## **Investment Objective**

To achieve long-term growth in both capital and income by predominantly investing in equities (and their related securities) of continental European companies.

## **Investment Trust Facts**

Launch date:	05.11.91
Portfolio manager:	Sam Morse, Marcel Stotzel
Appointed to trust:	01.01.11, 01.09.20
Years at Fidelity:	17, 6
Total Net Assets (TNA):	£ 1,300m
Ordinary shares in Issue:	411,466,049
Share price:	294.50p
NAV:	315.84p
Discount:	6.76%
Gross Market Gearing:	13.2
Net Market Gearing:	12.5%

## Performance Comparator

Market Index:	FTSE World Europe ex-UK Index Total Return
Market Index:	

The same index is used in the positioning tables on this factsheet. Past performance is not a reliable indicator of future results. The value of investments can go down as well as up and you may get back less than you invested.

## Cumulative performance in GBP (%)

Performance is shown for the last five years (or since launch for funds launched within that period).

# Performance to 30.04.21 in GBP (%)

	1m	3m	YTD	1yr	3yr	5yr	Since 05.11.91*
Share Price Cumulative Growth	5.2	8.6	4.4	29.2	49.5	100.9	4,256.3
NAV Cumulative Growth	5.3	10.4	7.9	30.3	40.6	94.7	4,431.6
Index Cumulative Growth	4.5	9.4	7.0	34.7	27.8	76.9	1,253.2

NAV Annualised Growth	-	-	-	30.3	12.0	14.3	13.8
Index Annualised Growth	-	-	-	34.7	8.5	12.1	9.2

Basis: bid-bid with income reinvested, in GBP, net of fees.

Market indices are sourced from RIMES and other data is sourced from third-party providers such as Morningstar.

\*Performance commencement date.

## **Key Risks**

The value of investments can go down as well as up and you may not get back the amount invested. Overseas investments may be more volatile than established markets. The shares in the investment trust are listed on the London Stock Exchange and their price is affected by supply and demand. The investment trust can gain additional exposure to the market, known as gearing, potentially increasing volatility.

## MONTHLY FACTSHEET

#### 30 APRIL 2021

## Portfolio Manager Commentary

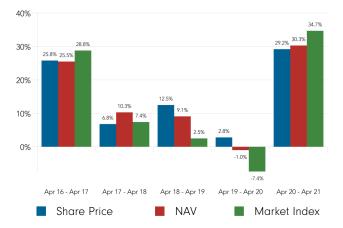

Continental European equities gained in April, driven by upbeat corporate earnings, encouraging economic data and the rollout of COVID-19 vaccination programmes in the region. Despite renewed lockdowns in France, Germany and Italy, investors were optimistic as Pfizer and BioNTech announced they would substantially increase delivery of their COVID-19 vaccine to the European Union (EU) in the second quarter of 2021. Early indications for the first quarter reporting season shows a high proportion of companies beating expectations, which bolsters confidence in a broader recovery for 2021/22.

During the month, the Trust recorded positive returns and outperformed the index, supported by strong stock selection in the consumer discretionary, financials and technology sectors. As investor sentiment shifted back in favour of growth names, holdings in consumer-related names such as LVMH Moet Hennessy and parcel delivery group Hermes International, contributed to returns. Selected financials, such as 3i Group also added value.

The strategy employs an active, bottom-up stock picking approach, which focuses on finding attractively-valued companies that can deliver sustainable dividend growth over time. In keeping with the longstanding investment process, the strategy remains fully invested and balanced in terms of sector exposure and position sizes.

On a rolling 12-month basis, the Trust recorded NAV and share price returns of 30.3% and 29.2%, respectively, compared to 34.7% for the index.

30 APRIL 2021

2

## 30 APRIL 2021

## Approach and Style

Seeking growth at a reasonable price: The portfolio manager seeks companies based on their prospects for producing dividends and dividend growth as this indicates steady structural growth. He searches for companies focusing on four key areas which are positive fundamentals, which includes a good track record, structural growth cycle on cycle and a good return on capital employed; the ability to generate cash, with a robust underlying level of cash generation which relates to profitability; dislikes companies that borrow large sums of money and he looks for opportunities with the flexibility to invest: finally he prefers stocks that are attractively valued as he is not prepared to pay any price for a good opportunity. He looks for good quality at a reasonable price and this is why his style has been associated with growth at a reasonable price or GARP.

The portfolio will generally have low turnover with a typical holding period of three to five years. The composition of his portfolio is fairly concentrated at between 50 to 60 stocks. The portfolio manager does not have a bias to a particular sector or company size with a diversified selection of holdings. Further growth potential is delivered through the selection of stocks rather than sectors or countries.

#### Independent Assessment

Information in this section is the latest available at date of publication. Further details can be found in the Glossary section of this factsheet. As some ratings agencies may use past performance to produce their assessments, these are not a reliable indicator of future results.

#### Morningstar Style Box ®

#### How data is calculated and presented

Portfolio composition data has been calculated and presented according to several general principles, which are listed below.

- **Aggregation**: all investments, including derivatives, linked to a particular issuing company have been combined to form a total percentage holding for each company. The aggregate holding is referred to in this factsheet as a position. Where a company is listed in two separate countries, each listing may be classified as a separate issuing company. Exchange Traded Funds (ETFs) and derivatives on ETFs are treated as individual securities – ie not aggregated.

- **Categorisation**: for investments that have underlying securities we use the attributes of the underlying issuing company or common share to determine the appropriate sector, market capitalisation band and geographic area.

- **Derivatives:** all derivatives are included on an exposure basis and, where necessary, are delta-adjusted. Delta-adjusting expresses derivatives in terms of the equivalent number of shares that would be needed to generate the same return.

- **"Basket" securities:** securities that represent a number of company shares – like index futures or options – are allocated to categories (such as country) whenever possible. Otherwise they are included in the "Other Index / Unclassified" category.

# Portfolio Construction – Explained

This factsheet contains information about the composition of the fund at a particular point in time. It aims to help you understand how the fund manager is positioned to achieve the fund's objectives.

The Equity Exposure table provides an overall view of the fund. Net Equity represents - in percentage terms - how much of the fund is invested in the market, netting off long and short positions. The higher the figure, the more the fund will take part in any market rises (or falls). It is important to note that Net Equity can be greater than 100% (for example if the manager is using derivative contracts) and when it is, the portfolio may be described as geared.

The exposure and positioning tables on page 2 break the fund down into a number of different views, each providing a different perspective on the fund's investments.

## Glossary / Additional Notes

#### **Equity Exposure notes**

#### GROSS MARKET EXPOSURE

Gross Market Exposure is the total of long exposures, plus the total of short exposures, and less the total of exposures hedging the portfolio, expressed as a percentage of shareholders' funds (Total Net Assets).

#### NET EQUITY

The net positive exposure to the market with short and hedge positions subtracted from long positions.

30 APRIL 2021

## Glossary / Additional Notes

#### OTHER

The value of any non-equity investments (excluding cash funds) expressed as a percentage of TNA.

#### UNINVESTED CASH

This is 100% minus the fund's Net Equity exposure and minus Other. This leaves any residual cash exposure that is not invested in shares or via derivatives.

#### Investment Trust Facts

#### NAV

The total value of a company's assets less the total value of its liabilities is its net asset value (NAV). For valuation purposes it is common to divide net assets by the number of shares in issue to give the net assets per share. NAV calculations can include or exclude current financial year income. For the purposes of this factsheet, they are valued with assets including income and costs and with debt valued at the market.

#### PREMIUM

If the share price of an investment company is higher than the net asset value (NAV) per share, the company is said to be trading at a premium. The premium is shown as a percentage of the NAV.

#### DISCOUNT

If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. The discount is shown as a percentage of the NAV.

#### GEARING

Gearing is the Market Exposure figure (either gross or net) expressed in excess of Total Net Assets. It represents the additional exposure to the market above Shareholders' Funds.

#### FAIR VALUE

The fair value of investments is initially taken to be their cost and is subsequently measured as follows: Listed investments are valued at bid prices, or last market prices, depending on the convention of the exchange on which they are listed; and

Unlisted investments are investments which are not quoted, or are not frequently traded, are stated at the Directors' best estimate of fair value and take account of the cost of the investment, recent arm's length transactions in the same or similar investments and financial performance of the investment since purchase.

#### General notes

#### TOTAL NET ASSETS (TNA)

The Company's total assets minus its total liabilities - also known as Shareholders' Funds. It represents the amount by which a company is financed through common and preferred shares.

#### INDEX

The index used in the positioning tables on page 2 is the index defined in the Performance Comparator section on page 1.

#### TOP NET LONG POSITIONS

Those companies in which the largest percentages of the trust's total net assets are effectively invested. Positions in other funds – including ETFs (Exchange Traded Funds) - can appear in this table, but index derivatives form part of an "Other Index / Unclassified" category which will not appear.

#### TOP OVERWEIGHT & UNDERWEIGHT POSITIONS

Those positions which have the largest active weight relative to the index. Positions in other funds - including ETFs (Exchange Traded Funds) - can appear in this table, but index derivatives form part of an "Other Index / Unclassified" category which will not appear. In the underweight table, any short position names have been withheld in line with Fidelity's disclosure policy.

#### NET LONG POSITIONS CONCENTRATION

Illustrates the weight of the top 10, 20 and 50 positions in the trust and the weight of the top 10, 20 and 50 positions in the index. It does not attempt to show the coincidence of security ownership between fund and index. The sector/industry classification used (i.e. GICS, ICB, TOPIX and IPD) varies by fund. Full descriptions can be found below.

30 APRIL 2021

# Glossary / Additional Notes

## ONGOING COSTS (KID)

These include Portfolio transaction costs (the costs of us buying and selling underlying investments) and Other ongoing costs (the costs that we take each year for managing the investment).

These are based on the methodology prescribed by EU Regulation (PRIIPS) and differ from other presentations of costs such as the Ongoing Charge Figure (OCF) in the Company's Annual Report & Accounts.

#### PORTFOLIO TRANSACTION COSTS

These are costs incurred when trading underlying investments.

#### SECTOR INDUSTRY CLASSIFICATION

GICS: Global Industry Classification Standard (GICS) was developed by Standard & Poor's and MSCI Barra. GICS consists of 11 sectors, 24 industry groups, 68 industries and 157 sub-industries. More information is available at http://www.standardandpoors.com/indices/gics/en/us

ICB: The Industry Classification Benchmark (ICB) is an industry classification developed by Dow Jones and FTSE. It is used to segregate markets into sectors within the macroeconomy. The ICB uses a system of 10 industries, partitioned into 20 supersectors, which are further

divided into 41 sectors, which then contain 114 subsectors. More information is available at http://www.icbenchmark.com/
