Report of the Authorised Corporate Director

Legg Mason Investment Funds Limited, the authorised corporate director (the "ACD") of Legg Mason Funds ICVC (the "Company") is pleased to present the Interim Report & Financial Statements for the Company for the half year ended 31 August 2019. The Company is a UK authorised open-ended investment company ("OEIC"). It is organised in the form of an umbrella company and, as at 31 August 2019, has eighteen constituent sub-funds (each a "Fund") spanning major asset classes around the world.

Authorised Status

The Company is an investment company with variable capital ("ICVC") incorporated in England and Wales and was authorised by the Financial Services Authority (now the Financial Conduct Authority) on 31 July 2003 under regulation 12 (Authorisation) of the Open-Ended Investment Companies Regulations 2001, as amended, (the "OEIC Regulations").

Each Fund is operated as a distinct fund with its own portfolio of investments and its own investment objective. The investment objective for each active Fund and the policy for achieving that objective are set out in the "Investment Objective and Policy" section of each Fund's report. The investment activities of each active Fund are set out in the "Portfolio Summary" section of the report and accounts. Shareholders are not liable for the debts of the Company.

Fund Liabilities

Under the OEIC Regulations, each Fund is a segregated portfolio of assets and those assets can only be used to meet the liabilities of, or claims against, that Fund. Whilst the provisions of the OEIC Regulations provide for segregated liability between Funds, the concept of segregated liability is relatively new. Accordingly, where claims are brought by local creditors in foreign courts or under foreign law contracts, it is not yet known whether a foreign court would give effect to the segregated liability and cross-investment provisions contained in the OEIC Regulations. Therefore, it is not possible to be certain that the assets of a Fund will always be completely insulated from the liabilities of another Fund of the Company in every circumstance.

Funds Update

On 20 February 2019, shareholders of all Funds were notified of the appointment of BNY Mellon International Ltd ("BNY Mellon") to provide Transfer Agency services to the Company, replacing DST Financial Services International Ltd ("DST"). On 18 March 2019, BNY Mellon replaced DST.

On 10 June 2019, shareholders in the Legg Mason IF Martin Currie Japan Alpha Fund were notified of the resignation of the investment manager of the Fund. On 6 August 2019, shareholders of the Fund were notified that it will be liquidating. On 6 September 2019, the Fund liquidated.

On 30 August 2019, the Company added the Legg Mason IF Martin Currie Asia Unconstrained Fund to the Legg Mason Funds ICVC prospectus. This Fund was launched on 27 September 2019.

Directors of the Authorised Corporate Director

Fionnuala Doris (appointed 18 September 2019) Brian Eakes John Justin Eede Joseph LaRocque (resigned 26 June 2019) Joseph Keane (appointed 18 September 2019) Jaspal Sagger Ursula Schliessler (resigned 26 June 2019) Edward Venner

Economic and Market Overview

Six Months Ended 31 August 2019

Global Economic Review

The global economic expansion continued during the six months ended 31 August 2019, although there were headwinds from globe trade conflicts. In its July 2019 World Economic Outlook Update, the International Monetary Fund ("IMF") said, "Global growth remains subdued. Since the April World Economic Outlook report, the United States further increased tariffs on certain Chinese imports and China retaliated by raising tariffs on a subset of US imports. Global technology supply chains were threatened by the prospect of US sanctions, Brexit-related uncertainty continued, and rising geopolitical tensions roiled energy prices. Against this backdrop, global growth is forecast at 3.2 percent in 2019, picking up to 3.5 percent in 2020. Risks to the forecast are mainly to the downside. They include further trade and technology tensions that dent sentiment and slow investment; a protracted increase in risk aversion that exposes the financial vulnerabilities continuing to accumulate after years of low interest rates; and mounting disinflationary pressures that increase debt service difficulties, constrain monetary policy space to counter downturns, and make adverse shocks more persistent than normal." From a regional perspective, the IMF projects 2019 growth in the US will be 2.6%, compared to 2.9% in 2018. 2019 growth in the eurozone is forecast to be 1.3%, versus 1.9% in 2018. Japan's economy is expected to expand 0.9% in 2019, compared to 0.8% in 2018. Elsewhere, the IMF projects that overall growth in emerging market countries will decelerate to 4.1% in 2019, versus 4.5% in 2018.

Market Review - Fixed Income

The overall global fixed income market produced strong results during the reporting period. Both short- and long-term US Treasury yields declined during the six months ended 31 August 2019. The yield for the two-year Treasury began the reporting period at 2.52% and ended the period at 1.50%. The yield for the ten-year Treasury was 2.73% at the beginning of the reporting period and ended the period at 1.50% (bond yields and prices move in the opposite direction). The Federal Reserve Board (the "Fed")iv raised the federal funds ratev four times in 2018, ending the year at a range between 2.25% and 2.50%. However, in January 2019, the Fed announced the adoption of a data-dependent approach and signaled a pause in rate increases. Finally, as expected, the Fed lowered rates at its meeting in July 2019 to a range between 2.00% and 2.25%. This represented the first cut since 2008. Longer-term sovereign yields in Europe generally trended lower over the period. Elsewhere, investment-gradevi corporate bondsvii and lower-rated corporate bonds posted solid returns, as did US dollar-denominated emerging market sovereign debt.

Market Review - Global Equitiesviii

Global equities generated mixed returns during the reporting period. Despite concerns over trade conflicts, US equities posted solid results. While there were several setbacks, they were more than offset by periods of strength. Supporting the market at times were hopes for progress in US-China trade negotiations and expectations for several Fed rate cuts in the second half of 2019. Elsewhere, developed non-US equities were relatively flat overall during the period. In addition to trade concerns, they were negatively impacted by signs of moderating growth and a number of geopolitical issues, including Brexit. Finally, emerging market^{ix} equities generated poor results. This was partially due to slowing global growth and a strengthening US dollar.

Legg Mason Investment Funds Limited

September 2019

It should be noted that the value of investments and the income from them may go down as well as up. Investment involves risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results.

- ¹ The International Monetary Fund ("IMF") is an organization of 189 countries, working to foster global monetary cooperation, secure financial stability, facilitate international trade, promote high employment and sustainable economic growth, and reduce poverty around the world.
- Fixed income bonds.
- Treasury yield interest rates on borrowing that is paid by the government.
- Federal Reserve Board (the "Fed") is responsible for the formulation of U.S. policies designed to promote economic growth, full employment, stable prices, and a sustainable pattern of international trade and payments.
- The federal funds rate is the rate charged by one depository institution on an overnight sale of immediately available funds (balances at the Federal Reserve) to another depository institution; the rate may vary from depository institution to depository institution and from day to day.
- vi Investment grade a credit rating that means a government or corporate bond has a relatively low risk of default.
- vii Corporate bond a bond issued by a corporation to raise money effectively in order to expand its business.
- viii Equity ownership interest in a corporation in the form of common stock or preferred stock.
- ix Emerging markets in investment terms, countries whose financial markets are less developed and where investor protection and market infrastructure is often weaker than in developed markets such as the UK.

Statement of Authorised Corporate Director's Responsibilities

The OEIC Regulations and COLL (together, the "Regulations") require the ACD to prepare financial statements for each annual and half-yearly accounting period which give a true and fair view of the net revenue or net expense and the net capital gains or losses on the property of the Company for the accounting period and the financial position of the Company as at the end of the period.

In preparing the financial statements the ACD shall:

- select suitable accounting policies and apply them consistently;
- comply with the Statement of Recommended Practice for financial statements of authorised funds issued by the Investment Management Association in May 2014, COLL, the Prospectus and Instrument of Incorporation;
- follow generally accepted accounting principles and applicable accounting standards, subject to any material departures which shall be disclosed the explained in the financial statements;
- keep proper accounting records which enable it to demonstrate that the financial statements as prepared comply with the above requirements; and
- take reasonable steps for the prevention and detection of fraud or other irregularities.

Legg Mason IF Brandywine Global Income Optimiser Fund

General Information

Investment Brandywine Global

Manager Investment Management

Fund Size £162.8m Sector N/A

Fund Launch 19 December 2011

Investment Objective and Policy

The objective of this Fund is to generate income in all market conditions over a rolling three to five year period. While the Fund's priority is to generate income, it will also seek to preserve capital. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in (i) government and corporate debt securities, convertible securities, mortgage backed securities and asset backed securities that are listed or traded on regulated markets; (ii) units or shares of collective investment schemes which may include collective investment schemes managed or operated by the ACD or an associate of the ACD; and (iii) financial derivative instruments, such minimum percentage consisting solely of the

assets set out at (i) above, or a combination of (i) and (ii), of (i) and (iii), or of (i), (ii) and (iii). The Fund will invest in a combination of investment grade and below investment grade bonds (as measured by Standard & Poor's, Moody's or an equivalent external rating agency), convertible bonds, spot and forward foreign exchange contracts, credit default swaps and other financial derivative instruments which may be used for investment purposes as well as efficient portfolio management purposes. A minimum of 80% of the Fund's net asset value will be invested in securities or derivatives that are either denominated in Sterling or, if denominated in other currencies, are hedged to Sterling. No more than 10% of the Fund's net asset value may be invested in units or shares of collective investment schemes. The Fund may also invest in other transferable securities, money market instruments and deposits. When deemed appropriate by the Fund's investment manager, the Fund may hold synthetic short positions, on individual securities, indices, currencies and/or interest rates. Although the Fund aims to generate income in all market conditions whilst seeking to preserve capital, this objective is not guaranteed; the objective may not be achieved; the Fund may experience negative returns and investors may not get back the amount originally invested.

Legg Mason IF Brandywine Global Income Optimiser Fund

The Legg Mason IF Brandywine Global Income Optimiser Fund increased 7.87% in sterling terms over the period under review, while the IA Sterling Strategic Bond sector recorded an increase in sterling terms of 5.73%.

Q. What were the leading contributors to performance during the reporting period?

A. The largest contributor to the Fund's performance was its European sovereign duration exposure, including German and French government bonds, among others. Moderating growth, falling inflation and elevated political risk sparked a rally in high-quality European bonds. In addition, a "dovish pivot" from the European Central Bank triggered declining yields (bond yields and prices move in the opposite direction). The Fund's exposure to US Treasuries was also beneficial for results. The slowdown in growth, tepid inflation, US/China trade uncertainty and the start of easing cycle from the U.S. Federal Reserve Board benefited US government bonds. Elsewhere, allocations to both US corporate high-yield and investment-grade bonds were additive for performance, as they provided relatively attractive coupons and benefited from falling yields.

Q. What were the leading detractors from performance during the reporting period?

A. The Fund's small exposure to Latin America bonds and its allocations to the Mexican peso and Brazilian real detracted from performance. The Fund owned these assets for part of reporting period and our tactical exposure was a headwind for results. This was more to do with external macro environment and the period in which we held these positions, rather than negative domestic developments. The Fund's positioning in the US dollar was also a headwind for returns. We were tactically long and short the US dollar at various points during the reporting period. In aggregate, our positioning in the US dollar was negative for performance.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

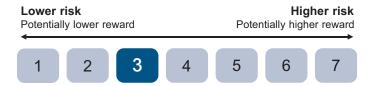

A. High-quality sovereign duration (US Treasuries, along with French, UK and Japanese government bonds) continues to be a large allocation within the portfolio. We continue to have conservative exposure to higher-quality US high-yield and investment-grade corporate bonds, in both cases with a preference for shorter duration securities. We do not have exposure to lower quality assets or highly levered capital structures. Notable sector allocation with corporate credit are Financials, Consumer Non-Cyclicals and Basic Materials.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in a diversified portfolio of bonds from various countries and sectors have historically been subject to relatively small fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the Fund may not be able to repay the investment or pay the interest due on it, leading to losses for the Fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Low rated bonds: The Fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Asset-backed securities: The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the fund. These types of investments may also be difficult for the Fund to sell quickly.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Hedging: The Fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the Fund and base currency of the Fund itself (hedging). However, hedging transactions can also expose the Fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the Fund

Interest rates: Changes in interest rates may negatively affect the value of the Fund. Typically as interest rates rise, bond values fall.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Fund counterparties: The Fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

² Launched on 2 October 2017.

³ Launched on 13 February 2019.

Legg Mason IF ClearBridge Global Equity Income Fund

General Information

Investment ClearBridge Investment,

Manager LLC
Fund Size £25.0m
Sector Global Growth
Fund Launch 23 May 2008

Investment Objective and Policy

The objective of the Fund is to achieve income and capital growth through investment primarily in a range of equity and equity-related securities. The Fund seeks to achieve its objective by investing globally in quality companies which the investment manager believes are undervalued. There is a focus on dividend yield and potential for capital growth. The Fund may also invest in other investments as permitted by the FCA Rules as applicable from time to time, which may include: units or shares in other collective investment schemes (up to a maximum of 10% of the net asset value of the Fund) and warrants (up to

a maximum of 5% of the net asset value of the Fund). The Fund may also use derivatives for efficient portfolio management as explained in the Prospectus.

Legg Mason IF ClearBridge Global Equity Income Fund

The Legg Mason IF ClearBridge Global Equity Income Fund rose by 4.56% in sterling terms during the period under review, while its index, the MSCI World Index, rose in sterling terms by 13.28%.

Q. What where the leading contributors to performance during the reporting period?

A. Stock selection in the Energy and Health Care sectors and an underweight allocation to Health Care were the primary contributors to performance. Among individual stocks, Target, Lumax International, AIG, AT&T and Novartis were the top contributors.

Q. What were the leading detractors from performance during the reporting period?

A. Stock selection in the Consumer Discretionary, Financials, Materials and Industrials sectors as well as an underweight allocation to the Information Technology sector detracted the most from performance. Among individual stocks, the leading detractors included Glencore, Continental, Kohl's, Schlumberger and Galliford Try.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the period, the Fund's largest country allocations were to the US, UK, and France. Its largest sector exposures were to Financials, Industrials and Energy.

The Fund closed a number of positions, with the largest being Dick's Sporting Goods, Rio Tinto, Sumitomo Mitsui Financial Group, Kohl's and Duratex

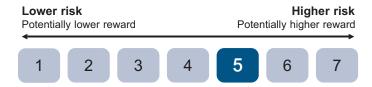

Global value stocks are discounting a sustainably high uncertainty and bleak economic prospects. Any resolution to trade, European geopolitics, and/or improvement in macroeconomic prospects are likely to turn the game. Going forward, the manager will be looking for potential opportunities in out-of-favour companies in pro-cyclical sectors, companies targeting rising domestic demand in emerging markets ("EM") regions as well as EM companies adopting a strong dividend culture indicated by strong dividend growth.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in shares of companies from various countries and sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF ClearBridge US Equity Fund

General Information

Investment ClearBridge Investment,

Manager LLC
Fund Size £30.3m
Sector North America
Fund Launch 1 January 2003

Investment Objective and Policy

The objective of this Fund is to achieve capital growth, principally through investment in securities of US issuers. The Fund seeks to achieve its objective by investing at least 80% in securities of US issuers which the investment manager believes are undervalued. The Fund may also invest up to 20% of its assets in securities of non-US issuers. At least 50% of the net asset value of the Fund will be invested in equity securities. The Fund may also invest in other investments to the extent permitted by the FCA Rules as applicable from time to time, which may include: units or shares in other collective investment schemes (up

to a maximum of 10% of the net asset value of the Fund) and warrants (up to a maximum of 5% of the net asset value of the Fund). The Fund may also use derivatives for efficient portfolio management as explained in the Prospectus. The Fund will usually be invested in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF ClearBridge US Equity Fund

The Legg Mason IF ClearBridge US Equity Fund rose by 10.69% in sterling terms over the period under review, while its index, the S&P 500 Index, recorded a gain in sterling terms of 15.93%.

Q. What where the leading contributors to performance during the reporting period?

A. Stock selection in the Materials and Financials sectors contributed to relative returns. The leading contributors to performance for the period were Royal Gold, Microsoft, American International Group, Allergan and Alphabet.

Q. What were the leading detractors from performance during the reporting period?

A. Stock selection in the Energy, Health Care, Consumer Discretionary and Utilities sectors detracted from performance, as did an underweight to the Information Technology ("IT") sector. The leading detractors from performance during the reporting period were Alexion Pharmaceuticals, Encana, Mylan, Capri Holdings and Halliburton.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. The most significant changes to the portfolio were the purchase of Altria in the Consumer Staples sector, CVS, in the Health Care sector, and Advance Auto Parts in the Consumer Discretionary sector. The portfolio closed several positions, the most significant of which were Merck and Universal Health Services in the Health Care sector and AutoZone in the Consumer Discretionary sector. At the end of the period the portfolio was positioned with its largest active overweights in the Financials and Materials sectors; its largest underweights were to the IT and Consumer Discretionary sectors.

Global bond and equity markets are in total disagreement: the world's sovereign debt markets have priced in a very high probability of recession, while U.S. equity indexes are near record highs. The current challenge for investors is the massive divergence in what feedback has priced into these two major asset classes. Another great divergence in the market is the now-extreme valuation difference between growth and value stocks at a broad level. Expensive stocks are getting more expensive and cheap stocks are getting cheaper, and in a classic sign of feedback the divergence is accelerating. As this process has continued many value stocks are already reflecting a recession. As a result, the market is paying us a nice premium to take on the macro risk from cyclical stocks in the form of attractive free cash flow yields, good existing returns, clean balance sheets and capital returns through buybacks and dividends that are well above the market.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other Funds) in shares of US companies from various sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in the United States, which means that it is more sensitive to local economic, market, political or regulatory events in the United States, and will be more affected by these events than other Funds that invest in a broader range of regions.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Legg Mason IF ClearBridge US Equity Income Fund

General Information

Investment ClearBridge Investment,

Manager LLC
Fund Size £33.5m
Sector North America
Fund Launch 17 October 2011

Investment Objective and Policy

The objective of this Fund is to provide total return by seeking to provide income as well as long-term capital growth over a rolling three to five year period. Although the Fund seeks to provide total return through income generation and capital growth over a rolling three to five year period, there is no guarantee that this will be achieved over such a time period, or any time period. The Fund's capital is at risk. The Fund seeks to achieve its objective by investing at least 70% of its net assets in US equity or US equity related securities, which the investment manager believes have the ability to maintain or increase dividends or

income distributions over the longer term. The Fund may from time to time invest in preferred and convertibles securities as well as fixed-income securities of any quality when the investment manager believes such securities provide a compelling yield opportunity consistent with the Fund's overall objective of total return. The total amount invested in such assets will not exceed 30% of the Fund's net assets. The Fund may invest up to 20% of its net assets in equity or equity related securities of non-US issuers (with market capitalisations generally of at least \$10 billion). The Fund may also invest in other transferable securities, money market instruments, deposits and collective investment schemes. The investment manager's investment process emphasises the individual security selection of companies which it believes have assets or earnings power that are either unrecognized or undervalued.

Legg Mason IF ClearBridge US Equity Income Fund

The Legg Mason IF ClearBridge US Equity Income Fund increased by 18.93% in sterling terms during the period under review, while its index, the S&P 500 Index, rose in sterling terms by 15.93%.

Q. What where the leading contributors to performance during the reporting period?

A. Stock selection in the Consumer Staples, Information Technology ("IT") and Materials sectors contributed the most to relative performance. The leading contributors to performance during the reporting period were Microsoft, American Tower, Home Depot, Apple and Mastercard.

Q. What were the leading detractors from performance during the reporting period?

A. An underweight to the IT sector and an overweight to the Energy sector detracted the most. The portfolio's cash position also weighed on relative results. The leading detractors from performance during the reporting period were 3M, Bank of New York Mellon, Schlumberger, Qualcomm and Pfizer.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. During the period the portfolio initiated positions in Blackstone in the Financials sector and Edison International in the Utilities sector. We closed positions in Bank of New York Mellon in the Financials sector, Costco in the Consumer Staples sector, DuPont de Nemours in the Materials sector, Healthcare Trust of America in the Real Estate sector, Schlumberger in the Energy sector and AT&T in the Communication Services sector. At the end of the period the portfolio's largest overweights were to the Financials and Consumer Staples sectors; its largest underweights were to the IT and Health Care sectors.

The biggest headwind to recent economic growth has been the escalation in trade wars. It goes without saying that lower interest rates do nothing to address these tensions. While these trade conflicts may be resolved with new trade agreements, we do not think the world will return to the laissez-faire trade environment that prevailed until recently. The political environment has changed (both in the U.S. and abroad) and the new nationalism underpinning current trade conflicts is unlikely to dissipate soon. This changing approach to trade is a paradigm shift for the global economy with many and varied ramifications. We feel confident that the markets have not adequately digested or priced in these changes as no one yet knows all the multi-variant ways this retreat from globalization will impact economies, sectors and companies. In a lower-growth world characterized by increased volatility and uncertainty, we continue to believe that a diversified portfolio of high-quality companies with the ability to raise their dividends on a sustainable basis is a good place to be.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in shares of US companies from various sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Bonds: There is a risk that issuers of bonds held by the Fund may not be able to repay the investment or pay the interest due on it, leading to losses for the Fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation.

Geographical focus: This Fund invests primarily in the United States, which means that it is more sensitive to local economic, market, political or regulatory events in the United States, and will be more affected by these events than other Funds that invest in a broader range of regions.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Japan Equity Fund

General Information

Investment Shiozumi Asset

Manager Management Company

Fund Size £993.1m Sector Japan

Fund Launch 22 October 1996

Investment Objective and Policy

The objective of the Fund is to achieve capital growth through investment in securities of Japanese companies. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in the securities of Japanese companies, which have above average growth prospects relative to the shares of Japanese companies as a whole. The Fund may hold up to 10% of its net asset value in cash or near cash where, in the Investment Manager's opinion, attractive investment opportunities cannot be found. In exceptional market conditions and/or for liquidity management purposes, the Fund may hold cash or near cash in excess of 10% of its net asset value.

Legg Mason IF Japan Equity Fund

The Legg Mason IF Japan Equity Fund returned 18.09% in sterling terms over the period under review, while its benchmark, the Japan TSE First Section (Topix) Index, returned 9.16% in sterling terms.

The Fund remains most heavily weighted in the services sector and retail/wholesale companies. The Fund also has meaningful exposures to pharmaceutical companies and information and communications-related stocks.

Q. What where the leading contributors to performance during the reporting period?

A. The leading contributors were M3, operator of medical platform business mainly providing marketing support to pharmaceutical companies, GMO Payment Gateway, provider of credit card settlement services to e-commerce companies and public agencies, Welcia Holdings, operator of drug chain stores, Nihon M&A Center, the M&A consultancy specialized for smaller companies, and Nintendo, developer, manufacturer, and seller of home-use game hardware and software in the home entertainment business.

Q. What were the leading detractors from performance during the reporting period?

A. The leading detractors were Outsourcing, provider of staff placement and outsourcing services for factory production lines and design, Benefit One, a leading welfare business agency for companies and government agencies, and UT Holding, Japan's largest staffing company for the manufacturing sector specialized in semiconductor manufacturing.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

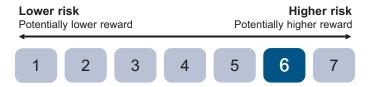

A. The manager's investment strategy continued to remain the same with the portfolio focusing on domestic-oriental sectors that the manager believes will be major beneficiaries from workstyle reforms, such as medical & nursing care services, outsourcing business, and e-commerce. At the end of the reporting period, healthcare related holdings accounted for 32.7%, elderly related companies represented 10.1%, consumption related companies including online business represented 26.6%, internet services companies represented 8.8% and human resources and outsourcing companies 17.9% of the Fund.

Summary of Significant Changes

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other funds) in shares of small cap Japanese companies from various sectors have historically been subject to large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in Japan, which means that it is more sensitive to local economic, market, political or regulatory events in Japan, and will be more affected by these events than other Funds that invest in a broader range of regions.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the share classes value and may cause the share class to lose as much as or more than the amount invested in the derivatives.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Legg Mason IF Martin Currie Asia Pacific Fund

General Information

Investment Martin Currie
Manager Investment
Management

Fund Size £39.1m Sector Asia Pacific Fund Launch 14 February 1994

Investment Objective and Policy

The objective of the Fund is to achieve long-term capital growth through investment in the Asia Pacific region, excluding Japan. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies in any economic sector domiciled or having their principal activities in the Asia Pacific region, excluding Japan. The Fund will invest principally in equity securities but may also invest in other transferable securities, money market instruments, derivatives and forward transactions (for investment purposes as well as efficient portfolio management purposes), deposits and collective investment schemes. The Fund will usually invest in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF Martin Currie Asia Pacific Fund

The Legg Mason IF Martin Currie Asia Pacific Fund increased by 4.41% in sterling terms over the period under review, while its index, MSCI AC Asia Pacific ex Japan Index (Net) (GBP), increased in sterling terms by 5.38%.

Q. What where the leading contributors to performance during the reporting period?

A. In regional terms, China was by far the largest contributor to positive performance, with Singapore also beneficial. At a sector level, Financials was the top performer, with Utilities also faring well. Chinese sports brand Li Ning, Taiwan-based E. Sun Financial and Australian retailer Woolworths were the top-performing stocks.

Q. What were the leading detractors from performance during the reporting period?

A. Australia was the most notable negative from a country perspective with Thailand and Korea also weak. In sector terms, the Communications Services and Information Technology ("IT") weighed the most on performance. At a stock level, China's global distribution system TravelSky was the biggest drag on performance, followed by Hong Kong property developer Sino Land and Chinese train manufacturer Zhuzhou CRRC Times Electric Co.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to China, Korea and Australia. At a sector level, the biggest allocations were to the Financials, Consumer Discretionary and IT. There was one new purchase over the period, China-based pharmaceutical firm YiChang HEC ChangJiang. On the other side, we sold holdings in Korean mobile and online game development Com2us, Indian automobile manufacturer Maruti Suzuki, Indonesian department store Matahari and Indian textile manufacturer Welspun.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other Funds) in shares of companies from various Asian countries and sectors has historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in Asia, which means that it is more sensitive to local economic, market, political or regulatory events in Asia, and will be more affected by these events than other Funds that invest in a broader range of regions.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated Fund: The Fund invests in fewer companies than other funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF Martin Currie China Fund

General Information

Investment Martin Currie
Manager Investment
Management
Fund Size £4.0m
Sector China
Fund Launch 10 March 2010

Investment Objective and Policy

The objective of the Fund is to achieve long-term capital growth through investment in China. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies listed in China or with significant assets, investments, production activities, trading or other business interests in China, or which derive a significant part of their revenue from China. The Fund will invest principally in equity securities but may also invest in other transferable securities, money market instruments, derivatives and forward transactions (for investment purposes as well as efficient portfolio management purposes), deposits and collective investment schemes. Investors should note

that the investment manager deems 'China' to include the People's Republic of China and Hong Kong. Therefore any reference to 'China' should be construed and interpreted accordingly. The Fund may from time to time invest in all or any of the above mentioned territories. The Fund may, from time to time, and at the investment manager's discretion, be invested in a lesser number of stocks than is typical of an equity fund. This may result in a high percentage of cash being held in the Fund while investment decisions are made as to the portfolio selection or because of short term trading imbalances. This could have an impact on the performance of the Fund. The Fund will usually invest in a concentrated portfolio (typically 30-50 holdings).

Legg Mason IF Martin Currie China Fund

The Legg Mason IF Martin Currie China Fund increased by 9.99% in sterling terms during the period under review, while its index, the MSCI Zhong Hua (Net) (GBP), increased by 1.65%.

Q. What where the leading contributors to performance during the reporting period?

A. At a sector level, the Information Technology ("IT") was the leading contributor to returns, with Consumer Staples also beneficial over the period. In stock terms, food and flavourings company Foshan Haitian, electronics firm Luxshare Precision and Jiangsu Hengrui Medicine were the top performers.

Q. What were the leading detractors from performance during the reporting period?

A. Materials was the worst-performing sector within the portfolio, with Real Estate also weighing on performance. The most notable detractors in terms of stocks were online video platform iQIYI, Sino Biopharmaceutical and mineral mining and exploration company China Molybdenum.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to the Financials, Consumer Discretionary and Communication Services sectors. Purchases over the period included Longi Green Energy and Wuliangye Yibin; sales included Xinyi Glass and Zhejjang Dingli Machinery.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other funds) in shares of Chinese companies from various sectors has historically been subject to large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Investment in China: The Fund invests in China and is subject to the risk of significant change in political, social or economic policy in China, which may negatively affect the value of such investments.

Geographical focus: This Fund invests primarily in China, which means that it is more sensitive to local economic, market, political or regulatory events in China, and will be more affected by these events than other Funds that invest in a broader range of regions.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF Martin Currie Emerging Markets Fund

General Information

Investment Martin Currie
Manager Investment
Management

Fund Size £22.2m

Sector Emerging Markets Fund Launch 09 September 1991

Investment Objective and Policy

The objective of the Fund is to achieve long-term capital growth through investment in emerging markets. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies domiciled or having their principal activities in emerging market countries. The Fund will invest principally in equity securities but may also invest in other transferable securities, money market instruments, derivatives and forward transactions (for investment purposes as well as efficient portfolio management purposes), deposits and collective investment schemes. The Fund will usually invest in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF Martin Currie Emerging Markets Fund

The Legg Mason IF Martin Currie Emerging Markets Fund returned 6.54% in sterling terms over the period under review, while the MSCI EM Index (Net) (GBP), which increased in sterling terms by 4.11%.

Q. What where the leading contributors to performance during the reporting period?

A. At a regional level, China and Brazil were the largest contributors for the portfolio over the six months. At a sector level, the Financials and Information Technology ("IT") were the strongest performers. In stock terms, Chinese gas operator China Gas Holdings, Brazilian conglomerate Cosan and EPAM systems – an IT service company, with its primary operations in Central and Eastern Europe – all provided the best relative returns.

Q. What were the leading detractors from performance during the reporting period?

A. Taiwan was the largest detractor in regional terms over the period, with Russia also faring badly. Consumer staples was the most notable negative at a sector level. Of the stocks held within the portfolio, Korean speciality chemical producer LG Chem, Aspen Pharmacare firm South Africa, and Chinese auto parts producer Minth were the worst-performing stocks during the period.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weights were to China, Korea and India at a regional level, and the Financials, IT and Consumer Discretionary at a sector level. Purchases over the period were ICICI Bank, IRB Brasil, Kotak Mahindra Bank and OdontoPrev. Looking at sales, positions were exited in Aspen Pharmacare, CTBC Financial, and MultiChoice Group.

General Information

Investment Martin Currie
Manager Investment
Management
Fund Size £20.8m
Sector Europe
Fund Launch 06 May 1985

Investment Objective and Policy

The objective of the Fund is to provide long-term capital appreciation through investment in a concentrated portfolio comprised of at least 80% of its net asset value in European (excluding UK) equities. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in shares of companies domiciled or listed in Europe excluding the United Kingdom, or which conduct the predominant part of their economic activity in Europe (ex. UK). The Fund may invest both directly and indirectly in such companies. Where the Fund invests indirectly in the shares of companies it may do so through investment in equity related securities, such as depositary receipts (including American depositary receipts and

global depositary receipts), collective investment schemes or by using derivative instruments (such as index futures and low exercise price warrants). The collective investment schemes in which the Fund may invest include those in respect of which the ACD has been appointed as the authorised corporate director and/or that are managed by one or more associates of the ACD.

The Fund does not use a benchmark for the purposes of the Benchmarks Regulation.

Legg Mason IF Martin Currie European Unconstrained Fund

The Legg Mason IF Martin Currie European Unconstrained Fund increased by 15.44% in sterling terms during the period under review.

Q. What where the leading contributors to performance during the reporting period?

A. At a country level, Denmark and the Netherlands were the strongest absolute contributors over the six months. At a sector level, the Consumer Staples and Financials were the best performers. At a stock level, Italian luxury car manufacturer Ferrari, sportswear firm Adidas and consumer goods giant Unilever were the most notable positives.

Q. What were the leading detractors from performance during the reporting period?

A. France made the smallest absolute contribution within the portfolio, along with Sweden and Spain. Information Technology ("IT") was the weakest at a sector level. In stock terms, German semiconductor manufacturer Infineon Technologies was the weakest performer, with Swedish tech firm Hexagon and software name Check Point also weighing on performance.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

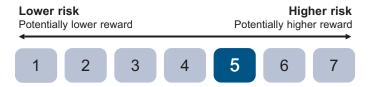

A. At the end of the reporting period, the portfolio's largest absolute weight was to Swiss equity. At a sector level, the biggest allocations were to IT and Consumer Discretionary. In terms of portfolio activity, we sold Switzerland-based luxury goods firm Richemont; there were no new purchases.

Summary of Significant Changes

For the six months ended 31 August 2019

Purchases	Costs £'000	Sales	Proceeds £'000

Total purchases for the period	3,509	Total sales for the period	913

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the fund holds fewer investments than many other Funds) in shares of companies from various European, excluding the UK, countries and sectors has historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in Europe, which means that it is more sensitive to local economic, market, political or regulatory events in Europe, and will be more affected by these events than other Funds that invest in a broader range of regions.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Martin Currie Global Equity Income Fund

General Information

Investment Martin Currie
Manager Investment

Fund Size £162.3m
Sector North America
Fund Launch 01 November 2010

Investment Objective and Policy

The objective of this Fund is to achieve income, with the potential for capital growth over the long term, by investing in securities of companies listed globally. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in equity securities listed or traded on markets anywhere in the world, whether directly or via financial derivative instruments. The Fund's investment in financial derivative instruments will generally be below 25% of its net asset value. However, from time to time, the investment manager may invest more than this if it believes it is in the interest of the Fund. The Fund will invest in companies which are believed to generate a strong cash flow and provide sustainable or increasing dividends. The Fund will invest in a concentrated portfolio (typically 35-55 holdings).

Legg Mason IF Martin Currie Global Equity Income Fund

The Legg Mason IF Martin Currie Global Equity Income Fund increased by 15.05% in sterling terms during the period under review, while the IA Global Equity Income sector rose in sterling terms by 9.65%.

Q. What where the leading contributors to performance during the reporting period?

A. At a regional level, holdings in Asia and North America made notable contributions over the period. In sector terms real estate was the most beneficial. In stock terms, US software giant Microsoft, US communications infrastructure firm Crown Castle, and gases and chemicals distributor Air Products & Chemicals were the leading portfolio performers.

Q. What were the leading detractors from performance during the reporting period?

A. Emerging markets provided the smallest contribution from a regional perspective, whereas Energy weighed the most on returns at a sector level. In stock terms, US energy company Occidental Petroleum, French multinational advertising Publicis and tobacco giant Philip Morris were the main detractors.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the portfolio's largest absolute weight was to stocks in the North America region. At a sector level, the biggest allocations were to Industrials and Consumer Staples. Purchases over the period included Publicis and US telecommunications operator Verizon. Sales included Deutsche Telekom and Canadian energy firm Suncor.

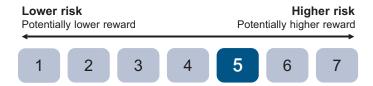

Summary of Significant Changes

For the six months ended 31 August 2019

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other Funds) in shares of companies from various countries and sectors has historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Hedging: The Fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the Fund and base currency of the Fund itself (hedging). However, hedging transactions can also expose the Fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the Fund.

Leverage: The Fund may use derivatives to help try to achieve the Fund's objective which may result in the Fund being leveraged. Leverage magnifies the exposure of the Fund to be greater than the underlying investments and can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested or the premium received from selling (writing) put and call options.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Charges from capital: The Fund's fees and expenses may be taken from its capital (rather than income). This will result in an increase in income available for distribution to investors. However, this will forego some of the capital that the share class has available for future investment and potential growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Statement of Total Return (unaudited)

For the six months ended 31 August 2019

	31.08.19		31.08.	18
	£'000	£'000	£'000	£'000
Income				
Net capital gains		18,976		8,590
Revenue	4,079		4,035

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Martin Currie Japan Alpha Fund

General Information

Investment Martin Currie

Manager Investment
Management

Fund Size £75.1m

Sector Japan

Fund Launch 16 January 2006

Investment Objective and Policy

The objective of the Fund is to achieve capital growth, through investment in Japan. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of large and medium sized companies domiciled in or having their principal activities in Japan. The Fund will invest principally in equity securities but may also invest in other transferable securities, money market instruments, deposits and collective investment schemes. The Fund may, from time to time, and at the investment manager's discretion, be invested in a lesser number of stocks than is typical of an equity fund. This may result in a high percentage of cash being held in the Fund while investment decisions are made as to

the portfolio selection or because of short term trading imbalances. This could have an impact on the performance of the Fund. The Fund will usually invest in a concentrated portfolio (typically 40-60 holdings).

Legg Mason IF Martin Currie Japan Alpha Fund

The Legg Mason IF Martin Currie Japan Alpha Fund increased by 9.27% in sterling terms during the period under review, while its index the Topix (with dividend), increased in sterling terms by 9.16%.

Q. What where the leading contributors to performance during the reporting period?

A. Over the period, the Information Technology ("IT") and healthcare stocks were the top contributors to relative returns within the portfolio. Semiconductor firm Lasertec, Ship Healthcare and software company Oracle were the best-performing stocks.

Q. What were the leading detractors from performance during the reporting period?

A. Financials and Telecommunications Services were the biggest drags at a sector level over the period. Japan Post Holdings, Bank of Kyoto and UT Group were the main detractors.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

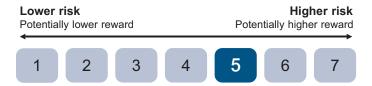

A. At the end of the reporting period, the largest absolute weights were to the Industrials, IT and Consumer Discretionary sectors. Sales over the period included Fujitec, a supplier of transportation systems, and Kanto Denka, a manufacturer of chemicals. There was one purchase: Katitas, a real estate company mainly engaged in the remodelling of used homes.

Summary of Significant Changes

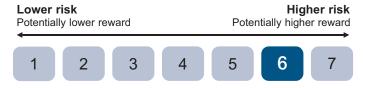

For the six months ended 31 August 2019

Risk and Reward Profile

Risk and Reward Profile - Class X Accumulation (Hedged)

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other funds) in shares of small cap Japanese companies from various sectors have historically been subject to large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in Japan, which means that it is more sensitive to local economic, market, political or regulatory events in Japan, and will be more affected by these events than other Funds that invest in a broader range of regions.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the share classes value and may cause the share class to lose as much as or more than the amount invested in the derivatives.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF Martin Currie North American Fund

General Information

Investment Martin Currie
Manager Investment
Management

Fund Size £164.8m Sector North America Fund Launch 01 September 1983

Investment Objective and Policy

The objective of the Fund is to achieve capital growth through investment in the United States of America and Canada. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in securities of companies domiciled or having their principal activities in the United States of America and Canada. The Fund will invest principally in equity securities but it may also invest in units in other transferable securities, money market instruments, deposits and collective investment schemes. The Fund will usually invest in a concentrated portfolio (typically around 40 holdings).

Legg Mason IF Martin Currie North American Fund

The Legg Mason IF Martin Currie North American Fund increased by 21.44% in sterling terms during the period under review, while its index, the MSCI North America Index (Net) (GBP), increased in sterling terms by 15.21%.

Q. What where the leading contributors to performance during the reporting period?

A. Information Technology ("IT") was the top-performing sector within the portfolio, with Health Care also aiding relative performance. At a stock level, coffee chain Starbucks, California-based medical equipment company ResMed and animal vaccine firm Zoetis were the most notable positives.

Q. What were the leading detractors from performance during the reporting period?

A. Communication Services and Real Estate were the worst-performing sectors within the portfolio. Hydrocarbon exploration firm EOG Resources, R&D company Agilent Technologies and industrial name Rockwell Automation were the most notable negatives at a stock level.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. At the end of the reporting period, the largest absolute weights were to holdings in IT, Health Care and Consumer Discretionary. Purchases over the period included software giant Microsoft, and Masimo, a manufacturer of non-invasive patient-monitoring technologies. Sales included private healthcare provider HCA and pharmaceutical multinational Merck.

Legg Mason IF QS UK Equity Fund

General Information

Investment

Manager QS Investors LLC

Fund Size £29.6m

Sector UK All Companies Fund Launch 31 October 1995

Investment Objective and Policy

The objective of this Fund is to achieve capital growth through investment in quoted securities of UK companies. The Fund seeks to achieve its objective by investing atleast 80% of its net asset value in dividend paying stocks issued by large and mid-cap UK company shares listed on the London Stock Exchange and being constituents of the FTSE All Share Index. The Fund may also invest in other investments as permitted by the FCA Rules as applicable from time to time, which may include collective investment schemes (up to a maximum of 10% of the net asset value of the Fund). The Fund may also use derivatives for efficient portfolio management as explained in the Prospectus.

Legg Mason IF QS UK Equity Fund

The Legg Mason IF QS UK Equity Fund increased by 0.91% in sterling terms over the period under review while its index, the FTSE All-Share Index, rose in sterling terms by 4.28%.

For the six months ending August 31, 2019, the portfolio underperformed the FTSE All Share Index (FTSE Index), but achieved its investment objective of offering attractive yields and lower volatility than the FTSE Index. Stock selection detracted from the Fund for the six-month period, chiefly in Consumer Staples and Financials ex Banks. Selection was strong in Materials, but not enough to completely offset the negative impact across other sectors.

Q. What where the leading contributors to performance during the reporting period?

A. Stock selection in Materials was the largest positive contributor to the Fund for the six-month period. Positive stock selection within Information Technology also provided modest contribution. Allocation across sectors contributed positively overall to active performance, primarily in underweights to Banks and Energy.

Q. What were the leading detractors from performance during the reporting period?

A. Underperformance for the period was driven primarily by stock selection, which detracted most notably in Consumer Staples and Financials ex Banks. From an allocation perspective, an underweight to Health Care detracted some value.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. There were no significant changes to the portfolio over the six-month reporting period. The most notable changes include a decreased weight to Consumer Discretionary and Financials ex Banks, and an increased weight in Real Estate and Materials. Portfolio beta to the FTSE Index as of August 2019 month end was 0.79, and current yield was 6.22%, higher than the 4.7% current yield of the FTSE Index. The portfolio is most overweight Real Estate and Utilities, and most underweight Banks and Energy.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in shares of UK companies from various sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in the United Kingdom, which means that it is more sensitive to local economic, market, political or regulatory events in the United Kingdom, and will be more affected by these events than other Funds that invest in broader range of regions.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

Legg Mason IF RARE Global Infrastructure Income Fund

General Information

Investment RARE Infrastructure

Manager Limited Fund Size £456.6m

Sector Global Infrastructure

Fund Launch 01 July 2016

Investment Objective and Policy

To provide investors with an income comprised of dividends with a secondary investment objective of long-term capital growth. The Fund seeks to achieve its objective by investing primarily in a diverse range of global listed infrastructure securities across a number of infrastructure sub-sectors such as gas, electricity and water utilities, toll-roads, airports, rail and communication infrastructure and across different geographic regions, under normal market conditions. The investments of the Fund will primarily include securities listed on stock exchanges of developed countries. However, in order to ensure that the Investment Manager retains full flexibility to seek exposure to infrastructure securities on a global basis,

investors should note that up to 20% of the Fund's net asset value may be invested in securities (including depositary receipts) of developing countries in circumstances where such markets present opportunities consistent with the Fund's investment objective. The Fund may also invest in recently issued securities not yet listed on a securities exchange but that are expected to be listed within 12 months of purchase and derivative instruments up to a maximum of 10% of the Fund's net asset value. Although it is intended that the Fund will normally be invested in accordance with the limits set out above, the Investment Manager may decide that, due to market conditions and in the interests of the Fund and its shareholders, it would be appropriate to hold more or less, or perhaps even significantly more or less than this where it is in the interests of the Fund and its shareholders to do so and where such action is consistent with the Fund's investment objective. Derivatives and forward transactions may be used by the Fund for investment purposes and for the purposes of efficient portfolio management (including hedging).

Legg Mason IF RARE Global Infrastructure Income Fund

The Legg Mason IF RARE Global Infrastructure Income Fund increased by 15.03% in sterling terms during the period under review.

Q. What where the leading contributors to performance during the reporting period?

A. On a regional basis, USA & Canada was the top contributor to performance during the reporting period (+4.06%) of which Canadian electric utilities Emera (+1.25%) and Hydro One (+0.94%) were the lead performers.

Hydro One (H) is the largest rate-regulated electricity transmission and distribution company in Ontario. Defensive sectors are benefiting from the lower interest rate environment and some risk-aversion related to the slowing global economy and trade tensions. Separately, H shares have gradually re-rated over the past few months, as the business has stabilized with a new management team in place, a constructive multi-year distribution rate plan decision received from the regulator, and a perceived subsiding of government intervention risk.

Emera (EMA) is a listed Canadian utility that generates 95% of its earnings from its regulated operations, including in Florida and Nova Scotia. EMA has also benefitted from a lower interest rate environment, along with the company's earlier announced sale of its Maine regulated utility business, which received an attractive valuation of approximately 1.8x rate base. The asset sale significantly de-risks EMA's funding plan for its medium-term capital program, which is focused on capital allocation towards its regulated Florida utility business, where the company is seeing ample clean energy investment opportunities backed by a constructive regulatory framework.

Q. What were the leading detractors from performance during the reporting period?

A. Chinese port operator China Merchants Port Holdings was the largest detractor from performance (-0.80%). The share price of CMP fell during the reporting period after the US raised the tariff on the US\$200b tranche of imports from China from 10% to 25%. This renewed concerns over the US-China trade tension in early May. During June, President Trump and President Xi met at the G-20 summit, with the US agreeing not to impose new tariffs on Chinese imports; trade talks are expected to resume soon. Uncertainty around the upcoming trade talks between China and the US remains high.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. On a regional level, the Fund's largest exposure is in USA & Canada and consists of exposure to Utilities (32%) and economically sensitive sectors (2%).

For the Legg Mason IF RARE Global Infrastructure Income Fund, the primary quantitative tool in portfolio construction is the Excess Return, on which RARE's stock ranking system is based. As such, driven by valuation, the key shift in the composition of the Fund, during the period of analysis, include:

- 1. Decreased exposure to Asia Pacific (EM) from 5% to 3%. We exited Chinese toll road operator Shenzhen Expressway.
- 2. Increased exposure to Latin America from 6% to 9%. We initiated positions in Mexican airport operator Grupo Aeroportuario del Pacifico and Chilean water company Aguas Andinas.

^{*} Real Estate Investment Trust (REIT).

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because a concentrated investment (the Fund holds fewer investments than many other Funds) in shares of infrastructure companies from various countries and sectors have historically been subject to relatively large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Investment in infrastructure: The Fund invests in shares of infrastructure companies, and the value of these shares can be negatively affected by economic or regulatory occurrences affecting their industries. Investments in new infrastructure projects carry risks where they may not be completed within the budget, agreed timeframe or specifications. Operational and supply disruptions can also have a negative effect on the value of the company's shares.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Concentrated Fund: The Fund invests in fewer companies than other Funds which invest in shares usually do. This means that the Fund does not spread its risk as widely as other Funds and will therefore be affected more if an individual company has significant losses.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Charges from capital: The Fund's fees and expenses may be taken from its capital (rather than income). This will result in an increase in income available for distribution to investors. However, this will forego some of the capital that the share class has available for future investment and potential growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

¹ Launched on 16 February 2019.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Legg Mason IF Royce US Smaller Companies Fund

General Information

Investment

Manager Royce & Associates, LP

Fund Size £171.8m

Sector North American Smaller

Companies
Fund Launch 29 March 2004

Investment Objective and Policy

The objective of this Fund is to achieve capital growth, principally through investment in securities of smaller US companies. The Fund seeks to achieve its objective by investing at least 80% of its net asset value in the securities of US smaller companies, measured at the time of investment, with emphasis placed on finding companies that possess excellent business strengths and/or prospects, high internal rates of return and low leverage, and whose securities are trading significantly below the investment manager's estimate of their current worth. The Fund may also invest in other investments to the extent permitted by the FCA Rules as applicable from time to time, which may include: collective investment

schemes (up to a maximum of 10% of the net asset value of the Fund) and convertible securities of companies with market capitalisations above US\$ 5 billion.

Legg Mason IF Royce US Smaller Companies Fund

The Legg Mason IF Royce US Smaller Companies Fund was up 3.34% during the reporting period, while its small-cap benchmark, the Russell 2000 Index, returned 4.38% in sterling terms. Stock selection was a positive factor versus the benchmark, while sector allocation was negative for the six-month period.

Q. What where the leading contributors to performance during the reporting period?

A. Only three of the portfolio's ten equity sectors made a positive contribution to performance during the reporting period: Health Care, Financials and Real Estate. At the industry level, commercial services & supplies (from the otherwise disappointing Industrials sector) health care technology (Health Care) and thrifts & mortgage finance (Financials) were the most additive for results.

Q. What were the leading detractors from performance during the reporting period?

A. Of the seven sectors that detracted from results, those making largest negative impact were Consumer Discretionary, Industrials and Information Technology. The industries that detracted most were electronic equipment, instruments & components (Information Technology), leisure products (Consumer Discretionary), energy equipment & services (Energy) and machinery (Industrials).

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

A. There were no significant changes to the portfolio over the reporting period. Our largest recent investments continued to be in high-quality companies operating in industries with weak near-term market sentiment, such as the agriculture and energy markets. Investing in superior firms when other investors' short-term concerns offer us what we think are attractive valuations for long-term investments will remain the foundation of our strategy. The Fund's largest weightings at the end of the reporting period were the Industrials and Information Technology sectors

In spite of recent headlines focusing on the likelihood of imminent recession, the U.S. economy continues to grow, although at a slower pace. In our view, the current climate of moderate economic growth, low interest rates, inexpensive energy and little inflation creates a positive backdrop for equities. Having said that, we cannot rule out the negative scenario in which the current global manufacturing slowdown continues downward and becomes a global contraction. The escalated U.S.-China conflicts would seem to increase that probability. In this event, we would expect global equities, including small-cap stocks, to experience more volatility and possibly some declines. However, in this kind of stormy market weather, we train our sights on those companies that look best positioned, while seeking to take advantage of temporarily depressed prices. As has often been our practice in market declines, we were actively buying in many of our portfolios during August's declines.

We think it's also helpful to note that environments featuring increased uncertainty, turbulence and market volatility often provide opportunities for companies with leading market positions and strong balance sheets to solidify or expand their market share. Volatile environments have also been historically favorable for active small-cap managers. As small-cap specialists looking beyond the current headlines, we believe this an environment better suited to selectively buy than to sell small-cap stocks.

Legg Mason IF Royce US Smaller Companies Fund (continued)

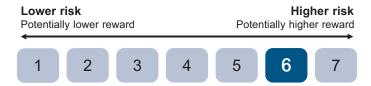

Summary of Significant Changes

For the six months ended 31 August 2019

Purchases	Costs £'000	Sales	Proceeds £'000

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments is shares of small cap US companies from various sectors have historically been subject to large fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Investment in company shares: The Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates.

Geographical focus: This Fund invests primarily in the United States, which means that it is more sensitive to local economic, market, political or regulatory events in the United States, and will be more affected by these events than other Funds that invest in a broader range of regions.

Investment in smaller company shares: The Fund buys shares in smaller companies. It may be difficult to sell these shares, in which case the Fund may not be able to minimise a loss on such shares.

Fund currency: Changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment and any income received from it.

Hedged class currency: The value of your investment may fall due to changes in the exchange rates between the currencies that are significant to the Fund's investment strategy and the currency of your share class, pound sterling. The Fund manager will try to protect the value of your investment against such changes, but it may not succeed.

Derivatives: The use of derivatives can result in greater fluctuations of the share classes value and may cause the share class to lose as much as or more than the amount invested in the derivatives.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

General Information

Investment Western Asset

Manager Management Company

Fund Size £250.1m
Sector Global Bond
Fund Launch 23 May 2008

Investment Objective and Policy

The objective of the Fund is to maximise total return through income and capital appreciation by diversifying across a range of fixed income securities, sectors and currencies. The Fund seeks to achieve its objective by investing globally, principally in debt and fixed income securities denominated in currencies of a variety of developed and emerging market countries. A minimum of 80% of the Fund's net asset value will be invested in debt and fixed income securities that are either denominated in Pounds sterling or, if denominated in other currencies, hedged to Pounds sterling. Consequently, no more than 20% of the Fund's net asset value may be exposed to currencies other than Pounds

sterling. The Fund will invest more than 40% (and up to 100%) of the assets of the Fund in debt securities rated Investment Grade at the time of purchase, or if not rated, deemed by the investment manager to be of comparable quality. The Fund invests across the major fixed income sectors including high yielding, emerging market debt securities and loans (in each case to the extent permitted by the FCA Rules). The Fund may also invest in other investments to the extent permitted by the FCA Rules as applicable from time to time, which may include: units or shares in other collective investment schemes (up to a maximum of 10% of the net asset value of the Fund), preferred shares and equity securities acquired via conversions of convertible debt securities (up to a maximum of 10% the net asset value of the Fund) and derivatives for investment purposes as well as efficient portfolio management purposes.

Legg Mason IF Western Asset Global Multi Strategy Bond Fund

The Legg Mason IF Western Asset Global Multi Strategy Bond Fund increased 4.06% in sterling terms over the period under review, while the IA Global Bond sector recorded an increase in sterling terms of 5.73%.

Q. What were the leading contributors to performance during the reporting period?

A. The Fund's long U.S. duration exposure added to performance as yields declined. Sector allocations to high-yield corporate bonds and bank loans contributed to returns, as did the Fund's emerging markets bond exposure. Emerging market currencies were marginally additive for results, as most of these currencies strengthened against sterling.

Q. What were the leading detractors from performance during the reporting period?

A. There were no meaningful detractors from performance during the reporting period.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

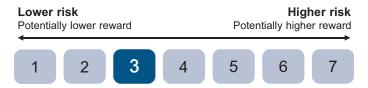

A. The Fund currently has significant exposures to high-yield corporate bonds, as well as to emerging market bonds and currencies. The Fund's average credit quality is BBB-. Looking ahead, the manager's focus remains on longer-term global economic and company fundamentals. The manager will also diversify the Fund's assets held in the portfolio in order to help spread risk. Key position changes during the reporting period were reductions to the Fund's bank loans allocation and profit taking in hard currency emerging market bonds on strength. The Fund's exposure to the Japanese yen was increased as a risk-off protection measure. The Fund's allocation to the U.S. high-yield Energy sector was also rebalanced. A preference for U.S. government duration versus European duration was reflected with some reduction in U.S. rates exposure, which was implemented toward the end of the period as yields declined.

Summary of Significant Changes

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment.

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because investments in a diversified portfolio of bonds from various countries and sectors have historically been subject to relatively small fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the Fund may not be able to repay the investment or pay the interest due on it, leading to losses for the Fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Emerging markets investment: The Fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Asset-backed securities: The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the Fund. These types of investments may also be difficult for the Fund to sell quickly.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Hedging: The Fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the Fund and base currency of the Fund itself (hedging). However, hedging transactions can also expose the Fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the Fund

Interest rates: Changes in interest rates may negatively affect the value of the Fund. Typically as interest rates rise, bond values fall.

Fund counterparties: The Fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

Launched on 12 September 2018.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

General Information

Investment Western Asset

Manager Management Company

Limited £11.8m

Fund Size £11.8m Sector UK Corporate Bond Fund Launch 12 February 1998

Investment Objective and Policy

The objective of the Fund is to provide a regular income stream, in excess of the prevailing level of interest rates in the U.K., with a focus on capital preservation. The Fund seeks to achieve its objective by investing in a range of fixed interest securities including, but not limited to, corporate bonds, government bonds and asset backed securities. The Fund will invest a minimum of 60% of its net asset value in global investment grade corporate bonds and UK government bonds (gilts). In addition, the Fund may invest up to 35% of its net asset value in global high yield bonds. The Fund may also invest in other transferable securities, money market instruments, deposits, collective investment schemes and

derivatives for efficient portfolio management only. Any instrument denominated in a currency other than Pounds sterling will normally be hedged back to Pounds sterling.

Legg Mason IF Western Asset Retirement Income Bond Fund

The Legg Mason IF Western Asset Retirement Income Bond Fund increased 4.90% in sterling terms over the period under review, while the IA Sterling Strategic Bond sector recorded an increase in sterling terms of 5.73%.

Q. What were the leading contributors to performance during the reporting period?

A. The Fund targets a fixed asset allocation of 20% gilts, 50% investment-grade corporate bonds and 30% high-yield corporate bonds. Positive total returns were largely driven by falling global government bond yields, which benefited the Fund's long UK and U.S. duration positions. Investment-grade corporate bonds contributed to returns as their spreads tightened. In particular, the Fund's exposure to Financials and Industrials was a significant positive for performance. An allocation to U.S. high-yield corporate bonds also contributed to results as carry (incremental yield) and falling underlying government yields overwhelmed modest spread widening.

Q. What were the leading detractors from performance during the reporting period?

A. There were no meaningful detractors from performance during the reporting period.

Q. Were there any significant changes to the portfolio and how was it positioned at the end of the reporting period?

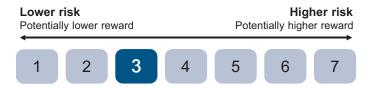

A. There were no significant changes to the portfolio during the reporting period.

Risk and Reward Profile

There is no guarantee that the Fund will remain in the indicator category shown above and the categorisation of the Fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this Fund.

The lowest category does not mean a risk-free investment

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The Fund is in its risk/reward category because mixed investments in UK government and global bonds have historically been subject to relatively small fluctuations in value.

The Fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the Fund may not be able to repay the investment or pay the interest due on it, leading to losses for the Fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation

Liquidity: In certain circumstances it may be difficult to sell the Fund's investments because there may not be enough demand for them in the markets, in which case the Fund may not be able to minimise a loss on such investments.

Low rated bonds: The Fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds.

Asset-backed securities: The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the Fund. These types of investments may also be difficult for the Fund to sell quickly.

Derivatives: The use of derivatives can result in greater fluctuations of the Fund's value and may cause the Fund to lose as much as or more than the amount invested.

Hedging: The Fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the Fund and base currency of the Fund itself (hedging). However, hedging transactions can also expose the Fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the Fund

Interest rates: Changes in interest rates may negatively affect the value of the Fund. Typically as interest rates rise, bond values fall.

Fund counterparties: The Fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

Annual management charge from capital: The Fund's annual management charge is taken from its capital (rather than income). This may adversely affect the Fund's overall growth.

For further explanation on the risks associated with an investment in the Fund, please refer to the section entitled "Risk Factors" in the Prospectus.

^{*} Operating charges include indirect costs incurred in the maintenance and running of the sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated against the average Shares in issue for the accounting period.

^{**} The operating charges (OCF) shows the annual expenses of the Fund as a percentage of the average Net Asset Value, which helps you compare the annual expenses to different schemes.

^{***} Direct transaction costs within this table have been calculated against the average Net Asset Value for the accounting period.

¹ Launched on 16 January 2019.

Equalisation

This applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Glossary

Accommodative policy – one aiming to stimulate the economy through, for example, lower interest rates in order to encourage spending and discourage saving.

Asset – a financial instrument that is typically held in stocks, share or bond form. An owner of an asset usually holds it with an intention of receiving future returns.

Bailout – a term used to describe the financial aid provided to a collapsed financial organisation.

Blended average rating – an indication of the risk in a bond fund. The rating averages all of the credit ratings within a bond fund and is often expressed in a letter format such as BB.

Bond – a debt investment in which an investor loans money to an entity (corporate or governmental) that borrows the funds for a defined period of time at a fixed interest rate.

Bond ratings – bond ratings, here using Standard & Poor's grades, are expressed as letters ranging from 'AAA', which is the highest grade, to 'C', which is the lowest grade.

Bull market (also referred to as a 'Bullish' view) - a market in which share prices are rising, encouraging buying.

Commodity – a basic good used in commerce that is interchangeable with other commodities of the same type. Traditional examples of commodities include grains, gold, beef, oil and natural gas.

Consumer discretionary – goods and services typically purchased with discretionary income (income received after the deduction of basic living costs and tax).

Consumer staples – these are goods that are purchased which are purchased by consumers regardless of their finances. These typically include products such as food, tobacco, household goods and alcohol.

Corporate bond – a bond issued by a corporation to raise money effectively in order to expand its business.

Correlation - a statistical measure of how two financial securities move in relation to each other.

Credit – a debt investment in which an investor loans money to an entity (corporate or governmental) that borrows the funds for a defined period of time at a fixed interest rate.

Credit spreads – a credit spread is the difference in yield between two bonds of similar maturity but different credit quality. For example, if the 10-year Treasury note is trading at a yield of 6% and a 10-year corporate bond is trading at a yield of 8%, the corporate bond is said to offer a 200-basis-point (i.e. 2%) spread over the Treasury.

Credit quality - the perceived risk of a bond.

Currency markets – markets in which participants from around the world are able to buy, sell, exchange and speculate on different currencies.

Cyclical - more dependent on the prevailing state of, or changes in, the economic environment.

Debt market - the bond/fixed income market.

Defensive – less dependent on changes in the economy.

Deflation – a sustained decrease in the general price level of goods and services in an economy over a period of time.

Developed market – in investing, a developed market is a country that is most developed in terms of its economy and capital markets.

Dividend – a distribution of a portion of a company's earnings to a class of its shareholders.

Duration – a measure of the sensitivity of an asset against rising and falling interest rates. The duration of a financial asset that consists of fixed cash flows. For a bond, this is the weighted average of the times until those fixed cash flows are received.

Economic indicators – statistics about economic activity.

Emerging markets – in investment terms, countries whose financial markets are less developed and where investor protection and market infrastructure is often weaker than in developed markets such as the UK.

Equity – ownership interest in a corporation in the form of common stock or preferred stock.

European Central Bank - the central bank responsible for the monetary system of the European Union (EU) and the euro currency.

Federal Reserve Board (the "Fed") – is responsible for the formulation of U.S. policies designed to promote economic growth, full employment, stable prices, and a sustainable pattern of international trade and payments.

The federal funds rate – is the rate charged by one depository institution on an overnight sale of immediately available funds (balances at the Federal Reserve) to another depository institution; the rate may vary from depository institution to depository institution and from day to day.

Fiscal – typically refers to revenue that belongs to the government.

Fixed income - bonds.

Fundamentals – the qualitative and quantitative information that contributes to the economic well-being and the subsequent financial valuation of a company, security or currency. Analysts and investors analyse these fundamentals to develop an estimate as to whether the underlying asset is considered a worthwhile investment.

Geopolitical - relating to politics, especially international relations, as influenced by geographical factors.

Gilt – a fixed-interest loan security issued by the UK government.

Glossary (continued)

Growth versus value – growth investing focuses on companies that managers believe will experience faster-than-average growth as measured by revenues, earnings or cashflow. Value investing tries to find companies whose stock prices do not necessarily reflect their fundamental worth.

Hedge - an investment made as security, i.e. with the aim of reducing the potential losses of another investment.

High yield bonds – high-paying bonds with lower credit ratings than investment grade corporate bonds. Because of the higher risk of default, these bonds pay a higher yield than investment grade bonds.

Inflation - a sustained increase in the general price level of goods and services in an economy over a period of time.

Infrastructure - this covers investments in areas such as power plants, water treatment facilities, airports, roads.

Interest rates - rates charged or paid for the use of money.

International Monetary Fund ("IMF") – is an organization of 189 countries, working to foster global monetary cooperation, secure financial stability, facilitate international trade, promote high employment and sustainable economic growth, and reduce poverty around the world.

Investment grade - a credit rating that means a government or corporate bond has a relatively low risk of default.

Investor (or market) sentiment – the general prevailing attitude of investors with regard to anticipated price developments in a particular market.

Issue – a term used to describe the activity of selling assets in order to raise capital.

Large caps – a term used by the investment community to refer to companies with a market capitalisation value of more than \$10 billion.

Macro-driven – affected by macroeconomics (the branch of economics concerned with large-scale or general economic factors, such as interest rates and national productivity).

Market capitalisation – or 'market cap' is calculated by taking a firm's current share price and multiplying that figure by the total number of shares outstanding.

Maturity – refers to a finite time period at the end of which the financial instrument (i.e. a bond) will cease to exist and the principal is repaid with interest.

Monetary policy – a country's central bank usually sets the monetary policy that attempts to regulate the supply of money into the country.

Overweight (exposure) – is an allocation to a country, region or sector greater than that of the index against which the Fund is benchmarked.

Peripheral – relates to non-essential activities such as non-central business operations.

Qualitative easing – a monetary policy method used by the government and/ or central bank to purchase riskier, lower quality and often less expensive financial assets in comparison to higher quality assets.

Quantitative easing – a method used by the government and/ or central bank increase the money flow into the economy by purchasing financial assets.

Reflation - when a government and/ or central bank implement policies aimed at reducing deflation.

Short position – is the sale of a borrowed security, commodity or currency, with the expectation that the asset will fall in value.

Small caps – refers to a company with a market capitalisation near the low end of the publicly traded spectrum. The boundaries that separate these classifications are not clearly defined and can vary according to the source.

Sovereign or Government bonds – are bonds issued by governments.

Spread sectors - non-governmental fixed income investments with higher yields at greater risk than governmental investments.

Supranationals – bonds issued by international organizations, often multinational or quasi-government organizations, with a purpose of promoting economic development.

Top-down – driven by broader economic and market themes rather than by company-specific factors.

Treasury yield – interest rates on borrowing that is paid by the government.

Underweight (exposure) – is an allocation to a country, region or sector less than that of the index against which the Fund is benchmarked.

US Federal Reserve – the central bank of the United States and the most powerful financial institution in the world.

User pays – the concept that products are most valuable the when the consumer has paid the full price for the goods and services consumed.

Utility – the asset class that represents investments in areas such as gas, electricity and water.

Volatility - the up and down movement so financial markets.

Yield - the amount in cash (in percentage terms) that returns to the owners of a security, in the form of interest or dividends received

Yield curve - the curve that plots the interest rates, at a set point in time, of bonds having equal credit quality, but differing maturity dates.

Important Information

Please note that past performance is no guide to future returns and you may not get back the amount originally invested. You should be aware that funds and stock market investments should normally be regarded as longer term investments and that they may not be suitable for everyone. Unlike a bank or building society account, the value of your investment can go down if you exercise any right to cancel, and you may not get back the amount originally invested if the share price has fallen since you invested.

A summary of risk factors for the Company is outlined below:

- Fluctuations in exchange rates may affect the value of an investment and any income derived from it. All Funds are permitted to hedge their currency exposure by way of forward currency contracts.
- Investments in the Funds may not be suitable for all investors. Investors should seek independent financial advice.
- The deductions for charges and expenses, in particular the entry charges, are not made uniformly throughout the life of the investment. If you cash in during the early years, you may not get back the amount initially invested.
- For any Fund, until they reach a sufficient size, the proportion of charges and expenses allocated to such a Fund may be higher and so the return on investment in the Fund is more affected by fees and charges than in more established Funds.

The Annual Report and Audited Financial Statements only provides brief information on each Fund which should not be relied upon in making an investment decision. Please refer to the relevant key investor information document and Prospectus for the Company for full description of objectives and risk factors for each Fund.

Each of the investment management companies listed in the brochure is affiliated with the ACD through common control and ownership by Legg Mason, Inc., except for Shiozumi Asset Management Company Limited. The ACD provides its clients with access to such affiliates primarily through its range of Funds within the Company, in which such affiliates serve as investment manager or sub-investment manager. While some of the affiliates are authorised or licensed to conduct business in one or more European jurisdictions, they are not authorised to offer their investment advisory services in all European jurisdictions. Investors' access to such affiliates may be limited to investing only in the Company.

Any eligible complainant having any complaint in respect of the Fund should inform the ACD in writing of the details of the complaint to the Complaints Manager at Legg Mason Investments, 201 Bishopsgate, London EC2M 3AB. This will then be investigated and a reply provided as soon as possible and any appropriate remedial action taken. In addition, eligible complainants will have a right of complaint directly to the Financial Ombudsman Service if he/she is not satisfied with the outcome of the investigation into the complaint. Details of the Financial Services Compensation Scheme established under the Financial Services and Market Act 2000, under which an investor may be entitled to receive compensation if the ACD is unable to meet any of its liabilities to the investor, are available on written request from the ACD.
