Investment Objective and Policy

Schroder UK Growth Fund plc aims to achieve capital growth by investing in the shares of UK companies. The portfolio is biased towards high quality companies which are expected to grow their profits more than the average for the market in the long term. By 'high quality' we mean companies with credible management, a sound and transparent business strategy, and a strong product or service. While the portfolio is reasonably balanced between different sectors of the market, it is managed fairly aggressively in that the fund manager concentrates on around 30-40 companies, allowing him to back his preferred companies more heavily.

Risk Considerations

Trusts which invest in a smaller number of stocks carry more risk than funds spread across a larger number of companies. The trust will invest solely in the companies of one country or region. This can carry more risk than investments spread over a number of countries or regions. The trust may borrow money to invest in further investments, this is known as gearing. Gearing will increase returns if the value of the investments purchased increase in value by more than the cost of borrowing, or reduce returns if they fail to do so. As a result of the annual management fee and finance costs being charged partially to capital, the distributable income of the trust may be higher, but the capital value of the trust may be eroded.

Past performance is not a guide to future performance and may not be repeated. The value of investments and the income from them can go down as well as up and you may not get back the amount originally invested.

Some performance differences between the fund and the benchmark may arise because the fund performance is calculated at a different valuation point from the benchmark.
