Methodology for Performance Calculations
Portfolio performance is calculated on a daily basis and adjusted for external cash flows. The daily return of a portfolio is calculated as the percent change of the market value of the portfolio in that particular day, including accrued interest and dividends, net of non-reclaimable withholding taxes on income and capital gains and trading expenses, and adjusted for external cash flows. We assume cash flows occur at the beginning of the day. The market value of a portfolio is calculated as the sum of all holdings of the portfolio (including cash and cash equivalent, accrued interests and investments) valued at market price less total liabilities. Reclaimable withholding taxes are accrued. Returns are geometrically linked to arrive at monthly, quarterly, and annual returns. Portfolio returns are calculated Net of non-reclaimable taxes and trading expenses and Net of management, administrative and custody fees.
