	Fund
% invested	99.0%
Yield to Maturity (cash excluded)**	5.10
Yield to worst**	3.97
Average maturity (year)	4.20
Modified duration	2.09
OAS Spread (bp)	408

Investment strategy

The Fund's investment strategy is to manage, on an active and discretionary basis, a diversified portfolio composed of traditional bonds (and convertible bonds up to 10% of net assets) with high yields and ratings between BB+ and B- according to Standard & Poor's or equivalent ratings based on the Management Company's own analysis, with maturities of a maximum of six months and one day after 31 December 2023 (final maturity of the product or early redemption options at the issuer's discretion) and issued mainly by corporate issuers with their registered office in Europe.

Annual performance (rolling 12 months)					
from				3/31/17	3/29/18
to				3/29/18	3/29/19
Fund				2.8%	-1.0%

Past performance is not an indication of future results. Performance may vary over time.

Calendar performance (from january 01 to december 31)					
	2014	2015	2016	2017	2018
Fund				6.2%	-6.9%

Performance Analysis									
	Annualized performance			Cumulative performance					
	3 years	5 years	Inception	1 month	YTD	1 year	3 years	5 years	Inception
Fund			1.91%	0.94%	4.69%	-			-

Annualized volatility			
	1 year	3 years	5 years
Fund	3.90%		

Futures and options are not included in the calculation of the yield. The YTM is calculated before currency hedging. The YTW is calculated after currency hedging.

The Yield to Maturity (YTM) is the estimation at a certain date of the expected rate of return of a bond portfolio if the securities are held to maturity. It does by no means constitute a promised return. It can, therefore, be affected by interest rate risks, default risks, reinvestment risks and the fact that bonds may not be held until maturity.

The Yield to worst (YTW) is the estimation at a certain date of the worst expected rate of return of a bond portfolio of which some of the securities would not be held until maturity but redeemed at the discretion of the issuer (call). It does by no means constitute a promised return. It can, therefore, be affected by interest rate risks, default risks, reinvestment risks and the fact that bonds may not be held until maturity.

*Definitions of the financial indicators used are available for download on the website www.am.oddo-bhf.com under the heading "Regulatory information".

Redemption fees payable to the Fund will only be charged during the distribution period

(1) Risk/return scale in a range from 1 (lowest risk) to 7 (highest risk). This indicator is not constant and is updated if the risk/reward profile of the fund changes over time. The lowest category does not mean a risk-free investment. Historical data, such as is used to calculate the risk/return ratio, may not be a reliable indication of the future risk profile of the Fund. There is no guarantee that the management objectives in terms of risk and return will actually be met.

Interest rate future				
Modified duration (after hedging)	1.08	1.00	0.03	2.11

Portfolio manager comment

The key event in March was the ongoing equity and credit market rally, which resulted in the best quarter since 2009 for the S&P 500 and since 2012 for the European indices.

Both of the threats weighing on the markets in the last quarter of 2018 had been eliminated. Central banks adopted a more accommodative approach in response to the risk of a global economic slowdown, while the constructive progress made in negotiations between the US and China suggests that an agreement may be reached in the coming months.

The prospect of a return to a calmer business climate has enabled financial market stakeholders to plan ahead and not attach too much importance to the gloomy macroeconomic statistics that have characterised the start to the year. Uncertainty on the terms of the UK's exit from the European Union seems to have been tuned out as background noise and has not had an impact on the markets as yet.

Against this backdrop, the 10-year Treasury yield fell sharply, going from 2.71% to 2.40% by month-end. Similarly, the 10-year Bund yield fell from 0.18% to -0.07%. It is therefore easy to see the impact of central banks' messaging on the markets.

The bullish trend continued on the credit market with a tightening of spreads, although this was more pronounced for cash securities than for synthetic indices. The iTraxx Xover Series 30 remained practically unchanged, dipping from 277 bps to 274 bps, and the same trend was seen on the iTraxx Main, which ended the month at 60 bps versus 61.5 bps at the start of the month.

The high yield market continued on the upward trajectory seen in March, led by telecoms (+1.57%) and technology (+1.17%), whereas health care (+0.21%) and transport (+0.19%) lagged behind. On the investment grade front, the market received a boost from both credit and fixed income. The benchmark posted net performance of +1.38% but only +0.50% of this came from the credit component. The main contributors to this rise were real estate (+1.93%) and telecoms (+1.83%).

We participated in the Schaeffler and Volvo Cars issues on the primary market, started exiting from Raffinerie Heide and took profits on Motor Oil, Ardagh, ArcelorMittal, DEA and Tenneco.

Q1 2019 was surprisingly productive despite the lacklustre macroeconomic picture. Technically, with a fairly quiet high yield primary market, accommodative central banks, global growth stabilising at a lower level (especially in China and the US) and substantial investments flowing back into these asset classes, the market should continue to perform well, albeit at a slower rate. However, we should be on our guard against excessive optimism and geopolitical shocks. For this reason, we remain optimistic yet cautious.

Breakdown by asset class

Breakdown by rating

The breakdown takes into consideration the rating of the issuer or the guarantor in the case of unrated issues.

Sector breakdown

Geographic breakdown

Main portfolio issuers
