

INCOME PARTNERS MANAGED VOLATILITY HIGH YIELD BOND FUND - CLASS 2

Fund Manager's Report - 30 November 2020

IMPORTANT INFORMATION

- Income Partners Managed Volatility High Yield Bond Fund (the "Fund") invests primarily in high yield debt instruments, which are below investment grade or unrated. The Fund will invest in high yield debt instruments, and as a result may be subject to substantial credit/counterparty risk, credit rating related risks, interest rates risk, liquidity risks, and valuation risks. The investments held by the Fund may fall in value and therefore your investment in the Fund may suffer losses.
- II. The Fund's managed volatility strategy may not achieve the desired results under all circumstances. While the Fund's manager will endeavor to manage the Fund such that it does not exceed its pre-determined annualized volatility target, there is no guarantee that such targets can be reached in all market conditions. Managed volatility does not necessarily mean lower risk and the Fund may still suffer losses.
- III. The Fund is denominated in RMB, and RMB is currently not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that RMB will not depreciate. If you convert Hong Kong Dollar or any other currency into RMB so as to invest in the Fund and subsequently convert the RMB redemption proceeds back into Hong Kong Dollar or any other currency, you may suffer a loss if RMB depreciates against Hong Kong Dollar or other currency. In addition, the underlying investments in the Fund may be denominated in currencies other than RMB. The NAV may be affected favorably by fluctuations in the exchange rates between these currencies and the base currency and by changes in the exchange rate controls.
- The Fund invests in the Greater China region and in the China market and there is subject to emerging market risk including political, economic, legal, regulatory and liquidity risks.
- The Fund may invest in derivative transactions such as swaps, futures and forwards for hedging purposes. There is no guarantee that the hedging techniques will be effective.
- In respect of the distribution Units of the Fund (save for Class 2C Dis (USD) Units), the Fund's manager currently intends to make monthly dividend distribution. However, the distribution amount of dividend rate is not guaranteed. In respect of the Class 2C Dis (USD) Units, the Fund's manager makes non-discretionary monthly distributions. For certain classes of Units of the Fund, the Fund's manager may at its discretion pay distributions out of the capital of the Fund. The Fund's manager may also, at its discretion, pay distributions out of gross income, while paying all or part of the fees and expenses of the capital of the Fund, resulting in an increase in distributable income for payment of distributions by the Fund. Therefore the Fund may effectively make payment of dividend out of capital. Payment of distributions out of capital represents a return or withdrawal of part of the amount they originally invested of from any capital gains attributable to the original investment. Any such distributions may result in an immediate reduction of the net asset value per unit of the Fund.
- Investment involves risk. Past performance is not a guarantee or a reliable indicator of future results and no guarantee is being made that similar returns will be achieved in the future
- In making investment decisions, investors should not rely solely on the information in this report and should read the offering document of the Fund of further details including the risk factors. This document does not constitute an offering document.

INVESTMENT OBJECTIVE

The Fund seeks to maximize total investment returns, comprising capital appreciation and interest income by primarily investing in high yield debt instruments that are below investment grade or unrated. It aims to deliver high yield returns with a reduced level of volatility compared against the broader high yield market through an active managed volatility strategy by using both quantitative and qualitative measures. The Fund has a geographical focus on Greater China and Asia.

PORTFOLIO OVERVIEW¹²

In November, the Asian USD high yield market rallied from the consolidation in September and October, as the outcome of US election has eliminated a major uncertainty, and investors started to price in potential positives ahead, including the approval and usage of Covid-19 vaccines, a second round of fiscal and monetary stimulus in the US, as well as the rebound of the global economy in 2021.

In terms of valuation, by the end of November, the average credit spread of JACI non-investment grade blended index has tightened to 669bps from 725bps in October, compared to the pre-pandemic level of 535bps by the end of 2019.

In October and November, China's economy showed further recovery. The YoY growth rate of China's Total Social Financing, an indicator of overall credit expansion, softened slightly to 13.6% in November from 13.7% in October, and remained high compared to last year's around 11% level. On the economy side, the YoY growth rate of China's YTD Fixed Assets Investments rebounded to 1.8% in October from 0.8% in September, while the YoY growth rate of YTD Retail Sales recovered to -5.9% in October from -7.2% in September. The leading indicator, China's official Manufacturing PMI also jumped to 52.1 in November from 51.4 in October.

In November, after the unexpected default of a locally AAA-rated provincial level State Owned Enterprise (SOE) Yongcheng Coal, China onshore investors became more concerned about the underlying credit quality of onshore corporate bond issues. Such development has triggered a partial repricing of onshore credit market, in particular among the weaker local government owned SOEs and LGFVs. We deem such repricing and credit differentiation of onshore credit market positive, as it is a healthy development toward a more transparent and efficient credit market. In addition, we do not consider the recent defaults pose systemic risk due to (1) China's YTD onshore default rate is still low at 1.83% even under the impact of recent pandemic, which shows the resilience of China's economy; (2) With much lower Debt/GDP ratio than Developed Markets, Chinese government and central bank have the resources and power to contain systemic risks, if any; (3) Only selective local SOEs and LGFVs are with weak fundamentals. There are many more strong credits in sectors such as utility, consumer, manufacturing, etc. Overall, the weakness in China's onshore credit market had minimal impact on the offshore USD Chinese high yield market and the fund in November, as offshore USD Chinese high yield credits have already been trading at a wide premium over onshore CNY-denominated credits, typically for the same name, tenor and

Looking ahead, considering the outperformance of China's economy, potential positives on vaccines and stimulus, as well as the zero USD interest rate environment, the manager remains constructive on Asian high yield at current valuation, and will continue to actively manage risk.
