

## Hermes Multi-Strategy Credit Fund

Factsheet 31 July 2019

**Objective:** The investment objective of the Fund is to generate a high level of income by primarily investing in a diversified portfolio of credit securities including investment grade bonds, high yield bonds, credit default swaps and money market securities (including commercial bank loans) while exhibiting lower volatility relative to the global high yield market.

### Fund information

Fund type	UCITS
Inception date	01 May 2014
Fund size (m)	£765.2 / €841.5 A\$1,359.3 / US\$936.9 S\$1,282.2
Portfolio Manager	Fraser Lundie
Co-Portfolio Manager(s)	Andrey Kuznetsov

Bloomberg ticker	HMSFGAH
Morningstar Rating	★★★
FE Crown Fund Rating	★★★★★★

Share classes - whether Accm or Dist, hedged or unhedged - are available in other currencies

Ongoing Charge as at 30 June 2019 (estimated number)

Morningstar as at 30 June 2019

FE Crown Fund Rating as at 01 July 2019

### Fund performance as at 31 July 2019

Performance over one year is annualised

### Monthly performance (%)

		Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD
2017	Fund	0.91	1.07	-0.29	0.62	0.62	0.08	0.47	-0.01	0.22	0.31	-0.06	0.09	4.09
2018	Fund	0.41	-0.69	-0.74	0.05	-0.83	-0.45	0.96	-0.25	0.31	-0.79	-1.14	-1.03	-4.14
2019	Fund	2.44	1.21	0.89	1.37	-0.74	1.69	0.57	-	-	-	-	-	7.65

### Rolling year performance (%)

	31/07/18 to 31/07/19	31/07/17 to 31/07/18	31/07/16 to 31/07/17	31/07/15 to 31/07/16	31/07/14 to 31/07/15
Fund	4.55	-0.77	6.23	3.66	2.81

Performance not available for all of the above period. Fund performance shown is valued at close of business. Performance shown is the F share class Sterling Accumulating Hedged net of all costs and management fees since seeding on 07 May 2014. Subscription and redemption fees are not included in the performance figures. Funds with a mid-month inception date show part period performance for that month.

### Risk profile

- Past performance is not a reliable guide to future performance.
- The value of investments and income may go down as well as up and you may not get back the original amount invested.
- Bonds Risk: Where the Fund invests in debt instruments (such as bonds) there is a risk that the entity who issues the contract will not be able to repay the debt or to pay the interest on the debt. If this happens then the value of the Fund may vary sharply in value or result in loss. Also the value of the debt instrument may go up or down with changing interest rates.
- Emerging Markets Risk: The performance of the Fund may have some dependence on the economic environment of emerging markets which may negatively affect the value of the Fund.
- Loan Risk: The Fund may invest in secured or unsecured loans. Loans that are fully secured offer the Fund more protection than an unsecured loan, in the event of non-payment of scheduled interest or principal. However, there is no assurance that the sale of assets from a secured loan would satisfy the borrower's obligation. The loans in which the Fund intends to invest may not be rated by any internationally recognised rating service.
- Leverage Risk: The use of leverage may result in large fluctuations in the net asset value of the Fund, amplifying both gains and losses.
- Financial Derivative Instruments (FDIs) Risk: The Fund makes extensive use of FDIs, the value of which depends on the performance of an underlying asset. Small changes in the price of that asset may cause larger changes in the value of the FDIs, increasing either potential gain or loss. FDIs can be used to alter the exposure to underlying Investments. Depending on how they are used, FDIs may increase or decrease the overall volatility of the Fund and carry the risk of substantial loss in market conditions which are not expected by the Investment Manager at the time the FDIs are entered into.
- For more information on risks please refer to the Key Investor Information Document and Prospectus.

## Hermes Multi-Strategy Credit Fund

## Hermes Multi-Strategy Credit Fund

Factsheet 31 July 2019

### Glossary of terms

Accm or Accumulating	Instead of income derived from the fund's shares being paid to investors as dividends, this income is re-invested within the fund to buy further shares.
Average Weighted Coupon Benchmark	Figure derived by weighting the coupon of each bond by its relative size in the portfolio.
Bloomberg Ticker Bond	A standard against which the performance of a security, mutual fund or investment manager can be measured. Generally, broad market stock and bond indexes are used for this purpose. A string of characters or numbers used to identify a listed company or entity on financial services news services.
Citywire Rating	An asset that allows an investor to lend money to a borrower (such as a corporation or government) for a defined period in exchange for interest being paid to the lender throughout the term of the loan and the loan being paid at maturity.
COB	Citywire provides a rating of individual fund manager performance, rather than rating funds. Fewer than 25% of managers tracked qualify for a Citywire Fund Manager Rating. The ratings range downwards from AAA to AA, A and +.
Coupon	Close of business.
Credit	The rate of interest paid on a bond, which is expressed as a percentage of the nominal or face value. Coupons are typically paid semi-annually. The coupon on a fund level is the weighted average of all of the coupons on the underlying investments.
Credit Default Swap (CDS)	An asset class that focuses on investment in instruments that allow entities (such as corporations and governments) to borrow money in order to fund activities. Interest is paid by the borrower to the lender in instalments (known as 'coupon payments') throughout the term of the loan and the loan is expected to be repaid at a defined date in the future. Borrowers receive a 'credit rating' that indicates how risky the loan is likely to be and how likely it is that the borrower will fail to make repayments. More risky borrowers will be expected to pay a higher interest rate to compensate the borrower for the risk.
Credit Exposure	CDS is an insurance contracted by two parties on one underlying issuer facing a risk of default. CDS long risk represents an investment purchased to make a profit from the price of the underlying investment rising. CDS short risk represents an investment purchased to make a profit from the price of the underlying investment falling. CDS Index is an index containing multiple CDS's.
Credit Spread	The total amount of credit extended to a borrower by a lender and the maximum value that will be lost if the counterparty defaults on the loan.
Duration	The yield spread, or difference in yield between different securities, due to different credit quality.
Duration Times Spread (DTS)	A measure that helps approximate the degree of price sensitivity of a bond to changes in the interest rates. Although stated in years, duration is often explained as an estimate of the percentage price change of a bond in response to a one percent change in interest rates. Bonds with higher duration have a greater sensitivity to changes in interest rates and will generally experience a more significant drop in value as interest rates rise so carry a higher degree of risk.
FE Crown Fund Rating	DTS equals credit spread multiplied by duration. This is a volatility measure of spread duration.
Future	Ratings are compiled using three key measurements of a fund's performance. A five FE Crown Fund Rating reflects the highest tier.
High-Yield Bond	A financial contract obligating the buyer to purchase an asset (or the seller to sell an asset) at a predetermined future date and price.
IA Sector	A Bond that has a lower credit rating than other Bonds, increasing the potential risk of loan default. In return for the increased risk, the Bond will pay a higher interest rate ('yield') than investment grade Bonds.
ISIN	The IA sectors divide funds available in the UK, including some offshore (EU) funds, into smaller groups., to allow you to make like-for-like comparisons between funds in a sector.
Loan	International Securities Identification Numbers (ISIN) uniquely identify a financial security for trading and settlement purposes.
Maturity	Money lent to an entity under a contractual arrangement agreed between the borrowers and lender, in exchange for interest throughout the life of the loan and expected repayment of the loan at maturity.
Morningstar Rating	The period of time for which a financial instrument remains outstanding. Maturity refers to a finite time period at the end of which the financial instrument will cease to exist and the principal is repaid with interest. The term is most commonly used in the context of fixed income investments, such as bonds.
Modified duration	A ranking ranging from one to five stars, with five being the best, given to publicly traded mutual funds by the investment research firm Morningstar.
Ongoing Charge	A measure of risk for fixed income securities as it predicts the sensitivity of the value of the fund's portfolio to a change in interest rates. The higher the value the greater the volatility of the fund's performance resulting from changes to interest rates. If the modified duration of a fund is 5 then the average price movement of the fund resulting from a +/- 1% change in interest rates is 5%.
Overweight / Underweight	Estimated charges taken from the Fund over one year.
Portfolio Exposures	A situation where a portfolio holds an excess or lesser amount of a particular security when compared to the security's weight in the underlying benchmark portfolio.
Principal	A measurement of how much a fund is invested in a particular financial security and/or market sector and/or industry. The measurement is usually represented as a percentage of the overall fund or a percentage relative to its benchmark.
Relative Curve Positioning by Duration Contribution	The original sum invested.
Spread Duration	The total duration of a bond portfolio is composed of various duration 'contributions' or exposure along the yield curve. The portfolio has exposure to various sectors of the yield curve (specifically 0-5yrs, 5-15yrs, 15-30yrs, +30yrs) and this exposure is then compared to the index to give the relative exposure, with a positive being an overweight exposure, and a negative an underweight.
Valuation Point	A measure of the percentage change in a bond price for a 1% change in credit spread.
Yield	The time at which the assets of a fund are priced.
Yield Curve	A figure that shows the income return you receive from a bond. The yield displayed is the 'Effective Yield' of the fund; which takes into account reinvestment of all of the underlying bond coupon payments.
Yield to Worst	A line that plots the interest rates at a set point in time having equal credit quality but differing maturity dates.
	It is the lowest potential yield that can be received on a bond without the issuer actually defaulting. This figure is derived by weighting the Yield to Worst of each bond by its relative size in the portfolio.
