

ASI UK Equity Fund

(From 7 August 2019 the fund name was amended from Aberdeen UK Equity Fund to ASI UK Equity Fund)

Class I Accumulation GBP

31 January 2020

Objective

To generate growth over the long term (5 years or more) by investing in UK equities (company shares).

Performance Target: To achieve the return of the FTSE All-Share Index plus 3% per annum over three years (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target. The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Portfolio securities

- The fund will invest at least 70% in equities and equity related securities of companies listed, incorporated or domiciled in the UK or companies that derive a significant proportion of their revenues or profits from UK operations or have a significant proportion of their assets there.
- The fund may also invest in other funds (including those managed by Aberdeen Standard Investments), money-market instruments and cash.

Performance Data: Share Class I Acc. Source: Lipper. Basis: Total Return, NAV to NAV, UK Net Income Reinvested. "Fund (Net)" refers to the actual unit price performance of the shareclass shown; "Fund(Gross)" adds back charges such as the annual management charge to present performance on the same basis as the performance target / performance comparator / portfolio constraining benchmark.

These figures do not include the initial charge; if this is paid it will reduce performance from that shown.

Past performance is not a guide to future returns and future returns are not guaranteed.

Risk and reward profile

Lower risk Typically lower rewards Higher risk Typically higher rewards

This indicator reflects the volatility of the fund's share price over the last five years. See Key Investor Information Document (KIID) for details.

Key risks

- The value of investments and the income from them can fall and investors may get back less than the amount invested.
- A concentrated portfolio may be more volatile and less liquid than a more broadly diversified one. The funds investments are concentrated in a particular country or sector.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

Management process

- The management team use their discretion (active management) to maintain a diverse asset mix at sector and stock level.
- Their primary focus is on stock selection using research techniques to select individual holdings. The research process is focused on finding high quality companies at attractive valuations that can be held for the long term.
- In seeking to achieve the Performance Target, the FTSE All-Share Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation (tracking error) between the returns of the fund and the index, is not ordinarily expected to exceed 9%. Due to the active nature of the management process, the fund's performance profile may deviate significantly from that of the index.

Derivative usage

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as Efficient Portfolio Management).
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.
