## May Factsheet

Performance, Portfolio Breakdowns and Net Asset information as at: 31-May-2020

All other data as at 11-Jun-2020

For Investors in the UK. Investors should read the Key Investor Information Document and Prospectus prior to investing.

The Fund seeks to track the performance of an index composed of companies from South Africa.

On 01-06-2020, the benchmark changed from MSCI South Africa to MSCI South Africa 20/35 Index. The change will be reflected in the benchmark data.

### KEY BENEFITS

- 1 Exposure to a broad range of companies in South Africa
- 2 Direct investment in South African companies
- 3 Single country exposure

**Key Risks:** Emerging markets are generally more sensitive to economic and political conditions than developed markets. Other factors include greater 'Liquidity Risk', restrictions on investment or transfer of assets and failed/delayed delivery of securities or payments to the Fund. Investment risk is concentrated in specific sectors, countries, currencies or companies. This means the Fund is more sensitive to any localised economic, market, political or regulatory events. Currency Risk: The Fund invests in other currencies. Changes in exchange rates will therefore affect the value of the investment. The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events. Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily. Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

## GLOSSARY

**Total Expense Ratio (TER):** A measure of the total costs associated with managing and operating a fund. The TER consists primarily of the management fee plus other expenses such as trustee, custody, or operating expenses. It is expressed as a percentage of the fund's total net asset value.

**Distribution yield:** The distribution yield represents the ratio of distributed income over the last 12 months to the fund's current Net Asset Value.

**Product Structure:** Indicates whether the fund buys the actual underlying securities in the index (i.e. Physical) or whether the fund gains exposure to those securities by buying derivatives, such as swaps (known as 'Synthetic'). Swaps are a form of contract that promises to provide the return of the security to the fund, but the fund does not hold the actual security. This can introduce a risk that the counterparty defaults on the "promise" or contract.

**Methodology:** Indicates whether the product is holding all index securities in the same weight as the index (replicating) or whether an optimised subset of index securities is used (optimised/sampled) in order to efficiently track index performance.
