Investment target: Capital preservation. Long-term value.

Preserving capital and achieving long-term value is the goal of **Ethna-AKTIV**. The fund is designed for investors who appreciate stability, value maintenance and liquidity of the fund's assets and who would also like to obtain a reasonable increase in value. This is achieved by an active management policy taking into account the current market situation as well as future developments. Consequently, **Ethna-AKTIV** is based on an investment strategy that combines flexibility with balance. Following the principle of risk diversification, the Portfolio Management invests in liquid funds, bonds and, up to maximal 49%, in equities.

This information is based on historic data. The performance shown is no indicator of current or future performances. The value of the units can fluctuate. The performance shown does not take into consideration any subscription or redemption fees and/or commissions.

Gross performance⁴ (31.07.2014 - 31.07.2019)

This information is based on historic data. The performance shown is no indicator of current or future performances. The value of the units can fluctuate. The performance shown does not take into consideration any subscription or redemption fees and/or commissions.

³ Base of calculation: value of the unit (including the subscription fee of the first investment year only); distributions are reinvested. The calculation is made according to the BVI method. The performance of this model calculation is based on an investment amount of EUR 1,000 and adjusted for the following costs: subscription fee of 3.00% (reduction of the invested amount of 29.13 EUR = 2.913% on the first investment day) in the first year of investment. Regarding the management of the deposit account, your bank may charge account keeping fees that reduce performance.

⁴ The management fee, custodian bank fee and all other additional costs are taken into account in the calculation of the unit price as stated in the provisions of the contract. Distributions are reinvested. Performance is calculated using the BVI method (corresponds to the SFAMA-method in Switzerland), which means that the calculations do not include an issuing charge, transaction costs (such as order fees and brokerage fees), custodian bank fees or other management fees. Including the issuing surcharge would reduce performance.

Risk and reward profile

Synthetic indicator

← lower risk

higher risk →

← potentially lower reward

potentially higher reward →

1	2	3	4	5	6	7
---	---	---	---	---	---	---

Description: The historical data used for calculating the synthetic indicator are not reliable indication of the future risk and reward profile of the fund. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

Reason for the categorisation: This share class has been placed in the aforementioned risk class because its unit price is subject to little to medium fluctuation, therefore the profit potential and loss exposure may be low to moderate.

Opportunities

- less exposure to fluctuations in value through the combination of several asset classes and the distribution of investment capital over a number of individual securities (diversification)
- professional Portfolio Management with many years of experience
- active risk management and hedging (emphasis on capital preservation)
- active portfolio management with the objective of achieving positive yields even in weak market phases
- stability and continuity thanks to a focus on fixed-interest securities
- participation in the positive performances of equity and bond markets

Risks

- negative price developments for market, sector or company reasons in equity or bond investments of the fund; also due to general increases in yield and/or increased credit spreads of specific issuers of bonds
- general, geographic and geopolitical country risks; including the risk that the issuer of a bond, despite of his own solvency, fails to fulfill its obligations because of one state's missing or impaired ability or willingness to transfer to another
- issuer, counterparty credit and default risks due to investments in bonds, stocks or hedging transactions; including the risk of insolvency resulting from over-indebtedness or bankruptcy of the issuer or a counterparty; a total loss of the respective investment vehicle is possible
- exchange rate risks due to investments in foreign currencies or stocks and bonds which are denominated in a foreign currency
- The investor suffers a loss when selling the fund shares below the purchase price.

In general

The unit price may at any time fall below the purchase price at which the customer acquired the unit. Historical performance is no guarantee for future returns. A profitable resale is possible only after an increase in the value of the unit that exceeds the subscription fee as well as other fees and costs in the investment period.

Important notices

An investment in investment funds, as with all securities and comparable financial assets, carries the risk of capital or currency losses. Consequently, the unit price and the yield are variable and cannot be guaranteed. The costs of a fund investment have an effect on the actual profit. No guarantee can be given that the investment objectives will be achieved.
