

Key Investor Information

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

JPM Global Macro Opportunities Fund C - Net Income a Share Class of JPM Global Macro Opportunities Fund a Fund of JPMorgan Fund ICVC

ISIN GB00B44CT796

The Authorised Corporate Director ("ACD") is JPMorgan Funds Limited

Objective and Investment Policy

Investment Objective: To provide positive investment returns over a rolling 3 year period in all market conditions by investing in securities globally, using financial derivative instruments where appropriate. A positive return is not guaranteed over this or any time period and a capital loss may occur.

Investment Approach:

- ▶ Investment process based on macroeconomic research to identify global investment themes and opportunities.
- ▶ Flexible and focused approach to take advantage of global trends and changes through traditional and non-traditional assets.
- ▶ Fully integrated, risk management framework provides detailed portfolio analysis.

Investment Policy: The Investment Adviser uses an investment process based on macroeconomic research to identify global investment themes and opportunities. The Investment Adviser uses a flexible asset allocation approach, using a broad range of asset classes, instruments and techniques. Allocations may vary significantly and exposure to certain asset classes, markets, sectors or currencies may be concentrated from time to time, in response to market conditions and opportunities.

The Investment Adviser will invest, directly or through the use of Financial Derivative Instruments (derivatives), in global Equity securities (including smaller capitalisation companies), Bonds, (including up to 100% in government and public securities, below investment grade and unrated debt securities), Commodity Index Instruments, currencies, Convertible Securities, collective investment schemes and cash and cash equivalents. Issuers of securities may be located in any country, including Emerging Markets.

The Investment Adviser may have net Long or net Short Position exposure to asset classes, industry sectors, markets and /or currencies depending upon market conditions and opportunities. This may result in a net short position at the overall Fund level. Long Positions will be

achieved directly or through the use of Financial Derivative Instruments, and Short Positions will be achieved via the use of Financial Derivative Instruments only.

The Fund may use Financial Derivative Instruments (derivatives) for investment purposes or Efficient Portfolio Management including hedging, where appropriate.

Although most of the non-Sterling securities will be hedged back into Sterling, the Investment Adviser will also use opportunities in the foreign exchange market to maximise returns.

The Fund may invest in China A-Shares via the China-Hong Kong Stock Connect Programmes.

Portfolio Transaction Costs: A consequence of this investment strategy is that the volume of transactions and, therefore, transaction costs, are material. Portfolio transaction costs are paid from the assets of the fund. They are additional to the charges set out in the Charges section. The chart in the Past Performance section shows the Fund's performance including portfolio transaction costs.

Redemption and Dealing: Shares of the Fund may be redeemed on demand, with dealing normally on a daily basis.

Management Discretion: The Investment Adviser has the discretion to buy and sell investments on behalf of the Fund within the limits of the Objective and Investment Policy.

Benchmark: The benchmark of the Fund is ICE 1 Month GBP LIBOR.

The Benchmark is a performance comparator however the Fund will be managed without reference to its Benchmark. The Benchmark has been chosen as it reflects the investment strategy for the Fund.

Distribution Policy: This Share Class will distribute income.

For an explanation of some of the terms used in this document, please visit the glossary on our website at www.jpmorgan.co.uk/kiid-glossary.

Risk and Reward Profile

The above rating is based on the historic volatility of the Net Asset Value of the Share Class over the last five years and the volatility which is consistent with the risk limit of the Sub-Fund.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

A Share Class with the lowest risk rating does not mean a risk-free investment.

Why is this Share Class in this category? This Share Class is classified in category 5 because its Net Asset Value has shown medium to high fluctuations historically and this category is consistent with the risk limit of the Sub-Fund.

Other material risks:

- ▶ The value of your investment may fall as well as rise and you may get back less than you originally invested.
- ▶ The Fund aims to provide a positive return in any market conditions over a rolling 3 year period, although this is not guaranteed.
- ▶ The Fund can use sophisticated investment techniques that differ from those used in traditional equity funds.
- ▶ The Fund should not be used as a substitute for liquidity funds or cash accounts.
- ▶ The Sub-Fund uses financial derivative instruments for investment purposes. The value of financial derivative instruments can be volatile and may result in gains or losses in excess of the amount required initially to establish a position in the derivative. The ACD is required to disclose in Appendix A of the Prospectus the sum of the gross notional exposure of the financial derivative instruments used (including those used for hedging or efficient portfolio management)

as the expected level of leverage. However, this figure does not take into account whether the instrument increases or decreases investment risk and so may not be representative of the overall level of investment risk in the Sub-Fund.

- ▶ Some financial derivative instruments (derivatives) traded on an exchange may be illiquid, and as a result, may need to be held until the derivative contract position expires. This may have an adverse impact on the return of the Fund.
- ▶ The value of equity and equity-linked securities may fluctuate in response to the performance of individual companies and general market conditions.
- ▶ The value of bonds and other debt securities may change significantly depending on market, economic and interest rate conditions as well as the creditworthiness of the issuer. Issuers of bonds and other debt securities may fail to meet payment obligations (default) or the credit rating of bonds and other debt securities may be downgraded. These risks are typically increased for below investment grade and certain unrated securities, which may also be subject to higher volatility and be more difficult to sell than investment grade securities.
- ▶ The Fund invests opportunistically and exposure to the markets may vary substantially over a short period of time depending on market conditions. Therefore the Fund may not be fully invested in rising markets; conversely the Fund could be more than fully invested in a falling market. In both circumstances the performance of the Fund would suffer.
- ▶ To the extent that any underlying assets of the Fund are denominated in a currency other than Sterling and are not hedged back to Sterling, movements in currency exchange rates can adversely affect the return of your investment. The currency hedging that may be used to

minimise the effect of currency fluctuations may not always be successful.

- ▶ The value of securities in which the Fund invests may be influenced by movements in commodity prices which can be very volatile.
- ▶ Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks. Emerging market currencies may be subject to volatile price movements. Emerging market securities may also be subject to higher volatility and be more difficult to sell than non-emerging market securities.
- ▶ The Fund may invest in China A-Shares through the China-Hong Kong Stock Connect Programmes which are subject to regulatory change, quota limitations and also operational constraints which may result in increased counterparty risk.

- ▶ The Fund invests in securities of smaller companies which may be more difficult to sell, more volatile and tend to carry greater financial risk than securities of larger companies.
- ▶ The possible loss from taking a short position on a security (using financial derivative instruments) may be unlimited as there is no restriction on the price to which a security may rise. The short selling of investments may be subject to changes in regulations, which could adversely impact returns to investors.
- ▶ The Fund may be concentrated in a limited number of securities, industry sectors or countries and as a result, may be more volatile than more broadly diversified funds.
- ▶ Further information about risks can be found in "Part 11: Risk Warnings" of the Prospectus.

Charges

One-off charges taken before or after you invest	
Entry charge	None
Exit charge	None
This is the maximum that might be taken out of your money before it is invested or before the proceeds of your investment are paid out.	
Charges taken from this Share Class over a year	
Ongoing charge	0.67%
Charges taken from this Share Class under certain specific conditions	
Performance fee:	None

- ▶ The actual entry and exit charges paid may be less. Information on charges can be obtained from the investor's financial adviser.
