

Investec

Emerging Markets Blended Debt Fund

'I' shares, GBP

As at end April 2019

Objectives and investment policy summary

The Fund aims to provide income and long-term capital growth.

The Fund invests primarily in bonds (contracts to repay borrowed money which typically pay interest at fixed times) issued by governments, institutions or companies in emerging markets (countries that are in economic terms less developed than the major Western countries). These bonds are issued in either the currency of the country in which they are issued or in hard currencies (globally traded major currencies).

The Fund uses a currency hedging strategy that aims to reduce the impact of exchange rate movements between US dollars (USD) and the currency that the Fund's investments are valued in, sterling (GBP), consistent with the currency hedging in the Fund's performance comparison index (50% JPMorgan GBI-EM Global Diversified/30% JPMorgan EMBI Global Diversified/20% JPMorgan CEMBI Broad Diversified). This strategy will be implemented regardless of whether the rate of exchange between GBP and USD is increasing or decreasing. It uses derivatives for efficient portfolio management and investment purposes. The currency hedging in the Fund seeks to reduce, but is not intended to remove, currency risk between GBP and USD. The Fund's actual exposure to USD at any time may be higher or lower than the USD exposure hedged to GBP in the performance comparison index, depending on the Investment Manager's investment view on currency returns and/or volatility (wide fluctuations in price). Where higher, this will result in additional currency exposure to USD. Where lower, this will result in additional currency exposure to GBP.

The Fund may invest in other assets such as cash, money market instruments (tradable securities where money can be invested for short periods), other funds (which may be managed by the Investment Manager, other companies in the same group as the Investment Manager or a third party) and derivatives (financial contracts whose value is linked to the price of an underlying asset). Derivatives may be used for investment purposes (i.e. in order to achieve the Fund's investment objectives) or for efficient portfolio management purposes e.g. with the aim of either managing the Fund risks or reducing the costs of managing the Fund.

Investec Emerging Markets Blended Debt Fund

General risks

The value of these investments, and any income generated from them, will be affected by changes in interest rates, general market conditions and other political, social and economic developments, as well as by specific matters relating to the assets in which they invest. Past performance should not be taken as a guide to the future. The Fund's objectives will not necessarily be achieved and there is no guarantee that these investments will make profits; losses may be made. This Fund may not be appropriate for investors who plan to withdraw their money within the short to medium term.

Specific fund risks

Charges from capital: For Inc-2 and Inc-3 shares classes, expenses are charged to the capital account rather than to income, so capital will be reduced. This could constrain future capital and income growth. Income may be taxable.

Currency exchange: Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

Default: There is a risk that the issuers of fixed income investments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The worse the credit quality of the issuer, the greater the risk of default and therefore investment loss.

Derivatives: The use of derivatives may increase overall risk by magnifying the effect of both gains and losses leading to large changes in value and potentially large financial loss. A counterparty to a derivative transaction may fail to meet its obligations which may also lead to a financial loss.

Emerging market: These markets carry a higher risk of financial loss than more developed markets as they may have less developed legal, political, economic or other systems.

Government securities exposure: The Fund may invest more than 35% of its assets in securities issued or guaranteed by a permitted sovereign entity, as defined in the definitions section of the Fund's prospectus.

Interest rate: The value of fixed income investments (e.g. bonds) tends to decrease when interest rates rise.

Liquidity: There may be insufficient buyers or sellers of particular investments giving rise to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than might be anticipated.

Important information

We recommend that you seek independent financial advice to ensure this Fund is suitable for your investment needs.

All the information contained in this communication is believed to be reliable but may be inaccurate or incomplete. Any opinions stated are honestly held but are not guaranteed and should not be relied upon.

This communication is provided for general information and/or marketing purposes only. It is not an invitation to make an investment nor does it constitute an offer for sale. The full documentation that should be considered before making an investment, including the Prospectus and Key Investor Information Documents, which set out the Fund specific risks, are available from Investec Asset Management. A rating is not a recommendation to buy, sell or hold a fund. This Fund should be considered as a long-term investment.

The fund is a sub-fund of Investec Funds Series iv which is a UCITS incorporated in England and Wales as an investment company with variable capital. This communication should not be distributed to private customers who are resident in countries where the Fund is not registered for sale or in any other circumstances where its distribution is not authorised or is unlawful. In the USA, this communication should only be read by institutional investors, professional financial advisors and, at their exclusive discretion, their eligible clients. It must not be distributed to US Persons apart from the aforementioned recipients. THIS INVESTMENT IS NOT FOR SALE TO US PERSONS.

Fund prices and English language copies of the Fund's Prospectus, latest annual and semi-annual Report & Accounts, Instrument of Incorporation and Key Investor Information Documents may be obtained from www.investecassetmanagement.com and Investec Asset Management Limited, Woolgate Exchange, 25 Basinghall Street, London EC2V 5HA.

Investec Emerging Markets Blended Debt Fund

Glossary summary

Alpha: Jensen's alpha is a risk adjusted measure of a fund's performance relative to its performance comparison benchmark.

Beta: A measure of the volatility of a fund relative to its performance comparison index, i.e. how sensitive the fund is to movements in the market. A figure greater than 1 indicates that the fund will tend to outperform in a rising market and under perform in a falling one, i.e. is more volatile than the market. The reverse applies to a Beta of less than 1.

Credit rating: A score awarded by an independent rating agency to indicate the financial strength of the issuer of a bond, and the potential for a default on interest and principal payments. The top credit rating is 'AAA'. The lowest rating to be considered 'investment grade' is 'BBB'. Below 'BBB', bonds are termed 'sub investment grade' or 'high yield'. Average credit ratings are based on the individual bond ratings issued by the ratings agencies. For each bond, the ratings issued by each agency are combined to form a single rating based on the methodology that most closely matches the performance comparison index (PCI), otherwise median is typically used where there is no PCI. The portfolio rating is the weighted average of the above bond ratings.

Distribution types

Accumulation (Acc): An accumulation share will not make income payments to shareholders but will instead accrue the income daily in the net asset value of the share class. Income is deemed distributed for UK tax purposes.

Income (Inc): An income share will distribute all or part of the income accruing in that share class.

Income-2 (Inc-2): These distribute the income accruing in the share class and charge all their expenses to capital. This maximises the income available for distribution – although it also reduces capital by an equivalent extent which could constrain future capital and income growth. This can be inefficient from a tax perspective in those countries where income tax rates are higher than those on capital gains.

Income-3 (Inc-3): These share classes are similar to Inc-2 share classes in that they charge all their expenses to capital in order to maximise the amount of distributable income. Additionally, Inc-3 share classes aim to provide a consistent distribution rate which is based on the investment manager's expectation of the long term underlying yield. To achieve this they may make distributions from capital or carry over excess income from one calendar year to the next. As the income rate is based on a forecast, there is a risk that future income generated by the fund is overestimated leading to distributions being taken from capital which could also constrain future capital and income growth.

Duration: This is a measure of risk for funds which invest in bonds as it predicts the sensitivity of the value of a fund's portfolio given changes in interest rates. The higher the value the greater the volatility of the fund's performance resulting from changes to interest rates. The Modified duration is shown.

OEIC: Open Ended Investment Company. Investec Funds Series iv; incorporated in England and Wales, the UCITS umbrella of which this sub-fund is a part of.

Information ratio: A measure of a portfolio manager's skill against a performance comparison index. The over or underperformance of the fund relative to its performance comparison index is divided by the tracking error. In this way, we arrive at the value, per unit of extra risk assumed, that the manager's decisions have added to what the market would have delivered anyway. The higher the Information Ratio the better.

KIID SRRI: The Synthetic Risk Reward Indicator (SRRI) which appears in the Key Investor Information Document (KIID). A number on a scale of 1 to 7 based on how much the value of a fund has fluctuated over the past 5 years (or an estimate if the fund has a shorter track record). A rating of 1 represents the lower end of the risk scale with potentially lower rewards available whilst a rating of 7 reflects higher risk but potentially higher rewards.

Maturity profile: The average life of each bond in a fund's portfolio, weighted by value.

Ongoing charge: This figure includes the annual management fee and administrative costs but excludes any performance fee or portfolio transaction costs (except in the case of an entry or exit charge paid by a fund when buying or selling units in another fund). Ongoing charges may vary from year to year.

NAV: The Net Asset Value (NAV) represents the value of the assets of a fund less its liabilities.

Sector: A peer group of funds managed to a similar investment policy. Not every fund will have a relevant sector, but for those that do, a full list of the funds included in the sector can be obtained from us on request.

Tracking error: A measure of how much a fund's returns deviate from those of its performance comparison index. The lower the number the closer the fund's historic performance has followed that of its performance comparison index.

Volatility: The amount by which the performance of a fund fluctuates over a given period.

YTD: Year to date.

Yields

Yield: The Yield reflects the amounts that may be distributed over the next 12 months as a percentage of the Fund's net asset value per share, as at the date shown, based on a snapshot of the portfolio on that day. Where there is a yield number in brackets, it is calculated in the same way, however, as the charges of the share class are deducted from capital rather than income, it shows the level of yield had these charges been deducted from income. Yields do not include any preliminary charge and investors may be subject to tax on their distributions. The effect of taking expenses from capital is to increase income whilst reducing capital to an equivalent extent and may constrain future capital and income growth.
