What is this product?

Type

An English law governed, uncertificated, registered, collateralised exchanged-traded note linked to the Bund Rolling Future through swap arrangements ("Swaps") entered into with eligible swap providers ("Swap Providers").

Objectives

The objective of this product is to provide three times the daily performance of the Bund Rolling Future index (the "Benchmark"), which tracks front-month Euro-Bund futures, plus the interest revenue earned on the collateralised amount. Euro-Bund futures are traded on EUREX and deliver German government bonds with 8.5-10.5 years to maturity.

For example, if the index rises by 1% over a day, then the ETP will rise by 3%. and if the index falls by 1% over a day, then the ETP will fall by 3%. In both cases excluding fees and interest revenue.

Holding this product for more than one day is likely to result in a return which is different to 3 times the return of the Benchmark over that holding period. This difference, called the "Compounding Effect", is caused by the product's daily leverage rebalancing, and is magnified by more leverage and longer holding periods. Compounding may have a positive or negative impact on the product's return, but tends to have a negative impact the higher the volatility of the Benchmark.

You may trade this product on various stock exchanges at your own discretion. You may lose the full value of your initial investment, but you will not lose more than your initial investment.

This product is intended to be marketed to investors who understand the risks associated with the Benchmark index, its underlying assets, leveraged positions, daily rebalancing and compounded daily returns, who are willing to take a high level of risk and who have the ability to monitor their positions during the day.

Term of the PRIIP

This product does not have a fixed term. The term will depend on how long you choose to hold the product however, the final maturity date is 30 November 2062. Boost Issuer PLC is entitled to terminate this product unilaterally.

What are the risks and what could I get in return?

The summary risk indicator is a guide to the level of risk of this product. We have classified this product as 4 out of 7, which is the middle risk class. It rates the potential losses from future performance, based on past performance, at a medium level.

Losses will be magnified by leverage. Performance may suffer when the market is volatile.

Be aware of currency risk. If you buy this product in a currency different than the currency of the Benchmark, the final return you will get will depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Performance Scenarios

Investment €10,000		
Scenarios		One (1) day (Recommended holding period)
Unfavorable Scenario	What you might get back after costs	€9,885

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor or broker. The figures do not take into account your personal tax situation, which may affect how much you get back.

What happens if Boost Issuer PLC is unable to pay out?

The product is not protected by the Irish Deposit Guarantee Scheme or any other investor compensation or guarantee scheme. This means that if Boost Issuer PLC is unable to pay out, you may lose all of your investment. Since the ability of Boost Issuer PLC to pay out depends on receiving the amounts due under the product from the Swap Providers under the Swaps, it receives from the Swap Providers daily assets as collateral (the "Collateral") for such obligations with a value equal to or in excess of the value of the daily price of the product. If the Swap Providers are unable to pay Boost Issuer PLC, its ability to pay out will be limited to the amounts realised from the Collateral, as further explained in the Prospectus.

The Reduction in Yield ("RIY") shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are cumulative costs of the product itself over the recommended holding period. The figures assume you invest €10,000. The figures are estimates and may change in the future.

What are the costs?

Costs over time

Investment €10,000	If you cash in after one (1) year
Total costs	€141
