As at 31 October 2024

Investment risks

The value of investments and any income will fluctuate (this may partly be as a result of exchange rate fluctuations) and investors may not get back the full amount invested.

The product invests in smaller companies which may result in a higher level of risk than a product that invests in larger companies. Securities of smaller companies may be subject to abrupt price movements and may be less liquid, which may mean they are not easy to buy or sell.

The product uses derivatives for efficient portfolio management which may result in increased volatility in the NAV.

The use of borrowings may increase the volatility of the NAV and may reduce returns when asset values fall.

- Fund Ratings - RSMR Investment Trust Rating: Rayner Spencer Mills Research (RSMR) provide a wide set of recognised and respected ratings, founded on rigorous research, proven expertise and a first-class reputation. The initial fund analysis takes each Investment Association (IA) sector and looks at a range of performance and risk measures that are appropriate to that sector. Funds and investment trusts that display attractive performance and risk characteristics may then be taken forward for further analysis. RSMR's quantitative analysis includes review of performance, risk statistics, ongoing charges and fees and fund size and their qualitative analysis includes review of the fund manager/management team background, manager resources, fund philosophy, fund management processes, risk controls and environmental, social and governance (ESG) factors. Selecting funds and investment trusts is only part of the process - the ongoing monitoring of the lists and the procedure for making changes is equally important.
