### Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

	Typically lower rewards					Typically higher rewards	
	1	2	3	4	5	6	7
Euro I Accumulation	1	2	3	4	5	6	7
Euro I Distribution	1	2	3	4	5	6	7
Sterling I Distribution	1	2	3	4	5	6	7

- This Fund is ranked at 6 because funds of this type have experienced high rises and falls in value in the past. Although this is a high risk ranking it is not the highest.
- Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. Please note the Fund's risk category may change in the future. The indicator does not take into account the following risks of investing in this Fund:
- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency rates will reduce the value of your investment.
- This Fund holds a limited number of investments. If one of these investments falls in value this can have a greater impact on the Fund's value than if it held a larger number of investments.
- For full details of risks involved please refer to the Prospectus
