

Storebrand Global Low Volatility is an actively managed equity fund that invests in global stock market through a proprietary long-only, model-based factor approach. The objective of the fund is to produce smaller price fluctuations than the fund's benchmark index. A systematic management strategy is used with active investment decisions to select the most attractive companies. The fund applies a quantitative model that has a certain preference for shares with a high absolute return. The fund usually invests in approximately 80 to 150 large and medium sized low volatility stocks, spread across the developed countries included in the funds benchmark. The fund follows our standard for sustainable investments, which means, among other things, that we refrain from investing in companies that are in breach of international standards and conventions. These include human rights, labour law and international law, corruption and financial crime, serious climate and environmental damage, and controversial weapons (land mines, cluster bombs and nuclear weapons). We also exclude companies where more than 5 per cent of net sales come from the production and/or distribution of fossil fuels, tobacco, weapons, alcohol, gambling, pornography, cannabis, or companies with large fossil reserves.
