

Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Man Convertibles Japan Class D EUR Acc Shares

(ISIN:LU0063949068) Man Convertibles Japan (the 'Fund') is a sub-fund of Man Umbrella SICAV (the 'Company').

MDO Management Company S.A., is the Manager of the Company.

Objectives and investment policy

- The Fund aims to produce positive returns through capital gains and earning interest income. The Fund invests mainly in convertible bonds issued by companies based in Japan, or companies which generate a large portion of their profits in Japan.
- Convertible bonds are fixed income instruments that can be converted into shares of the issuing company. The Fund may use the option to convert bonds in order to benefit from positive performance of an issuer's shares. Consequently the Fund may also hold shares.
- The Fund may make use of financial derivative instruments (i.e. instruments whose prices are dependent on one or more underlying asset ('FDI')).
- FDI are used for investment purposes and/or with the aim of protecting investments against anticipated movements in financial markets or the default of financial securities issuers. FDI may allow the Fund to obtain market exposure in excess of the value of the Fund's assets (leverage).
- Shares can be bought and sold each Dealing Day.
- The Fund is suitable for medium to long-term investors seeking higher returns. Given the high level of risk involved, the Fund is only suitable for investors able to sustain significant short-term loss. The Fund is aimed at investors with an investment horizon of at least two years.
- Any income generated by the Fund will be reinvested to grow the value of shares.

Risk and reward profile

- The lowest category does not mean 'risk free'.
- The risk and reward profile is not guaranteed and may change over time.
- Historical data may not be a reliable indication for the future.
- The risk category for this share class is 4 as funds of this nature engage in strategies that typically have a moderate volatility. The calculation is based on the historical volatility of the Fund's performance. Where there is insufficient Fund performance the calculation is based on either the historical volatility of a relevant benchmark for the investment strategy or the Manager's Value at Risk limit for the Fund. Please refer to the prospectus for further information relating to the Value at Risk.

The following risks may not be fully captured by the risk and reward profile:

- The use of FDI involves additional risks: (i) FDI may be highly sensitive to price movements of the asset on which they are based; (ii) a counterparty to a non-exchange traded FDI may not meet its payment obligations in the event of default; (iii) the use of FDI may result in increased leverage. These risks may lead to significant losses.
- The Fund's assets are invested in convertible bonds and shares; if a share or bond issuer becomes insolvent the Fund may lose the full amount invested.
- Liquidity characteristics of non-exchange listed investments can be irregular, and may result in higher than anticipated costs to liquidate the investment.
- Emerging markets experience specific risks due to increased volatility, illiquidity, political and economic instability, market turmoil, settlement risk and relatively weak regulatory standards.
- The Fund is a specialist country specific fund which, as a result, may carry greater risk than a more internationally diversified portfolio.
- The Fund may invest in non-investment grade securities which are considered higher risk investments that may cause income and principal losses for the Fund.
- The Fund is subject to normal market fluctuations and the risks associated with investing in international securities markets and therefore the value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested.

Further investment risks are set out in the relevant appendix to the prospectus.
