

Targeting income and long-term growth from mainly UK companies chosen for their quality and commitment to improving sustainability

Performance Data and Analytics to 30 September 2024

Investment objective

To achieve growth of income and capital from a portfolio invested mainly in companies listed or quoted in the United Kingdom that meet the Company's Sustainable and Responsible investing criteria as set by the Board.

For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to: http://corporate.morningstar.com/us/documents/ MethodologyDocuments/AnalystRatingforFundsMethodology.pdf. The Morningstar Analyst Rating for Funds is a forward-looking analysis of a fund. Morningstar has identified five key areas crucial to predicting the future success of a fund: People, Parent, Process, Performance, and Price. The pillars are used in determining the Morningstar Analyst Rating for a fund. Morningstar Analyst Ratings are assigned on a five-tier scale running from Gold to Negative. The top three ratings, Gold, Silver, and Bronze, all indicate that our analysts think highly of a fund; the difference betwee them corresponds to differences in the level of analyst conviction in a fund's ability to outperform its benchmark and $peers through time, within the context of the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in which the level of risk taken over the long term. \\ Neutral represents funds in the level of risk taken over the long term. \\ Neutral represents funds in the level of risk taken over the long term of the level of risk taken over the long term of the level of risk taken over the long term of the level of risk taken over the long term of the level of risk taken over the long term of the level of risk taken over the long term of the level of risk taken over the long term of the level of risk taken over the long term of the level of the level$ $our \ analysts \ don't \ have \ a strong \ positive \ or \ negative \ conviction \ over \ the \ long \ term \ and \ Negative \ represents \ funds \ that$ possess at least one flaw that our analysts believe is likely to significantly hamper future performance over the long term. Long term is defined as a full market cycle or at least five years. Past performance of a security may or may not be sustained in future and is no indication of future performance. Fund managers' report

UK equities dropped back in September, giving up some of the gains of the year so far. There were a number of significant geopolitical and macroeconomic developments during the month. First, the Federal Reserve of the United States opted to cut interest rates by a larger than expected 0.5%, reflecting some concerns over the health of the labour market. Alongside this there was a further escalation of tensions in the Middle East with the intensity of the conflict in Lebanon deepening, while we also saw a significant rally in Chinese related equities as investors speculated over the prospects for significant government support for the economy. As a result, metals prices gained sharply following a period of extended softness, as did companies with significant exposure to China. Domestic economic data continued to be mixed, particularly regarding the labour market and possible sources of inflation, the Bank of England opted to hold interest rates at their September meeting.

This was a quiet period for activity in the portfolio. Having reduced our position on relative strength in recent months we exited our small remaining holding in building materials manufacturer Marshalls, given a valuation that we felt more than reflected a recovery in their end markets. Alongside this, several options were written to generate additional income.

Within the Trust we saw strong returns over the month from companies exposed to Chinese demand and perceived as potential beneficiaries of government stimulus such as life insurer Prudential, animal genetics developer Genus and mining equipment manufacturer Weir Group. In contrast, Close Brothers was weak after releasing subdued results, weaker capital formation and realising a somewhat underwhelming price for the sale of their asset management division.

^c Expressed as a percentage of average daily net assets for the year ended 31 January 2024. The Ongoing Charges Figure (OCF) is the overall cost shown as a percentage of the value of the assets of the Company. It is made up of the Annual Management Fee and other charges. It does not include any costs associated with buying shares in the Company or the cost of buying and selling stocks within the Company. The OCF can help you compare the annual operating expenses of different Companies.

D Calculated using the Company's historic net dividends and month end share price.

^E The 'Active Share' percentage is a measure used to describe what proportion of the Company's holdings differ from the benchmark index holdings.

F Net gearing is defined as a percentage, with net debt (total debt less cash/cash equivalents) divided by shareholders' funds.

We continued to buy back our own shares in the market, seeing the discount to net assets as very attractive, particularly when we believe the underlying portfolio is excellent value.

The UK macroeconomic picture, while still subdued, looks more encouraging than it did at the turn of the year. An easing of monetary policy will also help support this. Meanwhile the starting valuation of the market, and the portfolio, reflects low expectations and this could provide the opportunity for strong prospective returns. M&A remains a prominent feature and stock buy backs a helpful support. There have been ongoing signs of international investors returning. A cocktail of a steady economy, declining interest rates and a softer pound could be very compelling for UK equities. Alongside this, more support for the global economy could also be helpful given the UK equity market's significant exposure to overseas revenues. That said, risks remain, particularly from elevated geopolitical tensions and a potentially polarising US election result in November. We shall continue to seek a balance to our positioning, giving ourselves the potential to perform in a range of market environments and seek to participate in new opportunities in good companies with attractive long-term prospects that at the same time meet our sustainable investing criteria.

Summary of Current Key Commercial Arrangements

The Company has appointed abrdn Fund Managers Limited (aFML), a wholly owned subsidiary of abrdn plc, as its alternative investment fund manager. aFML has been appointed to provide investment management, risk management, administration and company secretarial services and promotional activities to the Company.

The Company's portfolio is managed by abrdn Investments Limited (alL) by way of a group delegation agreement in place between aFML and alL. aFML has subdelegated administrative and secretarial services to abrdn Holdings Limited, promotional activities to alL, and fund accounting services to BNP Paribas Fund Services UK LImited.

Details of the management fees and fees payable for promotional activities are shown in notes 4 and 5 to the financial statements in the annual report. The management agreement is terminable on not less than six months' notice. In the event of termination by the Company on less than the agreed notice period, compensation is payable to the Manager in lieu of the unexpired notice period.

No performance fee.

Important Information

The Statement of Operating Expenses is designed to help investors understand the impact of operating expenses on financial performance.

 $Operating\ expenses\ are\ NOT\ deducted\ from\ the\ value\ of\ an\ investor's\ shareholding,\ which\ is\ derived\ from\ the\ share\ price.$

The market value (share price) of all publicly traded companies reflects a wide range of factors, including the estimated impact of operating expenses on future financial performance.

 $The \ market \ value \ of \ an \ investment \ trustmay \ diverge \ materially, both \ positively \ and \ negatively, from \ the \ reported \ net \ asset \ value.$

Publication date: 14 October 2024

Important information

Risk factors you should consider prior to investing:

- The value of investments, and the income from them, can go down as well as up and investors may get back less than the amount invested.
- Past performance is not a guide to future results.
- · Investment in the Company may not be appropriate for investors who plan to withdraw their money within 5 years.
- The Company may borrow to finance further investment (gearing). The use of gearing is likely to lead to volatility in the Net Asset Value (NAV) meaning that any movement in the value of the company's assets will result in a magnified movement in the NAV.
- The Company may accumulate investment positions which represent more than normal trading volumes which may make it difficult to realise investments and may lead to volatility in the market price of the Company's shares.
- The Company may charge expenses to capital which may erode the capital value of the investment.
- Derivatives may be used, subject to restrictions set out for the Company, in order to manage risk and generate income. The market in derivatives can be volatile and there is a higher than average risk of loss.
- · There is no guarantee that the market price of the Company's shares will fully reflect their underlying Net Asset Value.
- As with all stock exchange investments the value of the Company's shares purchased will immediately fall by the difference between the buying and selling prices, the bid-offer spread. If trading volumes fall, the bid-offer spread can widen.
- Certain trusts may seek to invest in higher yielding securities such as bonds, which are subject to credit risk, market price risk and interest rate risk. Unlike income from a single bond, the level of income from an investment trust is not fixed and may fluctuate.
- Yields are estimated figures and may fluctuate, there are no guarantees that future dividends will match or exceed historic dividends and certain investors may be subject to further tax on dividends.
