APRIL 2019 FACTSHEET

Unless otherwise stated, Performance, Portfolio Breakdowns and Net Asset information as at: 30-Apr-2019. All other data as at 13-May-2019.

For Investors in the UK. Investors should read the Key Investor Information Document and Prospectus prior to investing.

FUND OVERVIEW

The Fund aims to achieve a return on your investment, through a combination of capital growth and income on the Fund's assets, by tracking closely the performance of the FTSE Actuaries UK Conventional Gilts All Stocks Index, the Fund's benchmark index. The Fund invests in fixed income securities (such as bonds) that make up the benchmark index and, at the time of purchase, comply with the credit rating requirements of the benchmark index.

RATINGS

Key Risks Continued: Credit risk refers to the possibility that the issuer of the bond will not be able to repay the principal and make interest payments. Fixed income securities issued by governments can be affected by the perceived stability of the country concerned and proposed or actual credit rating downgrades. The fund invests in a limited number of market sectors. Compared to investments which spread investment risk through investing in a variety of sectors, share price movements may have a greater effect on the overall value of this fund. Investment risk is concentrated in specific sectors, countries, currencies or companies. This means the Fund is more sensitive to any localised economic, market, political or regulatory events.

SECTOR BREAKDOWN (%)

	Fund	Benchmark	Active
Government	99.65	100.00	-0.35
Cash and/or Derivatives	0.35	0.00	0.35

Negative weightings may result from specific circumstances (including timing differences between trade and settlement dates of securities purchased by the funds) and/or the use of certain financial instruments, including derivatives, which may be used to gain or reduce market exposure and/or risk management. Allocations are subject to change.

GLOSSARY

Effective Duration: A measure of price sensitivity of a bond to changes in interest rates. The Modified Duration of the fund is calculated as the average of the underlying bonds' modified duration values, adjusted to take account of their relative weight (size) within the fund.

Ongoing Charge: is a figure representing all annual charges and other payments taken from the fund.

Quartile Rank: categorises a fund into four equal bands based on their performance over a specified period within the relevant Morningstar's sector. The top or first quartile contains the top 25% of funds, through to the bottom or 4th quartile which contains the bottom 25% of funds.

SRRI: is a value based on the volatility of the fund, which gives an indication of the overall risk and reward profile of the Fund.

Nominal Weighted Average Life (WAL): A bond's maturity is the length of time until the principal amount of the bond is to be repaid. WAL of the fund is calculated as the average of the underlying bonds' maturities, adjusted to take account of their relative weight (size) within the fund.

Yield To Worst: The lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions are used by the issuer.

3 Year Tracking Error: A divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark.

Performance Fee: is charged on any returns that, subject to a High Water Mark, the Fund achieves above its performance fee benchmark. Please refer to the Prospectus for further information.
