

Key investor information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Deutsche
Asset Management

Deutsche Invest I Global Infrastructure, a sub-fund of the SICAV Deutsche Invest I

Share class SEK FDH (P) Security code: DWS2MT ISIN: LU1557078950

Management Company: Deutsche Asset Management S.A., a member of the Deutsche Bank Group.

Objectives and investment policy

The objective of the investment policy is to achieve sustained capital appreciation. In order to achieve this, the fund invests primarily in equities of issuers whose activities are focused on the global infrastructure segment. The infrastructure segment includes transport, energy, water and communication, in addition to social infrastructure. In this context, the selection of individual investments is the responsibility of the fund management. The currency of the sub-fund is EUR, the currency of the share class is SEK. The fund distributes annually. You may request the redemption of shares on each valuation day. The redemption may only be suspended in exceptional cases taking into account your interests as an investor.

Risk and reward profile

The calculation of the risk and reward profile is based on simulated data that cannot be used as a reliable indicator for the future risk profile. This risk indicator is subject to changes; the classification of the fund may change over time and cannot be guaranteed. Even a fund that is classified in the lowest category (category 1) does not represent a completely risk-free investment. The fund is classified in category 5 because its share price fluctuates comparatively strongly and the likelihood of both losses and gains is therefore relatively high. The following risks could be of particular significance for the fund. These risks can impair the performance of the fund and thus impact negatively on the net asset value per unit and on the capital invested by the investor. The unit value may at any time fall below the purchase price paid by the client. The fund invests its assets in selected regions or sectors. This increases the risk that the fund may be negatively influenced by the economic and political conditions in the respective regions or sectors. The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases. The fund invests in bonds, the value of which depends on whether the issuer is able to afford its payments. The deterioration of credit quality (ability and willingness to repay) may have an adverse effect on the value of the bond. A more detailed description of risks and other general information can be found under "Risk warnings" in the sales prospectus.
