Key investor information

UBAM - Global Bond (CHF), a sub-fund of UBAM

Class: I, C CHF (Capitalisation) LU0132665067

UBAM is a SICAV managed by UBP Asset Management (Europe) S.A.

Objectives and investment policy

The Fund seeks to grow your capital and generate income by investing in a diversified portfolio of bonds. It is an actively-managed, well-diversified portfolio. The Fund's value is calculated and expressed in Swiss Francs. For share classes in other currencies, the currency risk in relation to the base currency (Swiss Franc) is hedged.

To achieve its aims the Fund invests in government and investment grade bonds in US Dollars, Euros, Japanese Yen, Pounds Sterling and Swiss Francs. All investments that are not in Swiss Francs are hedged. Investment-grade bonds are bonds issued by companies with strong credit profiles as assessed by rating agencies. Investors in the Fund can redeem their units on any business day in Luxembourg, although we recommend a holding period of at least two years.

Any income received by the Fund is reinvested (capitalisation share class).

Risk and reward profile

With lower risk,  With higher risk,
potentially lower rewards potentially higher rewards

This indicator represents the annual historical volatility of the Fund over a 5-year period.

Risk Category 5 reflects high potential gains and/or losses for the portfolio. This is due to investments in bonds mainly denominated in Swiss Franc.

Historical data such as that used to calculate the synthetic indicator cannot be considered as a reliable indication of the Fund's future risk profile.

The risk category associated with the Fund is not guaranteed and may change over time.

The lowest risk category does not mean "risk free".

Your initial investment is not guaranteed.

Significant risk(s) for the Fund not taken into account in this indicator include the following:

Credit risk: The Fund invests in bonds, cash or other money market instruments. There is a risk that the issuer may default. The likelihood of this happening will depend on the credit-worthiness of the issuer. The risk of default is usually greatest with bonds that are rated as sub-investment grade.

Liquidity risk: Liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund may be unable to transact at advantageous times or prices.

Counterparty risk: As the Fund uses over-the-counter derivatives, there is a risk that the counterparty to the transactions will wholly or partially fail to honour its contractual obligations. This may result in a financial loss to the Fund.

Currency risk: The Fund invests in overseas markets. It can be affected by changes in exchange rates which may cause the value of your investment to decrease or increase.
