

ASI Investment Grade Corporate Bond Fund

(From 7 August 2019 The fund name was amended from Investment Grade Corporate Bond Fund to ASI Investment Grade Corporate Bond Fund)

Platform 1 Accumulation GBP

31 May 2020

Objective

To generate income and some growth over the long term (5 years or more) by investing in Sterling-denominated investment grade corporate bonds.

Performance Target: To achieve the return of the iBoxx Sterling Collateralized & Corporates plus 0.8% per annum (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target. The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Portfolio securities

- The fund will invest at least 60% in Sterling denominated investment grade corporate bonds
- The fund may invest in investment grade bonds issued anywhere in the world by governments and corporations, including sub-sovereigns inflation-linked, convertible, asset backed and mortgage backed bonds. The fund will employ techniques to reduce (hedge) risk related to currency movements on non-Sterling bonds.
- At the point of investment all bonds shall be investment grade with a credit rating of BBB or higher from at least one major rating agency such as Standard & Poors, Moodys or Fitch. The fund may also invest in other funds (including those managed by Aberdeen Standard Investments) and money-market instruments, and cash.

Risk and reward profile

This indicator reflects the volatility of the fund's share price over the last five years. See Key Investor Information Document (KIID) for details.

Key risks

- The value of investments and the income from them can fall and investors may get back less than the amount invested.
- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

Management process

- The management team use their discretion (active management) to identify bonds and derivatives based on analysis of global economic and market conditions (for example, interest rates and inflation) and analysis of a company's prospects and creditworthiness compared to that of the market.
- In seeking to achieve the Performance Target, the iBoxx Sterling Collateralized & Corporates is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation (tracking error) between the returns of the fund and the index is not ordinarily expected to exceed 2.5%. Due to the Fund's risk constraints, the intention is that the Fund's performance profile will not deviate significantly from that of the iBoxx Sterling Collateralized & Corporates over the longer term.
- Please note: The Fund's ability to buy and sell bonds and the associated costs can be affected during periods of market stress which could include periods where interest rates move sharply.
