## 6. Índice de rotación de la cartera

La rotación de la cartera es un indicador de la relevancia de los costes adicionales en los que incurre un fondo cuando compra y vende inversiones de conformidad con su política de inversión. El índice de rotación de la cartera se calcula de conformidad con las directrices con fecha del 16 de mayo de 2008 emitidas por la Swiss Fund Association como se detalla a continuación:

(Total de compras y ventas de valores - total de suscripciones y rescates de acciones del subfondo)

Activo neto medio del subfondo en la moneda del subfondo

El índice de rotación de la cartera se expresa como un porcentaje y, cuando el resultado del cálculo es negativo, se publica un valor de cero.
