

Non-UCITS Retail Scheme Key Investor Information

This document provides you with key investor information about this Fund. It is not marketing material. The information is provided to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

Santander Atlas Portfolio 4 (the "Fund")

A sub-fund of Santander Multi-Manager OEIC

Institutional Accumulation Share Class (ISIN: GB00BD3CW292). This Fund is managed by Santander Asset Management UK Limited.

OBJECTIVES AND INVESTMENT POLICY

Objective: The Fund's objective is to provide a combination of capital growth and income, over a 5+ year time horizon

INVESTMENT POLICY:

- The Fund aims to achieve its objective by investing globally in a wide range of bonds issued by companies and governments and shares issued by listed companies
- To obtain exposure to these assets, the Fund will invest indirectly by purchasing units in Collective Investment Schemes managed by other companies and / or the Authorised Corporate Director (ACD) or other companies within the Santander Group. The Fund may also invest directly
- At least 70% of the Fund will at all times be invested in the asset classes described above, but it has the flexibility to invest in other assets globally, such as cash, near cash and other money market instruments, real estate and commodities
- The Fund will target a low to moderate level of volatility over the longer term. The aim to achieve the target volatility may constrain the Fund's potential gains and losses
- Volatility is a measure of how much the return of an investment fluctuates around its average return. It is calculated, for the purposes of risk classification, by considering the investments currently within the Fund and the volatility of the underlying market
- The Fund is managed to stay within a Medium Risk category in accordance with Santander UK's Risk Categorisation process
- The Fund may use derivatives (contracts which derive their value/price from an underlying asset, such as shares or bonds) for efficient portfolio management. This means derivatives will be used to either reduce the risk, reduce costs, or to generate additional capital or income without materially affecting the risk of the fund
- The Fund operates with an OCF cap, which means that the ACD will aim to keep the cost of investing in it, excluding transaction costs, below 0.99%
- The ACD has the discretion to manage the Fund according to its investment views and opportunities identified as market and economic conditions change. It will select investments that it believes will best achieve the Fund's objective. An assessment will be completed on all investment opportunities before any investment decisions are made

OTHER INFORMATION:

- A Non-UCITS Retail Scheme (NURS) is an authorised fund in the UK capable of being promoted to retail investors, and which has wider investment powers than schemes which fall within the scope of the UCITS (Undertakings for Collective Investment in Transferable Securities) Directive
- Investment in the Fund should be regarded as a long-term investment. This Fund may not be appropriate for investors who plan to withdraw their money within 5 years
- You can buy and sell shares in the Fund on any business day
- Income arising from your investment will not be paid to you but will be rolled up into the value of your investment

RISK AND REWARD PROFILE

LOWER RISK

HIGHER RISK

Typically lower rewards

Typically higher rewards

- This risk and reward indicator shown above is based on historical data, which may not be a reliable indication for the future risk profile of the Fund
- The lowest risk and reward indicator does not mean risk free
- The risk and reward indicator shown is not guaranteed and may change over time
- The number 4 in the name of this Fund represents where this Fund sits in our internal risk scale of 1-10, where 1 is the lowest risk and 10 is the highest risk. This risk number is calculated by Distribution Technology, who are an independent provider of risk profiling tools to funds and investment advisors. This is different from the scale used to produce the risk and reward indicator. However, for this share class, currently the numbers are the same as each other. This may change in the future
- The risk and reward indicator is at the level it is because the value of shares and the income from them can fluctuate. The value of bonds issued by companies and governments can also vary, although usually by not as much. This can cause the value of your investment in the Fund to fall as well as to rise. The value of your investment is not guaranteed and you may get back less than the original amount you invested

OTHER RISKS:

- Credit Risk: Changes in interest rates or rating of an issuer may affect the performance of fixed income securities
- Equity Risk: The fund may directly or indirectly invest in shares of companies. The value of these shares and the income can increase or decrease due to changes in the health of the economy or an industry
- Liquidity Risk: The event of an inability to sell assets within the fund, without incurring a loss of capital, will directly impact the fund's ability to meet short term financial demands
- Derivatives Risk: Derivatives are highly sensitive to price movements in the underlying asset. Some derivatives can incur losses or gains that may generate additional volatility in the value of the fund
- Counterparty Risk: The insolvency of a counterparty providing services to the fund such as safekeeping of assets may expose the fund to financial losses
- Currency Risk: The fund invests in overseas securities. Fluctuations in exchange rates may affect the value of the investment
- Emerging Market Risk: Emerging Markets tend to exhibit a higher level of volatility relative to developed markets. This is partly due to factors such as liquidity risk, uncertainty surrounding political or economic conditions
- Property Risk: Real estate investment risk can arise from catalysts surrounding liquidity, interest rates, foreign exchange and a decline in market prices
- More information about other risks can be found in the Fund Prospectus section "Risk Factors"

CHARGES FOR THIS FUND

The charges you pay are used to cover the costs of managing the Fund, administering and safeguarding your investment and marketing and distributing the Fund. These charges reduce the potential growth of your investment.

One-off charges taken before or after you invest:	
Entry charge	0.00%
Exit charge	0.00%

The above charges are the maximum that might be taken from your money when you pay into the Fund, and before we pay out the proceeds of your investment.

Charges taken from the Fund over a year:	
Ongoing charge	0.71%
Charges taken from the Fund under specific conditions:	
Performance fee	0.00%

- More information about charges can be found in the Fund Prospectus section "Fees and Expenses" and Appendix 1 "The Funds"
- The ongoing charges also allow for the fees and charges from the underlying funds used by this Fund
- The costs of buying and selling securities are excluded, except those transaction charges paid to the Custodian of the Fund
- The ongoing charge figure is based on expenses for the half-year ending 1 June 2019 and has been annualised. This figure may vary from year to year
