PERFORMANCE DISCLOSURES

Past performance is not a guide to current and future performance. The value of your investments and any income from them may fall as well as rise and you may not get back the full amount you invested.

Source: J.P.Morgan Asset Management. Share class performance shown is based on the quoted price of the share class, assumes any net income was reinvested, and includes ongoing charges but not any entry or exit fees. Indices do not include fees or operating expenses and you cannot invest in them.

The Yield reflects net distributions declared over the past 12 months as a percentage of the quoted price at the date shown. It does not include the Entry charge and investors may be subject to tax on their distributions. Where a portion of the fund's expenses are charged to capital this has the effect of increasing the distribution for the year and constraining the fund's capital performance to an equivalent extent.

The performance shown prior the launch date of this share class relates to the A share class. The A share class performance has not been amended or simulated to adjust for the lower ongoing fees of the C share class.

DEFINITIONS

NAV Net Asset Value of a fund's assets less its liabilities per Share.

Quoted Price The single price at which all client orders are executed.

Morningstar Analyst Rating™ Morningstar's forward looking fund rating.

Overall Morningstar Rating™ assessment of a fund's past performance, based on both return and risk and shows how similar investments compare with their competitors. Investment decisions should not be based on a high rating alone.

FE Crown rating are quantitative ratings ranging from one to five designed to help investors identify funds which have displayed superior performance in terms of stockpicking, consistency and risk control.

FE Crown Fund Ratings are however purely quantitative and backward looking, and, as such, cannot offer any certainty about the future.

FE Trustnet crown rating as at 31 May 2021.

Rayner Spencer Mills rated fund rating as at 31 May 2021.

Uses both a qualitative and quantitative assessment of the funds. The fund is simply rated or not.

Correlation measures the relationship between the movement of the fund and its benchmark. A correlation of 1.00 indicates that the fund perfectly matched its benchmark.

Alpha (%) a measure of excess return generated by a manager compared to the benchmark. An alpha of 1.00 indicates that a fund has outperformed its benchmark by 1%.

Beta a measure of a fund's sensitivity to market movements (as represented by the fund's benchmark). A beta of 1.10 suggests the fund could perform 10% better than the benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant.

Annualised volatility (%) an absolute measure of volatility and measures the extent to which returns vary up and down over a given period. High volatility means that the returns have been more variable over time. The measure is expressed as an annualised value.

Sharpe ratio measures the performance of an investment adjusting for the amount of risk taken (compared a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.

Tracking error (%) measures how much a fund's returns deviate from those of the benchmark. The lower the number the closer the fund's historic performance has followed its benchmark.

Information ratio (IR) measures if a manager is outperforming or underperforming the benchmark and accounts for the risk taken to achieve the returns. A manager who outperforms a benchmark by 2% p.a. will have a higher IR than a manager with the same outperformance but who takes more risk.
