

## Hermes Multi-Strategy Credit Fund (the “Fund”) a sub-fund of Hermes Investment Funds plc (the “Company”) Class F Stg£ Acc. Hedged Shares (ISIN: IE00BKRCNB02) Hermes Fund Managers Ireland Limited (the “Manager”)

### Objectives and investment policy

The Fund aims to generate a high level of income over the long term while aiming to minimise volatility.

The Fund is a diversified portfolio that will primarily invest globally in Debt Instruments issued by companies or by governments (such as Bonds and Credit Default Swaps). Some of these may be Unrated.

It may also invest in other financial instruments or products, for example other funds, equities, indices and Derivatives.

The Fund uses Derivatives to assist in achieving its investment objective. The Fund uses Derivatives that may increase or reduce exposure to underlying assets and create leverage.

The Fund may use leverage up to 100% of the value of the Fund. This means that the Fund’s total exposure arising from its investments (including Derivatives) may amount to 200% of the value of the Fund.

The Fund’s base currency is USD but its investments may be priced in other currencies. Derivatives may be used to convert the value of those investments into USD.

**This Share Class will be hedged.** Hedging seeks to minimise exposure to exchange-rate differences between the Share Class currency and the base currency of the Fund (USD).

**You may buy or sell shares in the Fund each business day** (except bank holidays in the UK and Ireland).

**This Share Class is accumulating.** Your portion of any income received will be reinvested. This will be reflected in the value of your shares.

### Useful definitions

- **Credit:** A Fixed Income debt investment (including ‘**Bonds**’) in which the Fund lends money to a government or company, who is then obliged to pay a specified amount back to the purchaser of the bond on a given future date. The amount to be repaid usually includes the original amount (the principal) plus interest (coupons).
- **Credit Default Swap:** A type of Derivative that aims to protect against the loss in value of a Bond. It can also be bought and sold for investment purposes.
- **Derivatives:** Investments whose value is linked to one or more underlying assets.
- **Instruments:** A broad term to describe different ways in which the Fund can invest, such as through a stock, Bond or Derivative.
- **Leverage:** Use of various instruments or borrowed money that increases the exposure of the Fund to its investments – this has the potential to increase both the gain and loss of an investment.
- **Unrated:** Unrated debt that has not been assessed by a recognised rating agency.

### Risk and reward profile

#### Narrative explanation of the indicator and its main limitations:

The value of investments and income from them may go down as well as up and you may not get back the original amount invested.

- Historical data may not be a reliable indication for the future
- Risk category shown is not guaranteed and may shift over time
- The lowest category does not mean ‘risk free’
- This reflects volatility of the Fund based on historic movements of underlying investments.

#### Particular risks not adequately captured by this indicator include:

- **Bonds Risk:** When the Fund invests in debt instruments (such as Bonds), there is a risk that the entity issuing the debt will not be able to repay its original capital or the interest due. Also, the value of the debt instrument may rise or fall as interest rates change.
- **Emerging Markets Risk:** Investing in emerging markets carries certain risks, such as: the exchange rates of emerging market currencies are subject to greater fluctuations, there is less publicly available information about companies, and

there may be higher inflation and more social, economic and political uncertainty than in developed markets.

- **Counterparty Risk:** The Fund will be exposed to any institutions providing custody of assets, deposits or acting as counterparty on financial Derivatives. In the event of a counterparty experiencing financial difficulties, the Fund may be exposed to financial loss.
- **Loan Risk:** The Fund may invest in secured or unsecured loans. In the event of non-payments on a loan, the sale of assets from a secured loan may not match the return expected from the loan repayment.
- **Leverage Risk:** The use of leverage may result in large fluctuations in the net asset value of the Fund, amplifying either gains or losses.
- **Financial Derivative Instruments (“FDIs”) Risk:** The Fund uses Derivatives, the value of which depends on the performance of an underlying asset. Small changes in the price of that asset may cause larger changes in the value of the associated Derivatives, increasing potential gain or loss. Derivatives may increase or reduce the overall volatility of the Fund.
- **Liquidity Risk:** In difficult market conditions, certain Fund investments may be harder to sell at the last quoted market price.
- **Operational Risk:** The potential loss resulting from error or failure arising from people, systems, controls/safeguards or service providers that the Fund relies on.

## Charges for this Fund

The charges you pay are used to pay the costs of running the Fund, including the costs of distributing it. These charges reduce the potential growth of your investment.
