

LIONTRUST MA BLENDED INTERMEDIATE

The value of investments and any income provided by them can go down as well up. Investors could get back less than invested. Past performance is not a guide to future performance. This factsheet is for information purposes only and is not designed to provide advice on the suitability of an investment for your personal situation. If you have any questions regarding this factsheet, you are recommended to speak to a financial adviser.

Investment Objective and Policy Summary

The Fund seeks to achieve capital growth and income with a median level of volatility (risk), having a risk profile of 4, in a range from 1 to 7 where 1 is the lowest risk and 7 the highest. The risk profile used by Liontrust to produce the long term asset allocation differs from the Synthetic Risk and Reward Indicator shown elsewhere in this document, so the two rankings may not be the same. The Fund is an actively managed fund of funds which invests at least 70% of its assets in other funds (underlying funds), including those traded on stock exchanges, other closed-ended funds and funds managed by Liontrust or its associates. The underlying funds will invest in a range of asset classes including shares, bonds, money market instruments, freely transferable rights to buy other investments at a future date (warrants),

financial contracts that derive their value from other investment instruments or indices (derivatives) and deposits. The underlying funds will be a blend of 'active' funds which aim to beat the performance of a benchmark and 'passive' funds, which aim to track the performance of an index. The Fund may also invest directly in the above asset classes. The Fund may invest indirectly in property through Real Estate Investment Trusts and shares in property investment companies. The Fund aims to take a median level of risk. Liontrust selects investments for the Fund according to its long-term asset allocation based on its risk profile. Liontrust may change the combination of assets for the Fund over the short to medium term where it sees a benefit in doing so, as long as its overall long-term risk profile remains similar.

PERFORMANCE³ AS AT 30/06/2021

Performance since launch (%)

Cumulative performance (%)	1 month	3 months	YTD	1 year	3 years	5 years	Inception

Commentary

We continue to be positive on higher risk investments due to central bank monetary support, vaccine distribution and pent-up corporate and consumer demand. There are challenges to this view, from growth disappointments and the ongoing pandemic risks, either through lower vaccination rates around the globe or the emergence of new virus mutations. But the main concern for markets is whether better-than-expected growth as the world reopens will spark inflation and how this might affect the recovery. With inflation on the rise central banks might be forced into action to increase interest rates or restrict the flow of money into the economy. Inflation in the US has crept up to around 5% year on year and there are growing calls to douse these flames. In the UK inflation exceeded the

Bank of England's 2% target for the first time in almost two years, with upward pressure from transport, motor fuel and eating out costs. However, the US Federal Reserve and other central banks have said this spike in inflation will be temporary, citing pent-up demand being released as economies reopen. On the back of the broadly positive picture stock markets have continued to perform strongly. However, with so much good news already priced in we could see some cooling off through the rest of the year. During June, the main change was to sell a small part of our UK, European and Japanese equity exposure as part of a move to increase the level of cash in the portfolio in line with our targets. We did this by cutting some of our exposure in BGF European Equity Income, TB Evenlode Income and Man GLG Japan Core Alpha.

This risk indicator is based on historical data and may not be a reliable indication of the future risk profile. The category may shift over time and is not guaranteed.

Funds of category 4 have shown in the past low to medium volatility. Volatility describes how much the value of the fund went up and down. The shares of a fund of category 4 might be subject to low to medium fluctuations based on the historical volatility.

The following are additional risks not covered by the risk and reward category:

Credit Risk: There is a risk that an investment will fail to make required payments and this may reduce the income paid to the fund, or its capital value.

Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Liquidity Risk: If underlying funds suspend or defer the payment of redemption proceeds, the Fund's ability to meet redemption requests may also be affected.

Interest Rate Risk: Fluctuations in interest rates may affect the value of the Fund and your investment.

Derivatives Risk: Some of the underlying funds may invest in derivatives, which can, in some circumstances, create wider fluctuations in their prices over time.

Emerging Markets: The Fund may invest in less economically developed markets (emerging markets) which can involve greater risks than well developed economies.

Currency Risk: The Fund invests in overseas markets and the value of the Fund may fall or rise as a result of changes in exchange rates.

Index Tracking Risk: The performance of any passive funds used may not exactly track that of their Indices.

Important information

Yield is the amount of income generated by a fund's investment in relation to the price shown as an annual percentage.

The Annual Management Charge (AMC), is a charge taken from the fund. The charge is expressed as a percentage per annum but is normally taken daily from the fund and is calculated based on the value of funds under management. Normally the fund manager reserves the right to review the level of charge.

The Ongoing Charges Figure (OCF), is a charge you'll pay over a year for as long as you hold your investment, it is made up of the Annual Management Charge (AMC) and other operating costs. Other charges may occur.

Under fixed Administration Fees, the Operating Expenses are paid directly by Liontrust and we are reimbursed by each fund at a flat rate per year out of their respective net asset values. The OCF is made up of the AMC plus the fixed Administration Fees. In some periods, the Operating Expenses paid by Liontrust may be more than the Administration Fees collected by Liontrust from a fund. If this is the case, Liontrust will pay the difference from its own resources. Conversely, in some periods, the Administration Fees may be higher than the Operating Expenses, in which case Liontrust will retain the difference. As the funds in which you are invested grow in assets, the fixed Administration Fees are reduced.

This document does not provide you with all the facts you need to make an informed decision about investing. For a comprehensive list of common financial words and terms, see our glossary at: www.liontrust.co.uk/benefits-of-investing/guide-financial-words-terms. More information is available in the Key Investor Information Document (KIID) for the fund and in the fund prospectus, both of which are available, free of charge, from Liontrust. The KIID can also be downloaded from our website at www.liontrust.co.uk. We also recommend that you speak to your financial adviser before making any investment. The adviser can advise you on the number of financial products through which you can invest in this fund. This fund may not be appropriate for investors who plan to withdraw their money within five years.

Past performance is not a guide to future performance. Do remember that the value of an investment and the income generated from them can fall as well as rise and is not guaranteed, therefore, you may not get back the amount originally invested and potentially risk total loss of capital. The portfolios' investments are subject to normal fluctuations and other risks inherent when investing in securities. The issue of units/shares in Liontrust Funds may be subject to an initial charge, which will have an impact on the realisable value of the investment, particularly in the short term. There is no certainty the investment objectives of the portfolio will actually be achieved and no warranty or representation is given to this effect. The portfolios therefore should be considered as a medium to long-term investment.
