

Key risk factors

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

The Company's investments may be subject to liquidity constraints, which means that shares may trade less frequently and in small volumes, for instance in smaller companies. As a result, changes in the value of investments may be more unpredictable. In certain cases, it may not be possible to sell the security at or near the last market price quoted or at a value considered to be fair.

Derivatives may be used substantially for complex investment strategies. These include the creation of short positions where the Investment Manager artificially sells an investment it does not own.

Derivatives can also be used to generate exposure to investments greater than the net asset value of the Company. Investment Managers refer to this practice as obtaining market leverage or gearing. As a result, a small positive or negative movement in stock markets will have a larger impact on the value of these derivatives than owning the investments. The use of derivatives in this manner may have the effect of increasing the overall risk profile of the Company.

Approximately 30% of the Company's net assets may be invested in Contracts for Difference ("CFDs"). Please refer to the glossary for a fuller definition

The information contained in this release was correct as at 30 November 2024. Information on the Company's up to date net asset values can be found on the London Stock Exchange Website at:

<https://www.londonstockexchange.com/exchange/news/market-news/market-news-home.html>

Company objective

To provide shareholders with long term capital growth and an attractive total return through investment primarily in UK smaller companies and mid-capitalisation companies traded on the London Stock Exchange.

Fund information (as at 30/11/24)

Net asset value capital only:	667.19p
Net asset value incl. income:	682.83p
Share price	593.00p
Discount to cum income NAV	13.2%
Net yield: ¹	2.6%
Total gross assets: ²	£595.9m
Net market exposure as a % of net asset value: ³	108.5%
Ordinary shares in issue: ⁴	87,271,864
2023 ongoing charges (excluding performance fees): ^{5,6}	0.54%
2023 ongoing charges ratio (including performance fees): ^{5,6,7}	0.87%

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

¹ Calculated using the Final Dividend declared on 05 February 2024 paid on 28 March 2024, together with the Interim Dividend declared on 24 July 2024 paid on 21 August 2024.

² Includes current year revenue and excludes gross exposure through contracts for difference.

³ Long exposure less short exposure as a percentage of net asset value.

⁴ Excluding 15,938,000 shares held in treasury.

⁵ The Company's ongoing charges are calculated as a percentage of average daily net assets and using the management fee and all other operating expenses, excluding performance fees, finance costs, direct transaction charges, VAT recovered, taxation and certain other non-recurring items for the year ended 30 November 2023.

⁶ With effect from 1 August 2017 the base management fee was reduced from 0.70% to 0.35% of gross assets per annum. The Company's ongoing charges are calculated as a percentage of average daily net assets and using the management fee and all other operating expenses, including performance fees, but excluding finance costs, direct transaction charges, VAT recovered, taxation and certain other non-recurring items for the year ended 30 November 2022.

⁷ Effective 1st December 2017 the annual performance fee is calculated using performance data on an annualised rolling two-year basis (previously, one year) and the maximum annual performance fee payable is effectively reduced to 0.90% of two year rolling average month end gross assets (from 1% of average annual gross assets over one year). Additionally, the Company now accrues this fee at a rate of 15% of outperformance (previously 10%). The maximum annual total management fees (comprising the base management fee of 0.35% and a potential performance fee of 0.90%) are therefore 1.25% of average month end gross assets on a two-year rolling basis (from 1.70% of average annual gross assets).

Annual performance to the last quarter end (as at 30/09/2024)

Sterling	30/09/23	30/09/22	30/09/21	30/09/20	30/09/19
	30/09/24	30/09/23	30/09/22	30/09/21	30/09/20

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy. Index performance returns do not reflect any management fees, transaction costs or expenses. Indices are unmanaged and one cannot invest directly in an index.

¹With effect from 15 January 2024 the Numis Smaller Companies plus AIM (excluding Investment Companies) Index changed to the Deutsche Numis Smaller Companies plus AIM (excluding Investment Companies). Source: BlackRock, Datastream as stated.

The latest performance data can be found on the BlackRock Investment Management (UK) Limited website at blackrock.com/uk/thrg.

The above Net Asset Value (NAV) performance statistics are based on an NAV with income included with any income reinvested on the ex-dividend date, net of ongoing charges and any applicable performance fee. Share price performance figures are calculated on a mid market basis in sterling terms with income reinvested on the ex-dividend date. A fuller definition of ongoing charges, which includes the annual management fee, is given in the Glossary. Details of the management and performance fees are given in the fund information table overleaf. The performance of the Company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

Comments from the portfolio manager:

Please note that the commentary below includes historic information in respect of the performance of portfolio investments, index performance data and the Company's NAV and share performance.

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results.

The Company returned 1.5% in November, outperforming its benchmark, the Deutsche Numis Smaller Companies +AIM (excluding Investment Companies) Index, which returned 0.7%.¹

The UK market moved higher during November as bond yields and swap rates retreated. Weaker Sterling is helping the FTSE 100 Index and mid-cap Industrials from a translational perspective, while some UK domestics may now have to contend with increased costs of imported raw materials whilst mitigating increases in staff costs from the Budget. However, UK indices (large and small) all moved higher amidst another period of frenzied M&A activity reminding investors that significant value remains in the UK.

The largest positive contributor during the month was **Rotork**. The shares moved higher in response to a positive trading update which showed positive momentum in order intake, which was up 8% year-on-year, with all three key divisions (Water & Power, Oil & Gas, and CPI) seeing healthy progress. The second largest contributor was a **short in a UK pet retailer** which issued a profit warning in response to a softer market backdrop. Our concerns are more than transient consumer softness, due to prolonged operational issues at a distribution centre, falling customer engagement and poor online reviews indicate a more company specific problem that management are reticent to acknowledge. The third largest contributor was electronics components manufacturer, **TT Electronics**, which rose after receiving two bids during the month.

Several of the weaker long positions were UK domestic exposed businesses in areas like housebuilding and RMI (Repair, Maintenance and Improvement) spend as the market waits to see what impact the Budget has on consumption and consumer confidence. The largest detractors were housebuilder **Bellway** and building materials distributor **Grafton**, which both fell along with other UK rate sensitives in the aftermath of the Budget. Shares in **WH Smith** continued to drift lower during the month despite reporting resilient preliminary full-year results.

November marks the end of what has felt like an extremely challenging financial year. But we are pleased to report

that the portfolio was able to generate a positive return of 16.3%, outperforming the benchmark by +2.2%.

The Budget didn't prove to be the clearing event we hoped. Alas, the building momentum in UK evidence through the first half of 2024 has been completely upended, with growth, consumer confidence and business confidence all taking a significant hit. Whilst swap rates and bond yields have eased after the initial spike, it is clear from many of our interactions in recent company meetings is that these additional employer NI costs (specifically the lowering of the threshold to bring so many more transient workers into the catchment) will have direct consequences which are likely to be felt more through cost savings (job losses) than price increases. As one UK Industrial said to us "our customers don't care about a specific UK tax increase being passed on to them, and we can't undermine our competitive position versus US and Asian competitors". As for obvious sectors like leisure, retail and hospitality, the competition may well be domestic but there is a limit on the ability to pass on prices due to the softening consumer backdrop and competitive backdrop. This is an area we have moderated long exposure and have added shorts, particularly those that have the additional headwind of raw materials costs that need to be imported which will be negatively impacted by weaker sterling. As for housebuilders and RMI exposed names, we didn't buy the immediate sell-off but have just started adding to some of the market leaders in these areas, where we see compelling long-term value despite a cloudier backdrop.

Reflecting the greater risks to the UK outlook both in terms of growth and inflation, the gross exposure remains lower than normal levels at around 110%, whilst the net of the portfolio is around 105%.

We thank shareholders for your ongoing support and look forward to updating you all in the New Year.

Glossary of Terms

Alternative Investment Market (AIM)

AIM is the London Stock Exchange's international market for smaller growing companies. The AIM market has no restrictions on market capitalisation, and financial reporting is more flexible than for companies listed on the main market of the London Stock Exchange.

CFD (Contracts for Difference)

Under a CFD contract the seller undertakes to pay to the buyer the difference between the current value of an asset and its value at a specified end date; this may be a positive or negative amount dependant on how the price has moved. A CFD contract may be used to profit from the price of the underlying asset falling as well as rising; if the buyer enters into a contract where the transaction will generate a profit if the price of the underlying holding falls, this is called a short position. A CFD contract also enables the Company to take advantage of price movements by paying only a small margin and without the cost outlay of purchasing the underlying stock. CFD contracts are not without risks. They may generate losses as well as profits if the price of the underlying asset moves in an unfavourable direction. CFDs also involve counterparty risk – the risk the CFD provider or another counterparty to a trade fails to fulfil their obligations – and liquidity risk, which means market conditions/the mechanics of trading could alter in such a way that trades cannot be made.

Discount/Premium

Investment trust shares frequently trade at a discount or premium to the NAV. This occurs when the share price is less than (a discount) or more than (a premium) the NAV. The discount or premium is the difference between the share price (based on mid-market share prices) and the NAV, expressed as a percentage of the NAV. Discounts and premiums are mainly the consequence of supply and demand for the shares on the stock market.

Gearing

Investment companies can borrow to purchase additional investments. This is called 'gearing'. It allows investment companies to take advantage of a long-term view on a sector or to take advantage of a favorable situation or a particularly attractive stock without having to sell existing investments. Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

Long and short positions

Holding a long position in a security means that the holder owns the security or has gained exposure to the security via a CFD contract in the expectation that the stock will rise in value in the future.

A short position generally refers to an arrangement to sell

at a future date a stock that is not currently owned by the investor. Investors who sell short believe the price of the stock will decrease in value. If the price drops, they can buy the stock at the lower price and make a profit. If the price of the stock rises and they buy it back later at the higher price, a loss will be incurred. CFD contracts may be used to take short positions.

Market exposure

Gross exposure is calculated by adding the 'long' and 'short' positions together. For example, if the Company has 120% 'long' exposure through a combination of securities and 'long' CFDs and 10% held in 'short' CFDs it has a gross exposure of 130%. Net exposure refers to the exposure of the Company when the short positions are deducted from total long exposure. For example, if the Company has 120% 'long' exposure through securities and CFDs and 10% 'short' exposure through CFD positions the net exposure is 110%; this measurement provides a guide to the net directional market exposure and takes into account the fact that long and short positions can often offset one another when the market moves in a particular direction

NAV (Net Asset Value)

A company's undiluted NAV is its available shareholders' funds divided by the number of shares in issue (excluding treasury shares), before making any adjustment for any potentially dilutive securities which the Company may have in issue, such as subscription shares, convertible bonds or treasury shares. A diluted NAV is calculated on the assumption that holders of any convertibles have converted, subscription shares have been exercised and treasury shares are re-issued at the mid-market price, to the extent that the NAV per share is higher than the price of each of these shares or securities and that they are 'in the money'. The aim is to ensure that shareholders have a full understanding of the potential impact on the Company's NAV if these instruments had been exercised on a particular date.

Net yield

The net yield is calculated using total dividends declared in the last 12 months (as at date of this factsheet) as a percentage of month end share price.

Ongoing charges ratio

Ongoing charges (%) =

$$\frac{\text{Annualised ongoing charges}}{\text{Average undiluted net asset value in the period}}$$

Ongoing charges are those expenses of a type which are likely to recur in the foreseeable future, whether charged to capital or revenue, and which relate to the operation of the investment company as a collective fund, excluding the costs of acquisition/disposal of investments, financing charges and gains/losses arising on investments. Ongoing charges are based on costs incurred in the year as being the best estimate of future costs and include the annual management fee.

Glossary of Terms (continued)

Gross and net exposure

Market exposure gained through a CFD (Contract for Differences) contract refers to the gross market value of the underlying securities to which the investor is exposed through the CFD contract. Gross exposure refers to the total exposure the investor has through both long and short positions added together. For example, an investor who has 110% long market exposure through CFDs and 20% short market exposure through CFDs has gross market exposure of 130%.

Net exposure refers to the exposure the investor has through long positions less any short positions. For example, an investor who has 110% long market exposure through CFDs and 20% short market exposure through CFDs has net market exposure of 90%; this method of measurement is looking at the net directional market exposure and takes into account the fact that long and short positions theoretically offset one another when the market moves in a particular direction.

Price to Earnings Ratio (PE) and Book Value

Price to Earnings Ratio is a way to value a company that measures its current share price relative to its EPS (earnings per share). PE is generally used as a measure to assess if a company's stock is overvalued or undervalued. The book value of a company is the difference between a company's total assets and total liabilities, for example, the amount of money that would be paid out to shareholders if a company was liquidated and all liabilities paid off.

Risk Warnings

Capital at risk The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Fluctuation may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Levels and basis of taxation may change from time to time.

Trust Specific risks

Liquidity risk The Company's investments may have low liquidity which often causes the value of these investments to be less predictable. In extreme cases, the Company may not be able to realise the investment at the latest market price or at a price considered fair.

Complex derivative strategies. Derivatives can also be used to generate exposure to investments greater than the net asset value of the investment trust. Investment Managers refer to this practice as obtaining market leverage or gearing. As a result, a small positive or negative movement in stock markets will have a larger impact on the value of these derivatives than owning the physical investments. The use of derivatives in this manner may have the effect of increasing the overall risk profile of the Company.

Financial markets, counterparties and service providers. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Company to financial loss.

Counterparty Risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Gearing risk Investment strategies, such as borrowing, used by the Company can result in even larger losses suffered when the value of the underlying investments fall.

Investors should refer to the offering documentation for the funds full list of risks.

Important Information

This document is marketing material. Issued by BlackRock Investment Management (UK) Limited, authorised and regulated by the Financial Conduct Authority. Registered office: 12 Throgmorton Avenue, London, EC2N 2DL. Tel: + 44 (0)20 7743 3000. Registered in England and Wales No. 02020394. For your protection telephone calls are usually recorded. Please refer to the Financial Conduct Authority website for a list of authorised activities conducted by BlackRock.

The Company is managed by BlackRock Fund Managers Limited (BFM) as the AIFM. BFM has delegated certain investment management and other ancillary services to BlackRock Investment Management (UK) Limited. The Company's shares are traded on the London Stock Exchange and dealing may only be through a member of the Exchange. The Company will not invest more than 15% of its gross assets in other listed investment trusts. SEDOL™ is a trademark of the London Stock Exchange plc and is used under licence.

Net Asset Value (NAV) performance is not the same as share price performance, and shareholders may realise returns that are lower or higher than NAV performance.

BlackRock Throgmorton Trust plc currently conducts its affairs so that their securities can be recommended by IFAs to ordinary retail investors in accordance with the Financial Conduct Authority's rules in relation to nonmainstream investment products and intend to continue to do so for the foreseeable future. The securities are excluded from the Financial Conduct Authority's restrictions which apply to non-mainstream investment products because they are securities issued by investment trusts. Investors should understand all characteristics of the funds objective before investing. For information on investor rights and how to raise complaints please go to <https://www.blackrock.com/corporate/compliance/investor-right> available in in local language in registered jurisdictions.

BlackRock has not considered the suitability of this investment against your individual needs and risk tolerance. To ensure you understand whether our product is suitable, please read the fund specific risks in the Key Investor Document (KID) which gives more information about the risk profile of the investment. The KID and other documentation are available on the relevant product pages at www.blackrock.com/uk/its. We recommend you seek independent professional advice prior to investing.
