

Schroder International Selection Fund

EURO Equity

A Accumulation Share Class

Investment Objective, Policy and Risk

To provide capital growth primarily through investment in equity securities of companies in countries participating in the EMU.

The value of investments and the income from them may go down as well as up and investors may not get back the amounts originally invested. Investments in equities are subject to market risk and, potentially, to currency exchange rate risk. This fund may use financial derivative instruments as a part of the investment process. This may increase the fund's price volatility by amplifying market events.

Fund Overview

Gary Clarke

The fund's investment strategy is to add as much growth as possible to the portfolio at the best possible value. In other words, we look for companies with better-than-average growth prospects but at good value relative to their peers. In seeking the best investment opportunities, we do not try to predict what will happen in the wider economic environment. Rather, we perform an in-depth analysis of individual companies across the eurozone, concentrating our research on factors that influence a firm's ability to reward shareholders over the long term.

We look beyond short-term earnings to a company's profits growth potential and to the quality as well as quantity of earnings. In addition, how a company measures up to its competitors is key. On top of our independent research, meeting company management is also integral to fully understanding the businesses in which we invest. We are confident our thorough approach, which combines both growth and value characteristics, will help us deliver strong returns to investors over the long term.

Past performance is not a guide to future performance and may not be repeated.

All fund performance data are on a NAV to NAV basis, net income reinvested. Data is not available for the time periods with no % growth stated. In case a share class is created after the fund's launch date, a simulated past performance is used, based upon the performance of an existing share class within the fund, taking into account the difference in the Total Expense Ratio.
