

Key risk factors

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Overseas investments will be affected by currency exchange rate fluctuations.

The Company invests in economies and markets which may be less developed. Compared to more established economies, the value of investments may be subject to greater volatility due to increased uncertainty as to how these markets operate.

BlackRock Energy and Resources Income Trust plc invests in mining shares which typically experience above average volatility when compared to other investments. Trends which occur within the general equity market may not be mirrored by mining securities.

The Company may from time to time utilise gearing. A fuller definition of gearing is given in the glossary.

Options

The Company may write options for income generation and efficient portfolio management. Any use of derivatives for efficient portfolio management and options for investment purposes will be made on the basis of the same principles of risk spreading and diversification that apply to the Company's direct investments. A fuller definition of the options strategy is given in the glossary.

The latest performance data can be found on the BlackRock Investment Management (UK) Limited website at:

[blackrock.com/uk/beri](https://www.blackrock.com/uk/beri)

The information contained in this release was correct as at 30 June 2024. Information on the Company's up to date net asset values can be found on the London Stock Exchange Website at:

<https://www.londonstockexchange.com/exchange/news/market-news/market-news-home.html>

Company objective

To achieve an annual dividend target and, over the long term, capital growth by investing primarily in securities of companies operating in the mining and energy sectors.

Fund information (as at 30/06/24)

Net asset value – capital only:	131.80p
Net asset value cum income: ¹	131.95p
Share price:	117.00p
Discount to NAV (cum income):	11.3%
Net yield:	3.8%
Gearing - cum income:	9.5%
Total assets:	£162.7m
Ordinary shares in issue: ²	123,294,497
Gearing range (as a % of net assets):	0-20%
Ongoing charges: ³	1.19%

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

¹ Includes net revenue of 0.15p.

² Excluding 12,291,697 ordinary shares held in treasury.

³ The Company's ongoing charges are calculated as a percentage of average daily net assets and using the management fee and all other operating expenses excluding finance costs, direct transaction costs, custody transaction charges, VAT recovered, taxation and certain other non-recurring items for the year ended 30 November 2023. In addition, the Company's Manager has also agreed to cap ongoing charges by rebating a portion of the management fee to the extent that the Company's ongoing charges exceed 1.25% of average net assets.

A full disclosure of portfolio investments for the Company as at 31 December 2023 has been made available on the Company's website at the link given below:

<https://www.blackrock.com/uk/individual/literature/policies/beri-portfolio-disclosure.pdf>

Annual performance to the last quarter end (as at 30 June 2024)

Sterling	30/06/23	30/06/22	30/06/21	30/06/20	30/06/19
	30/06/24	30/06/23	30/06/22	30/06/21	30/06/20
	%	%	%	%	%
Net asset value	7.3	12.5	19.9	54.5	-12.1
Share price	6.7	10.3	21.2	73.1	-19.1

Cumulative performance (as at 30/06/24)

Sterling	1M%	3M%	6M%	1Y%	3Y%	5Y%
Net asset value	-3.8	2.7	4.3	7.3	44.7	96.4
Share price	-2.8	4.1	3.9	6.7	42.6	99.7

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

The above Net Asset Value (NAV) performance statistics are based on a NAV including income with any dividends reinvested on the ex-dividend date, net of ongoing charges. The Company does not have in place any performance fee arrangements. A fuller definition of ongoing charges, which include the annual management fee, is given in the glossary.

Share price performance figures are calculated on a mid market basis in sterling terms with income reinvested on the ex-dividend date.

The performance of the Company's portfolio, or Net Asset Value ("NAV") performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

Allocations are as of the date shown and do not necessarily represent current or future portfolio holdings.

Comments from the Portfolio Managers

Please note that the commentary below includes historic information on sector performance, commodity price performance and the Company's NAV performance.

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results.

The Company's NAV (Net Asset Value) had declined by 3.8% in June (in GBP terms).

Economic data in June showed signs of decelerating global growth and easing inflation. This led the European Central Bank to cut rates for the first time since the start of the pandemic, whereas the Bank of England and Federal Reserve left rates unchanged. Elsewhere, there was increased political uncertainty as President Emmanuel Macron called for snap elections in France, leading to volatility amongst French stocks. US interest rate expectations declined modestly, with the US 5-year yield falling from 4.5% to 4.3% which supported the performance of growth sectors such as technology over value sectors like mining and traditional energy.

Within traditional energy, oil prices ended the period higher, recovering from May's decline, but this masked notable volatility during the month with the Brent oil price down by 5% to \$75 at the low point. At the start of the month, OPEC announced an intention to add back oil production later in the year, with oil demand expected to continue to rise and this was initially taken negatively by the market. The Brent oil price rose by 9.9%, whilst WTI rose by 6.2%, ending the month at \$87/bbl and \$82/bbl respectively. The US Henry Hub natural gas price rose by 0.8% during the month to end at \$2.60/mmbtu.

Within the mining sector, most mined commodity prices posted declines through June, with iron ore (62% fe), copper and gold prices falling by 10.9%, 8.9% and 1.3% respectively. Economic data from China was weak with its manufacturing PMI below 50 indicating contraction, whilst average house prices recorded the largest year-on-year decline since 2015.

Within the energy transition theme, sentiment around renewables weakened during the month impacting the share prices of both clean power utility companies and renewable energy technology companies. Meanwhile, Bloomberg NEF's Long-Term Electric Vehicle Outlook indicated that rapidly falling battery prices, advancements in next-generation battery technology and improving economics of Electric Vehicles (EVs) continue to underpin long-term EV growth globally.

All data points in US dollar terms unless otherwise specified.

Non-Mainstream Pooled Investments status

The Company currently conducts its affairs so that its securities can be recommended by Independent Financial Advisers to ordinary retail investors in accordance with the Financial Conduct Authority's (FCA) rules in relation to Non-Mainstream Pooled Investments (NMPI) and intends to continue to do so for the foreseeable future. The securities are excluded from the FCA's restrictions which apply to non-mainstream pooled investments because they are shares in an investment trust.

Glossary of Terms

Discount/premium

Investment trust shares frequently trade at a discount or premium to NAV. This occurs when the share price is less than (a discount) or more than (a premium) to the NAV. The discount or premium is the difference between the share price (based on mid-market share prices) and the NAV, expressed as a percentage of the NAV.

Discounts and premiums are mainly the consequence of supply and demand for the shares on the stock market.

Gearing

Investment companies can borrow to purchase additional investments. This is called 'gearing'. It allows investment companies to take advantage of a long-term view on a sector or to take advantage of a favourable situation or a particularly attractive stock without having to sell existing investments.

Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

Net yield

The net yield is calculated using total dividends declared in the last 12 months (as at date of this factsheet) as a percentage of month end share price.

NAV (Net Asset Value)

A company's undiluted NAV is its available shareholders' funds divided by the number of shares in issue (excluding treasury shares), before making any adjustment for any potentially dilutive securities which the Company may have in issue, such as subscription shares, convertible bonds or treasury shares. A diluted NAV is calculated on the assumption that holders of any convertibles have converted, subscription shares have been exercised and treasury shares are re-issued at the mid-market price, to the extent that the NAV per share is higher than the price of each of these shares or securities and that they are 'in the money'.

The aim is to ensure that shareholders have a full understanding of the potential impact on the Company's NAV if these instruments had been exercised on a particular date.

Ongoing charges ratio

Ongoing charges (%) =

Annualised ongoing charges

Average undiluted net asset value in the period

Ongoing charges are those expenses of a type which are likely to recur in the foreseeable future, whether charged to capital or revenue, and which relate to the operation of the investment company as a collective fund, excluding the costs of acquisition/disposal of investments, financing charges and gains/losses arising on investments. Ongoing charges are based on costs incurred in the year as being the best estimate of future costs and include the annual management fee.

Options

An option is a contract that offers the buyer the right, but not the obligation, to buy (call) or sell (put) a security or other financial asset at an agreed-upon price (the strike price) during a certain period of time or on a specific date (exercise date) for a fee (the premium). The sale of call or put options on stocks that are believed to be overpriced or underpriced, based on the assumption that the options will not be exercised, is referred to as an 'options overwriting' strategy. The seller of the option collects a premium but if the option subsequently expires without being exercised, there will be no down side for the seller. However, if the stock rises above the exercise price the holder of the option is likely to exercise the option and this strategy can reduce returns in a rising market.

The Company writes options to generate income and for efficient portfolio management. Risk is mitigated by ensuring that any call options are covered (meaning that call options are only written in respect of stocks already owned within the Company's portfolio such that, if the options are exercised, the Company does not need to purchase stock externally at fluctuating market prices to meet its obligations under the options contract). Any use of derivatives for efficient portfolio management and options for investment purposes will be made on the basis of the same principles of risk spreading and diversification that apply to the Company's direct investments.

Share buyback

Share buyback is when a company buys back its own shares from investors. Once shares are repurchased they may either be cancelled or held in treasury for redistribution at a future point in time. A company will typically use share buyback powers to increase demand for its shares when its stock is undervalued in the market. Share buybacks reduce the number of shares in circulation, which can increase the share value and the earnings per share (EPS).

Risk Warnings

Investors should refer to the prospectus or offering documentation for the fund's full list of risks.

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Fluctuation may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Levels and basis of taxation may change from time to time.

Trust specific risks:

Gearing risk. Investment strategies, such as borrowing, used by the Trust can result in even larger losses suffered when the value of the underlying investments fall.

Emerging markets. Emerging market investments are usually associated with higher investment risk than developed market investments. Therefore, the value of these investments may be unpredictable and subject to greater variation.

Mining investments. Mining shares typically experience above average volatility when compared to other investments. Trends which occur within the general equity market may not be mirrored within mining securities.

Exchange rate risk. The return of your investment may increase or decrease as a result of currency fluctuations.

Derivative Risk general. The Fund uses derivatives as part of its investment strategy. Compared to a fund which only invests in traditional instruments such as stocks and bonds, derivatives are potentially subject to a higher level of risk.

Counterparty Risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Non-investment grade risk. Non-investment grade fixed income securities are more sensitive to changes in interest rates and present greater 'Credit Risk' than higher rated fixed income securities.
