

FUND FACTSHEET

HARRIS ASSOCIATES GLOBAL EQUITY FUND

JANUARY 2021

- The Fund invests primarily in listed equity securities of companies around the world and subject to equities, foreign exchange and liquidity risks.
- The Fund may hold equities having a value bias which may continue to be underpriced by the market for sustained periods of time.
- The Fund may use financial derivative instruments ("FDI") for hedging, efficient portfolio management and investment purposes which may involve counterparty/credit, liquidity, valuation, volatility and over-the-counter transaction risks. In adverse circumstances, the Fund may suffer significant losses in relation to use of FDI.
- This investment involves risks and investors may suffer substantial or total loss of their investment fund.
- Investor should not invest in the Fund solely based on the information provided in this document and should read the prospectus for details, including the risk factors.

FUND HIGHLIGHTS

- Invests primarily in companies around the world
- Employs a disciplined value approach and long-term absolute return orientation
- Seeks to invest in companies whose stocks are trading at a substantial discount to intrinsic value and have owner-oriented management teams
- Follows a rigorous, independent, fundamental research process that seeks to identify businesses with growing value
- Derives estimation of intrinsic value by adopting a private equity approach to public equity markets using cash flow analysis as the main metric
- Diversifies portfolio across countries and industries as a risk management tool without sacrificing stock selection

CALENDAR YEAR RETURNS %

TOTAL RETURNS	Fund %	Index %
1 month	-0.29	-0.99
1 year	12.40	15.45
3 months	28.73	16.40
Year to date	-0.29	-0.99
3 years	2.49	27.03
5 years	58.55	87.19
10 years	77.08	148.12
since inception	262.40	255.55

Total returns will be available 1 year after inception.

ANNUALISED PERFORMANCE (Month End)	Fund %	Index %
3 years	0.82	8.30
5 years	9.66	13.36
10 years	5.88	9.51
since inception	6.79	6.69

PERFORMANCE DATA SHOWN REPRESENTS PAST PERFORMANCE AND IS NOT A GUARANTEE OF FUTURE RESULTS. Some recent performance may be lower or higher. As the value of the capital and the returns change over time (notably due to currency fluctuations), the repurchase price of the shares can be higher or lower than their initial price. The performance indicated is based on the NAV (net asset value) of the share class, and is net of all charges applying to the fund but does not account for sale commissions, taxation or paying agent fees, and assumes that dividends if any are reinvested. Taking such fees or commissions into account would lower the returns. The performance of other share classes would be higher or lower based on the differences between the fees and the entry charges. In the periods where certain share classes are not subscribed or not yet created (inactive share classes), performance is calculated based on the actual performance of an active share class of the fund whose characteristics are considered by the management company as being closest to the inactive share class concerned, after adjusting it for the differences between the total expense ratios (TER), and converting any net asset value of the active share class in the currency in which the inactive share class is listed. The performance given for the inactive share class is the result of a calculation provided for information. Please read the important information given in the additional notes at the end of this document.

SHARE CLASS: R/A (USD)

MANAGEMENT

Management Company
NATIXIS INVESTMENT MANAGERS S.A

Investment Manager
HARRIS ASSOCIATES LP

Harris Associates manages domestic equity, international equity, and balanced portfolios. The firm employs an intensive, fundamental in-house research process to identify companies trading at a significant discount to managers' estimates of intrinsic business value. Managers construct portfolios on a stock-by stock basis and follow a strict buy/sell discipline.

Headquarters	Chicago
Founded	1976

Assets Under Management (Billion) US \$ 86.0 / € 73.3 (30/09/2020)

Portfolio Managers

David G. Herro, CFA: began investment career in 1985; joined Harris Associates in 1992; has managed the Fund since 2016; MA, University of Wisconsin-Milwaukee.

Jason E. Long, CFA: began investment career in 2000; joined Harris Associates in 2011; has managed the Fund since 2017; BA, San Diego State University.

Anthony P. Coniaris, CFA: began investment career in 1999; joined Harris Associates in 1999; has managed the Fund since 2014; MBA, Northwestern University.

This document has been issued by Natixis Investment Managers Hong Kong Limited ("Natixis Investment Managers HK"). Information herein is based on sources Natixis Investment Managers HK believe to be accurate and reliable as at the date it was made. Natixis Investment Managers HK reserve the right to revise any information herein at any time without notice. The above Fund data is for information only and does not constitute any offer or solicitation to buy or sell securities and no investment advice or recommendation. Investment involves risks. Past performance information presented is not indicative of future performance. Positive dividend yield does not imply positive returns. Source: Natixis Investment Managers. If investment returns are not denominated in HKD/USD, USD-/HKD-based investors are exposed to exchange rate fluctuations. This document has not been reviewed by the SFC.

Calculation of performance during periods of share class inactivity (if applicable)

For periods when certain share classes were unsubscribed or not yet created (the "inactive share classes"), performance is imputed using the actual performance of the fund's active share class which has been determined by the management company as having the closest characteristics to such inactive share class and adjusting it based on the difference in TERs and, where applicable, converting the net asset value of the active share class into the currency of quotation of the inactive share class. The quoted performance for such inactive share class is the result of an imputed calculation.

Illustrative Growth of 10,000

The graph compares the growth of 10,000 in a fund with that of an index. The total returns are not adjusted to reflect sales charges or the effects of taxation, but are adjusted to reflect actual ongoing fund expenses, and assume reinvestment of dividends and capital gains. If adjusted, sales charges would reduce the performance quoted. The index is an unmanaged portfolio of specified securities and cannot be invested in directly. The index does not reflect any initial or ongoing expenses. A fund's portfolio may differ significantly from the securities in the index. The index is chosen by the fund manager.

Risk Measures

The Risk & Reward Profile includes a "synthetic risk and reward indicator" (SRRI), as defined by the European Securities and Markets Authority (ESMA). This risk measure is calculated based on volatility of returns, in other words fluctuations in the net asset value (NAV) of the fund. The indicator is presented on a numerical scale of 1 to 7, where 1 is low and 7 high.

The risk measures below are calculated for funds with at least a three-year history.

Alpha measures the difference between a fund's actual returns and its expected performance, given its level of risk (as measured by beta). Alpha is often seen as a measure of the value added or subtracted by a portfolio manager.

Beta is a measure of a fund's sensitivity to market movements. A portfolio with a beta greater than 1 is more volatile than the market, and a portfolio with a beta less than 1 is less volatile than the market. R-squared reflects the percentage of a fund's movements that are explained by movements in its benchmark index, showing the degree of correlation between the fund and the benchmark. This figure is also helpful in assessing how likely it is that alpha and beta are statistically significant.

The Sharpe ratio uses standard deviation and excess return to determine reward per unit of risk.

Standard deviation is a statistical measure of the volatility of the fund's returns.

Tracking Error is reported as a standard deviation percentage difference between the performance of the portfolio and the performance of the reference index. The lower the Tracking Error, the more the fund performance resembles to the performance of its reference index.

The Information Ratio is the difference between the fund's average annualized performance and the reference index divided by the standard deviation of the Tracking Error. The information ratio measures the portfolio manager's ability to generate excess returns relative to the reference index.

Asset allocation

Cash offset for Derivatives represents the amount of cash the portfolio manager should borrow if he's Long exposed via derivatives and vice versa. The weighting of the portfolio in various asset classes, including "Other," is shown in this table. "Other" includes security types that are not neatly classified in the other asset classes, such as convertible bonds and preferred stocks. In the table, allocation to the classes is shown for long positions, short positions, and net (long positions net of short) positions. These statistics summarize what the managers are buying and how they are positioning the portfolio. When short positions are captured in these portfolio statistics, investors get a more robust description of the funds' exposure and risk.

Fund Charges

The ongoing charges figure is based on expenses for the year ending December 2019. It excludes the portfolio transaction costs, except in the case of an entry/exit charge paid by the SICAV when buying or selling units in another collective investment undertaking. CDSC (if applicable): Investors in class C Shares who redeem some or all of their Shares within one year from the date of their subscription may however be levied a contingent deferred sales charge ("CDSC") that will be retained by the financial institution through which the subscription of Shares was made by deduction from the redemption proceeds paid to the relevant investor. Investors in class CW Shares who redeem some or all of their Shares within the first 3 years from the date of their subscription may however be subject to a contingent deferred sales charge ("CDSC") that will be retained by the financial institution through which the subscription of Shares was made by deducting such charge from the redemption proceeds paid to the relevant investor.

Equity Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long equity holdings in the portfolio. The Price/Earnings ratio is a weighted average of the price/earnings ratios of the stocks in the underlying fund's portfolio. The P/E ratio of a stock is calculated by dividing the current price of the stock by its trailing 12-months' earnings per share. The Price/Cash Flow ratio is a weighted average of the price/cash-flow ratios of the stocks in a fund's portfolio. Price/cashflow shows the ability of a business to generate cash and acts as a gauge of liquidity and solvency. The Price/Book ratio is a weighted average of the price/book ratios of all the stocks in the underlying fund's portfolio. The P/B ratio of a company is calculated by dividing the market price of its stock by the company's per-share book value. Stocks with negative book values are excluded from this calculation.

Fixed-Income Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long fixed income holdings in the portfolio. Duration measures the sensitivity of a fixed income security's price to changes in interest rates. Average maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each maturity date by the market value of the security. Modified Duration is inversely related to percentage change in price on an average for a specific change in yield. Dividend Yield is the rate of return on an investment expressed as a percent. Yield is calculated by dividing the amount you receive annually in dividends or interest by the amount you spent to buy the investment.

Morningstar Rating and Category

Morningstar Rating and Category
© 2020 Morningstar. All Rights Reserved. The information, data, analyses and opinions ("Information") contained herein (1) include Morningstar's confidential and proprietary information (2) may not be copied or redistributed, (3) do not constitute investment advice (4) are provided solely for informational purposes (5) are not warranted to be complete, accurate or timely and (6) are drawn from fund data published on various dates. The information is provided to you at your own risk. Morningstar is not responsible for any trading decisions, damages or other losses related to the Information or its use. Please verify all of the Information before using it and don't make any investment decision except upon the advice of a professional financial adviser. Past performance is no guarantee of future results. The value and income derived from investments can go up or down. The Morningstar rating applies to funds having at least 3 years of history. It takes into account subscription fee, the yield without risk and the standard deviation to calculate for every fund its ratio MRAR (Morningstar Risk Adjust Return). Funds are then classified in decreasing order by MRAR: first 10 per cent receive 5 stars, the following 22,5 % 4 stars, the following 35 % 3 stars, following 22,5 % 2 stars, the last 10 % receive 1 star. Funds are classified within 180 European categories.

Special Risk Considerations

Growth/Value Equities risk: Investments in equities tend to fluctuate more than investments in bonds, but also offer greater potential for growth. The price of equity investments may sometimes fluctuate quite dramatically in response to the activities and results of individual companies, as well as in connection with general market and economic conditions. Additionally, funds may hold equities having either a growth or value bias; prices of the growth bias equities tend to be more sensitive to certain market movements as they are often subject to factors such as future earnings expectations which may vary with changing market conditions; whereas equities with a value bias may continue to be underpriced by the market for sustained periods of time.

Portfolio Concentration risk: Funds investing in a limited number of securities may increase the fluctuation of such funds' investment performance. If such securities perform poorly, the fund could incur greater losses than if it had invested in a larger number of securities. Please refer to the full prospectus, for additional details on risks

The fund is a sub-fund of Natixis International Funds (Lux) I which is organized as an investment company with variable capital under the laws of the Grand Duchy of Luxembourg and is authorized by the financial regulator (the CSSF) as a UCITS - 2-8 avenue Charles de Gaulle, L1653 Luxembourg - RCS Luxembourg B 53023. Natixis Investment Managers S.A., a Luxembourg management company authorized by the CSSF, is a Société anonyme with capital of 14 000 000 euros - 2,rue Jean Monnet L-2180 Luxembourg - RCS Luxembourg B 115843.
