### Risk and reward profile

◆ Lower risk				Higher risk ◆		
◆ Typically lower rewards				Typically higher rewards ◆		
1	2	3	4	5	6	7

• The risk and reward indicator is calculated on the basis of the share class volatility (the ups and downs in its value) over the prior 5 year period.

The risk and reward indicator:

- is based on historical data and may not be a reliable indication for the future;
- is not guaranteed and may change over time.
- The lowest category does not mean that a share class is risk free.

The share class category reflects the following factors:

- Higher volatility can result from investments in shares as their value may fluctuate more than other financial instruments, such as bonds.
- The Fund may invest in shares priced in currencies other than the currency of the share class. This may result in the value of the share class increasing or decreasing due to changes in foreign exchange rates.

- Your initial investment is not guaranteed.
- In addition to the risk captured by the indicator, the fund value may be affected by:
- Changes in exchange rates between currencies may cause the value of the investments to diminish or increase.
  - Any change in the Company's tax status or in legislation could affect the value of investments held by the Company.
  - Political and /or regulatory Risks.
  - Emerging markets risk: Investing in companies in emerging markets involves higher risk than investing in established economies or securities markets. Emerging Markets may have less stable legal and political systems, which could affect the safe-keeping or value of assets. Investments in emerging markets funds should not constitute a substantial portion of an investor's portfolio.
  - Investors should note that a more detailed description of risk factors is set out in full in the Prospectus.
