Report of the Authorised Corporate Director

Legg Mason Investment Funds Limited, the authorised corporate director (the "ACD") of Legg Mason Funds ICVC (the "Company") is pleased to present the Interim Report & Financial Statements for the Company for the half year ended 31 August 2018. The Company is a UK authorised open-ended investment company ("OEIC"). It is organised in the form of an umbrella company and, as at 31 August 2018, has eighteen constituent sub-funds (each a "Fund") spanning major asset classes around the world.

Authorised Status

The Company is an investment company with variable capital ("ICVC") incorporated in England and Wales and was authorised by the Financial Services Authority (now the Financial Conduct Authority) on 31 July 2003 under regulation 12 (Authorisation) of the Open-Ended Investment Companies Regulations 2001, as amended, (the "OEIC Regulations").

Each Fund is operated as a distinct fund with its own portfolio of investments and its own investment objective. The investment objective for each active Fund and the policy for achieving that objective are set out in the "Investment Objective and Policy" section of each Fund's report. The investment activities of each active Fund are set out in the "Portfolio Summary" section of the report and accounts. Shareholders are not liable for the debts of the Company.

Fund Liabilities

Under the OEIC Regulations, each Fund is a segregated portfolio of assets and those assets can only be used to meet the liabilities of, or claims against, that Fund. Whilst the provisions of the OEIC Regulations provide for segregated liability between Funds, the concept of segregated liability is relatively new. Accordingly, where claims are brought by local creditors in foreign courts or under foreign law contracts, it is not yet known whether a foreign court would give effect to the segregated liability and cross-investment provisions contained in the OEIC Regulations. Therefore, it is not possible to be certain that the assets of a Fund will always be completely insulated from the liabilities of another Fund of the Company in every circumstance.

Funds Update

On 9 March 2018, shareholders in the Legg Mason IF QS Emerging Markets Equity Fund were notified of the intention to terminate the Fund The investment manager of the Fund (QS Investors) had decided to stand down as investment manager following a review of its investment offering, the market opportunities available to the Fund and its competitive landscape. Legg Mason Investment Funds Limited (as ACD of the Fund) decided that the Fund had no long-term future and approved its termination subject to approval by the Financial Conduct Authority. The Fund was closed with effect from 23 April 2018.

Economic and Market Overview

Six Months Ended 31 August 2018

Global Economic Review

Global economic growth continued during the six months ended 31 August 2018. In its July 2018 *World Economic Outlook Update*, the International Monetary Fund ("IMF")ⁱ said, "Global growth is projected to reach 3.9 percent in 2018 and 2019, in line with the forecast of the April 2018 *World Economic Outlook*, but the expansion is becoming less even, and risks to the outlook are mounting. The rate of expansion appears to have peaked in some major economies and growth has become less synchronized." From a regional perspective, the IMF projects 2018 growth in the US will be 2.9%, compared to 2.3% in 2017. Growth in the eurozone is forecast to be 2.2%, versus 2.4% in 2017. Japan's economy is expected to expand 1.0% in 2018, compared to 1.7% in 2017. Elsewhere, the IMF projects that overall growth in emerging market countries will accelerate to 4.9% in 2018, versus 4.7% in 2017.

Market Review - Fixed Income

Global fixed income markets generated mixed results during the reporting period. In the US, short-term Treasury yieldsⁱⁱⁱ moved sharply higher as the US Federal Reserve Board ("Fed")^{iv} raised interest rates^v twice over the period and continued to reduce its balance sheet. The Fed currently anticipates making two additional rate hikes in 2018. Longer-term Treasury yields also rose as inflation ticked up. In contrast, longer-term sovereign^{vi} yields in Europe generally declined over the reporting period. Meanwhile, US investment-grade^{vii} corporate bond prices declined, whereas lower-rated corporate bond prices were positive overall. Emerging market^{viii} sovereign debt performed poorly given moderating growth outside the US and concerns over a global trade war. Local currency sovereign debt generated even weaker results, as emerging market currencies largely depreciated versus the US dollar over the reporting period.

Market Review - Global Equitiesix

Global equities generated mixed results during the six months ended 31 August 2018. The U.S. stock market experienced pockets of weakness, but posted a solid return during the reporting period. The market fell sharply in March 2018. This occurred given concerns that the Fed may raise interest rates^x more aggressively than previously expected. In addition, there were fears of a global trade war and several high profile issues in the technology industry. The US market then rebounded and moved higher over the last five months of the reporting period. This turnaround was partially due to corporate profits that largely exceeded expectations. International equities also experienced periods of volatility and produced weak results during the reporting period. In contrast, both developed market and emerging market equities posted weak returns over the reporting period. They were dragged down by a number of factors, including signs of decelerating growth outside the US, concerns over a global trade war and several geopolitical issues.

- The International Monetary Fund ("IMF") is an organization of 189 countries, working to foster global monetary cooperation, secure financial stability, facilitate international trade, promote high employment and sustainable economic growth, and reduce poverty around the world.
- Fixed income bonds.
- Treasury yield interest rates on borrowing that is paid by the government.
- iv US Federal Reserve the central bank of the United States and the most powerful financial institution in the world.
- v Interest rates rates charged or paid for the use of money.
- vi Sovereign or Government bonds are bonds issued by governments.
- vii Investment grade a credit rating that means a government or corporate bond has a relatively low risk of default.
- Financial markets in investment terms, countries whose financial markets are less developed and where investor protection and market infrastructure is often weaker than in developed markets such as the UK.
- ix Equity ownership interest in a corporation in the form of common stock or preferred stock.
- × Interest rates rates charged or paid for the use of money.

Statement of Authorised Corporate Director's Responsibilities

The OEIC Regulations and COLL (together, the "Regulations") require the ACD to prepare financial statements for each annual and half-yearly accounting period which give a true and fair view of the net revenue or net expense and the net capital gains or losses on the property of the Company for the accounting period and the financial position of the Company as at the end of the period.

In preparing the financial statements the ACD shall:

- select suitable accounting policies and apply them consistently;
- comply with the Statement of Recommended Practice for financial statements of authorised Funds issued by the Investment Management Association in May 2014, COLL, the Prospectus and Instrument of Incorporation;
- follow generally accepted accounting principles and applicable accounting standards, subject to any material departures which shall be disclosed the explained in the financial statements;
- keep proper accounting records which enable it to demonstrate that the financial statements as prepared comply with the above requirements; and
- take reasonable steps for the prevention and detection of fraud or other irregularities.

General Information

Investment Brandywine Global

Manager Investment Management

Fund Size £138.6m Sector N/A

Fund Launch 19 December 2011

Investment Objective and Policy

The objective of this Fund is to generate income in all market conditions over a rolling 3-5 year period. While the Fund's priority is to generate income, it will also seek to preserve capital. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in (i) government and corporate debt securities, convertible securities, mortgage backed securities and asset backed securities that are listed or traded on regulated markets; (ii) units or shares of collective investment schemes which may include collective investment schemes managed or operated by the ACD or an associate of the ACD; and (iii) financial derivative instruments, such minimum percentage consisting solely of the

assets set out at (i) above, or a combination of (i) and (ii), of (i) and (iii), or of (i), (ii) and (iii). The Fund will invest in a combination of investment grade and below investment grade bonds (as measured by Standard & Poor's, Moody's or an equivalent external rating agency), convertible bonds, spot and forward foreign exchange contracts, credit default swaps and other financial derivative instruments which may be used for investment purposes as well as efficient portfolio management purposes. A minimum of 80% of the Fund's net asset value will be invested in securities or derivatives that are either denominated in Sterling or, if denominated in other currencies, are hedged to Sterling. No more than 10% of the Fund's net asset value may be invested in units or shares of collective investment schemes. The Fund may also invest in other transferable securities, money market instruments and deposits. When deemed appropriate by the Fund's investment manager, the Fund may hold synthetic short positions, on individual securities, indices, currencies and/or interest rates. Although the Fund aims to generate income in all market conditions whilst seeking to preserve capital, this objective is not guaranteed; the objective may not be achieved; the Fund may experience negative returns and investors may not get back the amount originally invested.

Legg Mason IF Brandywine Global Income Optimiser Fund

The Legg Mason IF Brandywine Global Income Optimiser Fund decreased by 0.91% in sterling terms over the period under review, while the IA Sterling Strategic Bond sector recorded a decrease in sterling terms of 0.11%.

Q. What were the leading contributors to performance during the reporting period?

A. The largest contributor to the Fund's performance was its tactical exposure to US high yield credit through the use of derivatives (CDX). This was beneficial for results as their spreads narrowed during the period they were held by the Fund. This occurred given overall strong corporate profits and sold investor demand. An allocation to Colombian sovereign debt was beneficial as it offered attractive yields and benefited from rising oil prices. We closed the position in the spring of 2018. Tactical exposure to US Treasuries was also additive for returns. We closed the position to capture profits.

Q. What were the leading detractors from performance during the reporting period?

A. The Fund's exposures to Indonesian, Mexican and South African government bonds were the largest detractors from performance. Indonesia was negatively impacted by rising external debt and monetary tightening by its central bank. Investor sentiment for Mexico was challenged given uncertainties surrounding its July 2018 elections and concerns over NAFTA negotiations. Political uncertainties also dragged down South African bonds, as did the lack of structural reforms, moderating growth in China (its largest trading partner) and falling gold prices. All three positions were eliminated from the portfolio during the reporting period. Elsewhere, the Fund had a short position in German bonds at the beginning of the reporting period. This negatively impacted performance as the bond subsequently rallied and we closed the position.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. We meaningfully adjusted the portfolio during the reporting period and moved to reduce its overall risk exposure. This change was made given the deteriorating macro backdrop. In particular, accelerating growth in the US and rising inflation prompted continued monetary policy tightening by the US Federal Reserve Board ("Fed") and rising interest rates across the US yield curve. In addition, growth outside the US moderated and global trade tensions increased. Against this backdrop, we closed the Fund's emerging market sovereign and local emerging market positions in countries such as Columbia, Indonesia, Malaysia and South Africa. We also adjusted the Fund's duration exposure, covering our short German bond position, eliminating our long Italian bond position and paring our US Treasury exposure. In contrast, we added duration in safe havens such as the UK and France.

At the end of the reporting period, the Fund was defensively positioned. While we are cautiously optimistic on the global economy, near term challenges, such as slowing growth in China, possible missteps by the Fed and global trade concerns lead us to believe capital preservation should be paramount for the time being. Should the macro backdrop improve, we will look to opportunistically add risk back into the portfolio.

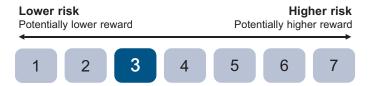

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in a diversified portfolio of bonds from various countries and sectors have historically been subject to relatively small fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the Fund may not be able to repay the investment or pay the interest due on it, leading to losses for the Fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Low rated bonds: The Fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Asset-backed securities: The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the Fund. These types of investments may also be difficult for the Fund to sell quickly.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Hedging: The Fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the Fund and base currency of the Fund itself (hedging). However, hedging transactions can also expose the Fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the Fund

Interest rates: Changes in interest rates may negatively affect the value of the Fund. Typically as interest rates rise, bond values fall.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Fund counterparties: The Fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

² Launched on 2 October 2017.

Legg Mason IF ClearBridge Global Equity Income Fund

General Information

Investment ClearBridge Investment,

Manager LLC
Fund Size £32.4m
Sector Global Growth
Fund Launch 23 May 2008

Investment Objective and Policy

The objective of the Fund is to achieve income and capital growth through investment primarily in a range of equity and equity-related securities. The Fund seeks to achieve its objective by investing globally in quality companies which the investment manager believes are undervalued. There is a focus on dividend yield and potential for capital growth. The Fund may also invest in other investments as permitted by the FCA Rules as applicable from time to time, which may include: units or shares in other collective investment schemes (up to a maximum of 10% of the net asset value of the Fund) and warrants (up to

a maximum of 5% of the net asset value of the Fund). The Fund may also use derivatives for efficient portfolio management as explained in the Prospectus.

Legg Mason IF ClearBridge Global Equity Income Fund

The Legg Mason IF ClearBridge Global Equity Income Fund declined 1.14% in sterling terms during the period under review while its index, the MSCI World (Net) Index, recorded a gain in sterling terms of 10.14%.

Q. What were the leading contributors to performance during the reporting period?

A. An underweight allocation to the Consumer Staples sector was the primary contributor to performance. Among individual stocks, Kohl's, Roche, Exelon, Target and Marr were the top contributors.

Q. What were the leading detractors from performance during the reporting period?

A. Stock selection in the Consumer Discretionary, Financials and Industrials sectors as well as an underweight allocation to the Information Technology sector detracted the most from performance. Among individual stocks, the leading detractors included Hosa International, Cyrela Brazil Realty, BNP Paribas, Prosiebensat.1 Media and Renewi.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the period, the Fund's largest country allocations were to the UK, the US and France. Its largest sector exposures were to Financials, Consumer Discretionary and Industrials.

The Fund added a number of new positions, with the largest being Dick's Sporting Goods, IBM, Pfizer Schlumberger and Thai Union Group, and closed several positions, the largest being WPP, Modern Times Group, Kemira, Cyrela Brazil Realty and Ascendas India Trust.

Going forward, the manager will be looking for potential opportunities in out-of-favour companies in pro-cyclical sectors such as Consumer Discretionary, companies targeting rising domestic demand in Emerging Markets ("EM") regions as well as EM companies adopting a strong dividend culture indicated by strong dividend growth.

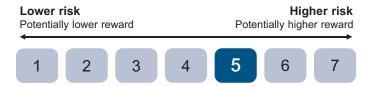

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in shares of companies from various countries and sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets or more developed countries.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Group 1 Group 2	Net Income 1.3853 0.8768	Equalisation – 0.5085	Distribution payable 31.10.18 1.3853 1.3853	Distribution paid 31.10.17 1.2510 1.2510

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF ClearBridge US Equity Fund

General Information

Investment ClearBridge Investment,

Manager LLC
Fund Size £36.0m
Sector North America
Fund Launch 01 January 2003

Investment Objective and Policy

The objective of this Fund is to achieve capital growth principally through investment in securities of US issuers. The Fund seeks to achieve its objective by investing at least 80% in securities of US issuers which the investment manager believes are undervalued. The Fund may also invest up to 20% of its assets in securities of non-US issuers. At least 50% of the net asset value of the Fund will be invested in equity securities. The Fund may also invest in other investments to the extent permitted by the FCA Rules as applicable from time to time, which may include: units or shares in other collective investment schemes (up

to a maximum of 10% of the net asset value of the Fund) and warrants (up to a maximum of 5% of the net asset value of the Fund). The Fund may also use derivatives for efficient portfolio management as explained in the Prospectus.

The Fund will usually be invested in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF ClearBridge US Equity Fund

The Legg Mason IF ClearBridge US Equity Fund rose by 10.08% in sterling terms over the period under review, while its index, the S&P 500 Index, recorded a gain in sterling terms of 14.45%.

Q. What were the leading contributors to performance during the reporting period?

A. Stock selection in the Energy and Utilities sectors contributed to relative returns. The leading contributors to performance for the reporting period were Allergan, Microsoft, Devon Energy, Alphabet and XL Group.

Q. What were the leading detractors from performance during the reporting period?

A. Stock selection in the Consumer Discretionary and Information Technology ("IT") sectors detracted from performance, as did an overweight to the Financials sector. The leading detractors from performance during the reporting period were Adient, Brighthouse Financial, Realogy, Synchrony Financial and Stericycle.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. The most significant changes to the portfolio were the purchase of Merck, in the Health Care sector, and the sale of XL Group, in the Financials sector. At the end of the period the portfolio was positioned with its largest active overweights in the Health Care and Financials sectors; its largest underweights were to the Consumer Discretionary and IT sectors.

The U.S. has enjoyed sizable profit margin growth due to lower interest rates, lower wages and lower taxes. Now higher rates, anti-trade policies and rising labor costs could pressure U.S. profit margins. Meanwhile, there is record U.S. net debt outside a recession, and sovereign debt has exploded. Company balance sheets are not prepared for higher rates, as asset prices would fall while debt service costs rise. We are therefore carefully watching signs of spreading liquidity risk: emerging market contagion, high yield spreads widening, a normalizing term premium, U.S. profit margins missing because of higher costs.

We find the opportunity set for U.S. assets to be modestly positive, and with select opportunities. The Financials sector, for example, should be the biggest beneficiary of higher rates and a higher term premium. We also believe oil will be in undersupply unless capital expenditures increase materially, and investors have never been this negative on energy companies with oil at current prices. Selective drug companies, meanwhile, look attractive from a valuation standpoint and should bolster defensive positioning should it be necessary.

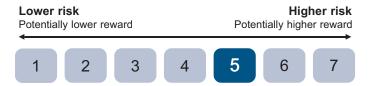

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other Funds) in shares of US companies from various sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in the United States, which means that it is more sensitive to local economic, market, political or regulatory events in the United States, and will be more affected by these events than other Funds that invest in a broader range of regions.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Legg Mason IF ClearBridge US Equity Income Fund

General Information

Investment ClearBridge Investment,

Manager LLC
Fund Size £37.0m
Sector North America
Fund Launch 17 October 2011

Investment Objective and Policy

The objective of this Fund is to provide total return by seeking to provide income as well as long-term capital growth over a rolling three to five year period. Although the Fund seeks to provide total return through income generation and capital growth over a rolling three to five year period, there is no guarantee that this will be achieved over such a time period, or any time period. The Fund's capital is at risk. The Fund seeks to achieve its objective by investing at least 70% of its net assets in US equity or US equity related securities, which the investment manager believes have the ability to maintain or increase dividends or

income distributions over the longer term. The Fund may from time to time invest in preferred and convertibles securities as well as fixed-income securities of any quality when the investment manager believes such securities provide a compelling yield opportunity consistent with the Fund's overall objective of total return. The total amount invested in such assets will not exceed 30% of the Fund's net assets. The Fund may invest up to 20% of its net assets in equity or equity related securities of non-US issuers (with market capitalisations generally of at least \$10 billion). The Fund may also invest in other transferable securities, money market instruments, deposits and collective investment schemes. The investment manager's investment process emphasises the individual security selection of companies which it believes have assets or earnings power that are either unrecognized or undervalued.

Legg Mason IF ClearBridge US Equity Income Fund

The Legg Mason IF ClearBridge US Equity Income Fund increased by 11.30% in sterling terms during the period under review, while its index, the S&P 500 Index, rose in sterling terms by 14.45%.

Q. What were the leading contributors to performance during the reporting period?

A. Stock selection in the Consumer Staples and Information Technology ("IT") sectors contributed the most to relative performance. The leading contributors to performance during the reporting period were Microsoft, Apple, Merck, Union Pacific and Home Depot.

Q. What were the leading detractors from performance during the reporting period?

A. An overweight to the Consumer Staples sector and an underweight to the IT sector detracted the most. Stock selection in the Consumer Discretionary and Energy sectors also detracted. The leading detractors from performance during the reporting period were 3M, International Paper, Blackrock, AT&T and Anheuser-Busch InBev.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. During the period the portfolio initiated positions in PNC Financial and Suncor Energy. We closed positions in Lamb Weston and Kimberly-Clark. At the end of the period the portfolio's largest overweights were to the Consumer Staples and Materials sectors; its largest underweights were to the IT and Health Care sectors.

After trending steadily upward throughout 2017, the market has entered a choppier phase. With earnings this year getting a pop from corporate tax cuts, we expect another strong year of dividend increases. Valuations for all asset classes are on the fuller side, but recent volatility has created valuation discrepancies across sectors in a way that had not been present before. As investors digest the recent market moves and map out portfolio allocations for the road ahead, we expect investors will return to dividend-growth stocks. This is a trend we have seen before in previous cycles of rising interest rates. We believe that holding a portfolio of high-quality dividend growers is an attractive investment proposition for today's current economic and market backdrop.

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Summary of Significant Changes

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in shares of US companies from various sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Bonds: There is a risk that issuers of bonds held by the Fund may not be able to repay the investment or pay the interest due on it, leading to losses for the Fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation.

Geographical focus: This Fund invests primarily in the United States, which means that it is more sensitive to local economic, market, political or regulatory events in the United States, and will be more affected by these events than other Funds that invest in a broader range of regions.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the share classes value and may cause the share class to lose as much as or more than the amount invested in the derivatives.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Japan Equity Fund

General Information

Investment Shiozumi Asset

Manager Management Company

Fund Size £1,111m Sector Japan

Fund Launch 22 October 1996

Investment Objective and Policy

The objective of the Fund is to achieve capital growth through investment in securities of Japanese companies. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in the securities of Japanese companies, which have above average growth prospects relative to the shares of Japanese companies as a whole. The Fund may hold up to 10% of its net asset value in cash or near cash where, in the Investment Manager's opinion, attractive investment opportunities cannot be found. In exceptional market conditions and/or for liquidity management purposes, the Fund may hold cash or near cash in excess of 10% of its net asset value.

Legg Mason IF Japan Equity Fund

The Legg Mason IF Japan Equity Fund returned 1.84% in sterling terms during the period under review, while its benchmark, the Japan TSE First Section (Topix) Index, returned 1.27% in sterling terms.

Q. What were the leading contributors to performance during the reporting period?

A. The leading contributors to performance were Monotaro, an online supplier of factory-use supplies, Start Today, Japan's largest online fashion retailer, and GMO Payment Gateway, a provider of credit card settlement services to e-commerce companies and public agencies.

Q. What were the leading detractors from performance during the reporting period?

A. The leading detractors from performance were Cyberdyne, a developer and manufacturer of robotics for medical use, Nihon M&A Center, a merger and acquisition ("M&A") consultant for smaller companies, and Nintendo, a developer, manufacturer and seller of game hardware and software in the home entertainment industry.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. Our investment strategy remained the same, with the portfolio focusing on domestic-oriental sectors that we believe will be major beneficiaries from workstyle reforms. These include medical & nursing care services, outsourcing business and e-commerce companies. At the end of the reporting period, health care-related holdings accounted for 27.8% of the portfolio, elderly-related companies represented 10.2% of the portfolio, consumption-related companies (including online businesses) represented 29.5% of the portfolio, internet service companies represented 8.1% of the portfolio, and human resources and outsourcing companies represented 19.2% of the portfolio.

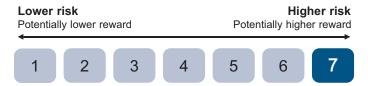

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Summary of Significant Changes

Risk and Reward Profile - Classes A Accumulation, X Accumulation

Risk and Reward Profile - Classes A Accumulation (Hedged), X Accumulation (Hedged)

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other funds) in shares of small cap Japanese companies from various sectors have historically been subject to large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in Japan, which means that it is more sensitive to local economic, market, political or regulatory events in Japan, and will be more affected by these events than other Funds that invest in a broader range of regions.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the share classes value and may cause the share class to lose as much as or more than the amount invested in the derivatives.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF Martin Currie Asia Pacific Fund

General Information

Investment Martin Currie

Manager Investment

Management

542 0m

Fund Size £42.9m Sector Asia Pacific Fund Launch 14 February 1994

Investment Objective and Policy

To achieve long-term capital growth through investment in the Asia Pacific region, excluding Japan. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies in any economic sector domiciled or having their principal activities in the Asia Pacific region, excluding Japan. The Fund will invest principally in equity securities but may also invest in other transferable securities, money market instruments, derivatives and forward transactions (for investment purposes as well as efficient portfolio management purposes), deposits and collective investment schemes. The Fund will usually invest in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF Martin Currie Asia Pacific Fund

The Legg Mason IF Martin Currie Asia Pacific Fund increased by 1.89% in sterling terms during the period under review, while its index, the MSCI AC Asia Pacific ex Japan Index (Net) (GBP), decreased in sterling terms by 0.13%.

Q. What were the leading contributors to performance during the reporting period?

A. In regional terms, China made the most significant contribution to performance. The Financials sector was the best-performing sector in relative terms. At a stock level, Chinese oil firm CNOOC, Australian diversified financial group Macquarie and Taiwan-based commercial bank E.Sun Financial fared the best.

Q. What were the leading detractors from performance during the reporting period?

A. India weighed the most on performance, with Information Technology ("IT") the worst-performing sector within the portfolio. At a stock level, Indian financial inclusion services Vakrangee, Australian healthcare firm CSL and Chinese auto-parts company Minth were the worst performers.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to China, Australia and Korea. At a sector level, the biggest allocations were to IT, Financials and Consumer Discretionary. New purchases over the period were pan-Asian retailer Dairy Farm and Korean online game developer Com2uS. Sales included Korean car parts firm Hyundai Mobis, Korean manufacturer Hyundai Steel and we sold depositary receipts in satellite TV service Dish TV (the portfolio had received these following an arbitrage trade when the company purchased competitor Videocon – another sale over the period).

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The fund is in its risk/reward category because a concentrated investment (the fund holds fewer investments than many other funds) in shares of companies from various Asian countries and sectors has historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in Asia, which means that it is more sensitive to local economic, market, political or regulatory events in Asia, and will be more affected by these events than other Funds that invest in a broader range of regions.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF Martin Currie China Fund

General Information

Investment Martin Currie
Manager Investment
Management
Fund Size £4.9m
Sector China
Fund Launch 10 March 2010

Investment Objective and Policy

The objective of the Fund is to achieve long-term capital growth through investment in China. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies listed in China or with significant assets, investments, production activities, trading or other business interests in China, or which derive a significant part of their revenue from China. The Fund will invest principally in equity securities but may also invest in other transferable securities, money market instruments, derivatives and forward transactions (for investment purposes as well as efficient portfolio management purposes), deposits and collective investment schemes. Investors should note

that the investment manager deems 'China' to include the People's Republic of China and Hong Kong. Therefore any reference to 'China' should be construed and interpreted accordingly. The Fund may from time to time invest in all or any of the above mentioned territories. The Fund may, from time to time, and at the investment manager's discretion, be invested in a lesser number of stocks than is typical of an equity fund. This may result in a high percentage of cash being held in the Fund while investment decisions are made as to the portfolio selection or because of short term trading imbalances. This could have an impact on the performance of the Fund. Under normal circumstances, the Fund will invest in a concentrated portfolio (typically 30-50 holdings).

Legg Mason IF Martin Currie China Fund

The Legg Mason IF Martin Currie China Fund decreased by 7.45% in sterling terms during the period under review, while its index, the MSCI Zhong Hua (Net) (GBP), decreased 5.23%.

Q. What were the leading contributors to performance during the reporting period?

A. In sector terms, Health Care stocks fared the best in the portfolio. At a stock level, WuXi Biologics was the top performer. Internet and entertainment giant Tencent and China Conch Venture Holdings, a Hong Kong-based firm, providing environmental-protection solutions, were also strong performers.

Q. What were the leading detractors from performance during the reporting period?

A. The Consumer Discretionary sector was the worst performer at a portfolio level. In stock terms, materials firm China Molybdenum weighed the most on returns. Sinopec, which trades petroleum and petrochemical products and auto-parts supplier Nexteer Automotive were also notable detractors.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to the Information Technology and Financials sectors. Purchases over the period included instant-noodle manufacturer Tingyi, property developer Agile Group and gas supplier ENN Energy. Sales included e-commerce company JD.Com, pharmaceutical Sino Biopharm and real estate investment trust Link REIT.

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other Funds) in shares of Chinese companies from various sectors has historically been subject to large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Investment in China: The Fund invests in China and is subject to the risk of significant change in political, social or economic policy in China, which may negatively affect the value of such investments.

Geographical focus: This Fund invests primarily in China, which means that it is more sensitive to local economic, market, political or regulatory events in China, and will be more affected by these events than other Funds that invest in a broader range of regions.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF Martin Currie Emerging Markets Fund

General Information

Fund Size

Investment Martin Currie
Manager Investment
Management

Sector Emerging Markets
Fund Launch 09 September 1991

£21.9m

Investment Objective and Policy

The objective of the Fund is to achieve long-term capital growth through investment in emerging markets. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies domiciled or having their principal activities in emerging market countries. The Fund will invest principally in equity securities but may also invest in other transferable securities, money market instruments, derivatives and forward transactions (for investment purposes as well as efficient portfolio management purposes), deposits and collective investment schemes. The Fund will usually invest in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF Martin Currie Emerging Markets Fund

The Legg Mason IF Martin Currie Emerging Markets Fund decreased by 4.02% in sterling terms during the period under review, ahead of the MSCI EM Index (Net) (GBP), which decreased in sterling terms by 4.79%.

Q. What were the leading contributors to performance during the reporting period?

A. In regional terms, Korea was the best performer over the period. At a sector level, Ithe Information Technology ("IT") sector fared the best within the portfolio. At a stock level, EPAM Systems, a global provider of software engineering, Chinese oil firm CNOOC and chipmaker Taiwan Semiconductor were the most notable positives.

Q. What were the leading detractors from performance during the reporting period?

A. Turkey was the most notable detractor over the period, while the Health Care sector weighed the most on returns. In stock terms, Turkish mobile operator Turkcell, Brazilian conglomerate Cosan and Turkish financial Arkbank were the worst performers.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to China, Korea and Taiwan. In sector terms, the largest allocation was to the IT, Consumer Discretionary and Financials sectors. Purchases over the period included Chinese car firm Brilliance, Korean storage battery manufacturer Samsung SDI and Taiwan-based manufacturer Globalwafers. Chinese car manufacturer Dongfeng and South African mobile operator Telkom were both sold over the period.

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

General Information

Investment Martin Currie
Manager Investment
Management
Fund Size £15.7m
Sector Europe
Fund Launch 06 May 1985

Investment Objective and Policy

The objective of the Fund is to provide an annual yield in excess of the MSCI Europe (ex UK) Index (Net) as well as the potential for capital growth through investment in Continental Europe. Although the Fund seeks to provide an annual yield in excess of that of the MSCI Europe (ex UK) Index (Net), as well as the potential for capital growth, this objective is not guaranteed; the objective may not be achieved; the Fund may experience negative returns and investors may not get back the amount originally invested. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies listed in Continental Europe. The Fund will invest principally in equity securities but may also

invest in other transferable securities, money market instruments, deposits and collective investment schemes. The Fund will invest in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF Martin Currie European Equity Income Fund

The Legg Mason IF Martin Currie European Equity Income Fund decreased by 0.38% in sterling terms during the period under review, compared with the MSCI Europe ex UK Index (Net) (GBP), which rose in sterling terms by 3.38%.

Q. What were the leading contributors to performance during the reporting period?

A. In regional terms, Switzerland made the most significant contribution to performance. Energy and Real Estate were the best-performing sectors in relative terms. At a stock level, German real estate firm Deutsche Wohnen, Spanish Bank Santander and Italian oil & gas company Eni were the most notable positives.

Q. What were the leading detractors from performance during the reporting period?

A. Germany weighed the most on performance, with Consumer Discretionary the worst-performing sector within the portfolio. At a stock level, Italian financial Intesa Sanpaolo, Danish jeweller Pandora and French international bank BNP Paribas were the worst performers.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to Germany and France. At a sector level, the biggest allocations were to the Financials sector, along with the Health Care sector. Over the period, we bought German pharmaceutical and life sciences company Bayer, and sold Pandora.

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The fund is in its risk/reward category because a concentrated investment (the fund holds fewer investments than many other funds) in shares of companies from various European countries and sectors has historically been subject to relatively large fluctuations in value

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in Europe, which means that it is more sensitive to local economic, market, political or regulatory events in Europe, and will be more affected by these events than other Funds that invest in a broader range of regions.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting From inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Charges from capital: The Fund's fees and expenses may be taken from its capital (rather than income). This will result in an increase in income available for distribution to investors. However, this will forego some of the capital that the share class has available for future investment and potential growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Martin Currie Global Equity Income Fund

General Information

Investment Martin Currie
Manager Investment

Fund Size £166.6m
Sector North America
Fund Launch 01 November 2010

Investment Objective and Policy

The objective of this Fund is to achieve income, with the potential for capital growth over the long term, by investing in securities of companies listed globally. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in equity securities listed or traded on markets anywhere in the world, whether directly or via financial derivative instruments. The Fund's investment in financial derivative instruments will generally be below 25% of its net asset value. However, from time to time, the investment manager may invest more than this if it believes it is in the interest of the Fund. The Fund will invest in companies which are believed to generate a strong cash flow and provide sustainable or increasing dividends. The Fund will invest in a concentrated portfolio (typically 35-55 holdings).

Legg Mason IF Martin Currie Global Equity Income Fund

The Legg Mason IF Martin Currie Global Equity Income Fund increased by 7.42% in sterling terms during the period under review, while the IA Global Equity Income sector rose in sterling terms by 6.01%

Q. What were the leading contributors to performance during the reporting period?

A. North America and Information Technology ("IT") made the largest absolute contributions to performance over the reporting period. At a stock level, computer giant Microsoft was the top performer over the period, with US pharmaceutical Merck and Canadian integrated energy firm Suncor also notable positives.

Q. What were the leading detractors from performance during the reporting period?

A. No regions or sectors detracted from absolute performance over the period, although emerging markets and Consumer Discretionary were flat in terms of their contribution. The worst performers over the period were German tyre manufaFcturer Continental, UK DIY retailer Kingfisher and US tobacco company Philip Morris.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weighting was to North America. At a sector level, the biggest allocations were to Financials, IT and Industrials. Purchases over the period included US materials firm Air Products and Chemicals, UK utility SSE and Swiss insurer Zurich. Sales included Australian diagnostic laboratory-medicine companies Sonic Healthcare, Swiss flavours, fragrances & cosmetic manufacturer Givaudan and Canadian financial Bank of Montreal.

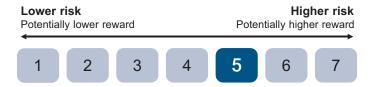

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Summary of Significant Changes

For the six months ended 31 August 2018

Purchases	Costs £'000	Sales	Proceeds £'000
Air Products & Chemicals	4,175	Sonic Healthcare	4,105
SSE	4,030	Givaudan	3,971
Zurich Insurance	3,864	Bank of Montreal	3,627
Meggitt	3,208	ING	3,590
Akzo Nobel	3,172	Meggitt	3,208
Prudential	2,436	Banca Generali	2,736
Sanofi	1,714	Prudential	2,291
Shanghai Fosun Pharmaceutical	1,652	British American Tobacco	1,919
Merck	1,631	AT&T	1,636
Microsoft	927	Credicorp	1,211
WEC Energy	841	Chevron	1,170
BCE	774	3M	876
DS Smith	561	Huntington Bancshares	476
Sonic Healthcare	438	CiixaBank	160
AT&T	296	Prudential November 2018	101
		British American Tobacco July 18	96
		Lockheed Martin September 2018	82
		Prudential	78
Total purchases for the period	29,719	Total sales for the period	31,333

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other Funds) in shares of companies from various countries and sectors has historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Hedging: The Fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the Fund and base currency of the Fund itself (hedging). However, hedging transactions can also expose the Fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the Fund.

Leverage: The Fund may use derivatives to help try to achieve the Fund's objective which may result in the Fund being leveraged. Leverage magnifies the exposure of the Fund to be greater than the underlying investments and can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested or the premium received from selling (writing) put and call options.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Charges from capital: The Fund's fees and expenses may be taken from its capital (rather than income). This will result in an increase in income available for distribution to investors. However, this will forego some of the capital that the share class has available for future investment and potential growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Launched 31 January 2017.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Martin Currie Japan Alpha Fund

General Information

Investment Martin Currie
Manager Investment
Management
Fund Size £99.7m
Sector Japan

Fund Launch 16 January 2006

Investment Objective and Policy

The objective of the Fund is to achieve capital growth, through investment in Japan. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of large and medium sized companies domiciled in or having their principal activities in Japan. The Fund will invest principally in equity securities but may also invest in other transferable securities, money market instruments, deposits and collective investment schemes. The Fund may, from time to time, and at the investment manager's discretion, be invested in a lesser number of stocks than is typical of an equity fund. This may result in a high percentage of cash being held in the Fund while investment decisions are made as to

the portfolio selection or because of short term trading imbalances. This could have an impact on the performance of the Fund. The Fund will invest in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF Martin Currie Japan Alpha Fund

The Legg Mason IF Martin Currie Japan Alpha Fund increased by 1.18% in sterling terms during the period under review, while its index, the Topix (with dividend), rose in sterling terms by 1.27%.

Q. What were the leading contributors to performance during the reporting period?

A. In sector terms, Consumer Discretionary fared the best in the portfolio. At a stock level, online fashion retailer Start Today was the top performer. Car maker Suzuki Motor and multinational conglomerate Sony were also strong performers.

Q. What were the leading detractors from performance during the reporting period?

A. The Industrials sector was the worst performer at a portfolio level. In stock terms, materials firm Sumitomo Metal Mining weighed the most on returns. Chemicals company Kansai Paint and electronics and electrical-equipment manufacturer Mitsubishi Electric were also notable detractors.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to the Consumer Discretionary and Industrials sectors. Purchases over the period included Sony Corporation, banking name Sumitomo Mitsui Financial Group and Sumitomo Metal Mining Company. Sales included construction-equipment manufacturer Komatsu, lighting-equipment maker Koito and electronics giant Panasonic.

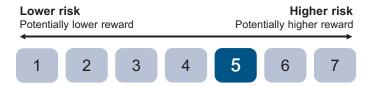

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile - Classes A and X Accumulation

Risk and Reward Profile - Class X Accumulation (Hedged)

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other funds) in shares of small cap Japanese companies from various sectors have historically been subject to large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in Japan, which means that it is more sensitive to local economic, market, political or regulatory events in Japan, and will be more affected by these events than other Funds that invest in a broader range of regions.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the share classes value and may cause the share class to lose as much as or more than the amount invested in the derivatives.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Group 2	_	1.0074	1.0074	0.7688

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Martin Currie North American Fund

General Information

Investment Martin Currie Investment

Manager Management
Fund Size £132.3m
Sector North America
Fund Launch 01 September 1983

Investment Objective and Policy

The objective of the Fund is to achieve capital growth through investment in the United States of America and Canada. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies domiciled or having their principal activities in the United States of America and Canada. The Fund will invest principally in equity securities but it may also invest in units in other transferable securities, money market instruments, deposits and collective investment schemes. The Fund will usually invest in a concentrated portfolio (typically around 40 holdings).

Legg Mason IF Martin Currie North American Fund

The Legg Mason IF Martin Currie North American Fund increased by 14.66% in sterling terms during the period under review, while its index, the MSCI North America Index (Net) (GBP), rose in sterling terms by 14.11%.

Q. What were the leading contributors to performance during the reporting period?

A. In sector terms, the Information Technology ("IT") stocks fared the best in the portfolio. At a stock level, HCA Holdings, an operator of healthcare facilities, was the top performer. EPAM Systems, a global provider of software engineering, and ADP, which produces human-resources management software, were also strong performers.

Q. What were the leading detractors from performance during the reporting period?

A. The Consumer Staples and Industrials sectors were the worst performers at a portfolio level. In stock terms, financial Bank OZK weighed the most on returns. Tobacco manufacturer Philip Morris and computer games firm Electronic Arts were also notable detractors.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to IT and Health Care sector. Purchases over the period included Electronic Arts, Agilent Technologies, which makes analytical laboratory instruments, and Mettler Toledo, a manufacturer of measurement & precision instruments. We sold Danaher, a conglomerate making products for environmental, life sciences, dental, and industrial technologies, Aptiv & Delphi Technologies (which were formed by Delphi Automotive when it split into two at the end of 2017) and Anadarko Petroleum.

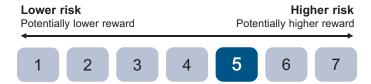

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other Funds) in shares of North American companies across various sectors has historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in North America, which means that it is more sensitive to local economic, market, political or regulatory events in North America, and will be more affected by these events than other Funds that invest in a broader range of regions.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF QS UK Equity Fund

General Information

Investment

Manager QS Investors LLC

Fund Size £33.8m

Sector UK All Companies Fund Launch 31 October 1995

Investment Objective and Policy

The objective of this Fund is to achieve capital growth through investment in quoted securities of UK companies. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in dividend paying stocks issued by large and mid-cap UK company shares listed on the London Stock Exchange and being constituents of the FTSE All Share Index. The Fund may also invest in other investments as permitted by the FCA Rules as applicable from time to time, which may include collective investment schemes (up to a maximum of 10% of the net asset value of the Fund). The Fund may also use derivatives for efficient portfolio management as explained in the Prospectus.

Legg Mason IF QS UK Equity Fund

The Legg Mason IF QS UK Equity Fund increased 6.14% in sterling terms over the period under review while its index, the FTSE All-Share Index, rose in sterling terms by 5.59%.

For the six months ended 31 August 2018, the portfolio outperformed the FTSE All Share Index (FTSE Index), and achieved its investment objective of offering attractive yields and lower volatility than the FTSE Index.

Stock selection benefited the Fund for the six-month period across most sectors, chiefly in Consumer Staples, Information Technology, and Telecommunication Services. Selection was materially weak only in Consumer Discretionary. In addition, sector allocation benefited the portfolio.

Q. What were the leading contributors to performance during the reporting period?

A. Stock selection benefited the Fund for the six-month period across most sectors, chiefly in Consumer Staples, Information Technology, and Telecommunication Services. In addition, sector allocation benefited the portfolio. The Fund was overweight Utilities and Industrials, and underweight Telecommunication Services, the weakest performing sector.

Q. What were the leading detractors from performance during the reporting period?

A. Selection was materially weak only in the Consumer Discretionary sector. Underweights in Health Care and Energy were the only notable detractors from a sector allocation perspective.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. There were no significant changes to the portfolio over the six-month reporting period. The most notable changes included increasing the overweight in Financials ex-Banks, reducing the overweight in Utilities, and increasing the underweight in Health Care. Portfolio beta to the FTSE Index as of August 2018 month end was 0.66, and current yield was 5.3%, higher than the 4.3% current yield of the FTSE Index. The portfolio was most overweight in Utilities and Consumer Discretionary and most underweight in Health Care.

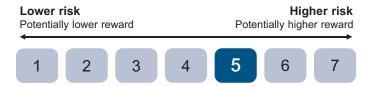

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in shares of UK companies from various sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in the United Kingdom, which means that it is more sensitive to local economic, market, political or regulatory events in the United Kingdom, and will be more affected by these events than other Funds that invest in a broader range of regions.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF RARE Global Infrastructure Income Fund

General Information

Investment RARE Infrastructure

Manager Limited Fund Size £381.1m

Sector Global Infrastructure

Fund Launch 01 July 2016

Investment Objective and Policy

To provide investors with an income comprised of dividends with a secondary investment objective of long-term capital growth. The Fund seeks to achieve its objective by investing primarily in a diverse range of global listed infrastructure securities across a number of infrastructure sub-sectors such as gas, electricity and water utilities, toll-roads, airports, rail and communication infrastructure and across different geographic regions, under normal market conditions. The investments of the Fund will primarily include securities listed on stock exchanges of developed countries. However, in order to ensure that the Investment Manager retains full flexibility to seek exposure to infrastructure securities on a global basis,

investors should note that up to 20% of the Fund's net asset value may be invested in securities (including depositary receipts) of developing countries in circumstances where such markets present opportunities consistent with the Fund's investment objective. The Fund may also invest in recently issued securities not yet listed on a securities exchange but that are expected to be listed within 12 months of purchase and derivative instruments up to a maximum of 10% of the Fund's net asset value. Although it is intended that the Fund will normally be invested in accordance with the limits set out above, the Investment Manager may decide that, due to market conditions and in the interests of the Fund and its shareholders, it would be appropriate to hold more or less, or perhaps even significantly more or less than this where it is in the interests of the Fund and its shareholders to do so and where such action is consistent with the Fund's investment objective. Derivatives and forward transactions may be used by the Fund for investment purposes and for the purposes of efficient portfolio management (including hedging).

Legg Mason IF RARE Global Infrastructure Income Fund

The Legg Mason IF RARE Global Infrastructure Income Fund increased by 9.34% in sterling terms during the period under review.

Q. What were the leading contributors to performance during the reporting period?

A. On a regional basis, USA & Canada was the top contributor to monthly performance (+4.55%) of which US electric NRG Yield (+0.88%) and Canadian gas Enbridge (+0.83%) were the lead performers.

NRG Yield (NYLD) is a US Yield Co which own and operate contracted renewable and conventional generation and thermal infrastructure assets. In February, NYLD announced that Global Infrastructure Partners (GIP) had acquired full ownership interest in NYLD. In August NYLD reported Q2 results above consensus expectations. Further with the GIP and NYLD deal nearing close, the market is turning more optimistic on NYLD's outlook under a new capital rich parent with international scale across renewables.

Enbridge's (ENB) core business is owning and operating one of the largest oil and gas pipeline networks in North America. The company also owns regulated gas distribution utilities in Ontario, and a fast-growing portfolio of renewable power assets in North America and Europe. The share price of ENB rallied significantly during the period under review for the following reasons:

- 1) In May ENB announced plans to simplify their corporate structure. In effect this could see all of the company's core liquid and gas pipeline assets come under the umbrella of one single listed entity. The market reacted positively to this announcement.
- 2) In May ENB also announced a \$3.2 billion asset sale in an effort to address leverage concerns.
- 3) Lastly, in June, the Minnesota Public Utilities Commission approved the Line 3 oil pipeline replacement project. While this is subject to a number of approvals, this announcement provided a boost to the share price of the stock.

Q. What were the leading detractors from performance during the reporting period?

A. Italian diversified infrastructure company Atlantia (ATL) was the largest detractor from performance (-1.27%). The collapse of the Polcevera road bridge in Genoa on 14 August focused the market's attention on Autostrade per l'Italia (ASPI), ATL's core Italian toll road asset. The press has been reporting on the wide-ranging measures that various politicians within the new coalition Government have put forward. These include rescinding the concession without compensation, to the more benign continuation of ASPI's current concession, but with greater oversight on investment from a more hands-on independent regulator and compensation for families and the Genoa community as well as funds for the bridge reconstruction. The Investment Committee is closely monitoring this event and engaging with key stakeholders to determine the valuation impact.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. On a regional level, the Fund's largest exposure is in USA & Canada and consists of exposure to utilities (36%) and economically sensitive sectors (3%). We have increased our conviction in North American pipelines as the valuations have been very attractive. Additionally, US Utilities continued to show signs of value and, as such, during the course of the year, the Investment Committee slowly increased the Strategy's exposure to this sub-sector.

For the Legg Mason IF RARE Global Infrastructure Income Fund, the primary quantitative tool in portfolio construction is the Excess Return, on which RARE's stock ranking system is based. As such, driven by valuation, the key shift in the composition of the Legg Mason IF RARE Global Infrastructure Income Fund, during the period of analysis, include:

- 1. Decreased exposure to Western Europe from 39% to 31%. We exited Spanish gas operator Gas Natural Fenosa and European satellite operator SES S.A.
- 2. Increased exposure to North America from 29% to 38%. Specifically, we:
 - Increased our exposure to North American electric sector from 11% to 19% as this sector continued to show signs of value. We initiated positions in Dominion Energy, Edison International, TerraForm, Duke Energy and Emera.
 - Increased our conviction in North American pipelines as the valuations have been very attractive. In particular, we increased our
 position in Williams Company and Enbridge.

Looking ahead, the manager continues to believe that it is prudent to retain a core exposure to more defensive, higher income utility companies, balanced against selected exposure to infrastructure, which is more sensitive to economic growth.

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

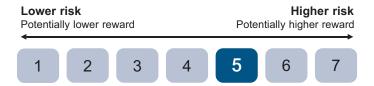

Summary of Significant Changes

^{*} Real Estate Investment Trust.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than any other Funds) in shares of infrastructure companies from various countries and sectors have historically been subject to relatively large fluctuations in value

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Investment in infrastructure: The Fund invests in shares of infrastructure companies, and the value of these shares can be negatively affected by economic or regulatory occurrences affecting their industries. Investments in new infrastructure projects carry risks where they may not be completed within the budget, agreed timeframe or specifications. Operational and supply disruptions can also have a negative effect on the value of the company's shares.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Concentrated fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Charges from capital: The Fund's fees and expenses may be taken from its capital (rather than income). This will result in an increase in income available for distribution to investors. However, this will forego some of the capital that the share class has available for future investment and potential growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Royce US Smaller Companies Fund

General Information

Investment

Manager Royce & Associates, LP

Fund Size £230.3m

Sector North American Smaller

Companies
Fund Launch 29 March 2004

Investment Objective and Policy

The objective of this Fund is to achieve capital growth, principally through investment in securities of smaller US companies. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in the securities of US smaller companies, measured at the time of investment, with emphasis placed on finding companies that possess excellent business strengths and/or prospects, high internal rates of return and low leverage, and whose securities are trading significantly below the investment manager's estimate of their current worth. The Fund may also invest in other investments to the extent permitted by the FCA Rules as applicable from time to time, which may include: collective investment

schemes (up to a maximum of 10% of the net asset value of the Fund) and convertible securities of companies with market capitalisations above US\$ 5 billion.

Legg Mason IF Royce US Smaller Companies Fund

The Legg Mason IF Royce US Smaller Companies Fund trailed its small-cap benchmark over the period, increasing 17.30% in sterling terms over the period under review while its index, the Russell 2000 Index, increased in sterling terms by 22.80%.

Q. What were the leading contributors to performance during the reporting period?

A. For the six-month period, eight of the portfolio's nine equity sectors made positive contributions to performance. The most significant contribution by far came from the large and diverse Information Technology sector, followed by sizable gains for Industrials, Consumer Discretionary, and Energy. Materials was the lone detracting sector, and its net losses were modest.

Q. What were the leading detractors from performance during the reporting period?

A. Relative to the small-cap Russell 2000 Index, the Fund was hurt most by stock selection and, to a lower degree, its larger exposure to the Industrials sector, particularly in the machinery industry. The portfolio's significantly lower weighting in the Health Care sector – one of the top performers in the small-cap index for the period under review – also detracted, as did the Fund's cash position. By contrast, the Fund was helped on a relative basis by strong stock picks in the Energy sector, where equipment & services holdings Pason Systems, TGS-NOPEC Geophysical Company, and Oil States International all performed well. Stock selection was also a strength in the Consumer Discretionary sector, thanks in large part to specialty retailers Caleres and Monro as well as Movado Group. Overall, sector allocation played a larger role in underperformance than stock selection for the period.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. We were pleased with our positioning at the end of June. Valuations for many holdings appear to have priced in the negative macro headlines and look to be trading on the questionable assumption that short-term profit pressures will not abate. We see things much differently, as financial reports and our meetings with managements both reveal consistently positive evidence in sales and order trends, along with specific actions being taken to improve margins, e.g., price increases and investments in automation. These businesses performed far better than their stocks did in the first half. If they deliver earnings growth, then we believe a strong case can be made for rotation into these names, especially since they offer both attractive growth prospects and the potential for multiple expansion. Several holdings looked not only well-positioned to us for a sustained improvement on existing growth trends, but many also appeared poised to benefit from a rebound for cyclical sectors, such as Industrials, large swaths of Information Technology, and Financials. Many holdings in these sectors continued to trade at steeper-than-normal discounts to defensives at the end of the first half, despite strong fundamentals and earnings growth outlooks. This gave us encouragement about the portfolio's prospects going forward.

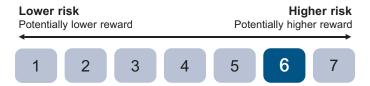

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile - Class A Accumulation (Hedged)

Risk and Reward Profile - Classes A Accumulation, X Accumulation (Hedged) & X Accumulation

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments is shares of small cap US companies from various sectors have historically been subject to large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in the United States, which means that it is more sensitive to local economic, market, political or regulatory events in the United States, and will be more affected by these events than other Funds that invest in a broader range of regions.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the share classes value and may cause the share class to lose as much as or more than the amount invested in the derivatives.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

General Information

Investment Western Asset

Manager Management Company

Fund Size £374.2m
Sector Global Bond
Fund Launch 23 May 2008

Investment Objective and Policy

The objective of the Fund is to maximise total return through income and capital appreciation by diversifying across a range of fixed income securities, sectors and currencies. The Fund seeks to achieve its objective by investing globally, principally in debt and fixed income securities denominated in currencies of a variety of developed and emerging market countries. A minimum of 80% of the Fund's net asset value will be invested in debt and fixed income securities that are either denominated in Pounds sterling or, if denominated in other currencies, hedged to Pounds sterling. Consequently, no more than 20% of the Fund's net asset value may be exposed to currencies other than Pounds sterling. The Fund will invest more than 40% (and up to 100%) of the assets of the Fund in

debt securities rated Investment Grade at the time of purchase, or if not rated, deemed by the investment manager to be of comparable quality. The Fund invests across the major fixed income sectors including high yielding, emerging market debt securities and loans (in each case to the extent permitted by the FCA Rules). The Fund may also invest in other investments to the extent permitted by the FCA Rules as applicable from time to time, which may include: units or shares in other collective investment schemes (up to a maximum of 10% of the net asset value of the Fund), preferred shares and equity securities acquired via conversions of convertible debt securities (up to a maximum of 10% the net asset value of the Fund) and derivatives for investment purposes as well as efficient portfolio management purposes.

Legg Mason IF Western Asset Global Multi Strategy Bond Fund

The Legg Mason IF Western Asset Global Multi Strategy Bond Fund decreased 2.77% in sterling terms over the period under review, while the IA Global Bond sector recorded an increase in sterling terms of 1.80%.

Q. What were the leading contributors to performance during the reporting period?

A. The Fund's bias to longer dated US dollar issues benefited performance as the yield curve flattened. The Fund's exposures to bank loans and high-yield corporate bonds were also beneficial, albeit to a lesser extent.

Q. What were the leading detractors from performance during the reporting period?

A. Turmoil in emerging markets intensified during the reporting period. This was driven by a combination of US dollar strength as the US Federate Reserve Board continued to normalize monetary policy and negative idiosyncratic developments in Turkey or Argentina that fed through the broader universe. Against this backdrop, the Fund's allocation to emerging market bonds was the largest detractor from performance over the period.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. Several changes were made in the portfolio's allocation to emerging markets over the reporting period. Emerging market currency positioning was rebalanced in order to reduce the overall risk in the portfolio. In addition, some profits were taken in certain local exposures in Poland and Brazil. Elsewhere, a short Australian dollar position was initiated as a hedge against declining global growth.

At the end of the reporting period, the portfolio remained diversified between emerging market (local and hard currency bonds), high-yield and investment-grade corporate bonds and government bonds. The portfolio's exposure to US Treasuries was used as a ballast against a risk-off environment, during which government bond yields tend to decline.

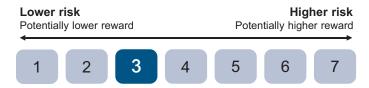

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in a diversified portfolio of bonds from various countries and sectors have historically been subject to relatively small fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the Fund may not be able to repay the investment or pay the interest due on it, leading to losses for the Fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Asset-backed securities: The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the Fund. These types of investments may also be difficult for the Fund to sell quickly.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Hedging: The Fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the Fund and base currency of the Fund itself (hedging). However, hedging transactions can also expose the Fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the Fund

Interest rates: Changes in interest rates may negatively affect the value of the Fund. Typically as interest rates rise, bond values fall.

Fund counterparties: The Fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Statement of Total Return (unaudited)

For the six months ended 31 August 2018

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

General Information

Fund Size

Investment Western Asset

Manager Management Company

Limited £12.5m

Sector UK Corporate Bond Fund Launch 12 February 1998

Investment Objective and Policy

The objective of the Fund is to provide a regular income stream, in excess of the prevailing level of interest rates in the U.K., with a focus on capital preservation. The Fund seeks to achieve its objective by investing in a range of fixed interest securities including, but not limited to, corporate bonds, government bonds and asset backed securities. The Fund will invest a minimum of 60% of its net asset value in global investment grade corporate bonds and UK government bonds (gilts). In addition, the Fund may invest up to 35% of its net asset value in global high yield bonds. The Fund may also invest in other transferable securities, money market instruments, deposits, collective investment schemes and

derivatives for efficient portfolio management only. Any instrument denominated in a currency other than Pounds sterling will normally be hedged back to Pounds sterling.

Legg Mason IF Western Asset Retirement Income Bond Fund

The Legg Mason IF Western Asset Retirement Income Bond Fund increased 0.99% in sterling terms over the period under review, while the IA Sterling Strategic Bond sector recorded a decrease in sterling terms of 0.11%.

Q. What were the leading contributors to performance during the reporting period?

A. The Fund targets a fixed asset allocation of 20% gilts, 50% investment-grade corporate bonds and 30% high-yield corporate bonds. The largest contributor to performance was the Fund's allocation to gilts.

Q. What were the leading detractors from performance during the reporting period?

A. The largest detractor from performance was the Fund's exposure to investment-grade corporate bonds, as their spreads widened during the reporting period.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. There were no significant changes to the portfolio during the reporting period.

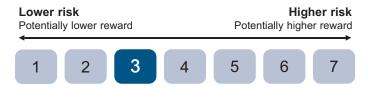

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The fund is in its risk/reward category because mixed investments in UK government and global bonds have historically been subject to relatively small fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the Fund may not be able to repay the investment or pay the interest due on it, leading to losses for the Fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Low rated bonds: The Fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds.

Asset-backed securities: The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the Fund. These types of investments may also be difficult for the fund to sell quickly.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Hedging: The Fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the Fund and base currency of the Fund itself (hedging). However, hedging transactions can also expose the Fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the Fund

Interest rates: Changes in interest rates may negatively affect the value of the Fund. Typically as interest rate rise, bond values fall.

Fund counterparties: The Fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Glossary

Accommodative policy – one aiming to stimulate the economy through, for example, lower interest rates in order to encourage spending and discourage saving.

Asset – a financial instrument that is typically held in stocks, share or bond form. An owner of an asset usually holds it with an intention of receiving future returns.

Bailout – a term used to describe the financial aid provided to a collapsed financial organisation.

Blended average rating – an indication of the risk in a bond fund. The rating averages all of the credit ratings within a bond fund and is often expressed in a letter format such as BB.

Bond – a debt investment in which an investor loans money to an entity (corporate or governmental) that borrows the funds for a defined period of time at a fixed interest rate.

Bond ratings – bond ratings, here using Standard & Poor's grades, are expressed as letters ranging from 'AAA', which is the highest grade, to 'C', which is the lowest grade.

Bull market (also referred to as a 'Bullish' view) - a market in which share prices are rising, encouraging buying.

Commodity – a basic good used in commerce that is interchangeable with other commodities of the same type. Traditional examples of commodities include grains, gold, beef, oil and natural gas.

Consumer discretionary – goods and services typically purchased with discretionary income (income received after the deduction of basic living costs and tax).

Consumer staples – these are goods that are purchased which are purchased by consumers regardless of their finances. These typically include products such as food, tobacco, household goods and alcohol.

Corporate bond – a bond issued by a corporation to raise money effectively in order to expand its business.

Correlation - a statistical measure of how two financial securities move in relation to each other.

Credit – a debt investment in which an investor loans money to an entity (corporate or governmental) that borrows the funds for a defined period of time at a fixed interest rate.

Credit spreads – a credit spread is the difference in yield between two bonds of similar maturity but different credit quality. For example, if the 10-year Treasury note is trading at a yield of 6% and a 10-year corporate bond is trading at a yield of 8%, the corporate bond is said to offer a 200-basis-point (i.e. 2%) spread over the Treasury.

Credit quality - the perceived risk of a bond.

Currency markets – markets in which participants from around the world are able to buy, sell, exchange and speculate on different currencies.

Cyclical - more dependent on the prevailing state of, or changes in, the economic environment.

Debt market - the bond/fixed income market.

Defensive – less dependent on changes in the economy.

Deflation – a sustained decrease in the general price level of goods and services in an economy over a period of time.

Developed market – in investing, a developed market is a country that is most developed in terms of its economy and capital markets.

Dividend – a distribution of a portion of a company's earnings to a class of its shareholders.

Duration – a measure of the sensitivity of an asset against rising and falling interest rates. The duration of a financial asset that consists of fixed cash flows. For a bond, this is the weighted average of the times until those fixed cash flows are received.

Economic indicators – statistics about economic activity.

Emerging markets – in investment terms, countries whose financial markets are less developed and where investor protection and market infrastructure is often weaker than in developed markets such as the UK.

Equity – ownership interest in a corporation in the form of common stock or preferred stock.

European Central Bank - the central bank responsible for the monetary system of the European Union (EU) and the euro currency.

Fiscal – typically refers to revenue that belongs to the government.

Fixed income - bonds.

Fundamentals – the qualitative and quantitative information that contributes to the economic well-being and the subsequent financial valuation of a company, security or currency. Analysts and investors analyse these fundamentals to develop an estimate as to whether the underlying asset is considered a worthwhile investment.

Geopolitical - relating to politics, especially international relations, as influenced by geographical factors.

Gilt - a fixed-interest loan security issued by the UK government.

Growth versus value – growth investing focuses on companies that managers believe will experience faster-than-average growth as measured by revenues, earnings or cashflow. Value investing tries to find companies whose stock prices do not necessarily reflect their fundamental worth.

Hedge - an investment made as security, i.e. with the aim of reducing the potential losses of another investment.

Glossary (continued)

High yield bonds – high-paying bonds with lower credit ratings than investment grade corporate bonds. Because of the higher risk of default, these bonds pay a higher yield than investment grade bonds.

Inflation - a sustained increase in the general price level of goods and services in an economy over a period of time.

Infrastructure - this covers investments in areas such as power plants, water treatment facilities, airports, roads.

Interest rates – rates charged or paid for the use of money.

Investment grade - a credit rating that means a government or corporate bond has a relatively low risk of default.

Investor (or market) sentiment – the general prevailing attitude of investors with regard to anticipated price developments in a particular market.

Issue – a term used to describe the activity of selling assets in order to raise capital.

Large caps – a term used by the investment community to refer to companies with a market capitalisation value of more than \$10 billion.

Macro-driven – affected by macroeconomics (the branch of economics concerned with large-scale or general economic factors, such as interest rates and national productivity).

Market capitalisation – or 'market cap' is calculated by taking a firm's current share price and multiplying that figure by the total number of shares outstanding.

Maturity – refers to a finite time period at the end of which the financial instrument (i.e. a bond) will cease to exist and the principal is repaid with interest.

Monetary policy – a country's central bank usually sets the monetary policy that attempts to regulate the supply of money into the country

Overweight (exposure) – is an allocation to a country, region or sector greater than that of the index against which the Fund is benchmarked.

Peripheral – relates to non-essential activities such as non-central business operations.

Qualitative easing – a monetary policy method used by the government and/ or central bank to purchase riskier, lower quality and often less expensive financial assets in comparison to higher quality assets.

Quantitative easing – a method used by the government and/ or central bank increase the money flow into the economy by purchasing financial assets.

Reflation – when a government and/ or central bank implement policies aimed at reducing deflation.

Short position - is the sale of a borrowed security, commodity or currency, with the expectation that the asset will fall in value.

Small caps – refers to a company with a market capitalisation near the low end of the publicly traded spectrum. The boundaries that separate these classifications are not clearly defined and can vary according to the source.

Sovereign or Government bonds – are bonds issued by governments.

Spread sectors – non-governmental fixed income investments with higher yields at greater risk than governmental investments. Underweight exposure – is an allocation to a country, region or sector less than that of the index against which the Fund is benchmarked.

Top-down – driven by broader economic and market themes rather than by company-specific factors.

Treasury yield – interest rates on borrowing that is paid by the government.

Underweight (exposure) – is an allocation to a country, region or sector less than that of the index against which the Fund is benchmarked.

US Federal Reserve - the central bank of the United States and the most powerful financial institution in the world.

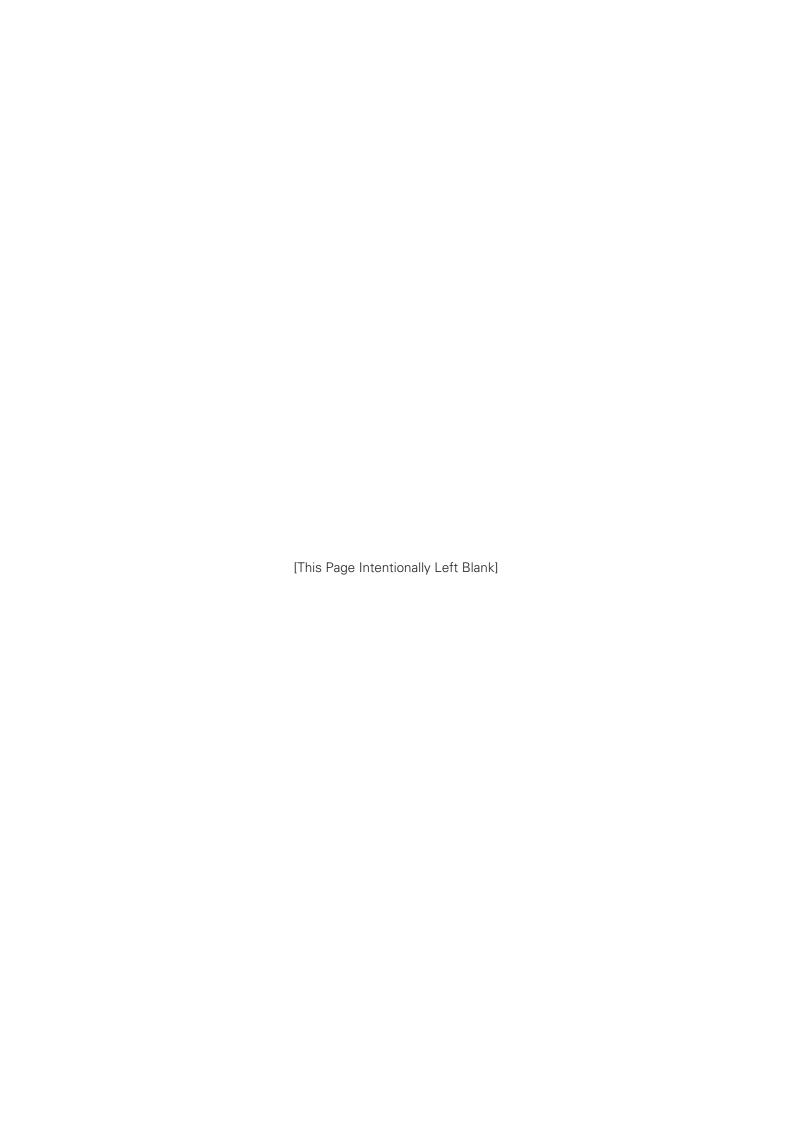

User pays – the concept that products are most valuable the when the consumer has paid the full price for the goods and services consumed

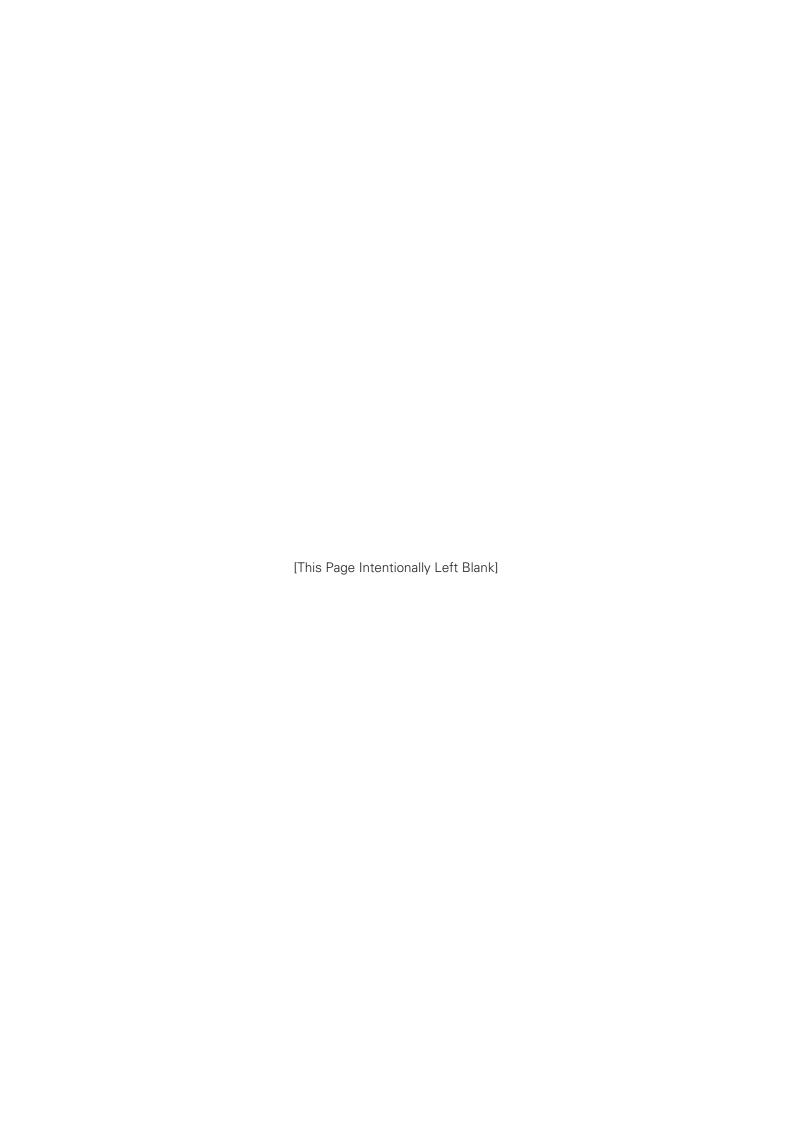

Utility - the asset class that represents investments in areas such as gas, electricity and water.

Volatility - the up and down movement so financial markets.

Yield - the amount in cash (in percentage terms) that returns to the owners of a security, in the form of interest or dividends received

Yield curve - the curve that plots the interest rates, at a set point in time, of bonds having equal credit quality, but differing maturity dates.

Important Information

Please note that past performance is no guide to future returns and you may not get back the amount originally invested. You should be aware that funds and stock market investments should normally be regarded as longer term investments and that they may not be suitable for everyone. Unlike a bank or building society account, the value of your investment can go down if you exercise any right to cancel, and you may not get back the amount originally invested if the share price has fallen since you invested.

A summary of risk factors for the Company is outlined below:

- Fluctuations in exchange rates may affect the value of an investment and any income derived from it. All Funds are permitted to hedge their currency exposure by way of forward currency contracts.
- Investments in the Funds may not be suitable for all investors. Investors should seek independent financial advice.
- The deductions for charges and expenses, in particular the entry charges, are not made uniformly throughout the life of the investment. If you cash in during the early years, you may not get back the amount initially invested.
- For any Fund, until they reach a sufficient size, the proportion of charges and expenses allocated to such a Fund may be higher and so the return on investment in the Fund is more affected by fees and charges than in more established Funds.

The Annual Report and Audited Financial Statements only provides brief information on each Fund which should not be relied upon in making an investment decision. Please refer to the relevant key investor information document and Prospectus for the Company for full description of objectives and risk factors for each Fund.

Each of the investment management companies listed in the brochure is affiliated with the ACD through common control and ownership by Legg Mason, Inc., except for Shiozumi Asset Management Company Limited. The ACD provides its clients with access to such affiliates primarily through its range of Funds within the Company, in which such affiliates serve as investment manager or sub-investment manager. While some of the affiliates are authorised or licensed to conduct business in one or more European jurisdictions, they are not authorised to offer their investment advisory services in all European jurisdictions. Investors' access to such affiliates may be limited to investing only in the Company.

Any eligible complainant having any complaint in respect of the Fund should inform the ACD in writing of the details of the complaint to the Complaints Manager at Legg Mason Investments, 201 Bishopsgate, London EC2M 3AB. This will then be investigated and a reply provided as soon as possible and any appropriate remedial action taken. In addition, eligible complainants will have a right of complaint directly to the Financial Ombudsman Service if he/she is not satisfied with the outcome of the investigation into the complaint. Details of the Financial Services Compensation Scheme established under the Financial Services and Market Act 2000, under which an investor may be entitled to receive compensation if the ACD is unable to meet any of its liabilities to the investor, are available on written request from the ACD.
