Man GLG Global Emerging Markets Debt Total Return Class DL USD Shares

(ISIN:IE00BD3B9693) Man GLG Global Emerging Markets Debt Total Return (the 'Fund') is a sub-fund of Man Funds VI plc (the 'Company').

Man Asset Management (Ireland) Limited, part of Man Group plc, is the Manager of the Company.

Objectives and investment policy

- The Fund aims to achieve returns in all market conditions over the long term primarily by investing in fixed income securities (eg bonds) denominated in local currency or in the currency of OECD countries and/or financial derivative instruments (ie instruments whose prices are dependent on one or more underlying asset ('FDI')).
- The fixed income securities primarily invested in will be issued or guaranteed by companies providing exposure to emerging markets or which have their registered office in emerging markets or by governments, government agencies or supranational bodies in emerging markets. The securities may be listed or traded on developed markets or the issuers may be developed market issuers providing emerging markets exposure. The fixed income securities are not subject to minimum rating requirements. The Fund may invest up to 100% in emerging markets.
- The Fund may retain a significant proportion of its portfolio in cash and/or invest a significant proportion of the portfolio in liquid assets (ie securities that can be quickly and easily turned into cash). In addition, the Fund may trade in global currencies.
- The Portfolio may invest up to 25% of its Net Asset Value in aggregate in convertible bonds (which may embed derivatives and/or leverage) and options.
- The Fund may invest up to 10% of its assets in shares of companies of emerging market countries or which carry out a significant part of their business in an emerging market country. The Fund may also invest up to 10% in other collective investment schemes.
- Benchmark. The Fund is actively managed; no benchmark is used as a universe for selection or for performance comparison purposes.
- The Portfolio's investment, directly, or indirectly through the use of derivatives, in fixed-income securities listed or traded on Recognised Markets in Russia shall not exceed 25% of the Net Asset Value of the Portfolio.
- The Fund typically aims to create returns through a long exposure, however, it may seek to apply a 'long-short strategy' whereby, in addition to buying and holding assets, it may use FDI to take 'short' positions whereby the Fund may make money in respect of issuers whose securities the Fund believes to be overvalued or expects to fall in value.
- The Investment Manager will apply an exclusion list of controversial stocks or industries which may be related to arms and munitions, nuclear weapons, tobacco and coal production.
- Recommendation: This fund may not be appropriate for investors who plan to withdraw their money within 5 years
- The Fund may actively use FDI to achieve the investment objective, for hedging against anticipated movements in a market or a security, or where it is more economically effective than directly holding the underlying asset. The use of FDI may multiply the gains or losses made by the Fund on a given investment or on its investments generally. FDI may allow the Fund to obtain market exposure in excess of the value of the Fund's assets (leverage).
- Investment in the Fund is suitable for investors seeking long-term capital growth with an investment horizon of at least five years.
- Any income earned on investments will be added to the value of investors' shares and investors can buy and sell their shares on each dealing day of the Fund.
- Recommendation : This fund may not be appropriate for investors who plan to withdraw their money within 5 years.

Risk and reward profile

Lower risk — Higher risk

Typically lower rewards — Typically higher rewards

1	2	3	4	**5**	6	7

- The lowest category does not mean 'risk free'.
- The risk and reward profile is not guaranteed and may change over time.
- Historical data may not be a reliable indication for the future.
- The risk category for this share class is 5 as funds of this nature engage in strategies that typically have a moderate to high volatility. The calculation is based on the historical volatility of the Fund's performance. Where there is insufficient Fund performance the calculation is based on either the historical volatility of a relevant benchmark for the investment strategy or the manager's Value at Risk limit for the Fund. Please refer to the prospectus for further information relating to the Value at Risk.

The following risks may not be fully captured by the risk and reward profile:

- The Fund may invest a significant proportion of its assets in securities with exposure to emerging markets which involve additional risks relating to matters such as the illiquidity of securities and the potentially volatile nature of markets not typically associated with investing in other more established economies or markets.
- The Fund will be exposed to credit risk on counterparties with which it trades in relation to on-exchange traded instruments such as futures and options and where applicable, 'over-the-counter' ("OTC","non-exchange") transactions. OTC instruments may also be less liquid and are not afforded the same protections that may apply to participants trading instruments on an organised exchange.
- The value of investments designated in another currency may rise and fall due to exchange rate fluctuations. Adverse movements in currency exchange rates may result in a decrease in return and a loss of capital. It may not be possible or practicable to successfully hedge against the currency risk exposure in all circumstances.
- Liquidity characteristics of non-exchange listed investments can be irregular, and may result in higher than anticipated costs to liquidate the investment.
- The Fund is subject to normal market fluctuations and the risks associated with investing in international securities markets and therefore the value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested.
- The Fund will invest FDI to achieve its investment objective. The use of FDI involves additional risks such as high sensitivity to price movements of the asset on which it is based. The extensive use of FDI may significantly multiply the gains or losses.
- The Fund may invest in non-investment grade securities which are considered higher risk investments that may cause income and principal losses for the Fund.
- The Fund's use of FDI may result in increased leverage which may lead to significant losses.
- There is no guarantee that the Fund will achieve its investment objective.

A complete description of risks is set out in the prospectus section entitled 'Certain Investment Risks'.
