## Man GLG Global Emerging Markets Bond Class D C NOK Shares

(ISIN:IE00BZCGMZ92) Man GLG Global Emerging Markets Bond (the 'Fund') is a sub-fund of Man Funds plc (the 'Company').

Man Asset Management (Ireland) Limited, part of Man Group plc, is the Manager of the Company.

### Objectives and investment policy

- The Fund aims to achieve a return in all market conditions primarily through investment in emerging market fixed income securities (eg bonds).
- The fixed income securities invested in will be issued or guaranteed by companies providing exposure to emerging markets or which have their registered office in emerging markets or by governments, government agencies or supranational bodies in emerging markets. The securities may be listed or traded on developed markets or the issuers may be developed market issuers providing emerging markets exposure. The Fund may also take exposure to countries which are regarded as developed markets where the investment manager believes that they exhibit characteristics of emerging markets.
- The Fund may invest up to 25% of its net assets in securities issued by or guaranteed by a single sovereign issuer with a non-investment grade rating. The fixed income securities are not subject to minimum rating requirements.
- The Fund may retain a significant proportion of its portfolio in cash and/or invest a significant proportion of the portfolio in liquid assets (ie securities that can be quickly and easily turned into cash). In addition, the Fund may trade in global currencies.
- The Fund will not have a specific exposure in terms of industry, sector, market or capitalisation. The Fund is actively managed and not constrained by a benchmark.
- The Fund typically aims to create returns through a long exposure (ie, it will benefit from an increase in the value of assets to which it obtains exposure). However, it may seek to apply a 'long-short strategy' whereby, in addition to buying and holding assets, it may use derivatives (ie instruments whose prices are dependent on one or more underlying asset ('FDI') to take 'short' positions whereby the Fund may make money in respect of issuers whose securities the Fund believes to be overvalued or expects to fall in value.
- The Fund may actively use FDI to achieve the investment objective, for hedging against anticipated movements in a market or a security, or where it is more economically effective than directly holding the underlying asset. The use of FDI may multiply the gains or losses made by the Fund on a given investment or on its investments generally.
- The Fund may actively use FDI to provide investors with the currency risk associated with the underlying investments of the Fund, or of an appropriate benchmark.
- Any income earned on investments will be added to the value of investors' shares and investors can buy and sell their shares on each dealing day of the Fund.

### Risk and reward profile

- The lowest category does not mean 'risk free'.
- The risk and reward profile is not guaranteed and may change over time.
- Historical data may not be a reliable indication for the future.
- The risk category for this share class is 4 as funds of this nature engage in strategies that typically have a moderate volatility. The calculation is based on the historical volatility of the Fund's performance. Where there is insufficient Fund performance the calculation is based on either the historical volatility of a relevant benchmark for the investment strategy or the Manager's Value at Risk limit for the Fund. Please refer to the prospectus for further information relating to the Value at Risk.

#### The following risks may not be fully captured by the risk and reward profile:

- Emerging markets experience specific risks due to increased volatility, illiquidity, political and economic instability, market turmoil, settlement risk and relatively weak regulatory standards.
- The use of FDI involves additional risks: (i) FDI may be highly sensitive to price movements of the asset on which they are based; (ii) a counterparty to a non-exchange traded FDI may not meet its payment obligations in the event of default; (iii) the use of FDI may result in increased leverage. These risks may lead to significant losses.
- Liquidity characteristics of non-exchange listed investments can be irregular, and may result in higher than anticipated costs to liquidate the position.
- The Fund may invest in non-investment grade securities which are considered higher risk investments that may cause income and principal losses for the Fund.

A complete description of risks is set out in the prospectus section entitled 'Certain Investment Risks'.

## Charges

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

### One-off charges taken before or after you invest

<b>Entry charge</b>	Up to 5.00%
<b>Exit charge</b>	None

This is the maximum that might be taken out of your money before it is invested / before the proceeds of your investment are paid out.

### Charges taken from the fund over a year

<b>Ongoing charges</b>	1.45%
------------------------	-------

### Charges taken from the fund under certain specific conditions

<b>Performance fee</b>	None
------------------------	------

The entry charge shown is a maximum figure and in some cases you might pay less. Please refer to your financial advisor or the distributor for the actual charges.

As this share class has not had a full year of performance, the ongoing charges figure is an estimated figure.

This figure may vary from year to year. It excludes performance fees (where applicable) and portfolio transaction costs, except in the case of an entry/exit charge paid by the Fund when buying or selling units in another sub-fund.

For detailed information on charges and fees please see the 'Fees and Expenses' section of the prospectus.
