Minimum investment:	A, A1 and D share class: Initial – EUR1,000 or USD1,000; Subsequent investment – EUR1,000 or USD1,000

What is this product?

This is a sub-fund of Schroder International Selection Fund, a mutual fund domiciled in Luxembourg and its home regulator is Commission de Surveillance du Secteur Financier.

Objectives and investment strategy

To provide capital growth primarily through investment in equity securities of European companies. In order to achieve the objective the investment manager will invest in a select portfolio of securities, which it believes offer the best potential for future growth.

Use of financial derivative instruments (“FDI”)

The fund may employ FDI for hedging and investment purposes. FDI can be used for instance to create market exposure. Such FDI include equity, currency, volatility or index related FDI and over-the-counter and/or exchange traded options, futures, contracts for difference, warrants, swaps, forward contracts and/or a combination of the above.

The fund may use FDI extensively to meet its specific investment objective. However, the fund does not intend to use FDI extensively for investment purposes.

What are the key risks?

Investment involves risk. Please refer to the offering document for details including the risk factors.

1. Equity investment risk

Investment in equity securities is subject to the risk that the market value of the stocks may go down as well as up due to numerous factors such as changes in investment sentiment, political environment, economic environment, regional or global economic instability, currency and interest rate fluctuations. If the market value of the stocks go down the net asset value of the fund may be adversely affected.

2. Risk of investment in Europe

The fund may invest in securities which may include a substantial investment in European securities. In light of the current fiscal conditions and concerns on sovereign debt of certain European countries, the fund may be subject to an increased amount of volatility, liquidity, price and currency risk should there be any adverse credit events in the European region. Notwithstanding the governments of the European countries have adopted measures to address these problems, it is possible that these measures may not work and may adversely affect the value of the fund's investment in European securities. If these adverse economic or financial events in Europe continue, they could have additional unfavourable effects on the economies and financial markets of other parts of the world thereby affecting the value of the fund's investment.

3. Performance fee risk

Performance fee of the fund is calculated with reference to the outperformance per share (as described in the "Performance fee" section below). In the event of outperformance, investors are subject to a performance fee regardless a loss in investment capital has been suffered by the investors.

4. FDI

The fund may use FDI to meet its specific investment objective. There is no guarantee that the performance of FDI will result in a positive effect for the fund. FDI exposure may lead to a high risk of significant capital loss. Risks associated with FDI include credit risk and counterparty risk, liquidity risk, valuation risk, volatility risk, over-the-counter transaction risks and hedging risk. There is no guarantee that the desired hedging instruments will be available or hedging techniques will achieve their desired result. In adverse situations, the use of hedging instruments may become ineffective in hedging and the fund may suffer significant losses.

5. Risks relating to distributions

- For distribution share classes with a general dividend policy, expenses will be paid out of capital rather than out of gross income. The amount of distributable income therefore increases and the amount so increased may be considered to be dividend paid out of capital; capital growth will be reduced and in periods of low growth capital erosion may occur.
- Distributions from capital may include a premium or discount which is determined by differences in the interest rates of the reference currency of the hedged share class and the fund currency. It is possible that there may be an increase in the amount of the distribution that is paid out of capital and hence a greater erosion of capital than other share classes. The distribution and net asset value of the share class may be positively or adversely affected by the differences in the interest rates of the reference currency of the hedged share class and the fund currency. The distribution and net asset value of the hedged share class may, therefore fluctuate more than, and may significantly differ from, other share classes.
- Distribution share classes with a fixed dividend policy will distribute the dividends based on a fixed amount or fixed percentage of the net asset value per share. This may result in share classes with fixed distributions either paying out both income and capital in distribution payments, or not substantially distributing all the investment income which a share class has earned.
- **You should note that in the circumstances where the payment of distributions are paid out of capital, this represents and amounts to a return or withdrawal of part of the amount you originally invested or capital gains attributable to that and may result in an immediate decrease in the net asset value of shares.**

Is there any guarantee?

This fund does not have any guarantees. You may not get back the full amount of money you invest.

What are the fees and charges?**Charges which may be payable by you**

You may have to pay the following fees when dealing in the shares of the fund.
