

VT SG UK Defined Return Assets Fund

Monthly Report

31st October 2019

Investment Objective & Investment Selection

The investment objective of the VT SG UK Defined Return Assets Fund is to generate capital growth over the long term.

The Fund will seek to achieve its objective primarily via exposure (indirectly by way of a swap) to a portfolio of defined return investments, namely twelve rolling up to six year autocalls (each of which will have a potential maturity date on a different calendar month each year) which are designed to provide a defined return if the FTSE 100 is at, or above, a predefined level on a specified date. Capital is at risk and there is no guarantee that a positive return will be achieved over a 12 month, or any, period.

Monthly Review

The October contract which has a 7.15% coupon passed by its observation date without breaching the 7,334.98 hurdle and therefore remains in place. The next observation point is the close of the 5th November 2019.

The UK Equity market fell back during October with the FTSE 100 Total Return Index down -1.87%. While the fund NAV per Share also receded during October, -0.10%, this compares favourably with the UK Equity market. The Fund continues to deliver performance at a reduced annualised volatility than that of the FTSE 100 since inception, i.e. 8.1% versus 12.7% respectively.

This recent FTSE 100 strength has increased the current indicated Gross Redemption Yield (GRY) to 6.44%.

As we enter November the FTSE 100 Index is very close to the 5th November strike level of 7,334.98, and recent market volatility could easily result in this investment being rolled into a replacement contract.

Past performance is not necessarily a guide to future performance.

See Overleaf for a strategy overview.

The Passive Defensive Investment Strategy

→ 12 Equal Holdings – Staggered Monthly

An investment into the Fund gives investors **equal** exposure to 12 defined return investments, namely twelve rolling up to six year autocalls (each of which will have a potential maturity date on a different calendar month each year) which are designed to provide a defined return if the FTSE 100 is at, or above, a predefined level on a specified date. Capital is at risk and there is no guarantee that a positive return will be achieved. The objective over time is to ensure investors have diversity of investment timing, investment level and potential return.

→ Example defined return investment returns

Each defined return investment return is dependent on the performance of the FTSE 100 Index.

If, on an annual autocall date, the FTSE 100 Index closes at or above the required level the defined return investment will end and the capital and any accumulated return for each year that has elapsed since the defined return investment start date, will be automatically reinvested into a new defined return investment following the very same strategy, resetting the dates and market levels at that time.

If, however, the FTSE 100 Index closes below the required level on an annual autocall date, the defined return investment will continue to the next annual autocall date.

If, the FTSE 100 Index does not close at or above the required level over any of the six annual autocall dates, the defined return investment will mature, and a capital loss will be incurred should the FTSE level be below 60% of the defined return investment start date.

Bold

Autocall Coupons are the current potential returns based on the level of the FTSE 100 as of the 31st October 2019.

Performance Indicators

The table below is a snapshot of the current shape of the Fund.

Market Move	-20%	-10%	0%	10%	20%
Intrinsic Value (GBP)	0.9780	1.3182	1.2035	1.1288	1.1288
Avg Time to Maturity (yrs)	4.39	3.56	1.72	0.47	0.47
Gross Redemption Yield	-2.25%	5.74%	6.44%	9.65%	9.65%

→ Intrinsic value

The intrinsic value is the aggregate terminal value of the Fund taking into account estimated fees over the relevant period (not accounting for additional value from future reinvestment).

→ Average Time to Maturity

The table also shows the weighted average time to maturity of the investments held within the Fund. Currently this is 1.72 years because, at current market levels, all of the autocallable investments are likely to call within 1 to 3 years. This number gives the investor an idea of how long it will take for them to earn the expected GRY.

If the Market (The FTSE 100) moves up by 10%, then at present many of the 12 strategies would be set to mature sooner, and thus the Average Time To Maturity decreases.

→ Gross Redemption Yield

The table above shows the current expected yield of the Fund taking into account estimated fees for certain movements in the underlying indices. This yield is based on the Intrinsic Value and the Average Time to Maturity. For example, if markets do not move, we would expect the Fund to yield 6.44% given its current make-up.

If the Market (The FTSE 100) moves up by 10%, then the Average Time To Maturity decreases, and so does the Intrinsic Value (GBP), and combined this increases the Gross Redemption Yield from 6.44% to 9.65%.
