Commentary at a glance

Performance

In the month under review the Company's NAV total return was -1.9% and the 80% FTSE All-Share Index/20% ICE BofA Sterling Non-Gilts Index total return was -1.0%.

Contributors/detractors

Holdings in Big Yellow and Severn Trent detracted from returns.

Outlook

We think the portfolio is well diversified, as we own both global businesses as well as domestic companies that we see as attractively valued.

Fund Manager commentary

Investment environment

The FTSE All-Share Index fell 1.2% as investors worried about a weakening economy and rising inflation in the UK.

The Bank of England (BoE) held its benchmark rate at 4.75% as expected, and was cautious about future rate cuts as it warned about persistent pricing pressures.

UK GDP unexpectedly contracted by 0.1% month-on-month in October, following a decline of 0.1% in September. It also emerged that the economy achieved no growth in the third quarter, which compared with an initial estimate of a 0.1% expansion.

Consumer price rises quickened to an eight-month high of 2.6% in November from October's 2.3%. Meanwhile, sterling retreated against the US dollar during the month, weighed down by worries about the economy and as the US currency strengthened.

The UK 10-year gilt yield ended the year at 4.6%, up from 4.2% at the end of November. Bond yields rose globally (prices fell, reflecting their inverse correlation), led by the US given fears over inflation from some of Donald Trump's potential policies.

The FTSE 100 Index fell 1.3% and underperformed the FTSE 250 Index (which fell 0.6%) and the FTSE Small-Cap Index (up 0.5%). The best-performing sectors in December were financials, consumer staples and health care, while real estate, basic materials and utilities sectors underperformed.

Portfolio review

Higher bond yields (lower prices) meant that typical "bond-proxy" sectors (more defensive equities that tend to behave a bit more like bonds), such as real estate and utilities, underperformed. Here, equity holdings in self-storage company Big Yellow and water utility firm Severn Trent detracted from returns.

Given accelerating inflation, investors also reduced their expectations for UK interest rate cuts. This resulted in weak share price performance from a number of companies focused on the domestic UK economy, such as housebuilder Taylor Wimpey and homeware retailer Dunelm.

Elsewhere, equity holdings in Victrex and Chesnara were positive for performance. Although Victrex reported a tough year for profits in 2024, its current trading pointed towards tentative signs of end-market recovery. Chesnara's share price reacted positively to news the company had made an accretive acquisition of a portfolio of assets from Canada Life.

During the month we sold the position in Blackstone Loan Financing Ltd, an investment trust that invests in floating rate senior secured loans. Its Board had recommended a cash bid for the underlying assets and a wind up of the company at a slight discount to mark-to-market (an accounting method based on a value determined by market conditions) net asset value (NAV). With the share price moving to reflect the underlying offer price, we sold the position.

Manager outlook

We believe the UK Budget and Donald Trump's presidency could lead to higher inflation and a more protracted pathway to lower interest rates. Also, we think corporate margins are likely to come under some pressure for domestic companies from the increase in National Insurance contributions and minimum wage. On the positive side, the financial health of consumers, corporates and the banking sector seem strong, while we believe that valuations in the UK are overall compelling. We think the portfolio is well diversified, as we own both global businesses as well as domestic companies that we see as attractively valued.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can "gear" is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Company specific risks

- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- Some of the investments in this portfolio are in smaller company shares. They may be more difficult to buy and sell, and their share prices may fluctuate more than those of larger companies.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.

Not for onward distribution. Before investing in an investment trust referred to in this document, you should satisfy yourself as to its suitability and the risks involved, you may wish to consult a financial adviser. This is a marketing communication. Please refer to the AIFMD Disclosure document and Annual Report of the AIF before making any final investment decisions. Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.
