PERFORMANCE SWAPS

The Fund has concluded "Performance swap" contracts in which two parties enter into an agreement, whereby the two parties exchange cash flows based on the performance of a reference index or stock for the specified life of the agreement. The amounts of interests paid or received are calculated and accounted for every time the NAV is calculated.

■ New Silk Road

The counterparty of this Performance Swap is JP MORGAN.

INFLATION SWAPS

The Fund has concluded "Inflation Swaps" which are contracts offering the difference between an inflation level, applied on a given nominal amount agreed at the contract inception, and a fixed interest rate applied on the same nominal amount. These amounts are calculated and booked for every time the NAV is calculated.

18 STATEMENT OF PORTFOLIO MOVEMENTS

Details of movements of securities in the portfolio for the year ending 30 June 2024 may be obtained free of charge on request at the Fund's registered office and the Hong Kong representative office.

The list of the portfolio changes can also be obtained free of charge at the Paying and Information Agent's office in Germany and at the Representative's office in Switzerland.

19 MASTER-FEEDER STRUCTURE

Amundi Funds Global Total Return Bond

The objective of the Sub-Fund Amundi Funds Global Total Return Bond is to achieve a combination of income and capital growth (total return).

Specifically, the Sub-Fund invests as a feeder fund in Amundi Oblig Internationales (master fund) that seeks to outperform (after applicable fees) the JP Morgan Global Government Bond Index Broad index over any given 3-year period.

The master fund invests mainly in OECD bonds and convertible bonds. Investments may include mortgage-backed securities (MBS) and asset-backed securities (ABS). Specifically, the Sub-Fund invests at least 85% of its net assets in shares of the master fund (OR-D class).

Amundi Oblig Internationales is a SICAV constituted under French law and qualifies as a master fund under Directive 2009/65/EC.

The master fund invests up to 100% in:

- bonds issued or guaranteed by OECD member states,
- investment-grade bonds and convertible bonds issued by companies that are headquartered, or do substantial business, in the OECD,
- MBSs and ABSs rated AAA (S&P) or Aaa (Moody's) at the time of the purchase and downgraded not less than AA or Aa2 when held.

The mortgages underlying the MBSs may be commercial or residential, and the MBSs may or may not come with any form of government credit backing.

The master fund's exposure to contingent convertible bonds is limited to 10% of net assets.

The master fund actively manages its exposure to interest rate and foreign exchange markets.

While complying with the above policies, the master fund may also invest in money market instruments, deposits, and up to 10% of its net assets in UCITS/UCIs.

The master fund makes extensive use of derivatives to reduce various risks, for efficient portfolio management and as a way to gain exposure (long or short) to various assets, markets or other investment opportunities (including derivatives which focus on credit and foreign exchange).

The master fund may enter into temporary acquisitions and sales of securities (repurchase and reverse repurchase agreements).

The master fund's net income is automatically distributed and its net realised capital gains are automatically reinvested or distributed each year, as the management company of the master fund may determine.

The master fund's investment team uses a wide range of strategic and tactical positions, including arbitrage among credit, interest rate and currency markets, in assembling a highly diversified portfolio.

The Investment manager of the both Sub-Funds is Amundi (UK) Limited.

Fees directly charged to Amundi Funds Global Total Return Bond amount to EUR 542,520.44 which is summarized in the table below in terms of percentages of the average NAV of Amundi Funds Global Total Return Bond share-classes:

			Ongoing charges	Performance fees
Global Total Return Bond	EUR	Class A EUR (C)	0.97%	0.57%

Fees indirectly charged through fees accrued in the master fund (OR-D Class) amount to EUR 46,516.24 or 0.15% of the average NAV of the master fund (OR-D Class) Amundi Oblig Internationales.

The annual and semi-annual reports of the master fund are available upon request at the Registered Office of the Fund.

Amundi Funds Global Total Return Bond also indirectly pays for fees of underlying funds held in the master fund.

The audit opinion of the annual report of the Master fund issued as at 28 June 2024, without modifying it, includes an emphasis of matter in relation to the valuation of the Russian securities following the Russian invasion on Ukraine on 24 February 2022.

Amundi Funds Target Coupon

The objective of the Sub-Fund Amundi Funds Target Coupon is to achieve a combination of income and capital growth (total return). Specifically, the Sub-Fund invests as a feeder fund in Amundi Revenus (master fund). The master fund and, as a consequence, the Sub-Fund are financial products that promote ESG characteristics pursuant to Article 8 of the Disclosure Regulation.

The master fund invests mainly in debt instruments (bonds and money market instruments) of all types that are issued by governments or companies around the world and denominated in one of the OECD currencies, with diversification among currencies and equity markets.

Specifically, the Sub-Fund invests at least 85% of its net assets in shares of the master fund (OR class). The Sub-Fund may invest up to 15% in deposits and derivatives that are used for hedging only.

Amundi Revenus is an FCP that is constituted under French law and qualifies as a master fund under Directive 2009/65/EC.

The master fund invests at least 70% of its net assets in debt instruments. The master fund may invest in

- below-investment-grade bonds (high-yield bonds),
- subordinated corporate bonds (including contingent convertible bonds up to 50% of net assets) and
- up to 20% of net assets in mortgage-backed securities (MBS) and asset-backed securities (ABS).

The master fund may also invest in equities of companies of all capitalisations and sectors around the world. The master fund's exposure to the equity market may range from 0% to 20% of net assets, and its exposure to the currency market may range from 0% to 100% of net assets.

The master fund may also invest up to 10% of net assets in UCITS/UCIs.

The master fund makes extensive use of derivatives to reduce various risks, for efficient portfolio management, and as a way to gain exposure (long or short) to various assets, markets or other investment opportunities (including derivatives which focus on credit).

The master fund may enter into temporary acquisitions and sales of securities (repurchase and reverse repurchase agreements).

The amount of the distributed income will be set annually by the management company of the master fund, based on the expected returns of the assets in the portfolio.

The master fund does not compare its performance to any particular index.

The master fund's investment team seeks to exploit yield premiums from a broad investment universe (primarily bonds), using a management approach that is flexible and is based on high-conviction choices. It analyses interest rate and economic trends (top-down) to identify strategies and country and asset class allocations that appear likely to offer the best risk-adjusted returns. The investment team then uses both technical and fundamental analysis, including risk premium and credit analysis, to select securities based on their potential to generate income (bottom-up) and to construct a highly diversified portfolio that can provide a regular return.

Further, the master fund seeks to achieve an ESG score of its portfolio greater than that of its investment universe.

The Investment manager of the both Sub-Funds is Amundi Asset management.

Fees directly charged to Amundi Funds Target Coupon amount to EUR 666,533.12 which is summarized in the table below in terms of percentages of the average NAV of Amundi Funds Target Coupon share-classes:

			Ongoing charges	Performance fees
Target Coupon	EUR	Class A2 EUR AD (D)	1.04%	-
	EUR	Class F2 EUR AD (D)	1.65%	-
	EUR	Class G2 EUR AD (D)	1.25%	-
	EUR	Class I2 EUR AD (D)	0.56%	-
	EUR	Class M2 EUR AD (D)	0.66%	-
	EUR	Class Q-A4 EUR AD (D)	1.01%	-

Fees indirectly charged through fees accrued in the master fund (OR class) amount to 17,282.56 or 0.04% of the average NAV of the master fund (OR class) Amundi Revenus.

Amundi Funds Target Coupon also indirectly pays for fees of underlying funds held in the master fund.

The annual and semi-annual reports of the master fund are available upon request at the Registered Office of the Fund.

Amundi Funds Montpensier Great European Models SRI

The objective of the Sub-Fund Amundi Funds Montpensier Great European Models SRI is to achieve capital growth over the recommended holding period through investment in Sustainable Investments pursuant to Article 9 of the Disclosure Regulation. Specifically, the Sub-Fund invests as a feeder fund in the Montpensier GREAT EUROPEAN MODELS SRI fund (master fund) that seeks to outperform its benchmark index, the Stoxx Europe 600 (SXXR) index.

The master fund invests mainly in European equities and equity linked instruments.

Specifically, the Sub-Fund invests at least 85% of net assets in shares of the master fund (Y class).

The master fund is a SICAV that is constituted under French law and qualifies as a master fund under Directive 2009/65/EC.

The master fund integrates Sustainability Factors in its investment process as outlined in more detail in the Transparency Code which is available on the fund' dedicated page on the management company website, www.montpensier.com.

The portfolio of the master fund is exposed to at least 60% in equities from European Union countries. Investments in securities eligible to the French Plan d'Epargne Action will represent a minimum of 75% of the assets.

While complying with the above policies, the Sub-Fund may also be exposed

- up to 30% of its assets in equities of European countries that are not members of the European Economic Area;
- up to 10% of its assets in equities of emerging markets as defined by the master fund;
- up to 10% of its assets in equities of markets outside Europe;
- to interest rate risk up to 40% of the net assets, with a maximum of 20% of the assets in bonds and 10% in money market instruments;
- up to 10% of net assets in deposits;
- up to 10% of net assets in UCITS/UCIs.

Investments in equities of small-cap stocks will be limited to 20% of the assets.

There are no constraint on sector or geographical allocation within Europe, on currency or on ratings on these investments.

The master fund may include an exchange rate risk limited to 30% of the net assets, excluding the Euro or other currencies of the European Economic Area.

The master fund may use derivatives to reduce various risks and to gain exposure (long or short) to various assets, markets or other investment opportunities (including derivatives which focus on equities).

The Stoxx Europe 600 (SXXR) index serves a posteriori as an indicator for assessing the Sub-Fund's performance.

The master fund is actively managed and there are no constraints relative to Stoxx Europe 600 (SXXR) index restraining portfolio construction.

The extra-financial approach implemented is presented in the SICAV's Transparency Code available on the website of the masterfund's investment manager. It is based on the integration of extrafinancial criteria as soon as the investment universe is defined, via an exclusion process in order to reduce the investment universe by at least 20% compared to the initial universe, in compliance with the French SRI label. In addition, all the stocks in the portfolio are analyzed according to a dual ESG and fundamental approach, the minimum required by the SRI label being 90% of stocks analyzed according to the ESG approach.

The extra-financial approach implemented is in line with a risk mitigation objective in terms of sustainability.

The Investment manager of the Sub-Funds are Amundi Asset Management (feeder) and Montpensier Finance (master fund).

Fees directly charged to Amundi Funds Montpensier Great European Models SRI amount to EUR 6,788.87 which is summarized in the table below in terms of percentages of the average NAV of Amundi Funds Montpensier Great European Models SRI share-classes:

			Ongoing charges	Performance fees
Montpensier Great European Models SRI	EUR	Class A2 EUR (C)	2.74%	-
	EUR	Class A5 EUR (C)	1.82%	-
	EUR	Class E2 EUR (C)	2.56%	-
	EUR	Class F EUR (C)	3.23%	-
	EUR	Class G EUR (C)	2.88%	-
	EUR	Class I2 EUR (C)	1.81%	-
	EUR	Class R2 EUR (C)	1.85%	-

Fees indirectly charged through fees accrued in the master fund amount to EUR 1,530.63 or 0.60% of the average NAV of the master fund Montpensier GREAT EUROPEAN MODELS SRI fund.

Amundi Funds Montpensier Great European Models SRI also indirectly pays for fees of underlying funds held in the master fund.

The annual and semi-annual reports of the master fund are available upon request at the Registered Office of the Fund.

Amundi Funds Montpensier M Climate Solutions

The objective of the Sub-Fund Amundi Funds Montpensier M Climate Solutions is to achieve capital growth over the recommended holding period through investment in Sustainable Investments pursuant to Article 9 of the Disclosure Regulation.

Specifically, the Sub-Fund invests as a feeder fund in the Montpensier M Climate Solutions fund that seeks to share in the development of global equity markets by investing primarily in shares of companies whose initiatives or solutions contribute directly or indirectly to reducing the impacts of climate change, or in shares of

companies part of whose activity concerns trends and developments linked to the theme of the energy and climate transition.

The master fund invests mainly in equities around the world.

Specifically, the Sub-Fund invests at least 85% of net assets in shares of the master fund (Y class).

The master fund is a FCP constituted under French law and qualifies as a master fund under Directive 2009/65/EC.

The master fund invests at least 75% of its net assets in equities and similar instruments (like certificates of investment and convertible bonds) of companies around the world, in all business sectors and all geographical regions including up to 40% of the assets in emerging markets.

Instruments that are equivalent to equity may represent up to 25% of the net assets. There are no market capitalisation constraints for these investments.

While complying with the above policies, the Sub-Fund may also:

- be exposed to interest-rate risk up to 40% of the net assets with a maximum of 25% of the assets in bonds and 10% in money market instruments;
- invest up to 10% of its net assets in UCITS/UCIs; and
- hold deposits for up to 10% of its net assets.

There are no rating nor currency constraint on these investments.

The master fund makes use of derivatives to reduce various risks, to gain exposure (long or short) to various assets, markets or other investment opportunities (including derivatives which focus on credit and equities).

The master fund is actively managed.

The reference to an index is only for subsequent comparison purposes.

The Stoxx Global 1800 (SXW1R) serves a posteriori as an indicator for assessing the Sub-Fund's performance.

The master fund's management strategy uses a dual approach to identify stocks:

- stock picking on the basis of non-financial criteria with the aim of identifying companies' involvement in the energy and ecological transition for climate. Certain activities, such as nuclear and fossil fuel energy will be excluded;
- completed by a fundamental analysis supported by a quantitative study based on financial ratios.

The Investment manager of the Sub-Funds are Amundi Asset Management (feeder fund) and Montpensier Finance (master fund).

Fees directly charged to Amundi Funds Montpensier M Climate Solutions amount to EUR 666,749.56 which is summarized in the table below in terms of percentages of the average NAV of Amundi Funds Montpensier M Climate Solutions:

			Ongoing charges	Performance fees
Montpensier M	EUR	Class A2 EUR (C)	1.56%	-
Climate	EUR	Class A5 EUR (C)	0.82%	-
Solutions	EUR	Class E2 EUR (C)	1.38%	-
	EUR	Class F EUR (C)	2.23%	-
	EUR	Class G EUR (C)	1.55%	-
	EUR	Class I2 EUR (C)	0.64%	-
	EUR	Class R2 EUR (C)	0.68%	-

Fees indirectly charged through fees accrued in the master fund amount to EUR 301,139.29 or 0.45% of the average NAV of the master fund Montpensier M Climate Solutions fund.

Amundi Funds Montpensier M Climate Solutions also indirectly pays for fees of underlying funds held in the master fund.

The annual and semi-annual reports of the master fund are available upon request at the Registered Office of the Fund.

Amundi Funds Impact Green Bonds

The objective of the Sub-Fund Amundi Funds Impact Green Bonds is to achieve a combination of income and capital growth (total return) over the recommended holding period through investment in Sustainable Investments pursuant to Article 9 of the Disclosure Regulation.

Specifically, the Sub-Fund invests as a feeder fund in Amundi Responsible Investing - Impact Green Bonds (master fund) that seeks to provide performance linked to Sustainable Investments pursuant to Article 9 of the Disclosure Regulation, by investing in green bonds whose impact on the environment is positive, assessed on the basis of estimated greenhouse gas emissions avoided and using the tonnes of CO2 equivalent emissions (tCO2e) avoided as indicator.

The master fund invests mainly in OECD investment grade green bonds issued by any issuer around the world and denominated in any currency.

Non-Euro currency exposure is limited to 10% of net assets.

Specifically, the Sub-Fund invests at least 85% of net assets in shares of the master fund (OR-D class).

The Impact Green Bonds master fund is a Sub-Fund of the Amundi Responsible Investing SICAV constituted under French law and qualifies as a master fund under Directive 2009/65/EC.

The master fund may invest up to 100% of its net assets in all of the following types of green bonds traded on a regulated market and issued by governments, supra-national organizations, and private or public companies around the world, including up to 15% of the assets in emerging markets:

- fixed-rate and variable-rate bonds;
- indexed bonds: inflation, CMR (Constant Maturity Rate);
- subordinated securities issued by any type of bank, corporation or insurance company;
- Asset-Backed Securities (ABS) and Mortgage-Backed Securities (MBS) up to a maximum of 10% of net assets.

The master fund will invest a minimum of 50% of the net assets in green bonds from issuers with an ESG rating of between A and D.

At least 90% of the securities held in the portfolio are subject to a non-financial analysis.

The master fund may invest up to 15% of net assets in unrated or below investment grade securities.

The currency risk will be hedged up to a total exposure to currencies other than the euro of 10% of the net assets.

While complying with the above policies, the master fund may also invest:

- up to 30% of its net assets in money market instruments;
- up to 10% of net assets in UCITS/UCIs;
- in deposits;

The master fund makes use of derivatives to reduce various risks, for efficient portfolio management and as a way to gain exposure (long or short) to various assets, markets or other investment opportunities (including derivatives which focus on interest rates, credit and foreign exchange).

The master fund is actively managed. The Barclays MSCI Global Green Bond Index (coupons reinvested), hedged in euro (the "Index") serves a posteriori as an

indicator for assessing the master fund's performance.

There are no constraints relative to the Index restraining portfolio construction.

The master fund's sustainable investment is focused primarily on environmental objectives by investing in so-called "green bonds" which fund eligible projects (i) meeting the criteria and guidelines of the Green Bond Principles (as published by the ICMA) and (ii) for which the positive impact on energy transition and the environment of the projects it finances can be assessed.

The Investment manager of the both Sub-Funds is Amundi Asset Management.

Fees directly charged to Amundi Funds Impact Green Bonds amount to EUR 106,312.21 which is summarized in the table below in terms of percentages of the average NAV of Amundi Funds Impact Green Bonds:

			Ongoing charges	Performance fees
Impact Green Bonds	EUR	Class A2 EUR (C)	1.08%	-
	EUR	Class E2 EUR (C)	0.88%	-
	EUR	Class F2 EUR (C)	1.52%	-

22 RECEPTION AND TRANSMISSION OF ORDERS FEES

Reception and transmission of orders fees are:

- paid to Amundi Intermediation or to Amundi (UK) Ltd, for their services rendered to Sub-Funds managed by Amundi which consist in centralizing orders and in supporting their best execution.
- accrued daily and paid quarterly on the basis of the transactions handled by Amundi's related parties.

Compared to an investment manager negotiating transactions on his own, the centralization of order enables namely to negotiate better prices with the brokers thanks to an increase of transactions volume, to have access to a larger number of brokers and to more market information, to benefit from the know-how of trading specialists and dedicated trading controllers.

These fees are recorded under caption "Reception and transmission of orders fees" in the Statement of Operations and Changes in Net Assets.

23 OPERATION WITH RELATED PARTIES

The related parties, in their capacity as brokers, may also carry out operations or invest in currencies or other financial products on behalf of each Sub-Fund for which the related parties act as broker or on their own behalf or as counterpart for their clients, including cases where the related parties or their clients are able to carry out transactions on their own behalf at the same time as on behalf of each Sub-Fund. The transactions as listed on the table have been entered into ordinary course of business and on normal commercial terms.

The Fund considers that the commissions, premiums and reductions billed by related parties will be competitive, even though it is in the interest of the related parties to obtain favourable commission rates, together with premiums and reductions for each Sub-Fund.

During the year, transactions for a total amount of EUR 21,717,646,048.80 i.e. 8.59% of the total transactions carried out over the year, were carried out by such related parties.

During the year ended on 30 June 2024, Amundi Funds carried out transactions with related parties amounting to:

24 SOFT DOLLARS COMMISSIONS

The Investment Managers of the concerned Sub-Funds have entered into soft commission arrangements with brokers under which certain goods and services used to support the investment decision making and are of demonstrable benefits to the Sub-Funds were received by the Investment Managers. The goods and services are paid for by the brokers out of commission they received and the Investment Managers do not make direct payment for these services. The goods and services utilised for the Fund include market analysis: data and quotation services, performance measurement and computer hardware and software incidental to the above goods and services; clearing and custodian services and investment related publications.

The following Sub-Funds have entered into soft commissions agreements:

Climate Transition Global Equity
Equity Japan Target
Japan Equity Value
Global Equity
US Equity Dividend Growth
US Equity ESG Improvers
US Equity Fundamental Growth
Pioneer US Equity Mid Cap
US Equity Research
US Equity Research Value
US Pioneer Fund
Strategic Income
US Bond
Pioneer Flexible Opportunities
Income Opportunities

26 SWING PRICING

On valuation days when it believes that trading in a Sub-Fund's shares will require significant purchases or sales of portfolio investments, the Board of Directors may adjust the Sub-Fund's NAV to more closely reflect the actual prices of the underlying transactions, based on estimated dealing spreads, costs, and other market and trading considerations. In general, the NAV will be adjusted upward when there is strong demand to buy Sub-Fund shares and downward when there is strong demand to redeem sub-fund shares. Any such adjustment is applied to all the Sub-Fund's transactions of a given day, when net demands exceed a certain threshold set by the Board of Directors. Those adjustments follow the objective to protect the SICAV's long-term Shareholders from costs associated with ongoing subscription and redemption activity and are not meant to address specific circumstances of each individual investor. For any given Valuation Day, the adjustment will normally not be larger than 2% of NAV, but the Board of Directors can raise this limit when necessary to protect the interests of shareholders.

The swing amounts posted for the period ended as at 30 June 2024 are booked in the "Statement of Operations and Changes in Nets Assets" under "net subscriptions/redemptions".

During July 2023 - June 2024, the following Sub-Funds were in scope of the Swing Pricing Mechanism:

No swing price adjustment was booked in the Net Asset Values per share as of 30 June 2024.

27 RUSSIAN SECURITIES

As a consequence of the Russian invasion on Ukraine on 24 February 2022 and its impact on the Russian markets and securities, the Board of Directors and the Management Company decided from the end of February to continuously review and fair value Russian equities (including ADR/GDR) and bonds.

Fair valuation takes into consideration the sanctions regimes in force and their impact on the tradability and settlement process of the concerned securities.

As at the time of writing, the fair valuation process in respect of these securities remains in place.

Here below the list of securities fair valued as of 30 June 2024:

Sub-Fund Name	Instrument Name	Quantity	Market Value in Sub-Fund currency	% of the NAV

A limited number of trades on such securities, carried out immediately before the invasion, remain unsettled. Here below the cumulated value as of 30 June 2024:

Sub-Fund Name	Amount of unsettled trades expressed in USD
Emerging Europe Middle East and Africa	625,042.82
Emerging Markets Equity Focus	252,148.38
Emerging World Equity	2,793,595.42
Russian Equity	1,022,731.17
Emerging Markets Blended Bond	3,398,094.42
Net Zero Ambition Multi-Asset	354,321.86
Pioneer Flexible Opportunities	636,367.38

The amounts related to these trades are included in the Statement of Net Assets section under Cash at banks and liquidities.

Following agreements reached with some counterparties after the financial year-end, several unsettled trades have been cancelled against amounts credited to the sub-funds.

The positions originally sold have been reinstated in portfolio and valued at 0; the balances of unsettled trades have been adjusted and here below the cumulated values as of 15 October 2024 expressed, for consistency, using the same fx-rates used for the previous table:

Sub-Fund Name	Amount of unsettled trades expressed in USD
Emerging Europe Middle East and Africa	461,116.40
Emerging Markets Equity Focus	252,148.38
Emerging World Equity	1,641,188.11
Russian Equity	780,776.16
Emerging Markets Blended Bond	642,724.21
Net Zero Ambition Multi-Asset	256,913.30
Pioneer Flexible Opportunities	636,367.38

The Board of Directors and the Management Company are undertaking actions to resolve the issues in the interest of the fund and its shareholders, having regard to the unprecedented nature of the situation.

The Board of Directors and the Management Company continue to monitor the evolution of the situation and are carefully considering the options available in respect of the suspended sub-fund, also in light of CCSF FAQ published on 31 March 2022.

28 DISTRESSED SECURITIES

At year end, none of the Sub-Funds had more than 10% of its NAV invested in distressed securities.

29 SUBSEQUENT EVENT

The Sub-Fund Global Macro Bonds & Currencies Low Vol will liquidate on July 22, 2024.

On September 12, 2024, the following Sub-Funds will be renamed:

- Amundi Funds Absolute Return Credit into Amundi Funds Multi Sector Credit
- Amundi Funds Euro Government Bond into Amundi Funds Euro Government Responsible Bond
- Amundi Funds Euro Corporate Short Term Impact Green Bond into Amundi Funds Impact Euro Corporate Short Term Green Bond

30 SUSTAINABLE FINANCE DISCLOSURE REGULATION (“SFDR”)

Information on environmental and/or social characteristics and/or sustainable investments are available under the (unaudited) Sustainable Finance Disclosure Regulation section and its relevant annexes where applicable.

Audit report

To the Shareholders of
Amundi Funds

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of Amundi Funds (the “Fund”) and of each of its sub-funds as at 30 June 2024, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The Fund’s financial statements comprise:

- the securities portfolio as at 30 June 2024;
- the statement of net assets as at 30 June 2024;
- the statement of operations and changes in net assets for the year then ended; and
- the notes to the financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the “Commission de Surveillance du Secteur Financier” (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the “Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements” section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Emphasis of matter

We draw attention to Note 1 to these financial statements, which indicates that the Board of Directors of the Fund decided to suspend the calculation of the net asset value, the issue and redemption and conversion of shares of the sub-fund Russian Equity effective 28 February 2022 following the ongoing geopolitical tensions and sanctions imposed on Russia which made impossible to trade or value the majority of assets of the sub-fund. Our opinion is not modified in respect of this matter.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or close any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;

- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund;
- conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Fund or any of its sub-funds (except for Global Macro Bonds & currencies Low Vol where a decision to liquidate exists) to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and communicate to them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, actions taken to eliminate threats or safeguards applied.

PricewaterhouseCoopers, Société coopérative

Christophe Pittie

A handwritten signature in blue ink, appearing to read 'C. Pittie', is written over a horizontal line.

Christophe Pittie

To the shareholders of Amundi Funds

We hereby confirm that, in our opinion, the Management Company of the Fund, has in all material respects, managed Amundi Funds in accordance with the provisions of the legal documentation of the Fund, as amended, for the year ended 30 June 2024.

For and on behalf of
CACEIS Bank Luxembourg S.A.

If required by the Law, notices to shareholders will be published in the Luxembourg "Mémorial", the Luxemburger Wort and in such other newspapers as the Directors may determine.

SFT REGULATION

Following the Regulation 2015/2365 of the European Parliament and of the Council of 25 November 2015 on transparency of securities financing transactions, only transactions on reverse repurchase agreements, repurchase agreements, securities lending and performance swaps were subject to this Regulation as at 30 June 2024.

All transactions are bilateral transactions.

Sub-funds respect at all time the constraint "Cash received as collateral of OTC contracts and repurchase agreements has to be higher than the sum of deposits with credit institutions, investments in high-quality government bonds, reverse repurchase transactions with credit institutions and investments in short term money market funds". Cash is managed as a whole; the investment management process does not specifically isolate cash received as collateral from other cash. Collateral granted by the Sub-Funds in the context of repurchase agreements are held on segregated accounts.

The interest received and paid under reverse repurchase agreements and repurchase agreements are disclosed in the Statement of Operations and Changes in Net Assets, for each Sub-Fund under the captions "Interest received on Repos/Reverse Repos" and "Interest paid on Repos/Reverse Repos".

* The total does not include the collateral cash.

All transactions are bilateral transactions.

For each counterparty and each sub-fund, collateral positions are followed-up globally for all OTC instrument types.

Cash collateral is managed as a whole; the investment management process does not specifically isolate cash received as collateral from other cash.

Returns and costs incurred from performance swaps transactions during the year ended 30 June 2024 are included in the valuation of the swaps.

REMUNERATION POLICY AND PRACTICES

Amundi Luxembourg S.A. remuneration policy is compliant with the requirements detailed in the European Directive 2014/91/EU that come into force on March 18, 2016, and was transposed into Luxembourg Law of 10 May 2016. The remuneration policy is based on Amundi group remuneration framework, and it is reviewed annually and approved by the Board of Amundi Luxembourg. The policy is subject to independent review by the internal Compliance function. In main evolutions of the 2023 remuneration policy was linked to "Amundi Ambition 2025" and ESG criteria and Sustainability Risk. Qualitative and quantitative criteria for Investment Management and Sales and Marketing has been added. There were no further material changes to the remuneration policy adopted for previous years.

The policy applicable for 2023 was approved by Amundi Luxembourg Board on October 05, 2023. Amundi group Remuneration Committee reviews on an annual basis the group remuneration policy. The 2023 review took place on February 02, 2023. The remuneration policy and practices objectives are consistent with and promote sound and effective risk management, aligning remuneration with long-term performance and risks in order to avoid conflicts of interest. Fixed remuneration components are linked to the roles covered, the professional services rendered and the scope of responsibilities, reflecting the level of academic qualification, market pay levels, experience and skills required for each position, as well as the level of excellence demonstrated. Variable remuneration is designed to promote a sustainable long-term development of the Management Company and a solid and effective risk management system. Variable remuneration awards consider the performance of the employee, her/his business unit and Amundi group as a whole, and it is based on both financial and non-financial criteria. Amundi Luxembourg S.A. and Amundi group have defined all identified staff having authority or influence on the funds Amundi manages, and who consequently are likely to have an impact on the performance or the risk profile of the funds.

■ AMOUNTS OF REMUNERATION AWARDED

Amundi Luxembourg S.A., the Management Company acts as of December 31, 2023 as Management Company or AIFM for several umbrella and standalone UCITS and AIFs.

The total remuneration expressed in Euro paid by Amundi Luxembourg S.A. to its staff during the calendar year 2023 is as follows:

	Nr. of beneficiaries	Fixed remuneration	Variable remuneration	Total
Staff	110	8,737,726.50	1,545,780.42	10,283,506.92
Out of which				
- Identified staff	9	1,419,514.99	516,082.67	1,935,597.66
- All other staff	101	7,318,211.51	1,029,697.75	8,347,909.26

As of 31/12/2023 and as of 30/06/2024 Amundi Funds SICAV represented respectively around 35 % and around 26 % of the Total Net Assets under Management of Amundi Luxembourg S.A..

The total remuneration figures shown above refer to activities in respect of all funds managed.

Amundi Luxembourg S.A. and Amundi group employees who are appointed to the Board of Directors of the Management Company and/or of the Funds waive the right to any remuneration in respect of all funds managed.

No employee of the Management Company receives any amount, including carried interest and performance fees, paid directly by the UCITS or AIFs managed.

* This Sub-Fund has been launched during the reported period, see more details in Note 1.

² This Sub-Fund has been renamed during the reported period, see more details in Note 1.

³ This Sub-Fund has been merged during the reported period, see more details in Note 1.

⁴ This Sub-Fund has been liquidated during the reported period, see more details in Note 1.

* In certain cases (when a sub-fund has been taken over, liquidated, or launched within the last 12 months, when any class of shares has been launched or liquidated within the last 12 months, when the assets under management for any class of shares have increased or reduced significantly within the last 12 months, or when there are few assets under management for any class) the Total Expense Ratios calculated on an annual basis (reference period of 12 months) may not be representative of the true value.

PERFORMANCE FEE REGULATION

Following the Guidelines of the European Securities and Market Authority on performance fees (ESMA34-39-992), the impact of performance fees data as at June 30, 2024, is as follows:

Class of Shares	ISIN	Amount of the performance fees realized at the end of the observation period in Sub-Fund currency	% based on the NAV at the end of the observation period ⁽¹⁾	Amount of the performance fees crystallized daily during the accounting period due to redemptions (in Sub-Fund currency)	% based on average NAV over the accounting period ⁽²⁾	Amount of performance fees accrued at period end (end of accounting period in Sub-Fund currency)	% based on the NAV at the end of the accounting period ⁽³⁾

(1) Amount of the performance fees realized at the end of the observation period in Sub-Fund currency divided by NAV as the end of the observation period

(2) Amount of the performance fees crystallized daily during the accounting year due to redemptions in Sub-Fund currency divided by Average NAV over the accounting period

(3) Amount of performance fees accrued at year end (end of accounting period) in Sub-Fund currency divided by NAV at the end of the accounting period

The active share classes with no performance fees crystallized during the year or with no performance fees at year end are not reported in the table.

DISCLOSURE REGULATION

On 18 December 2019, the European Council and European Parliament announced that they had reached a political agreement on the Disclosure Regulation, thereby seeking to establish a pan-European framework to facilitate Sustainable Investment. The Disclosure Regulation provides for a harmonized approach in respect of sustainability-related disclosures to investors within the European Economic Area's financial services sector.

For the purposes of the Disclosure Regulation, the Management Company meets the criteria of a "financial market participant", whilst each Sub-Fund qualifies as a "financial product". For further details on how a Sub-Fund complies with the requirements of the Disclosure Regulation please refer to the supplement for that Sub-Fund. Please also refer to the section on 'Sustainable Investment' in the Prospectus of the Fund and the Amundi Responsible Investment Policy available on www.amundi.com. As required by Art. 11 of the Disclosure Regulation the Fund makes the following statements: Under the Amundi Responsible Investment Policy, Amundi has developed its own ESG rating approach. The Amundi ESG rating aims to measure the ESG performance of an issuer, i.e. its ability to anticipate and manage Sustainability Risks and opportunities inherent to its industry and individual circumstances. By using the Amundi ESG ratings, portfolio managers are taking into account Sustainability Risks in their investment decisions. Amundi applies targeted exclusion policies to all Amundi's active investing strategies by excluding companies in contradiction with the Responsible Investment Policy, such as those which do not respect international conventions, internationally recognized frameworks or national regulations.

■ Article 9 Sub-Funds

These Sub-Funds have a sustainable objective and is therefore classified as article 9 under SFDR (Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector). Therefore, as required by Article 58 of COMMISSION DELEGATED REGULATION (EU) 2022/1288, detailed information on the environmental or social characteristics promoted by the financial product is available in an annex to this report.

This annex contains information about:

- Attainment of the sustainable investment objective of the financial product;
- Top investments, asset allocation & proportion of investments in different economic sectors and sub-sectors;
- Information on sustainable investments.

■ Article 8 Sub-Funds (required Art.11.1)

The Sub-Funds listed below are classified pursuant to article 8 of the Disclosure Regulation and aim to promote environmental and/or social characteristics. In addition to applying Amundi's Responsible Investment Policy, these Article 8 Sub-Funds aim to promote such characteristics through investments resulting in an ESG score of their portfolios greater than of their respective benchmark or investment universe. The ESG portfolio score is the AUM-weighted average of the issuers' ESG score based on Amundi ESG scoring model.

During the financial year under reporting, the Investment Manager continuously promoted environmental and/or social characteristics through the application of the above mentioned methodologies.

■ **Article 6 Sub-Funds**

Given the investment focus and the asset classes/sectors they invest in, the investment managers of all other Sub-Funds, not classified pursuant to article 8 or 9 of the Disclosure Regulation did not integrate a consideration of environmentally sustainable economic activities into the investment process for the Sub-Fund. Therefore, it should be noted that the investments underlying these Sub-Funds did not take into account the EU criteria for environmentally sustainable economic activities.

Throughout the financial year, the Sub-Fund considered PAI 14 via the Amundi Minimum Standard and Exclusion Policy related to controversial weapons, excluding issuers in the production, sale, storage or services for and of anti-personnel mines and cluster bombs, prohibited by the Ottawa and Oslo treaties and issuers involved in the production, sale or storage of chemical, biological and depleted uranium weapons, as per Amundi Global Responsible Investment Policy.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
●● X Oui	●○ Non
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 17.3% of the fund's net assets	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 81.5% of the fund's net assets	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

A Company is identified as sustainable by the asset manager, by applying the methodology described in the ESG Policy available on the website montpensier.com. A company may be involved in several SDGs. It is classified by the management company, as environmentally or socially sustainable, according to its involvement in the main SDG to which the management company has attached it.

To what extent was the sustainable investment objective of this financial product met?

The fund integrates sustainability factors in its investment process, as indicated in more details below.

By taking into account ESG criteria in the fund, the sustainable investment objective is to combine financial performance with the wish to positively influence, when possible, the issuers in terms of ESG performance, by encouraging companies to improve the integration of ESG criteria in their activities and valuing best practices.

The management company applied the policy described in the Pre-Contractual Document for financial products Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852.

100% of the invested portfolio excluding cash and cash equivalents (meaning 98.82% of the fund's net asset) is made up of sustainable investments.

The portfolio's weighted average carbon intensity and carbon footprint are lower than its index. This performance is attributable to our large under-exposure to fossil fuels.

The portfolio's weighted average carbon intensity and carbon footprint are also lower than the index when including Scope 3 Upstream emissions.

Additional Information (unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

1.1. Environmental performance

Global Compact Compliance: Weight of portfolio companies identified as in compliance with the principles of the United Nations Global Compact.

● **... and compared to previous periods?**

See above.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

How were the indicators for adverse impacts on sustainability factors taken into account?

Evaluating the "Do Not Significantly Harm" principle (DNSH) relies on exclusions, Principal Adverse Impacts (PAI) and the monitoring of controversies. In addition, companies with a negative environmental or social MIA impact, or E and S pillars, are considered to derogate the DNSH principle.

For further details, see the Prospectus and the SFDR Pre-contractual Document appended to the prospectus of the UCI, available on the management company's website.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

We exclude from our investment universe companies which are not aligned with certain international norms and conventions, most notably the United Nations Global Compact (UNGC), OECD Guidelines for Multinational Enterprises, the International Labor Organization (ILO) and the United Nations Guiding Principles on Business and Human Rights (UNGPHR). Companies which are subject to a "Red" controversy are excluded from the investment universe. Among these "Red" controversies are companies which are not in line with the United Nations Global Compact (Human Rights, Labor Rights, Environment and Corruption).

How did this financial product consider principal adverse impacts on sustainability factors?

We take into account the main indicators of negative impacts in the policy of sectoral and normative exclusions, analysis of good governance practices (using the proprietary Montpensier Governance Flag - MGF), the proprietary qualitative analysis of the contribution of companies to environmental and solidarity transitions (Montpensier Impact Assessment – MIA, Montpensier Industry Contributor – MIC), and/or in the analysis of eco- activities that determines the contribution to one or more UN Sustainable Development Goals (SDGs). The relevance and coverage of these indicators in analysis vary depending on the sector, industry and region in which each company operates.

Information regarding environmental, social and governance (ESG) objectives can be found on the management company's website:

<https://www.montpensier.com/sites/default/files/public/documents/politique-esg.pdf>

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:

Largest investments	Sector	% Assets	Country
Novo Nordisk B	Health Care	7.78%	Danemark
ASML Holding	Technology	7.74%	Pays-Bas

Additional Information (unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive safety and waste management rules;

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes

In fossil gas In nuclear energy

No

Data relating to companies' involvement in fossil gas and/or nuclear energy activities, in line with the taxonomy, are determined by taking into account only data published by companies.

Data on companies' involvement in taxonomy-compliant fossil gas and/or nuclear energy activities are not yet available.

For information, stocks identified as being involved in fossil and/or nuclear energy represent 3.40% of the portfolio, i.e. 3.40% of the portfolio for stocks deriving part of their sales from nuclear energy, and 0.00% for stocks involved in fossil energy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures. Turnover is estimated by MSCI ESG Research according to the methodology described below. CapEx and Opex data take into account only data published by companies.

European Taxonomy alignment
 European Taxonomy alignment is estimated by MSCI ESG Research, based on the maximum percentage of a company's revenue derived from products and services addressing environmental objectives, on the basis of the MSCI Sustainable Impact Metrics framework.
 The percentage of sales generated by products and services that meet environmental objectives is reduced to 0 for companies which do not meet the "Do No Significant Harm" and "Minimum Social Safeguards" criteria of the European taxonomy. The same applies to tobacco producers, to companies whose revenues derive 5% or more from the supply, distribution or retail sale of tobacco products, as well as companies involved in controversial weapons.

Additional Information (unaudited)

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The fund does not have a minimum proportion of investment in transitional or enabling activities.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

	28/06/24	30/06/23
Alignment on European Taxonomy	% AUM	% AUM
Great European Models SRI	4.8%	7.5%

The percentage indicated above represents the portfolio's contribution to the alignment with the European taxonomy (based on turnover) of all sustainable investments whether they have an environmental or social objective.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

As of the date of this report, 17.3% of net assets were invested in sustainable investments with an environmental objective, whereas 13.0% of net assets were not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

As of the date of this report, 81.5% of net assets were invested in sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Cash, cash equivalents and any hedging derivatives represent 1.2% of the fund's net assets, and do not offer minimum environmental or social guarantees.

What actions have been taken to attain the sustainable investment objective during the reference period?

The management company has applied the policy described in the pre-contractual information document for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852.

Montpensier Finance's shareholder engagement policy consists of a voting policy and an engagement policy.

Exercising voting rights is an important element of the dialogue with issuers. It encourages the best governance practices and promotes professional ethic.

Montpensier Finance considers that the exercise of voting rights is an integral part of the investment management process and should be carried out in the best interest of its clients. Montpensier Finance voting rights policy aims to promote the long-term valuation of its funds investments.

To exercise the voting rights attached to the equities held by the fund, the fund managers refer to the principles regarding corporate governance recommendations published by ISS Governance, in its Sustainability Policy. ISS covers all companies held in the portfolios of the funds managed by Montpensier Finance.

Compliance regulations require portfolio managers to carry out their functions independently, particularly with regard to issuers, and in the sole interest of unit/shareholders. Portfolio managers pay particularly attention to resolutions which may prejudice the interests of unit/shareholders.

The full voting policy as well as the latest voting rights exercise report are available on our website.

Additional Information (unaudited)

Montpensier Finance supplements its voting policy with an engagement policy.

The fund management teams are encouraged to raise any concern with companies during meetings, especially when the ESG issues seem insufficiently accounted for, in order to encourage these companies to improve their practices on environmental, social, and

corporate governance issues, all of which are factors of sustainable growth.

The fund managers, assisted by the SRI analysts, will establish a positive and constructive mid-to-longterm rapport with companies held in the portfolio.

This rapport is multi-faceted:

- ✓ Company contacts;
- ✓ Communicating the fund managers' voting intentions to the company prior to the General Meeting.

In addition to direct engagement initiatives we usually conduct directly with Small and Medium Companies, Montpensier Finance also participates in pooled engagement actions implemented by ISS as part of its ISS ESG program especially for larger companies.

This dialogue is conducted with the aim of:

- ✓ Encouraging companies to set up an ESG commitment;
- ✓ Encouraging companies to communicate about their ESG practices.

The full engagement policy as well as the latest engagement report are available on our website.

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

The fund does not use a sustainable benchmark. Its sustainability performance is compared to its benchmark : Stoxx 600

- ***How does the reference benchmark differ from a broad market index?***

N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
●● X Oui	●○ Non
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 96.6% of the fund's net assets	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

<input type="checkbox"/>	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Global equity thematic fund, all caps, targeting companies that are effectively involved & can generate a real impact in the energy and ecological transition for the climate.

To what extent was the sustainable investment objective of this financial product met?

The fund integrates sustainability factors in its investment process, as indicated in more details below.

The sustainable investment objective of the fund is to identify the involvement of companies in favor of the energy and ecological transition for the climate, in order to invest mainly in the stocks of companies whose initiatives or solutions contribute directly or indirectly to the reduction of the impacts of climate change, or in the stocks of companies which a part of the activity concerns changes and developments related to the theme of energy and climate transition.

ESG criteria are taken into account by the fund in order to unify financial performance and the wish to positively influence, when possible, the issuer in terms of ESG performance, by encouraging companies to improve the integration of ESG criteria in their activities and valuing best practices.

The management company applied the policy described in the Pre-Contractual Document for financial products Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852.

100% of the invested portfolio excluding cash and cash equivalents (meaning 98.11% of the fund's net asset) is made up of sustainable investments.

The portfolio's weighted average carbon intensity and carbon footprint are significantly lower than its index. This performance is attributable to our large under-exposure to fossil fuels.

The portfolio's weighted average carbon intensity is in line with its index, and carbon footprint is lower than its index when including Scope 3 Upstream emissions.

Additional Information (unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

of the fund's net assets as at 28/06/24

Industry Classification Benchmark (ICB) classification - 11 Industries Sectors

Additional Information (unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive safety and waste management rules;

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes

In fossil gas In nuclear energy

No

Data relating to companies' involvement in fossil gas and/or nuclear energy activities, in line with the taxonomy, are determined by taking into account only data published by companies.

Data on companies' involvement in taxonomy-compliant fossil gas and/or nuclear energy activities are not yet available.

For information, stocks identified as being involved in fossil and/or nuclear energy represent 3.40% of the portfolio, i.e. 3.40% of the portfolio for stocks deriving part of their sales from nuclear energy, and 0.00% for stocks involved in fossil energy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures. Turnover is estimated by MSCI ESG Research according to the methodology described below. CapEx and Opex data take into account only data published by companies.

The percentage of alignment with the taxonomy indicated above represents the portfolio's contribution in weighted average to the alignment with the European taxonomy (based on turnover, CapEx or OpEx) of all sustainable investments whether they have an environmental or social objective.

European Taxonomy alignment

European Taxonomy alignment is estimated by MSCI ESG Research, based on the maximum percentage of a company's revenue derived from products and services addressing environmental objectives, on the basis of the MSCI Sustainable Impact Metrics framework.

The percentage of sales generated by products and services that meet environmental objectives is reduced to 0 for companies which do not meet the "Do No Significant Harm" and "Minimum Social Safeguards" criteria of the European taxonomy.

The same applies to tobacco producers, to companies whose revenues derive 5% or more from the supply, distribution or retail sale of tobacco products, as well as companies involved in controversial weapons.

Additional Information (unaudited)

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The fund does not have a minimum proportion of investment in transitional or enabling activities.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

	28/06/24	30/06/23
Alignment on European Taxonomy	% AUM	% AUM
M Climate Solutions	65.8%	67.5%

The percentage indicated above represents the portfolio's contribution to the alignment with the European taxonomy (based on turnover) of all sustainable investments whether they have an environmental or social objective.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

As of the date of this report, 96.6% of net assets were invested in sustainable investments with an environmental objective, whereas 3.6% of net assets were not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

As of the date of this report, 0.0% of net assets were invested in sustainable investments with a social objective, knowing that this is a global equity thematic fund, all caps, targeting companies that are effectively involved & can generate a real impact in the Energy and Environmental Transition for the climate.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Cash, cash equivalents and any hedging derivatives represent 1.9% of the fund's net assets, and do not offer minimum environmental or social guarantees.

What actions have been taken to attain the sustainable investment objective during the reference period?

The management company has applied the policy described in the pre-contractual information document for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852.

Montpensier Finance's shareholder engagement policy consists of a voting policy and an engagement policy.

Exercising voting rights is an important element of the dialogue with issuers. It encourages the best governance practices and promotes professional ethic.

Montpensier Finance considers that the exercise of voting rights is an integral part of the investment management process and should be carried out in the best interest of its clients. Montpensier Finance voting rights policy aims to promote the long-term valuation of its funds investments.

To exercise the voting rights attached to the equities held by the fund, the fund managers refer to the principles regarding corporate governance recommendations published by ISS Governance, in its Sustainability Policy. ISS covers all companies held in the portfolios of the funds managed by Montpensier Finance.

Compliance regulations require portfolio managers to carry out their functions independently, particularly with regard to issuers, and in the sole interest of unit/shareholders. Portfolio managers pay particularly attention to resolutions which may prejudice the interests of unit/shareholders.

The full voting policy as well as the latest voting rights exercise report are available on our website.

Additional Information (unaudited)

Montpensier Finance supplements its voting policy with an engagement policy.

The fund management teams are encouraged to raise any concern with companies during meetings, especially when the ESG issues seem insufficiently accounted for, in order to encourage these companies to improve their practices on environmental, social, and

corporate governance issues, all of which are factors of sustainable growth.

The fund managers, assisted by the SRI analysts, will establish a positive and constructive mid-to-longterm rapport with companies held in the portfolio.

This rapport is multi-faceted:

- ✓ Company contacts;
- ✓ Communicating the fund managers' voting intentions to the company prior to the General Meeting.

In addition to direct engagement initiatives we usually conduct directly with Small and Medium Companies, Montpensier Finance also participates in pooled engagement actions implemented by ISS as part of its ISS ESG program especially for larger companies.

This dialogue is conducted with the aim of:

- ✓ Encouraging companies to set up an ESG commitment;
- ✓ Encouraging companies to communicate about their ESG practices.

The full engagement policy as well as the latest engagement report are available on our website.

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

The fund does not use a sustainable benchmark. Its sustainability performance is compared to its benchmark : Stoxx Global 1800

- ***How does the reference benchmark differ from a broad market index?***

N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

- ***How did this financial product perform compared with the reference benchmark?***

N/A

- ***How did this financial product perform compared with the broad market index?***

See above for the performance indicators of the fund and its benchmark against the sustainability indicators.

Product name: AMUNDI FUNDS IMPACT EURO CORPORATE SHORT TERM GREEN BOND

Legal entity identifier: 549300U5T6UEW30I8O37

Sustainable investment objective

Did this financial product have a sustainable investment objective?

X Yes

No

It made **sustainable investments with an environmental objective:** 89.86%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _____ of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met ?

During the financial year, the product continuously met its sustainable investment objective by aiming to have a higher ESG score than the ESG score of its investment universe **BLOOMBERG EURO GREEN BOND INDEX: CORPORATE**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The sub-fund maintained the committed share of its allocation invested in the use of green

bonds.

Green bonds' objective is to finance projects that generate a positive and measurable impact on the environment. The key indicator measuring the green bonds' impact is the "Avoided tons of CO2 emissions per million of euros invested in a year". Beyond the quantitative and qualitative financial analysis of the bonds that are likely to compose the portfolio, the selection process includes an ESG strategy assessment at the issuer level and a green bond assessment following several points of analysis:

1. Amundi has developed a proprietary ESG scoring system based on a seven-letter scale, ranging from A to G, where A is the best and G the worst rating. Any issuer with a Grating is excluded from all of Amundi's actively managed portfolios. We implement the verification of the issuer's ESG rating and check the rating's compliance with the related fund's criteria. As stated above, issuers with a G-rating on Amundi's ESG rating scale are not eligible for investment. If there are weaknesses, the ESG Research team will look for any controversy on the related pillar (E, S and G) in more detail.
2. Green bond assessment in terms of: (i) project analysis, via analysis of the geographical location of assets, action on the assets, assessment of any additional impact of the green project on the environment, biodiversity, local communities, or other social aspects (Do no significant harm), alignment to industry standards (e.g. alignment with International Capital Markets Association Green Bond Principles, Climate Bond Initiative, EU Taxonomy). (ii) issuer analysis at global ESG strategy and controversy levels, (iii) green funding rationale (type of projects funded, allocation of green assets, type of instruments funding green projects) and (iv) transparency (green bond report, second party opinion existence)
3. Ongoing monitoring (ex-post investment), which includes regular review of allocation and impact report of the green bond, controversies the issuer is involved in and issuer's environmental strategy.

Finally, all selected Green Bonds shall meet the criteria and guidelines of the Green Bond Principles as published by the International Capital Market Association. Please visit Amundi's Responsible Investment Policy for more details on the above.

● *How did the sustainability indicators perform?*

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.118 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.799 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Additional Information (unaudited)

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

At the end of the period, the portfolio holds **89.79 %** of green bonds.

- **... and compared to previous periods?**

At the end of the previous period, the weighted average ESG rating of the portfolio was 0,99 (C) and the weighted average ESG rating of the ESG investment universe was 0,83 (C).

At the end of the previous period, the portfolio held 95.01 % of green bonds

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund has an environmental sustainable investment objective. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.50% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of: **-turnover** reflecting the share of revenue from green activities of investee companies **-capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy. **- operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **89.36%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 0.00%.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. There are no minimum environmental or social safeguards for these assets.

 **What actions have been taken to attain the sustainable investment objective during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

 **How did this financial product perform compared to the reference benchmark ?**

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5 first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS IMPACT GREEN BONDS

Legal entity identifier: 213800XAP1H8TNKVRE27

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 95.98%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _____ of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made a **sustainable investments with a social objective:** _____

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met ?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **BLOOMBERG MSCI GLOBAL GREEN BOND HEDGED INDEX**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The sub-fund maintained the committed share of its allocation invested in the use of green bonds.

Green bonds' objective is to finance projects that generate a positive and measurable impact on the environment. The key indicator measuring the green bonds' impact is the "Avoided tons of CO2 emissions per million of euros invested in a year". Beyond the quantitative and qualitative financial analysis of the bonds that are likely to compose the portfolio, the selection process includes an ESG strategy assessment at the issuer level and a green bond assessment following several points of analysis:

1. Amundi has developed a proprietary ESG scoring system based on a seven-letter scale, ranging from A to G, where A is the best and G the worst rating. Any issuer with a G-rating is excluded from all of Amundi's actively managed portfolios. We implement the verification of the issuer's ESG rating and check the rating's compliance with the related fund's criteria. As stated above, issuers with a G-rating on Amundi's ESG rating scale are not eligible for investment. If there are weaknesses, the ESG Research team will look for any controversy on the related pillar (E, S and G) in more detail.
2. Green bond assessment in terms of: (i) project analysis, via analysis of the geographical location of assets, action on the assets, assessment of any additional impact of the green project on the environment, biodiversity, local communities, or other social aspects (Do no significant harm), alignment to industry standards (e.g. alignment with International Capital Markets Association Green Bond Principles, Climate Bond Initiative, EU Taxonomy). (ii) issuer analysis at global ESG strategy and controversy levels, (iii) green funding rationale (type of projects funded, allocation of green assets, type of instruments funding green projects) and (iv) transparency (green bond report, second party opinion existence)
3. Ongoing monitoring (ex-post investment), which includes regular review of allocation and impact report of the green bond, controversies the issuer is involved in and issuer's environmental strategy.

Finally, all selected Green Bonds shall meet the criteria and guidelines of the Green Bond Principles as published by the International Capital Market Association. Please visit Amundi's Responsible Investment Policy for more details on the above.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.212 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.935 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the

issuer's strategy to develop its human capital and the respect of the human rights in general;

- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

At the end of the period, the portfolio holds **96.23 %** of green bonds.

● **... and compared to previous periods?**

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.14 (C) and the weighted average ESG rating of the ESG investment universe was 0.97 (C). At the end of the previous period, the portfolio held 99.95 % of green bonds.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– **How were the indicators for adverse impacts on sustainability factors taken into account?**

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

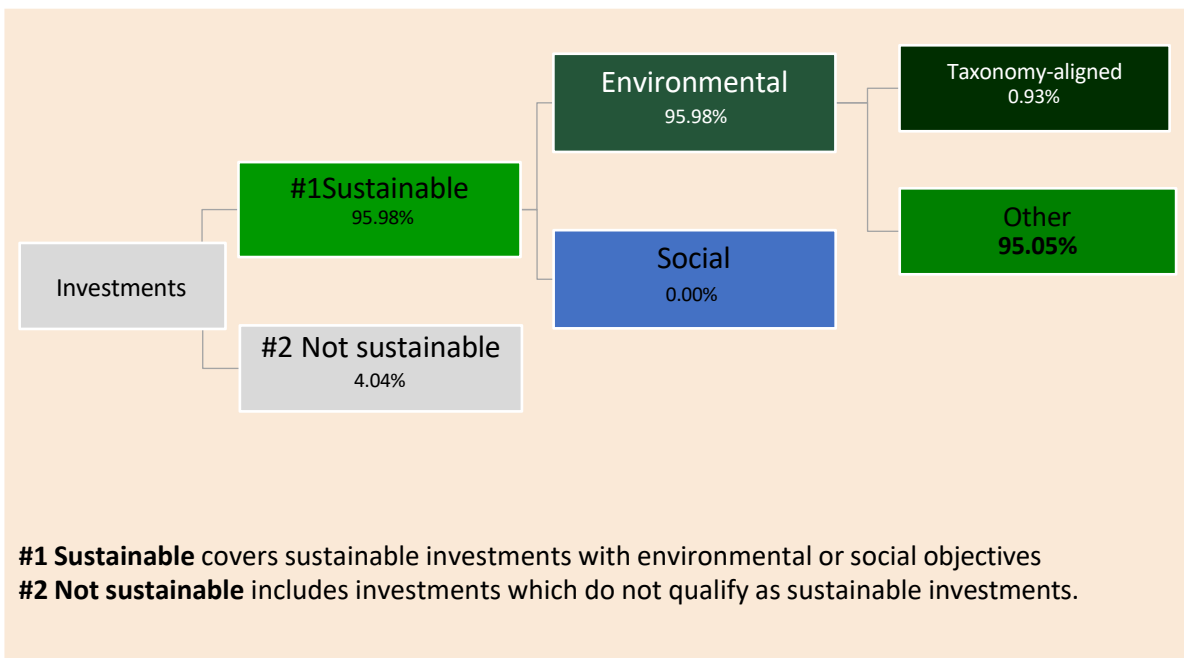

Largest Investments	Sector	Sub-Sector	Country	% Assets
AMUNDI RESP INV - IMPACT GREEN BD-OR(D)	Financials	Mutual Funds	France	101.28%

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

In which economic sectors were the investments made ?

Sector	Sub-Sector	% Assets
<i>Financials</i>	<i>Mutual Funds</i>	101.28%
<i>Forex</i>	<i>Forex</i>	-1.26%
<i>Cash</i>	<i>Cash</i>	-0.02%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund has an environmental sustainable investment objective. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.93% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:
 In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.40%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **95.05%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 0.00%.

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

What actions have been taken to attain the sustainable investment objective during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
CLIMATE TRANSITION GLOBAL EQUITY

Legal entity identifier:
213800AAWV9V2PNKC495

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made sustainable investments with an environmental objective:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **45.60%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI ACWI**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.243 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.171 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

This is the first SFDR periodic report produced for this sub-fund.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

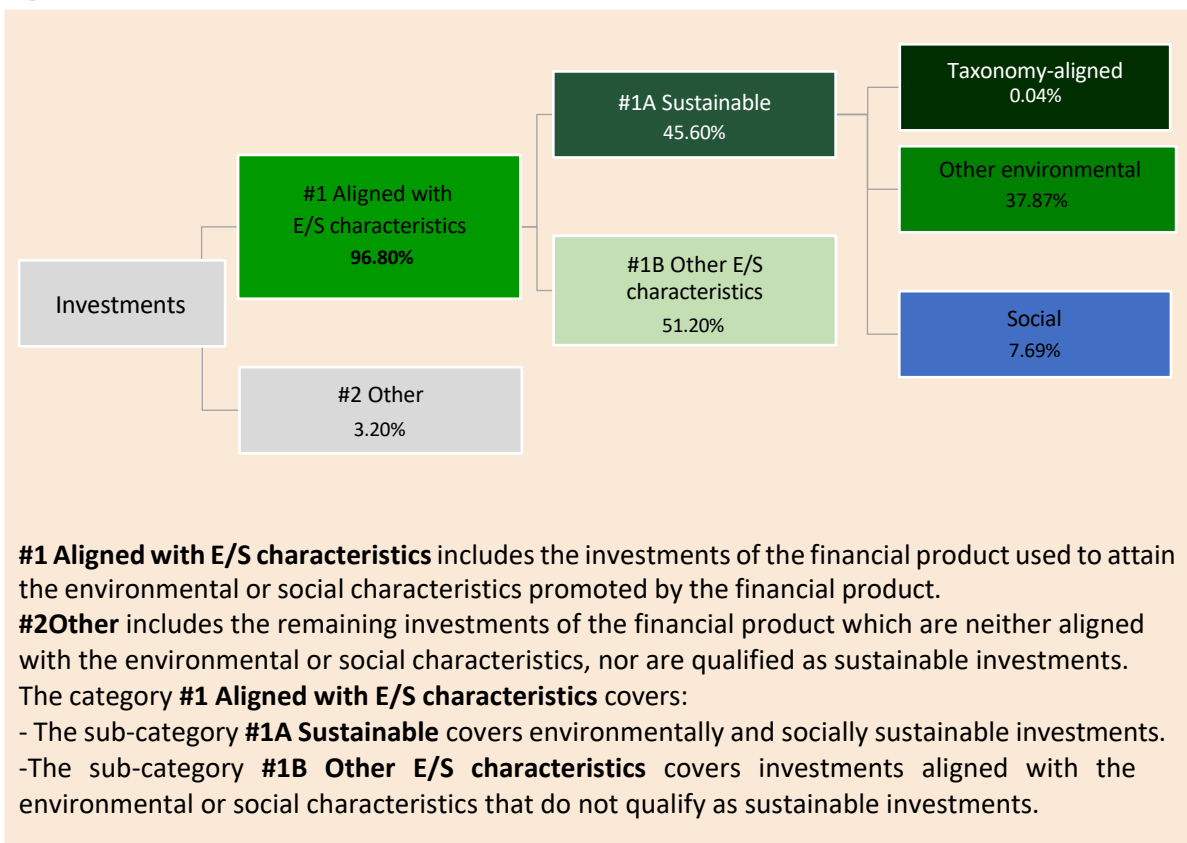

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

<i>Consumer Discretionary</i>	<i>Consumer Services</i>	0.72%
<i>Cash</i>	<i>Cash</i>	3.27%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.04% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas

In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

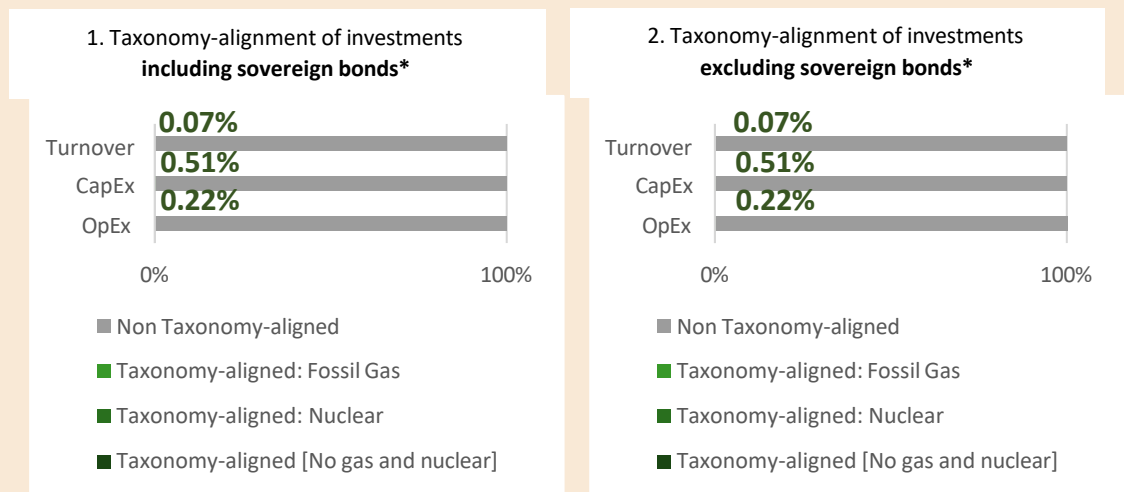

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.03% and the share of investment in enabling activities was 0.03%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

This is the first SFDR periodic report produced for this sub-fund.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **37.87%** at the end of the period. This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 7.69%.

 **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROLAND EQUITY

Legal entity identifier:
549300I7SRMTTD1P6F20

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **77.26%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EMU**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.174 (C)**.
- The weighted average ESG rating of the ESG investment universe is **1.030 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.11 (C) and the weighted average ESG rating of the ESG investment universe was 1.03 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

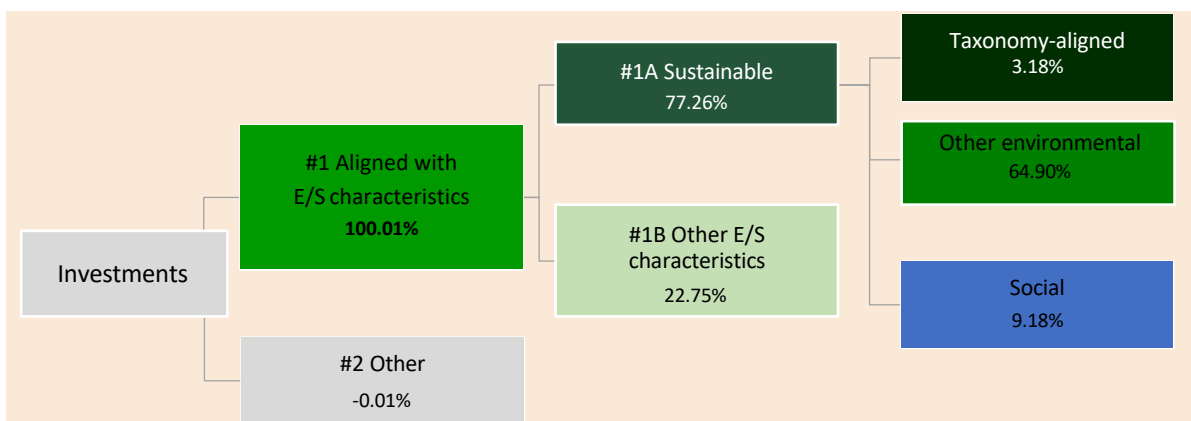

Largest Investments	Sector	Sub-Sector	Country	% Assets
ASML HOLDING NV	Information Technology	Semiconductors & Semiconductor Equipment	Netherlands	5.65%
SCHNEIDER ELECT SE	Industrials	Capital goods	France	4.96%
SANOFI	Health Care	Pharmaceuticals Biotech & Life Sciences	France	4.38%
LVMH MOET HENNESSY LOUIS VUI	Consumer Discretionary	Consumer Durables & Apparel	France	4.32%
SIEMENS AG-REG	Industrials	Capital goods	Germany	4.12%
DEUTSCHE TELEKOM NAM (XETRA)	Communication Services	Telecommunication	Germany	3.97%
IBERDROLA SA	Utilities	Electric Utilities	Spain	3.96%
ALLIANZ SE-REG	Financials	Insurance	Germany	3.49%
VINCI SA (PARIS)	Industrials	Capital goods	France	3.39%
BNP PARIBAS	Financials	Banks	France	3.21%
DEUTSCHE BOERSE AG	Financials	Financial Services	Germany	3.20%
ENI SPA MILAN	Energy	Oil, Gas & Consumable Fuels	Italy	3.17%
KBC GROUP NV	Financials	Banks	Belgium	3.00%
INFINEON TECHNOLOGIES AG	Information Technology	Semiconductors & Semiconductor Equipment	Germany	2.96%
VEOLIA ENVIRONNEMENT	Utilities	Multi-Utilities	France	2.82%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Industrials</i>	<i>Capital goods</i>	<i>16.19%</i>
<i>Financials</i>	<i>Banks</i>	<i>8.78%</i>
<i>Information Technology</i>	<i>Semiconductors & Semiconductor Equipment</i>	<i>8.61%</i>
<i>Consumer Discretionary</i>	<i>Consumer Durables & Apparel</i>	<i>7.04%</i>
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	<i>6.91%</i>
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	<i>6.12%</i>

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 3.18% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

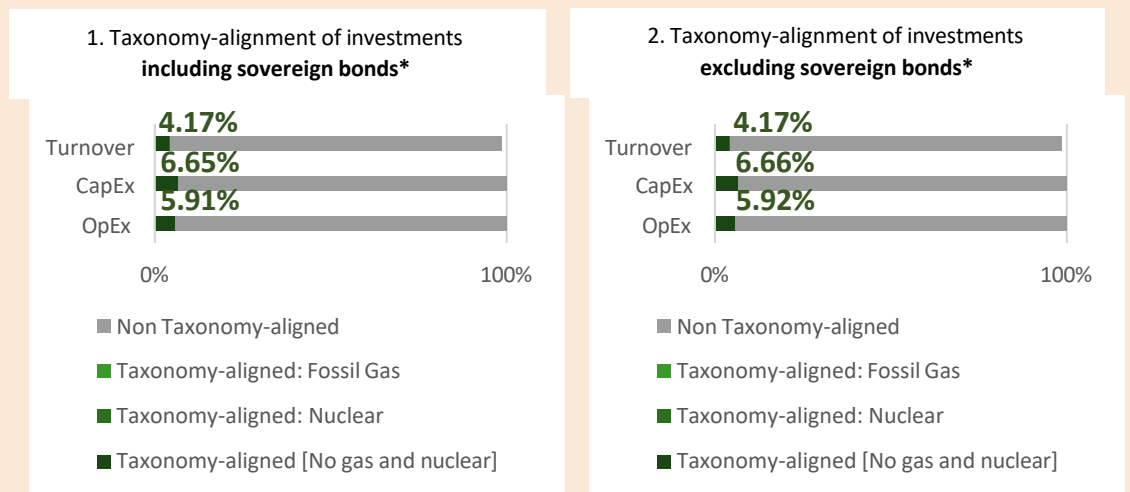

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.02% and the share of investment in enabling activities was 3.36%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 2.91%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **64.90%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 9.18%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EUROPEAN EQUITY ESG IMPROVERS

Legal entity identifier: 213800RD18BXDLA6QV22

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **56.77%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EUROPE (15)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The investment manager has focused the investment process on companies/sectors/countries that had embraced, or will embrace, a positive ESG

trajectory within their business. The investment manager identified investment opportunities that were aligned with the aim of generating alpha by focusing in particular on inclusion of companies/sectors/countries that will be strong ESG winners in the future, that have (or will have) a positive ESG profile improvement, while also investing in companies/sectors/countries that are currently ESG stewards.

Further, the Sub-Fund achieved an ESG score of its portfolio greater than that of the Benchmark. The Sub-Fund was compared with the ESG score of its Benchmark after 20% of the lowest ESG rated securities have been excluded from the Benchmark.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.145 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.798 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.19 (C) and the weighted average ESG rating of the ESG investment universe was 0.80 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and

2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on

environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.

- **Vote :** Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring :** Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

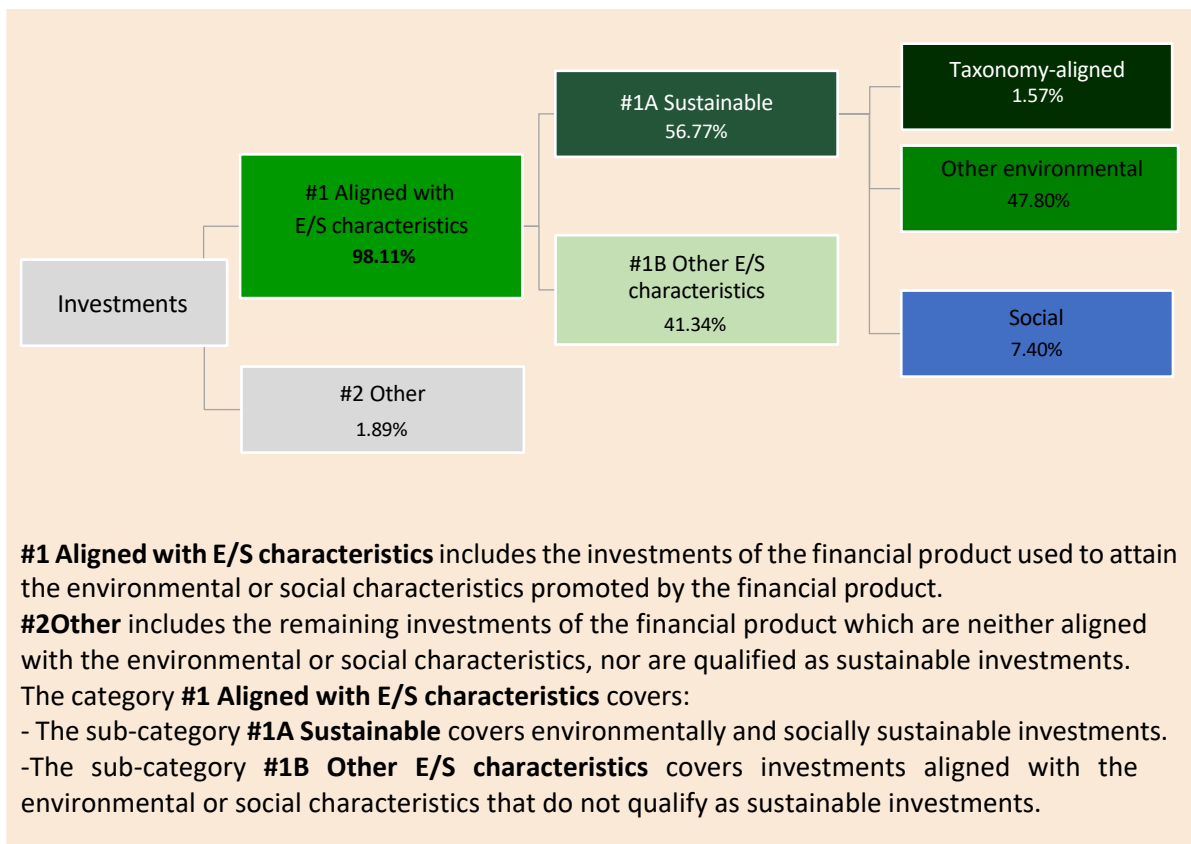

Largest Investments	Sector	Sub-Sector	Country	% Assets
NESTLE SA-REG	Consumer Staples	Food, Beverage & Tobacco	Switzerland	5.48%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.57% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

- Yes:
- In fossil gas In nuclear energy
- No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

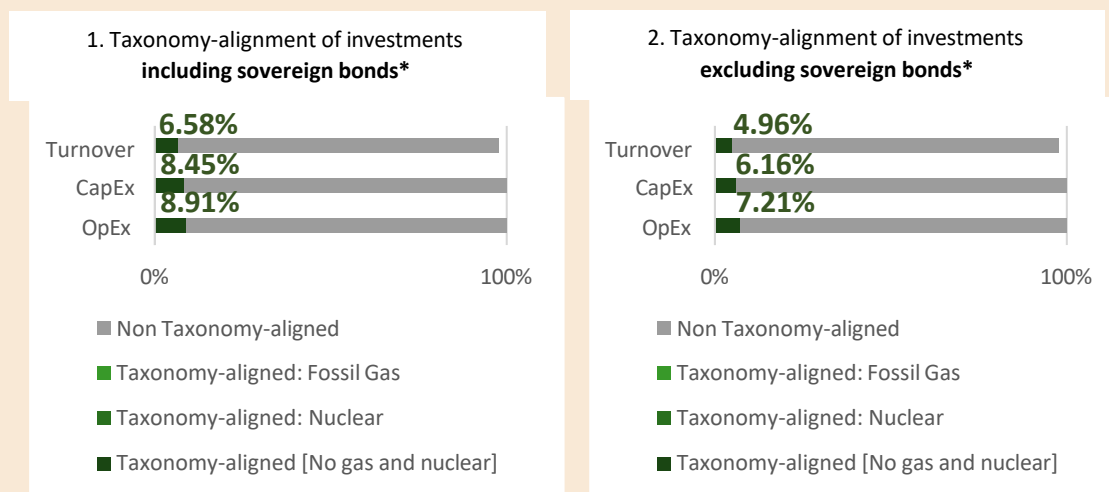

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.03% and the share of investment in enabling activities was 0.95%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 9.93%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **47.80%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 7.40%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROLAND EQUITY SMALL CAP

Legal entity identifier:
529900IUDK1P871TPU43

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **75.10%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EMU SMALL CAP**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The product is labeled SRI (Social and Responsible Investment). It sought throughout the year to promote the 3 dimensions (environmental, social and governance) by taking into account the ESG rating of issuers in the construction of the portfolio.

The ESG rating of issuers aims to assess their ability to manage the potential negative impact of their activities on sustainability factors. This analysis thus aims to assess their Environmental and Societal behaviors in terms of Governance by assigning them an ESG rating ranging from A (best rating) to G (worse rating), so as to achieve a more global assessment of the risks.

1. The portfolio has consistently applied the following Amundi exclusion policy:
 - Legal exclusions on controversial weapons
 - Companies that seriously and repeatedly contravene one or more of the 10 principles of the Global Compact (UN Global Compact), without credible corrective measures;
 - The sectoral exclusions of the Amundi group on Coal and Tobacco; (details of this policy are available in Amundi's Responsible Investment Policy available on the website www.amundi.fr)
2. No investment has been made in issuers rated F or G. For any issuer whose rating has been downgraded to F or G, the securities already present in the portfolio were sold within the timeframe committed to in the prospectus and taking into account financial interest of holders
3. The weighted average ESG score of the portfolio has consistently been higher than the weighted average ESG score of the fund's investment universe after eliminating the 20% of the worst issuers
4. The fund has favored issuers that are leaders in their sector of activity according to the ESG criteria identified by the team of extra-financial analysts of the management company ("best in class" approach). With the exception of the above exclusions, all economic sectors are represented in this approach and the UCI may therefore be exposed to certain controversial sectors.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.962 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.673 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an

effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● **... and compared to previous periods?**

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.91 (C) and the weighted average ESG rating of the ESG investment universe was 0.60 (C).

● **What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion** : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration** : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

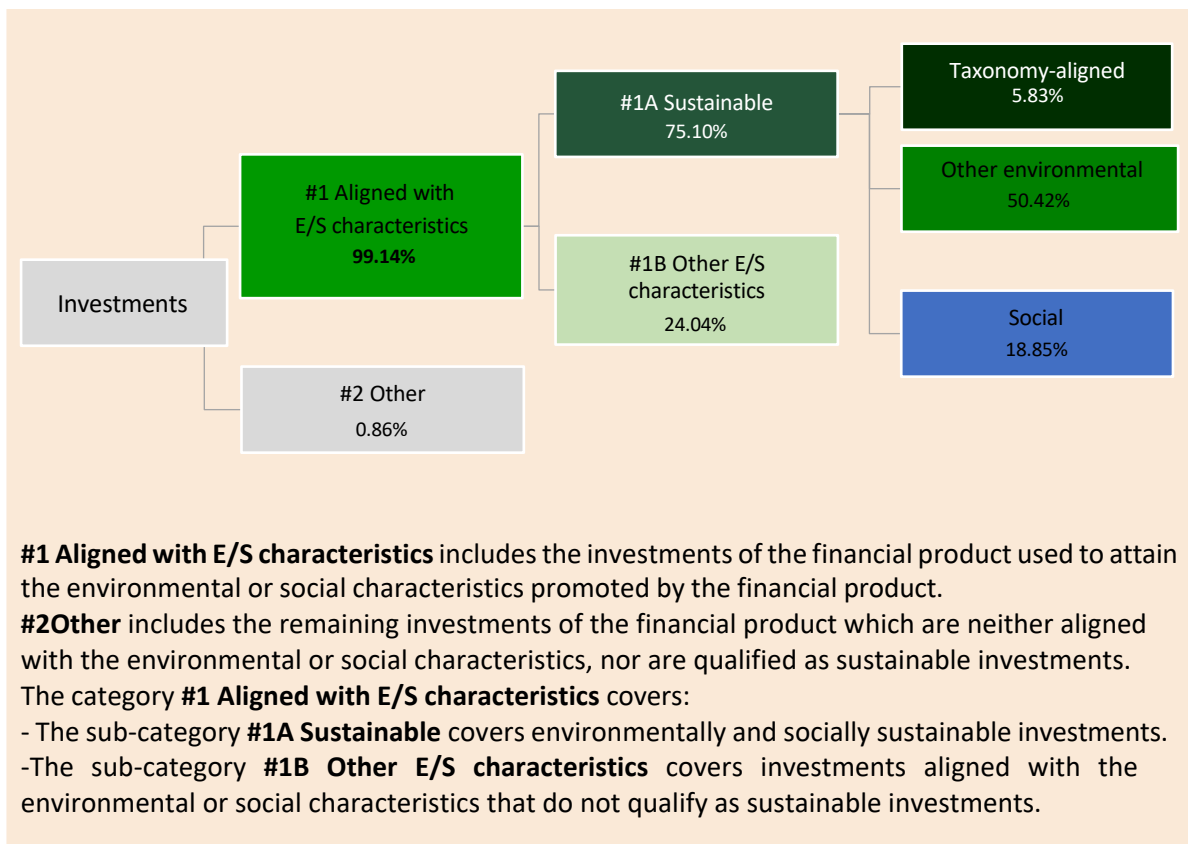

Largest Investments	Sector	Sub-Sector	Country	% Assets

<i>Financials</i>	<i>Mutual Funds</i>	0.67%
<i>Cash</i>	<i>Cash</i>	-0.29%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 5.83% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.21% and the share of investment in enabling activities was 3.90%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 8.67%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **50.42%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

- **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 18.85%.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EUROPEAN EQUITY

Legal entity identifier: 213800CFWZ9RHAKLOD58

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **68.94%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EUROPE (15)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.914 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.798 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

This is the first SFDR periodic report produced for this sub-fund.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

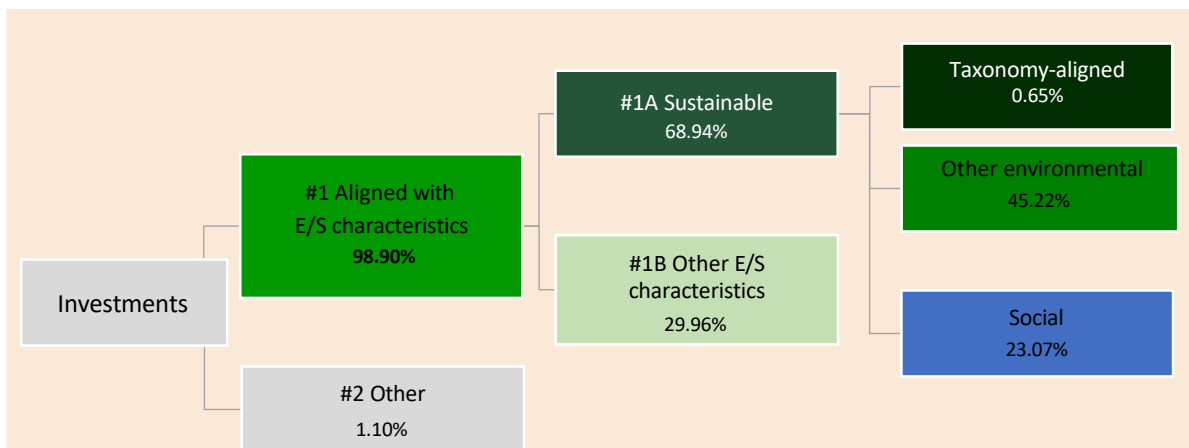

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
NOVO NORDISK A/S-B	Health Care	Pharmaceuticals Biotech & Life Sciences	Denmark	6.25%
ASTRAZENECA GBP	Health Care	Pharmaceuticals Biotech & Life Sciences	United Kingdom	5.20%
SHELL PLC	Energy	Oil, Gas & Consumable Fuels	United Kingdom	4.68%
SIEMENS AG-REG	Industrials	Capital goods	Germany	4.02%
SANOFI	Health Care	Pharmaceuticals Biotech & Life Sciences	France	3.67%
VINCI SA (PARIS)	Industrials	Capital goods	France	2.93%

KBC GROUP NV	Financials	Banks	Belgium	2.75%
EURONEXT NV PARIS	Financials	Financial Services	Netherlands	2.64%
TEMENOS AG - REG	Information Technology	Software & Services	Switzerland	2.60%
CIE FINANCIERE RICHEMO-A REG	Consumer Discretionary	Consumer Durables & Apparel	Switzerland	2.55%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	Sub-Sector	% Assets
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	17.12%
<i>Industrials</i>	<i>Capital goods</i>	12.02%
<i>Financials</i>	<i>Banks</i>	9.25%
<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	7.44%
<i>Consumer Discretionary</i>	<i>Consumer Durables & Apparel</i>	7.06%
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	7.00%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.65% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.02% and the share of investment in enabling activities was 0.63%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

This is the first SFDR periodic report produced for this sub-fund.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **45.22%** at the end of the period. This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 23.07%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EUROPE EX UK EQUITY

Legal entity identifier: 213800GUNJ834MSUJJ48

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **70.16%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EUROPE EX UK**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.185 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.906 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

This is the first SFDR periodic report produced for this sub-fund.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

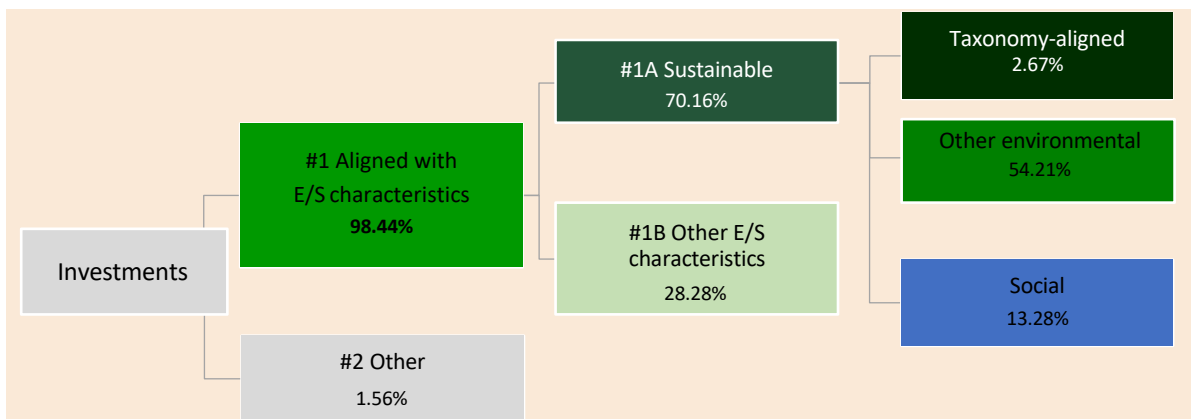

Largest Investments	Sector	Sub-Sector	Country	% Assets
NOVO NORDISK A/S-B	Health Care	Pharmaceuticals Biotech & Life Sciences	Denmark	7.11%
ALLIANZ SE-REG	Financials	Insurance	Germany	3.79%
SANOFI	Health Care	Pharmaceuticals Biotech & Life Sciences	France	3.74%
SCHNEIDER ELECT SE	Industrials	Capital goods	France	3.57%

INFINEON TECHNOLOGIES AG	Information Technology	Semiconductors & Semiconductor Equipment	Germany	2.66%
CIE FINANCIERE RICHEMO-A REG	Consumer Discretionary	Consumer Durables & Apparel	Switzerland	2.57%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	<i>17.36%</i>
<i>Industrials</i>	<i>Capital goods</i>	<i>13.40%</i>
<i>Consumer Discretionary</i>	<i>Consumer Durables & Apparel</i>	<i>8.38%</i>
<i>Financials</i>	<i>Banks</i>	<i>7.89%</i>
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	<i>6.29%</i>
<i>Information Technology</i>	<i>Semiconductors & Semiconductor Equipment</i>	<i>5.71%</i>

<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	4.64%
<i>Financials</i>	<i>Financial Services</i>	4.05%
<i>Information Technology</i>	<i>Software & Services</i>	3.85%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period

switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

the fund invested 2.67% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

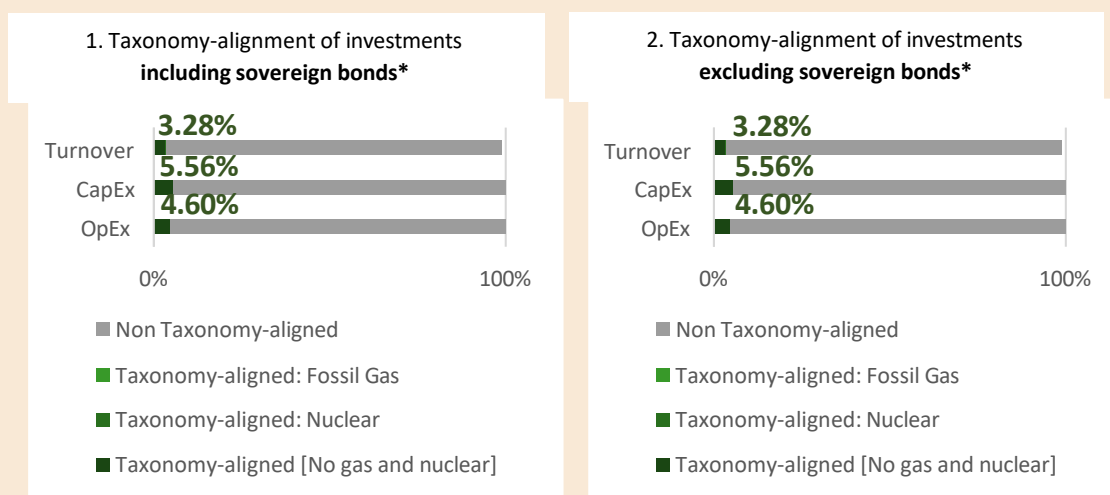

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.02% and the share of investment in enabling activities was 2.78%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

This is the first SFDR periodic report produced for this sub-fund.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **54.21%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 13.28%.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROPEAN EQUITY GREEN
TECHNOLOGY

Legal entity identifier:
222100X10NWGMIJQ5D49

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **83.85%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made a **sustainable investments with a social objective:** _____

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI Europe (dividends reinvested) Index**. In determining the ESG score of the Product and the ESG investment universe, ESG performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is 1.188 (C).
- The weighted average ESG rating of the ESG investment universe is 0.77 (C).

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.13 (C) and the weighted average ESG rating of the ESG investment universe was 0.76 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

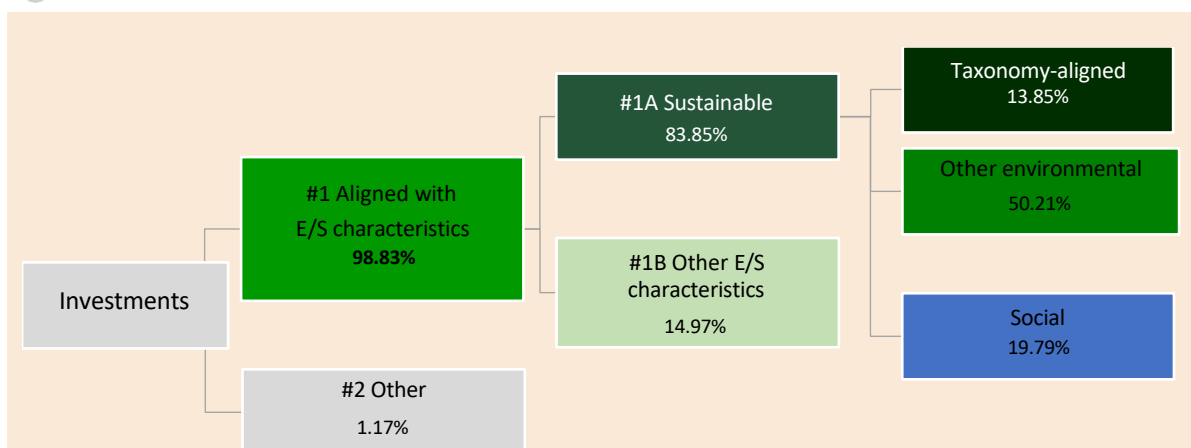

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
SAP SE / XETRA	Information Technology	Software & Services	Germany	3.95%
FERROVIAL SE	Industrials	Capital goods	Netherlands	3.65%
SPIE SA	Industrials	Commercial & Professional Services	France	3.54%
NOVONESIS (NOVOZYMES) B	Materials	Chemicals	Denmark	3.51%
UNITED UTILI GRP PLC	Utilities	Water Utilities	United Kingdom	3.51%
SEVERN TRENT PLC	Utilities	Water Utilities	United Kingdom	3.46%
LEGRAND SA	Industrials	Capital goods	France	3.44%
KONE OYJ-B	Industrials	Capital goods	Finland	3.37%
GETLINK SE	Industrials	Transportation	France	3.32%
INTERTEK GROUP PLC	Industrials	Commercial & Professional Services	United Kingdom	3.30%
MOWI ASA	Consumer Staples	Food, Beverage & Tobacco	Norway	3.15%
DASSAULT SYSTEMES SE	Information Technology	Software & Services	France	3.13%
PENNON GROUP PLC	Utilities	Water Utilities	United Kingdom	3.03%
BOUYGUES SA	Industrials	Capital goods	France	2.92%
ALTRI SGPS S.A.	Materials	Paper & Forest Products	Portugal	2.74%

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

Sector	Sub-Sector	% Assets
<i>Industrials</i>	<i>Capital goods</i>	<i>21.05%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 13.85% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

- Yes:
- In fossil gas In nuclear energy

No

low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

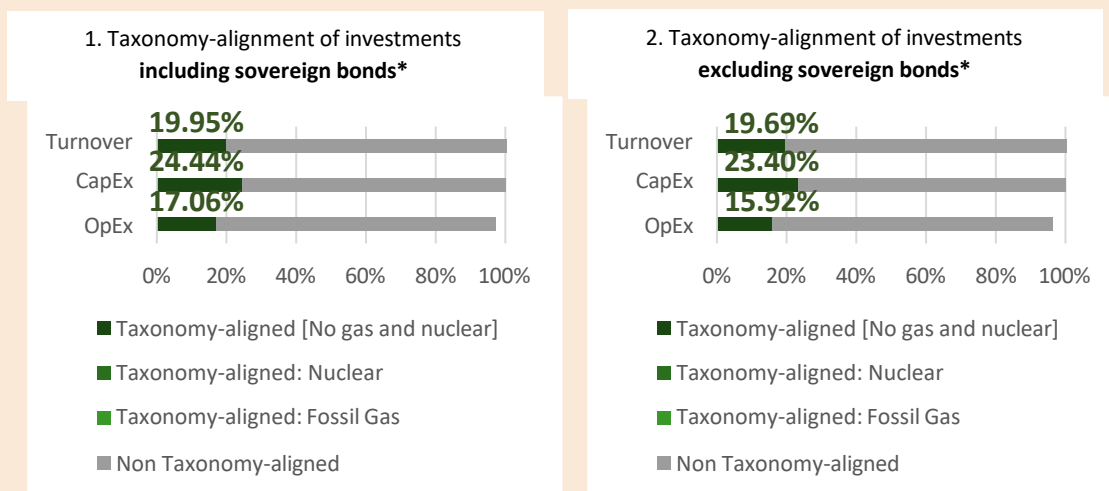

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.12% and the share of investment in enabling activities was 9.43%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 16.33%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **50.21%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 19.79%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EUROPEAN EQUITY VALUE

Legal entity identifier: 549300240RQEGYGAX021

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **60.71%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EUROPE VALUE**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.998 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.712 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.03 (C) and the weighted average ESG rating of the ESG investment universe was 0.70 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

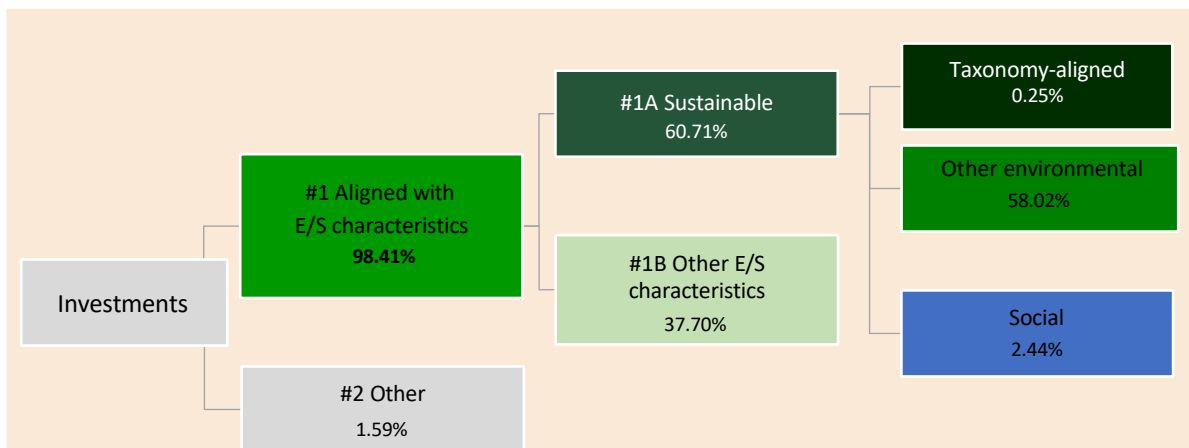

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
ROCHE HLDG AG-GENUSS	Health Care	Pharmaceuticals Biotech & Life Sciences	Switzerland	2.67%
SHELL PLC	Energy	Oil, Gas & Consumable Fuels	United Kingdom	2.58%
HSBC HOLDING PLC GBP	Financials	Banks	United Kingdom	2.58%
NOVARTIS AG-REG	Health Care	Pharmaceuticals Biotech & Life Sciences	Switzerland	2.55%
DEUTSCHE TELEKOM NAM (XETRA)	Communication Services	Telecommunication	Germany	2.52%
MUENCHENER RUECKVER AG-REG	Financials	Insurance	Germany	2.48%
ALLIANZ SE-REG	Financials	Insurance	Germany	2.47%
SANDOZ GROUP AG	Health Care	Pharmaceuticals Biotech & Life Sciences	Switzerland	2.46%
INTESA SANPAOLO	Financials	Banks	Italy	2.45%
SWEDBANK AB	Financials	Banks	Sweden	2.44%
PRYSMIAN SPA	Industrials	Capital goods	Italy	2.44%
INDUSTRIA DE DISENO TEXTIL	Consumer Discretionary	Consumer Discretionary Distribution & Retail	Spain	2.44%
REPSOL SA	Energy	Oil, Gas & Consumable Fuels	Spain	2.43%
KERING	Consumer Discretionary	Consumer Durables & Apparel	France	2.43%
ITV PLC	Communication Services	Media & Entertainment	United Kingdom	2.43%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	Sub-Sector	% Assets
<i>Financials</i>	<i>Banks</i>	16.25%
<i>Industrials</i>	<i>Capital goods</i>	11.77%
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	10.06%
<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	7.31%
<i>Financials</i>	<i>Insurance</i>	7.15%

<i>Information Technology</i>	<i>Software & Services</i>	2.27%
<i>Industrials</i>	<i>Transportation</i>	2.17%
<i>Forex</i>	<i>Forex</i>	-0.00%
<i>Cash</i>	<i>Cash</i>	1.59%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.25% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

-turnover reflecting the share of revenue from green activities of investee companies

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

-operational expenditure (OpEx) reflecting green operational activities of investee companies.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.10% and the share of investment in enabling activities was 1.02%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 5.74%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **58.02%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

- **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 2.44%.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

- **How did this financial product perform compared to the reference benchmark ?**

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the

environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROPEAN EQUITY INCOME ESG

Legal entity identifier:
549300L23KUMFUPDKS14

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **77.50%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EUROPE (15)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.199 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.798 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.13 (C) and the weighted average ESG rating of the ESG investment universe was 0.80 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

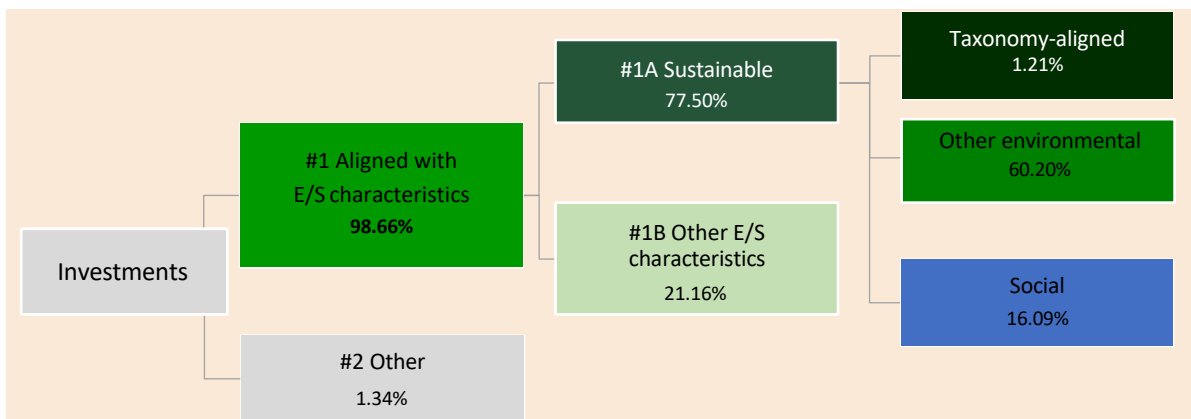

Largest Investments	Sector	Sub-Sector	Country	% Assets
NOVO NORDISK A/S-B	Health Care	Pharmaceuticals Biotech & Life Sciences	Denmark	6.88%
NOVARTIS AG-REG	Health Care	Pharmaceuticals Biotech & Life Sciences	Switzerland	5.31%

<i>Health Care</i>	<i>Health Care Equipment & Services</i>	0.63%
<i>Forex</i>	<i>Forex</i>	-0.11%
<i>Cash</i>	<i>Cash</i>	1.34%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.21% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or

low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

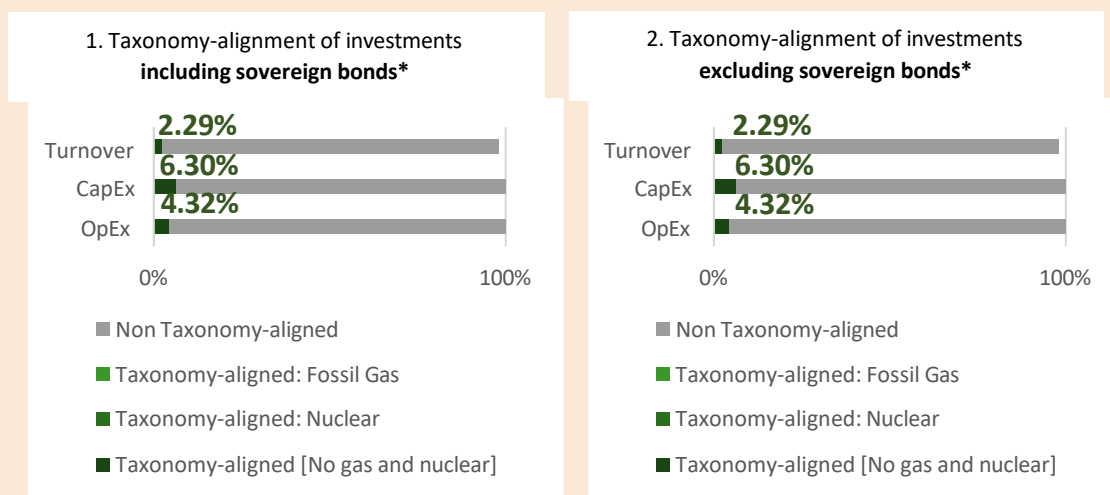

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.03% and the share of investment in

enabling activities was 1.79%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 4.11%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **60.20%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 16.09%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROPEAN EQUITY SMALL CAP

Legal entity identifier:
549300YCBHPCBFKKY81

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **63.96%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EUROPE (16) SMALL CAP**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.756 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.528 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.77 (C) and the weighted average ESG rating of the ESG investment universe was 0.49 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

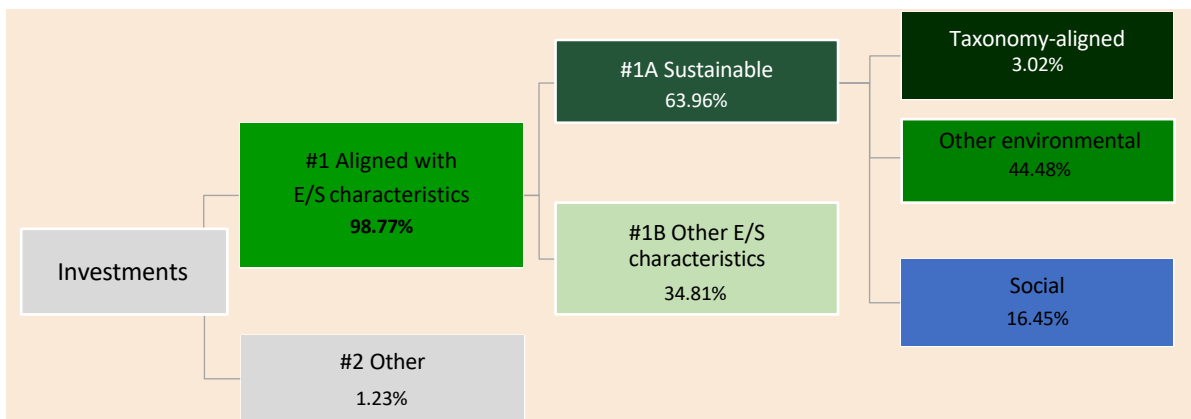

Largest Investments	Sector	Sub-Sector	Country	% Assets
SPIE SA	Industrials	Commercial & Professional Services	France	3.02%
BRITVIC PLC	Consumer Staples	Food, Beverage & Tobacco	United Kingdom	2.81%
BABCOCK INTL GRP	Industrials	Capital goods	United Kingdom	2.79%
INTERMEDIATE CAPITAL GROUP	Financials	Financial Services	United Kingdom	2.66%
CTS EVENTIM	Communication Services	Media & Entertainment	Germany	2.44%
ASR NEDERLAND NV	Financials	Insurance	Netherlands	2.12%
BANKINTER SA	Financials	Banks	Spain	2.11%
VISTRY GROUP PLC	Consumer Discretionary	Consumer Durables & Apparel	United Kingdom	2.07%
GRAFTON GROUP LDN (GBP)	Industrials	Capital goods	Ireland	2.05%
ELIS SA	Industrials	Commercial & Professional Services	France	2.04%
RS GROUP PLC	Industrials	Capital goods	United Kingdom	2.02%
DERWENT LONDON PLC	Real Estate	REITs	United Kingdom	2.02%
ALK-ABELLO A/S	Health Care	Pharmaceuticals Biotech & Life Sciences	Denmark	2.01%
GREGGS PLC	Consumer Discretionary	Consumer Services	United Kingdom	2.00%
GAZTRANSPORT ET TECHNIGAZ SA	Energy	Oil, Gas & Consumable Fuels	France	1.97%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Industrials</i>	<i>Capital goods</i>	<i>19.43%</i>
<i>Industrials</i>	<i>Commercial & Professional Services</i>	<i>8.58%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 3.02% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.08% and the share of investment in enabling activities was 1.33%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 5.60%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **44.48%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 16.45%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EQUITY JAPAN TARGET

Legal entity identifier: 529900LFY58YVU1ISY58

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **32.46%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **TOPIX**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.223 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.280 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.27 (D) and the weighted average ESG rating of the ESG investment universe was -0.28 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

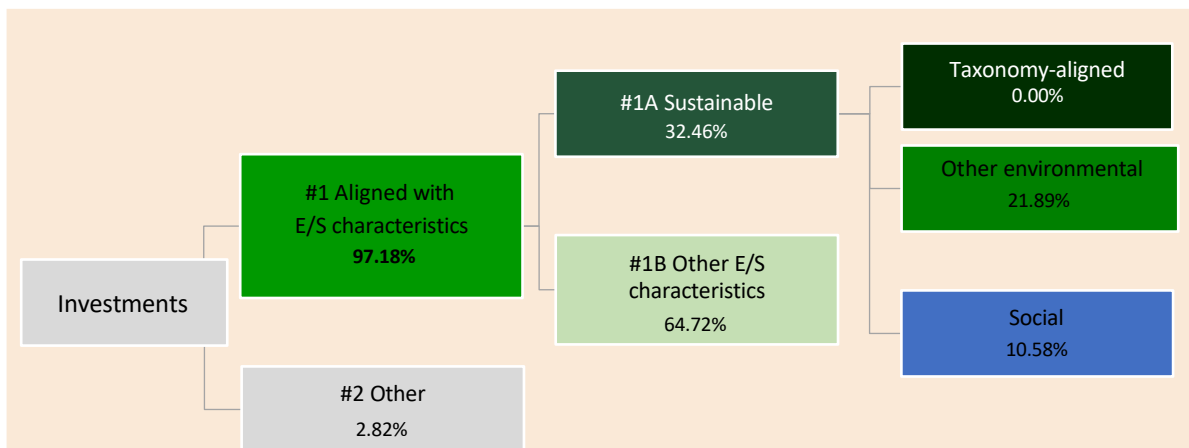

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
KYOCERA CORP	Information Technology	Technology Hardware & Equipment	Japan	3.97%
SHIZUOKA FINANCIAL GROUP INC	Financials	Banks	Japan	3.94%
RICOH CO LTD	Information Technology	Technology Hardware & Equipment	Japan	3.12%
KYOTO FINANCIAL GROUP INC	Financials	Banks	Japan	2.89%
NIPPON KAYAKU CO LTD	Materials	Chemicals	Japan	2.76%
TOPPAN HOLDINGS INC	Industrials	Commercial & Professional Services	Japan	2.75%
NIKON CORP	Consumer Discretionary	Consumer Durables & Apparel	Japan	2.65%
TS TECH CO LTD	Consumer Discretionary	Automobiles & Components	Japan	2.57%
TBS HOLDINGS INC	Communication Services	Media & Entertainment	Japan	2.51%
NOK CORP	Consumer Discretionary	Automobiles & Components	Japan	2.46%
MAKINO MILLING MACHINE CO	Industrials	Capital goods	Japan	2.36%
TODA CORP	Industrials	Capital goods	Japan	2.26%
KYORIN PHARMACEUTICAL CO LTD	Health Care	Pharmaceuticals Biotech & Life Sciences	Japan	2.14%
SEINO HOLDINGS CO LTD	Industrials	Transportation	Japan	1.99%
GUNZE LTD	Consumer Discretionary	Consumer Durables & Apparel	Japan	1.91%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	Sub-Sector	% Assets
<i>Industrials</i>	<i>Capital goods</i>	23.89%
<i>Information Technology</i>	<i>Technology Hardware & Equipment</i>	14.02%
<i>Materials</i>	<i>Chemicals</i>	10.79%
<i>Consumer Discretionary</i>	<i>Automobiles & Components</i>	10.15%
<i>Consumer Discretionary</i>	<i>Consumer Durables & Apparel</i>	7.16%
<i>Financials</i>	<i>Banks</i>	6.83%

<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	4.44%
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	3.68%
<i>Industrials</i>	<i>Transportation</i>	3.49%
<i>Industrials</i>	<i>Commercial & Professional Services</i>	3.49%
<i>Communication Services</i>	<i>Media & Entertainment</i>	2.51%
<i>Materials</i>	<i>Metals & Mining</i>	2.01%
<i>Information Technology</i>	<i>Semiconductors & Semiconductor Equipment</i>	1.83%
<i>Consumer Staples</i>	<i>Household & Personal Products</i>	0.97%
<i>Forex</i>	<i>Forex</i>	0.93%
<i>Consumer Staples</i>	<i>Consumer Staples Distribution & Retail</i>	0.61%
<i>Consumer Discretionary</i>	<i>Consumer Discretionary Distribution & Retail</i>	0.38%
<i>Cash</i>	<i>Cash</i>	2.92%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Additional Information (unaudited)

comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **21.89%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

- **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 10.58%.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

- **How did this financial product perform compared to the reference benchmark ?**

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the

environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
GLOBAL ECOLOGY ESG

Legal entity identifier:
549300PF1HPU3EW4TO97

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **63.42%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI WORLD**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The product is labeled SRI (Social and Responsible Investment). It sought throughout the year to promote the 3 dimensions (environmental, social and governance) by taking into account the ESG rating of issuers in the construction of the portfolio.

The ESG rating of issuers aims to assess their ability to manage the potential negative impact of their activities on sustainability factors. This analysis thus aims to assess their Environmental and Societal behaviors in terms of Governance by assigning them an ESG rating ranging from A (best rating) to G (worse rating), so as to achieve a more global assessment of the risks.

1. The portfolio has consistently applied the following Amundi exclusion policy:
 - Legal exclusions on controversial weapons
 - Companies that seriously and repeatedly contravene one or more of the 10 principles of the Global Compact (UN Global Compact), without credible corrective measures;
 - The sectoral exclusions of the Amundi group on Coal and Tobacco; (details of this policy are available in Amundi's Responsible Investment Policy available on the website www.amundi.fr)
2. No investment has been made in issuers rated F or G. For any issuer whose rating has been downgraded to F or G, the securities already present in the portfolio were sold within the timeframe committed to in the prospectus and taking into account financial interest of holders
3. The weighted average ESG score of the portfolio has consistently been higher than the weighted average ESG score of the fund's investment universe after eliminating the 20% of the worst issuers
4. The fund has favored issuers that are leaders in their sector of activity according to the ESG criteria identified by the team of extra-financial analysts of the management company ("best in class" approach). With the exception of the above exclusions, all economic sectors are represented in this approach and the UCI may therefore be exposed to certain controversial sectors.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.622 (C)**.
- The weighted average ESG rating of the ESG investment universe is **-0.179 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an

effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● **... and compared to previous periods?**

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.69 (C) and the weighted average ESG rating of the ESG investment universe was -0.12 (D).

● **What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion** : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration** : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

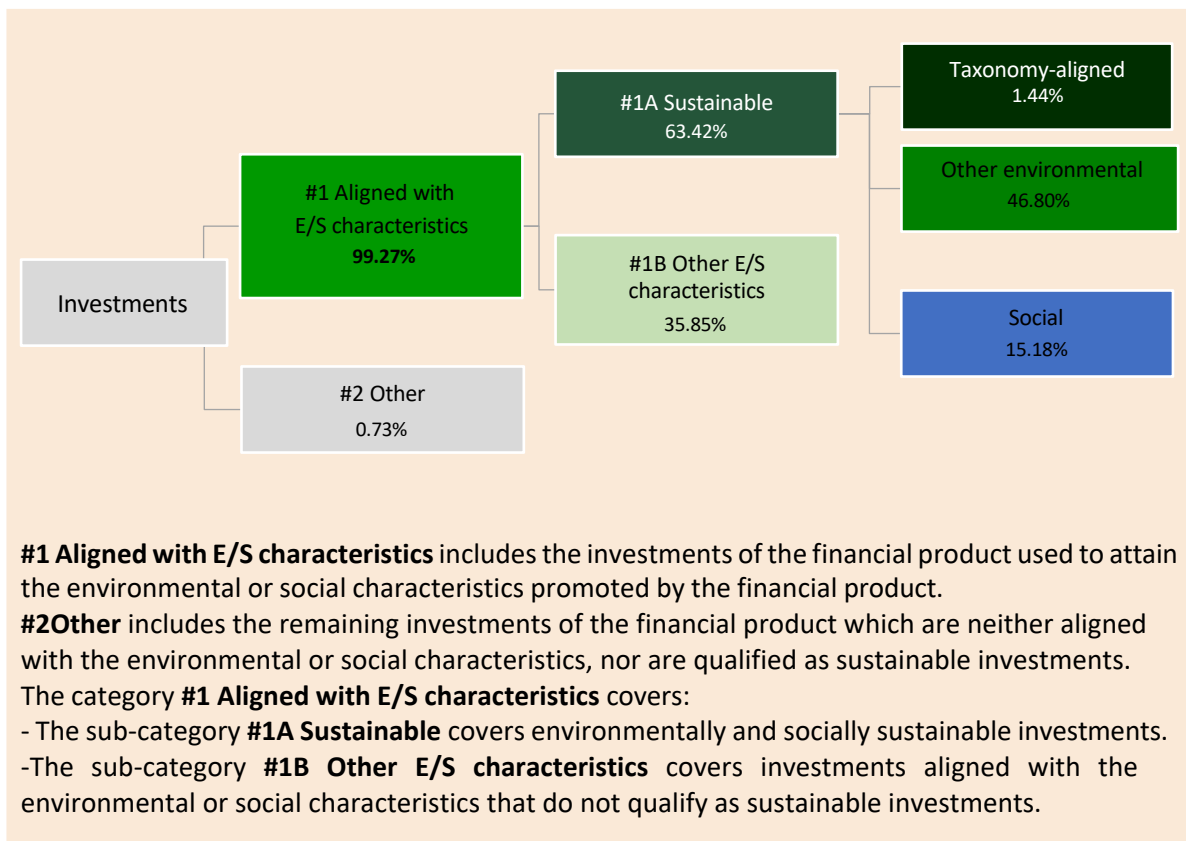

Largest Investments	Sector	Sub-Sector	Country	% Assets
TOKIO MARINE HOLDINGS INC	Financials	Insurance	Japan	3.25%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

● *In which economic sectors were the investments made ?*

Sector	Sub-Sector	% Assets
<i>Industrials</i>	<i>Capital goods</i>	<i>20.28%</i>
<i>Financials</i>	<i>Insurance</i>	<i>14.03%</i>
<i>Information Technology</i>	<i>Software & Services</i>	<i>10.79%</i>
<i>Information Technology</i>	<i>Semiconductors & Semiconductor Equipment</i>	<i>8.53%</i>
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	<i>7.44%</i>
<i>Industrials</i>	<i>Commercial & Professional Services</i>	<i>5.50%</i>
<i>Materials</i>	<i>Chemicals</i>	<i>4.96%</i>
<i>Industrials</i>	<i>Transportation</i>	<i>4.70%</i>
<i>Health Care</i>	<i>Health Care Equipment & Services</i>	<i>4.64%</i>
<i>Utilities</i>	<i>Multi-Utilities</i>	<i>3.70%</i>
<i>Financials</i>	<i>Financial Services</i>	<i>3.15%</i>
<i>Materials</i>	<i>Containers & Packaging</i>	<i>1.93%</i>
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	<i>1.76%</i>

<i>Consumer Discretionary</i>	<i>Consumer Services</i>	1.76%
<i>Communication Services</i>	<i>Telecommunication</i>	1.66%
<i>Consumer Discretionary</i>	<i>Consumer Durables & Apparel</i>	1.51%
<i>Financials</i>	<i>Banks</i>	1.51%
<i>Consumer Staples</i>	<i>Household & Personal Products</i>	1.41%
<i>Forex</i>	<i>Forex</i>	0.15%
<i>Cash</i>	<i>Cash</i>	0.58%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.44% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 1.66%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 1.72%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **46.80%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 15.18%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
GLOBAL EQUITY ESG IMPROVERS

Legal entity identifier:
213800RO5QUY7UX5U822

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **53.16%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI WORLD**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The investment manager has focused the investment process on companies/sectors/countries that had embraced, or will embrace, a positive ESG

trajectory within their business. The investment manager identified investment opportunities that were aligned with the aim of generating alpha by focusing in particular on inclusion of companies/sectors/countries that will be strong ESG winners in the future, that have (or will have) a positive ESG profile improvement, while also investing in companies/sectors/countries that are currently ESG stewards.

Further, the Sub-Fund achieved an ESG score of its portfolio greater than that of the Benchmark. The Sub-Fund was compared with the ESG score of its Benchmark after 20% of the lowest ESG rated securities have been excluded from the Benchmark.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.292 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.179 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● **... and compared to previous periods?**

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.27 (D) and the weighted average ESG rating of the ESG investment universe was -0.12 (D).

● **What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and

2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on

environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.

- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

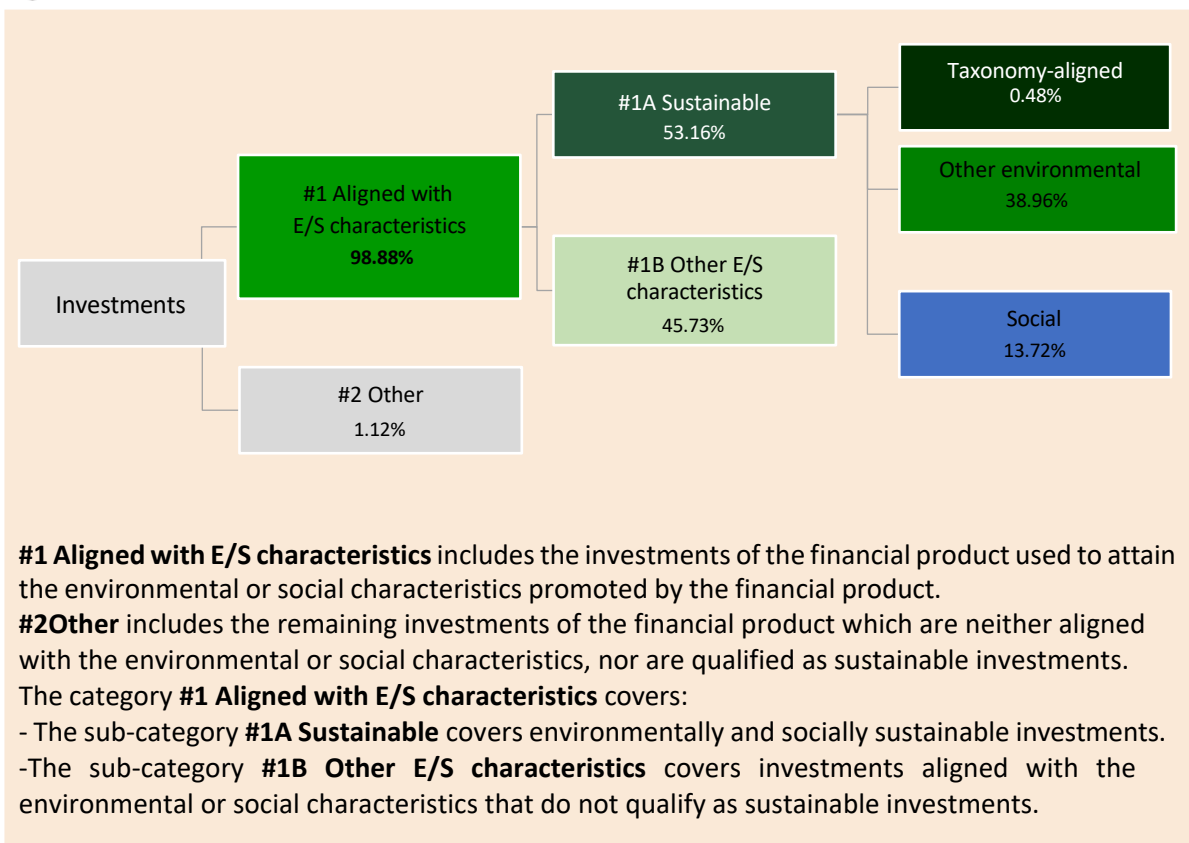

Largest Investments	Sector	Sub-Sector	Country	% Assets
MICROSOFT CORP	Information Technology	Software & Services	United States	7.42%
NVIDIA CORP	Information Technology	Semiconductors & Semiconductor Equipment	United States	6.04%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.48% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas

In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.48%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.31%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **38.96%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 13.72%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS NET
ZERO AMBITION GLOBAL EQUITY

Legal entity identifier:
213800EAAYY2IPNSZZ69

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **71.08%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI WORLD CLIMATE PARIS ALIGNED**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund.

During the financial year, the product continuously promoted environmental characteristics by aiming to reduce its carbon intensity by aligning its carbon footprint intensity to that of its Benchmark **MSCI WORLD CLIMATE PARIS ALIGNED**.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.522 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.012 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

The sustainability indicator used is the portfolio carbon footprint intensity, which is calculated as an asset weighted portfolio average and compared to the asset weighted carbon footprint intensity of the Benchmark. As a result, securities with relatively low environmental footprints had a higher probability of being selected in the portfolio compared to securities with relatively high environmental footprints.

- The weighted average carbon footprint intensity of the portfolio is **55.01**
- The weighted average carbon footprint intensity of the Benchmark is **66.13**

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was **0.66 (C)** and the weighted average ESG rating of the ESG investment universe was **0.04 (D)**. At the end of the previous period, the weighted average carbon intensity of the portfolio was **72.84** and the weighted average carbon intensity reference index was **74.69**.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.

- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

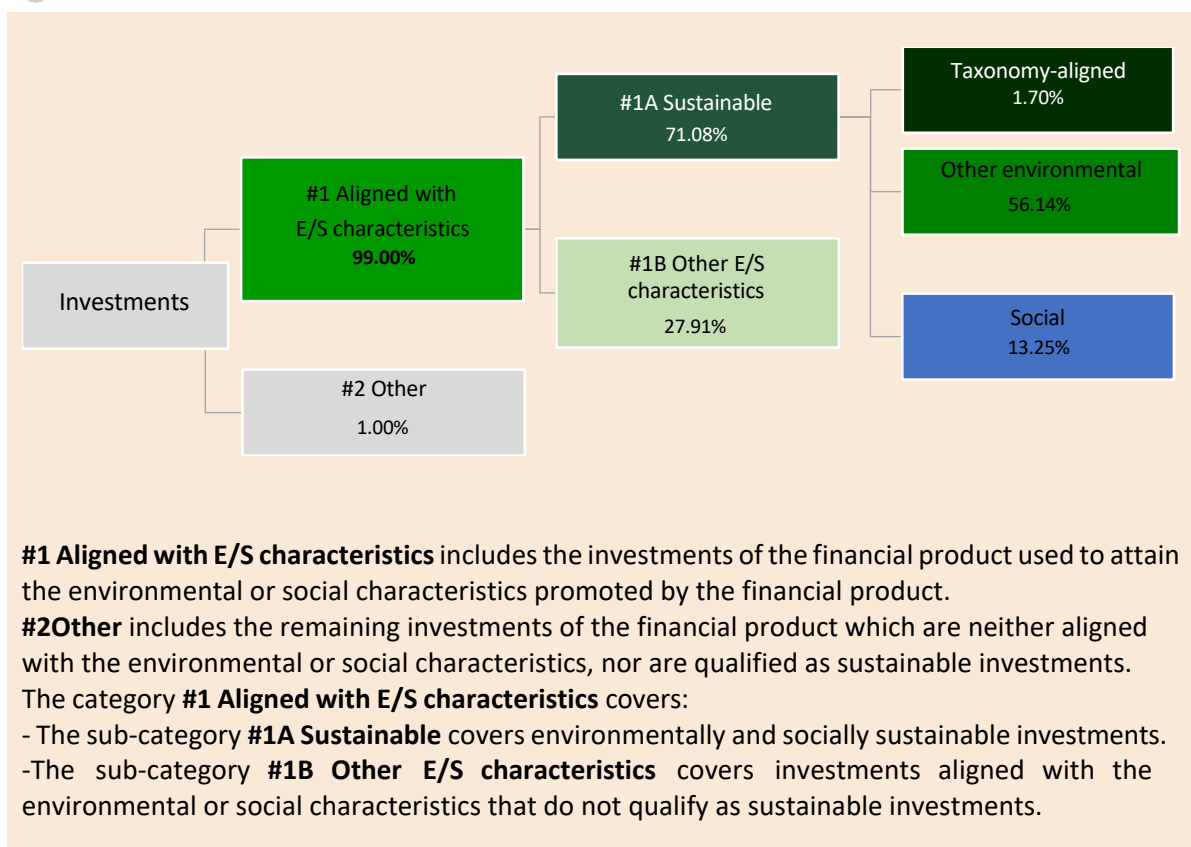

Largest Investments	Sector	Sub-Sector	Country	% Assets
MICROSOFT CORP	Information Technology	Software & Services	United States	7.72%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.70% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

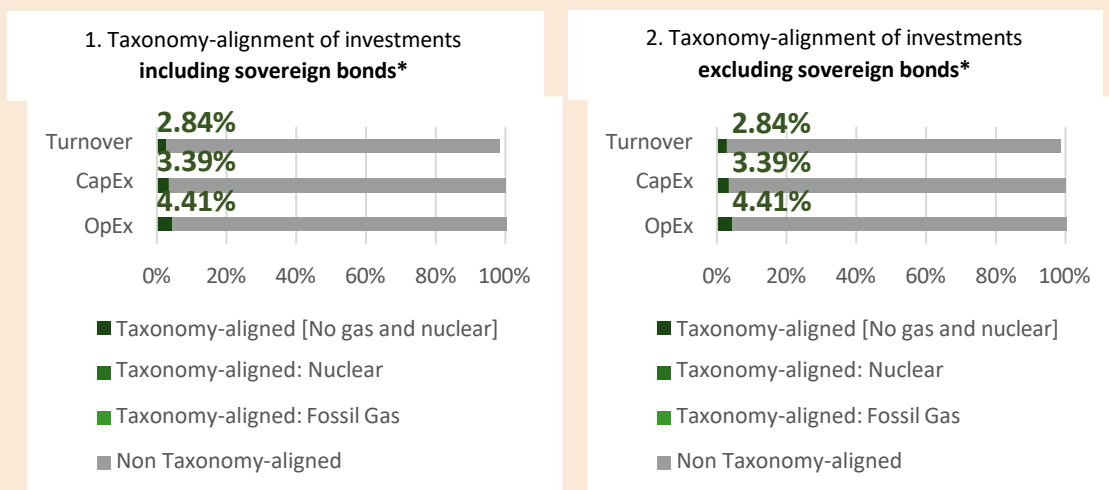

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.89%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 1.91%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **56.14%** at the end of the period. This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 13.25%.

 **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The sustainable investment objective is attained by aligning the carbon footprint reduction objectives of the fund with MSCI World Climate Paris Aligned Net USD Index. The portfolio carbon footprint intensity is calculated as an asset weighted portfolio average and compared to the asset weighted carbon footprint intensity of the Index.

As a result, securities with relatively low environmental footprints have a higher probability of being selected in the portfolio compared to securities with relatively high environmental footprints. In addition, the fund excludes companies on the basis of controversial behavior and (or) controversial products in accordance with the Responsible Investment Policy.

- The weighted average carbon footprint intensity of the portfolio is **55.01**
- The weighted average carbon footprint intensity of the Benchmark is **66.13**

● *How does the reference benchmark differ from a broad market index ?*

A broad market index, does not assess or include its constituents according to environment characteristics and therefore is not aligned with environmental characteristics.

The index used is a "Paris Aligned Benchmark" which incorporates specific objectives related to emission reductions and the transition to a low-carbon economy through the selection and weighting of underlying constituents

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

- The weighted average ESG rating of the portfolio is **0.522 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.012 (D)**.

- The weighted average carbon footprint intensity of the portfolio is **55.01**
- The weighted average carbon footprint intensity of the Benchmark is **66.13**

● ***How did this financial product perform compared with the reference benchmark ?***

The sustainable investment objective is attained by aligning the carbon footprint reduction objectives of the fund with MSCI World Climate Paris Aligned Net USD Index. The portfolio carbon footprint intensity is calculated as an asset weighted portfolio average and compared to the asset weighted carbon footprint intensity of the Index.

As a result, securities with relatively low environmental footprints have a higher probability of being selected in the portfolio compared to securities with relatively high environmental footprints. In addition, the fund excludes companies on the basis of controversial behavior and (or) controversial products in accordance with the Responsible Investment Policy.

- The weighted average carbon footprint intensity of the portfolio is **55.01**
- The weighted average carbon footprint intensity of the Benchmark is **66.13**

● ***How did this financial product perform compared with the broad market index ?***

A broad market index, does not assess or include its constituents according to environment characteristics and therefore is not aligned with environmental characteristics.

The index used is a "Paris Aligned Benchmark" which incorporates specific objectives related to emission reductions and the transition to a low-carbon economy through the selection and weighting of underlying constituents.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
GLOBAL EQUITY INCOME ESG

Legal entity identifier:
549300JVYWQ1AGFG7016

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **60.87%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI WORLD**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.644 (C)**.
- The weighted average ESG rating of the ESG investment universe is **-0.179 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.71 (C) and the weighted average ESG rating of the ESG investment universe was -0.12 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

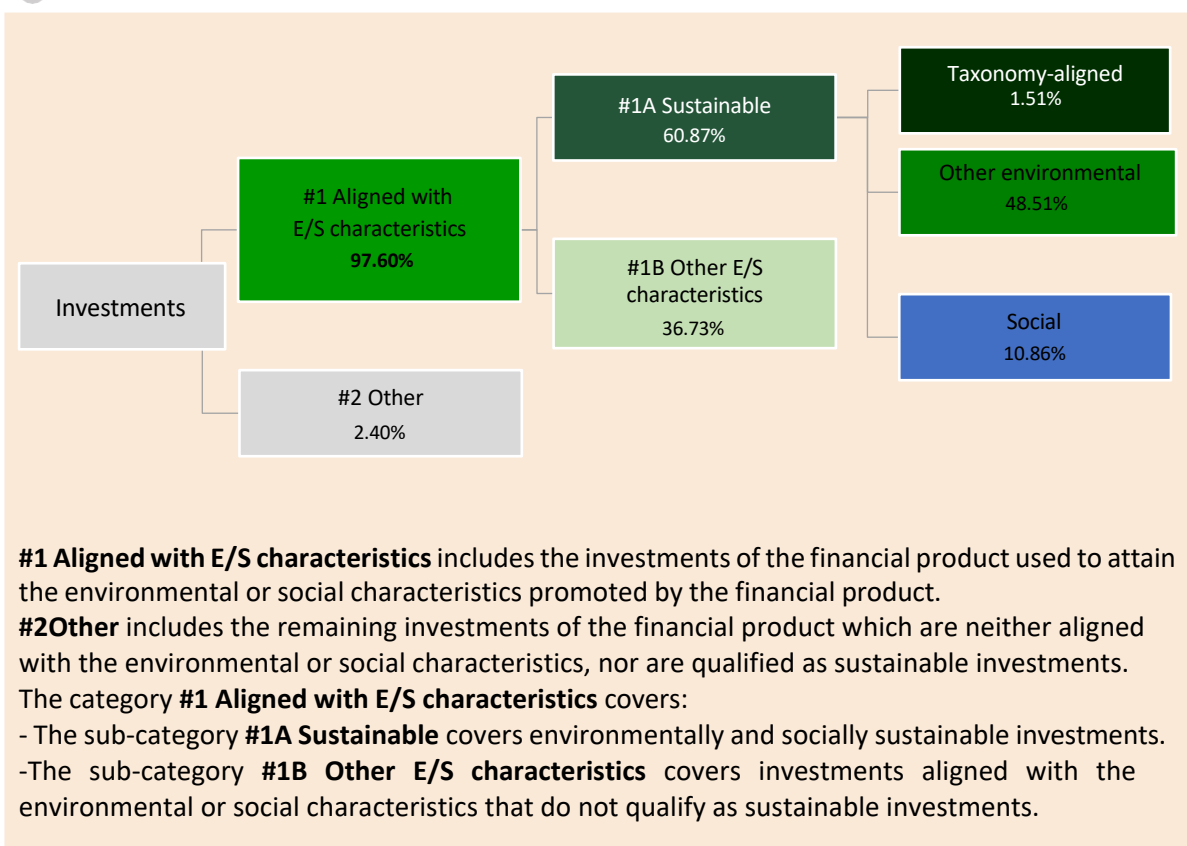

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
MICROSOFT CORP	Information Technology	Software & Services	United States	6.96%
JPMORGAN CHASE & CO	Financials	Banks	United States	2.94%

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.
 The category **#1 Aligned with E/S characteristics** covers:
 - The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
 -The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made ?

Sector	Sub-Sector	% Assets

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.51% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

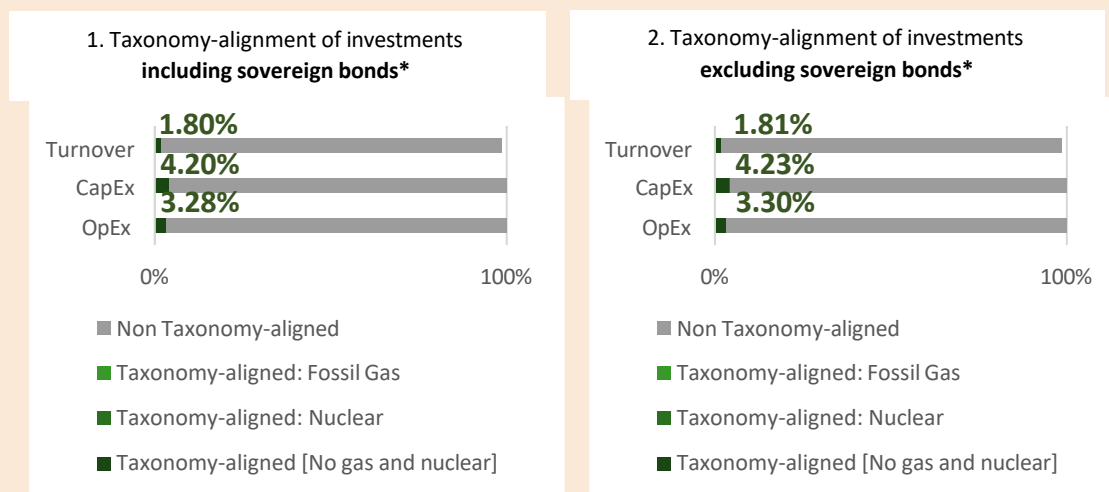

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 1.68%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 3.30%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **48.51%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 10.86%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS JAPAN EQUITY ENGAGEMENT

Legal entity identifier: 549300ELY8IPEE0JYT57

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective: _____

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **53.17%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **TOPIX**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.131 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.280 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.14 (D) and the weighted average ESG rating of the ESG investment universe was -0.28 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

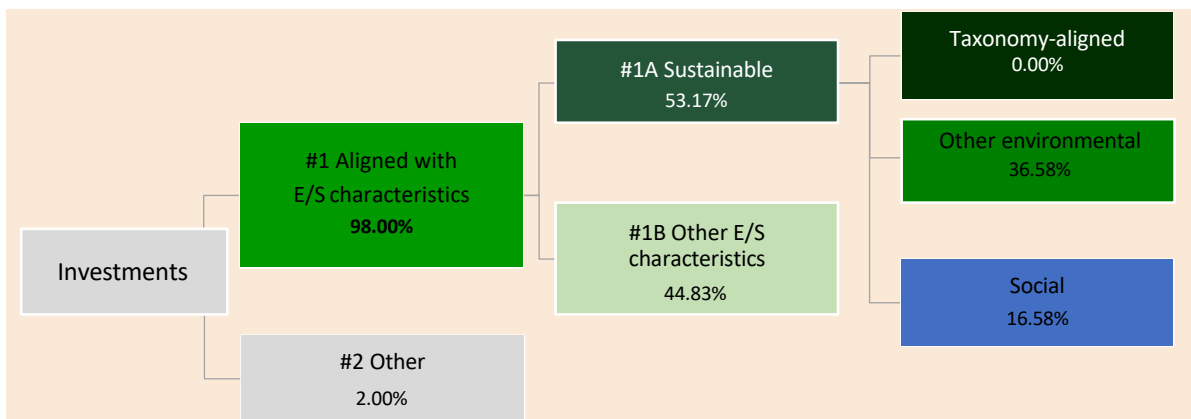

Largest Investments	Sector	Sub-Sector	Country	% Assets
SANWA HOLDINGS CORP	Industrials	Capital goods	Japan	4.34%
MITSUBISHI UFJ FIN	Financials	Banks	Japan	4.01%
TDK CORP	Information Technology	Technology Hardware & Equipment	Japan	3.95%
ORIX CORP	Financials	Financial Services	Japan	3.88%
KURITA WATER INDUST	Industrials	Capital goods	Japan	3.87%
RECRUIT HOLDINGS CO LTD	Industrials	Commercial & Professional Services	Japan	3.73%
KOMATSU LTD	Industrials	Capital goods	Japan	3.66%
AICA KOGYO CO	Materials	Chemicals	Japan	3.65%
SONY GROUP CORP (JT)	Consumer Discretionary	Consumer Durables & Apparel	Japan	3.62%
TOKIO MARINE HOLDINGS INC	Financials	Insurance	Japan	3.53%
NOMURA RESEARCH INST	Information Technology	Software & Services	Japan	3.44%
TOYOTA TSUSHO CORP	Industrials	Capital goods	Japan	3.37%
SUMITOMO FORESTRY	Consumer Discretionary	Consumer Durables & Apparel	Japan	3.35%
FAST RETAILING	Consumer Discretionary	Consumer Discretionary Distribution & Retail	Japan	3.31%
ZENKOKU HOSHO CO LTD	Financials	Financial Services	Japan	3.29%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Industrials</i>	<i>Capital goods</i>	23.71%
<i>Financials</i>	<i>Financial Services</i>	9.07%
<i>Information Technology</i>	<i>Technology Hardware & Equipment</i>	7.01%
<i>Consumer Discretionary</i>	<i>Consumer Durables & Apparel</i>	6.96%
<i>Materials</i>	<i>Chemicals</i>	6.62%
<i>Consumer Discretionary</i>	<i>Automobiles & Components</i>	5.97%

<i>Health Care</i>	<i>Health Care Equipment & Services</i>	5.35%

<i>Financials</i>	<i>Banks</i>	4.01%
<i>Industrials</i>	<i>Commercial & Professional Services</i>	3.73%
<i>Information Technology</i>	<i>Software & Services</i>	3.62%
<i>Financials</i>	<i>Insurance</i>	3.53%
<i>Consumer Discretionary</i>	<i>Consumer Discretionary Distribution & Retail</i>	3.31%
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	3.21%
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	2.94%
<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	2.75%
<i>Real Estate</i>	<i>Real Estate Management & Development</i>	1.76%
<i>Forex</i>	<i>Forex</i>	0.23%
<i>Cash</i>	<i>Cash</i>	1.89%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:
 In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **36.58%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

- **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 16.58%.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

- **How did this financial product perform compared to the reference benchmark ?**

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the

environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
GLOBAL EQUITY

Legal entity identifier:
549300R5QSNNJBY1T17

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **41.25%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ^x

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI ACWI**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.185 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.171 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.24 (D) and the weighted average ESG rating of the ESG investment universe was -0.12 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

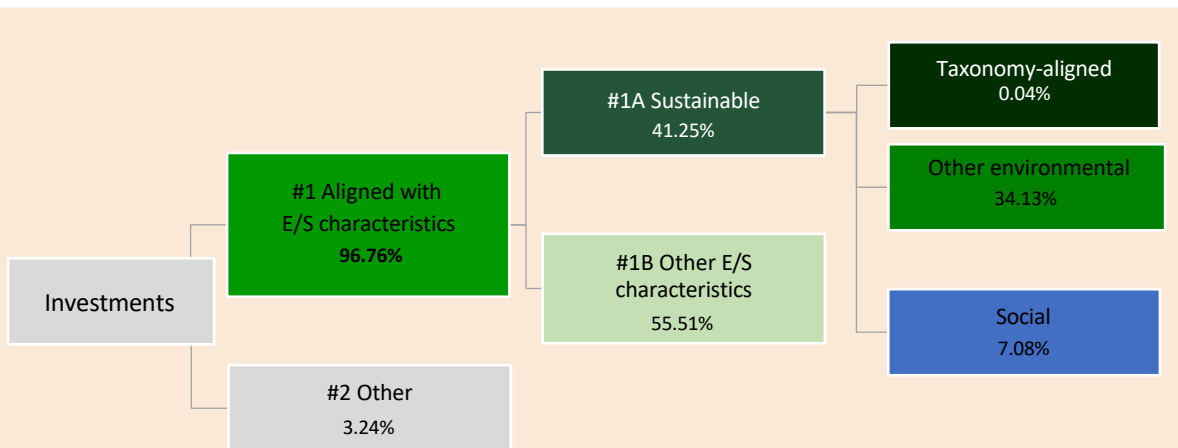

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
ALPHABET INC CL A	Communication Services	Media & Entertainment	United States	4.92%
AMAZON.COM INC	Consumer Discretionary	Consumer Discretionary Distribution & Retail	United States	4.34%
SHELL PLC	Energy	Oil, Gas & Consumable Fuels	United Kingdom	3.60%
INTL BUSINESS MACHINES CORP	Information Technology	Software & Services	United States	3.40%
KB FINANCIAL GROUP INC	Financials	Banks	Korea	3.36%
ADVANCED MICRO DEVICES	Information Technology	Semiconductors & Semiconductor Equipment	United States	3.27%
CARDINAL HEALTH INC	Health Care	Health Care Equipment & Services	United States	3.11%

SANOFI	Health Care	Pharmaceuticals Biotech & Life Sciences	France	2.43%
ABN AMRO BANK NV-CVA	Financials	Banks	Netherlands	2.33%
PURE STORAGE INC CL A	Information Technology	Technology Hardware & Equipment	United States	2.22%
AERCAP HOLDINGS NV	Industrials	Capital goods	Netherlands	2.16%
PERSIMMON PLC	Consumer Discretionary	Consumer Durables & Apparel	United Kingdom	2.05%

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made ?

Sector	Sub-Sector	% Assets
<i>Financials</i>	<i>Banks</i>	<i>13.40%</i>

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.04% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.03% and the share of investment in enabling activities was 0.01%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.01%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **34.13%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 7.08%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS US EQUITY DIVIDEND GROWTH

Legal entity identifier: 5493008HZKXKMO2U3E97

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

X

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **27.53%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **RUSSELL 1000 VALUE (FRC)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.137 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.479 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.13 (D) and the weighted average ESG rating of the ESG investment universe was -0.39 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

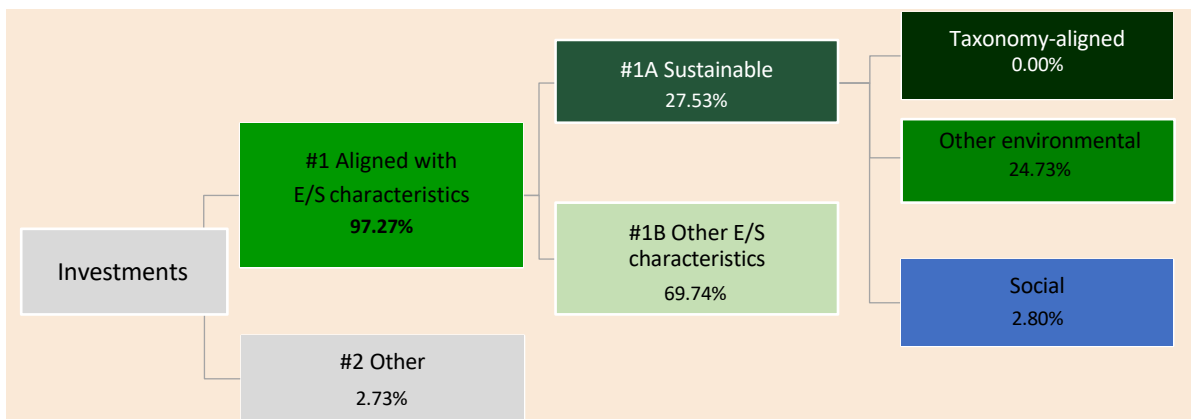

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Financials</i>	<i>Banks</i>	<i>13.09%</i>
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	<i>9.73%</i>
<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	<i>9.00%</i>
<i>Financials</i>	<i>Financial Services</i>	<i>8.45%</i>
<i>Industrials</i>	<i>Capital goods</i>	<i>5.65%</i>
<i>Industrials</i>	<i>Transportation</i>	<i>4.99%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **24.73%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 2.80%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

● ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS US EQUITY ESG IMPROVERS

Legal entity identifier: 213800ETDMQDXO6WX979

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **39.41%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **S&P 500**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The investment manager has focused the investment process on companies/sectors/countries that had embraced, or will embrace, a positive ESG

trajectory within their business. The investment manager identified investment opportunities that were aligned with the aim of generating alpha by focusing in particular on inclusion of companies/sectors/countries that will be strong ESG winners in the future, that have (or will have) a positive ESG profile improvement, while also investing in companies/sectors/countries that are currently ESG stewards.

Further, the Sub-Fund achieved an ESG score of its portfolio greater than that of the Benchmark. The Sub-Fund was compared with the ESG score of its Benchmark after 20% of the lowest ESG rated securities have been excluded from the Benchmark.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.107 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.433 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.14 (D) and the weighted average ESG rating of the ESG investment universe was -0.38 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and

2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on

environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.

- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

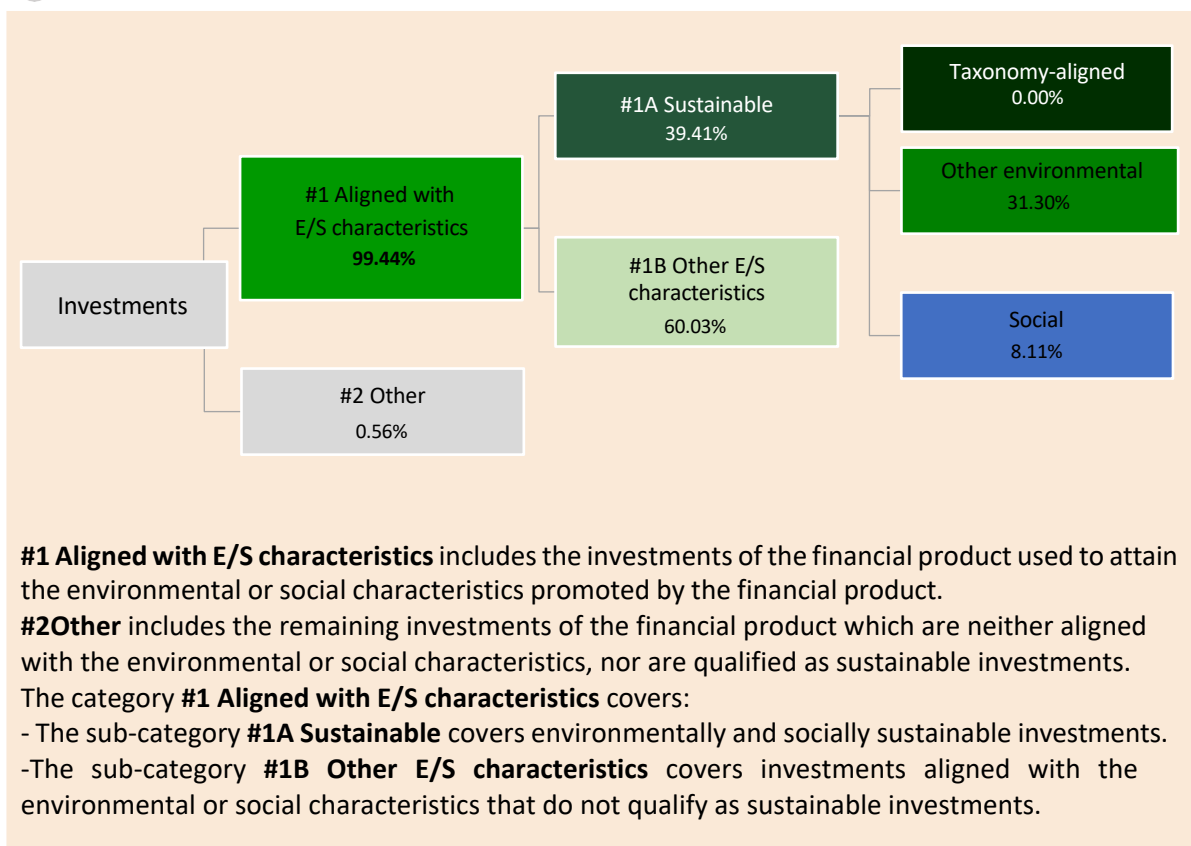

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
COCA-COLA CO/THE	Consumer Staples	Food, Beverage & Tobacco	United States	4.66%
CISCO SYSTEMS INC	Information Technology	Technology Hardware & Equipment	United States	4.61%
AMERICAN TOWER CL A	Real Estate	REITs	United States	3.38%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **31.30%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 8.11%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS US EQUITY FUNDAMENTAL GROWTH

Legal entity identifier: 54930019NOJ42Y83JC39

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

X

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **25.54%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **RUSSELL 1000 GROWTH**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.359 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.386 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.24 (D) and the weighted average ESG rating of the ESG investment universe was -0.36 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

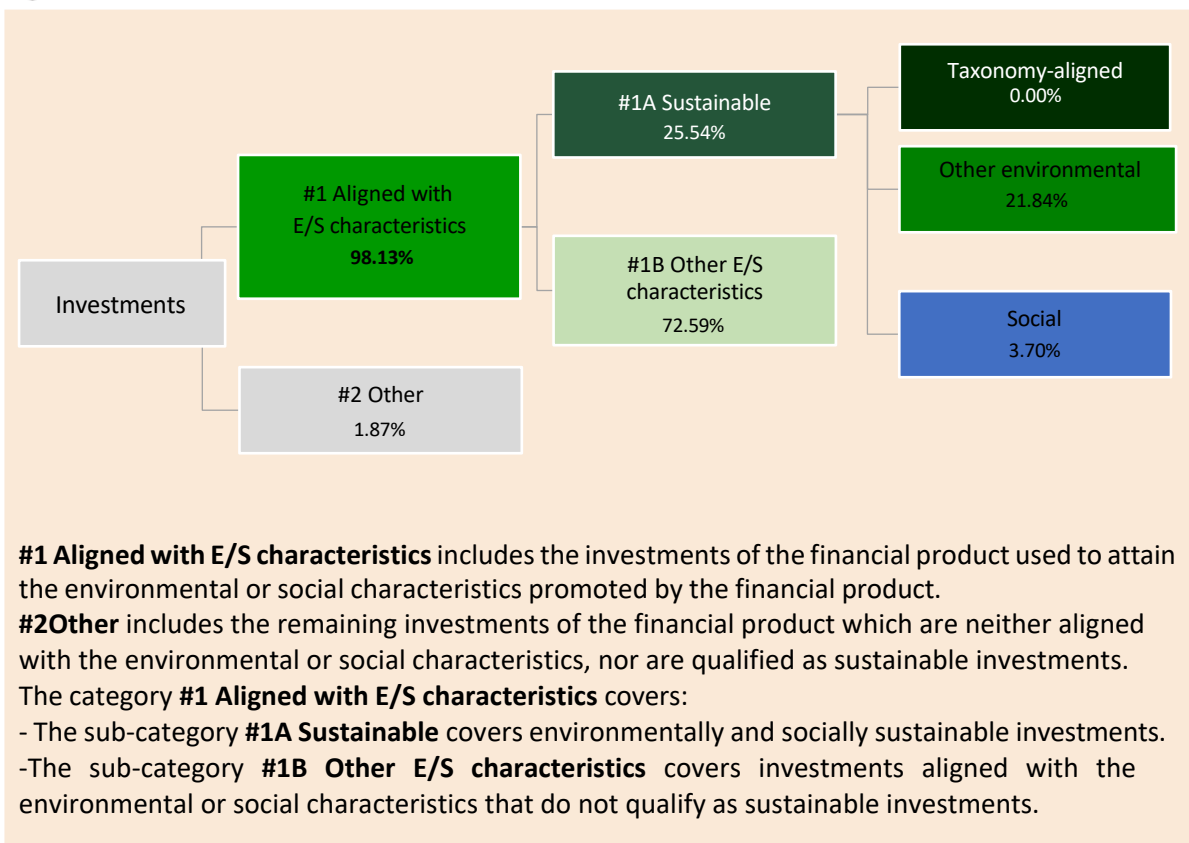

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
AMAZON.COM INC	Consumer Discretionary	Consumer Discretionary Distribution & Retail	United States	7.67%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Additional Information (unaudited)

comprehensive safety and waste management rules

Yes:
 In fossil gas In nuclear energy

No

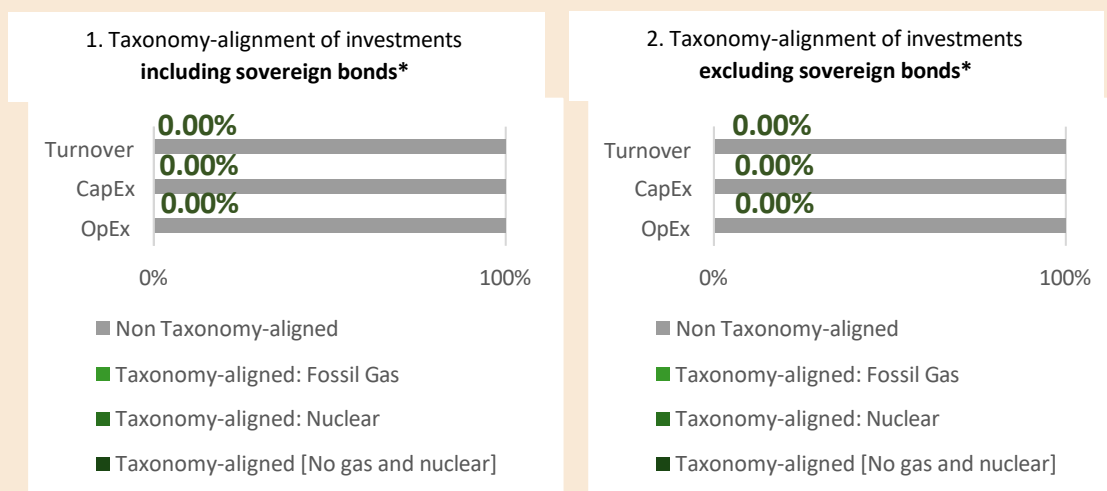

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

-operational expenditure (OpEx) reflecting green operational activities of investee companies.

● What was the share of investments in transitional and enabling activities ?

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **21.84%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

- **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 3.70%.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

- **How did this financial product perform compared to the reference benchmark ?**

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the

environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS US EQUITY RESEARCH

Legal entity identifier: 5493005S070A64LD3058

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **31.14%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **S&P 500**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.167 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.433 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.07 (D) and the weighted average ESG rating of the ESG investment universe was -0.38 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

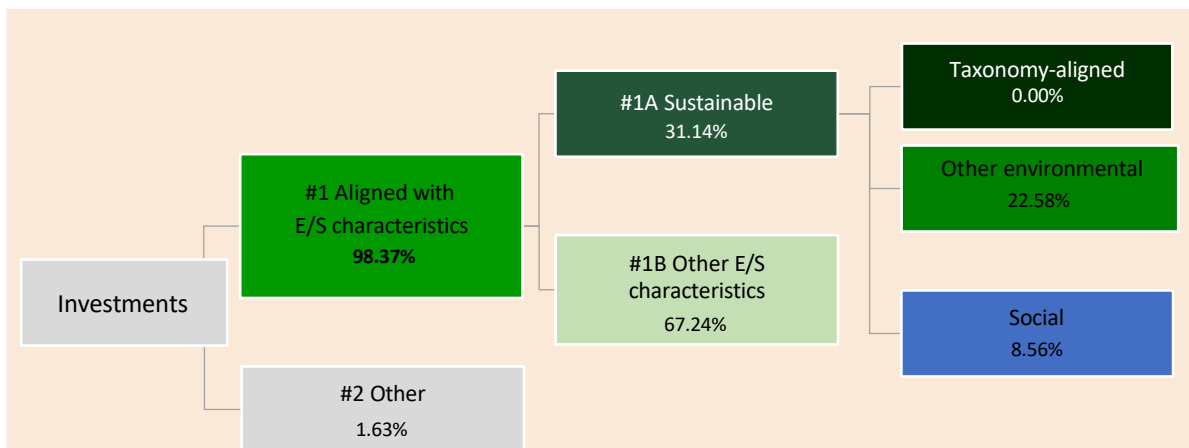

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
AMAZON.COM INC	Consumer Discretionary	Consumer Discretionary Distribution & Retail	United States	6.35%
ALPHABET INC CL A	Communication Services	Media & Entertainment	United States	5.93%
MICROSOFT CORP	Information Technology	Software & Services	United States	4.83%

CMS ENERGY CORP	Utilities	Multi-Utilities	United States	2.33%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.
 The category **#1 Aligned with E/S characteristics** covers:
 - The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
 - The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

Sector	Sub-Sector	% Assets
<i>Information Technology</i>	<i>Software & Services</i>	<i>11.56%</i>

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or

low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:
 In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **22.58%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

- **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 8.56%.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS US EQUITY RESEARCH VALUE

Legal entity identifier: 549300BN5NK5WLW1TH95

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **31.42%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **RUSSELL 1000 VALUE (FRC)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.020 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.479 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.019 (D) and the weighted average ESG rating of the ESG investment universe was -0.479 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

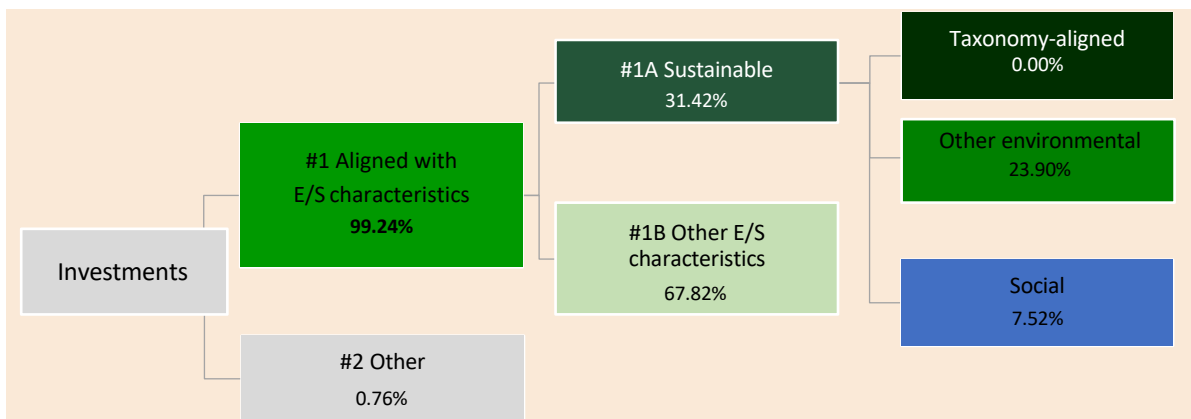

Largest Investments	Sector	Sub-Sector	Country	% Assets
COCA-COLA CO/THE	Consumer Staples	Food, Beverage & Tobacco	United States	5.13%
CISCO SYSTEMS INC	Information Technology	Technology Hardware & Equipment	United States	5.02%
PFIZER INC	Health Care	Pharmaceuticals Biotech & Life Sciences	United States	3.92%
JPMORGAN CHASE & CO	Financials	Banks	United States	3.84%
BANK OF AMERICA CORP	Financials	Banks	United States	3.79%
SHELL PLC	Energy	Oil, Gas & Consumable Fuels	United Kingdom	3.22%
PEPSICO INC	Consumer Staples	Food, Beverage & Tobacco	United States	3.03%
AMERICAN TOWER CL A	Real Estate	REITs	United States	2.91%
AIR PRODUCTS & CHEMI	Materials	Chemicals	United States	2.90%
AMERICAN ELECTRIC POWER	Utilities	Electric Utilities	United States	2.69%
CMS ENERGY CORP	Utilities	Multi-Utilities	United States	2.58%
SCHLUMBERGER LTD	Energy	Energy Equipment & Services	Curacao	2.46%
DEERE & CO	Industrials	Capital goods	United States	2.43%
WALT DISNEY CO/THE	Communication Services	Media & Entertainment	United States	2.33%
BEST BUY CO INC	Consumer Discretionary	Consumer Discretionary Distribution & Retail	United States	2.18%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Financials</i>	<i>Banks</i>	<i>9.72%</i>
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	<i>9.67%</i>

<i>Cash</i>	<i>Cash</i>	0.77%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **23.90%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 7.52%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

● ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS POLEN CAPITAL GLOBAL GROWTH

Legal entity identifier: 549300LSQ5T56F516810

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **56.45%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe MSCI ACWI. In determining the ESG score of the Sub-Fund and the Benchmark, ESG performance is assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three ESG characteristics of environmental, social and governance. The Benchmark is a broad market index which does not assess or include constituents according to environmental and/or social characteristics and therefore is not intended to be consistent with the characteristics promoted by the Sub-Fund. No ESG reference Benchmark has been designated.

How did the sustainability indicators perform?

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the

environmental or social characteristics promoted by the financial product are attained.

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period :

- The weighted average ESG rating of the portfolio is 0.197 (D)
- The weighted average ESG rating of the reference index is -0.171 (D)

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.233 (D) and the weighted average ESG rating of the reference index was -0.119 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and

security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria

including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

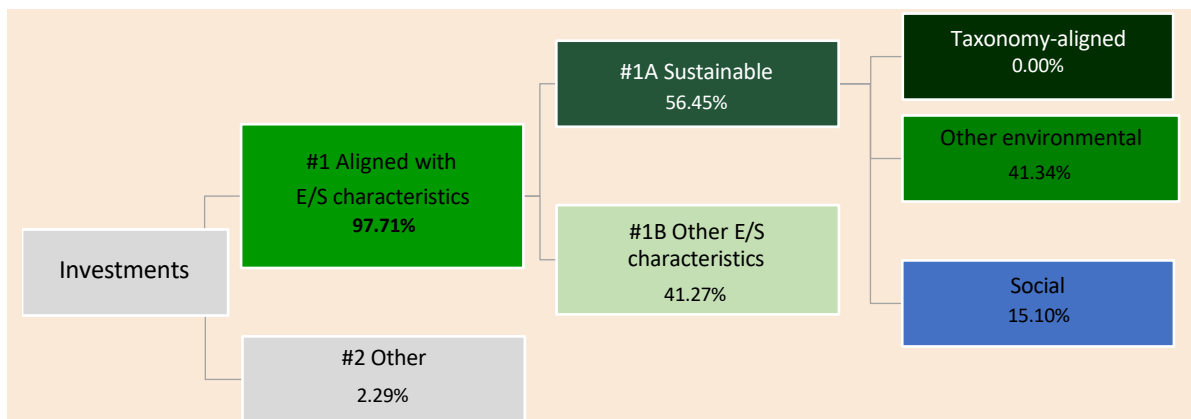

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
AMAZON.COM INC	Consumer Discretionary	Consumer Discretionary Distribution & Retail	United States	9.68%

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	Sub-Sector	% Assets
<i>Information Technology</i>	<i>Software & Services</i>	32.41%
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	13.79%
<i>Financials</i>	<i>Financial Services</i>	12.39%
<i>Consumer Discretionary</i>	<i>Consumer Discretionary Distribution & Retail</i>	9.68%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **41.34%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 15.10%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Reference benchmarks are indexes to measure whether the financial product

attains the environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **75.39%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made a **sustainable investments with a social objective:** _____

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EUROPE (15)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund.

During the financial year, the product continuously promoted environmental characteristics by aligning its carbon intensity to that of the **MSCI Europe Climate Paris Aligned Index (EUR)**, its reference comparator for assessing carbon intensity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.347 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.798 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

The sustainability indicator used is the portfolio carbon intensity, which is calculated as an asset weighted portfolio average and compared to the asset weighted carbon intensity of the comparator index. As a result, securities with relatively low carbon intensity had a higher probability of being selected in the portfolio compared to securities with relatively high carbon intensity.

- The weighted average carbon intensity of the portfolio is **68.05**
- The weighted average carbon intensity of the MSCI Europe Climate Paris Aligned Index (EUR) is **77.24**

● **... and compared to previous periods?**

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.31 (C) and the weighted average ESG rating of the ESG investment universe was 0.80 (C). At the end of the previous period, the weighted average carbon intensity of the portfolio was 92.18 and the weighted average carbon intensity reference index was 97.36¹.

● **What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

¹ Over the course of 2023 the reference index has been replaced with the MSCI Europe Climate Paris Aligned (EUR) and we have reported the carbon intensity of that index also for the previous period, for consistency.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion** : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration** : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

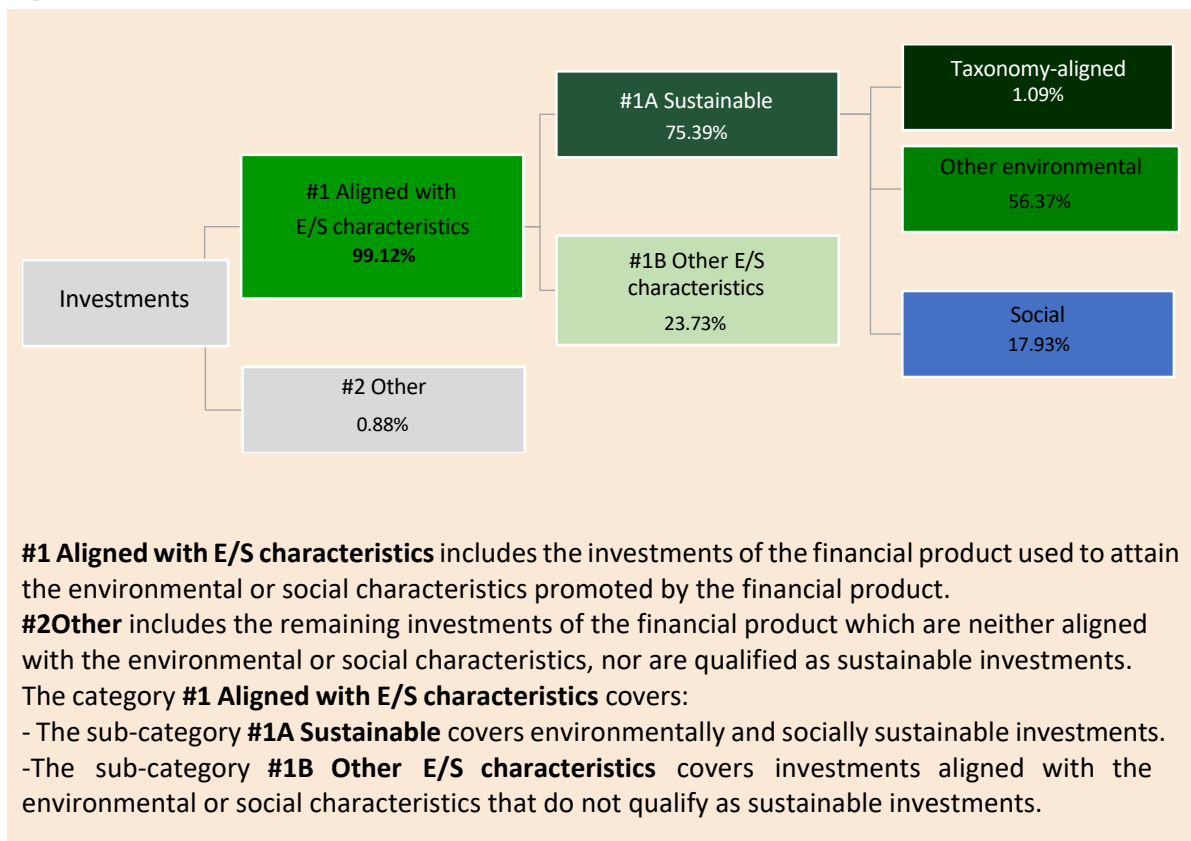

Largest Investments	Sector	Sub-Sector	Country	% Assets

<i>Cash</i>	<i>Cash</i>	0.80%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.09% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

contribution to an environmental objective.

Yes: In fossil gas In nuclear energy

No

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.01% and the share of investment in enabling activities was 1.33%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 11.27%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The share of sustainable investments with environmental objective not aligned to taxonomy was **56.37%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 17.93%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

The sustainable investment objective is attained by aligning the carbon footprint reduction objectives of the fund with MSCI Europe Climate Paris Aligned Index (EUR). The portfolio carbon intensity is calculated as an asset weighted portfolio average and compared to the asset weighted carbon intensity of the comparator index.

As a result, securities with relatively low carbon intensity have a higher probability of being selected in the portfolio compared to securities with relatively high carbon intensity. In addition, the fund excludes companies on the basis of controversial behavior and (or) controversial products in accordance with the Responsible Investment Policy.

- The weighted average carbon footprint intensity of the portfolio is 68.05
- The weighted average carbon footprint intensity of the MSCI Europe Climate Paris Aligned Index (EUR) is 77.24

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● ***How does the reference benchmark differ from a broad market index ?***

A broad market index, does not assess or include its constituents according to environment characteristics and therefore is not aligned with environmental characteristics.

The index used is a "Paris Aligned Benchmark" which incorporates specific objectives related to emission reductions and the transition to a low-carbon economy through the selection and weighting of underlying constituents.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

- The weighted average ESG rating of the portfolio is 1.347 (C).

- The weighted average ESG rating of the ESG investment universe is 0.798 (C).

- The weighted average carbon footprint intensity of the portfolio is 68.05

- The weighted average carbon footprint intensity of the MSCI Europe Climate Paris Aligned Index (EUR) is 77.24

● ***How did this financial product perform compared with the reference benchmark ?***

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **31.87%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **S&P 500**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.258 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.433 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.255 (D) and the weighted average ESG rating of the ESG investment universe was -0.433 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

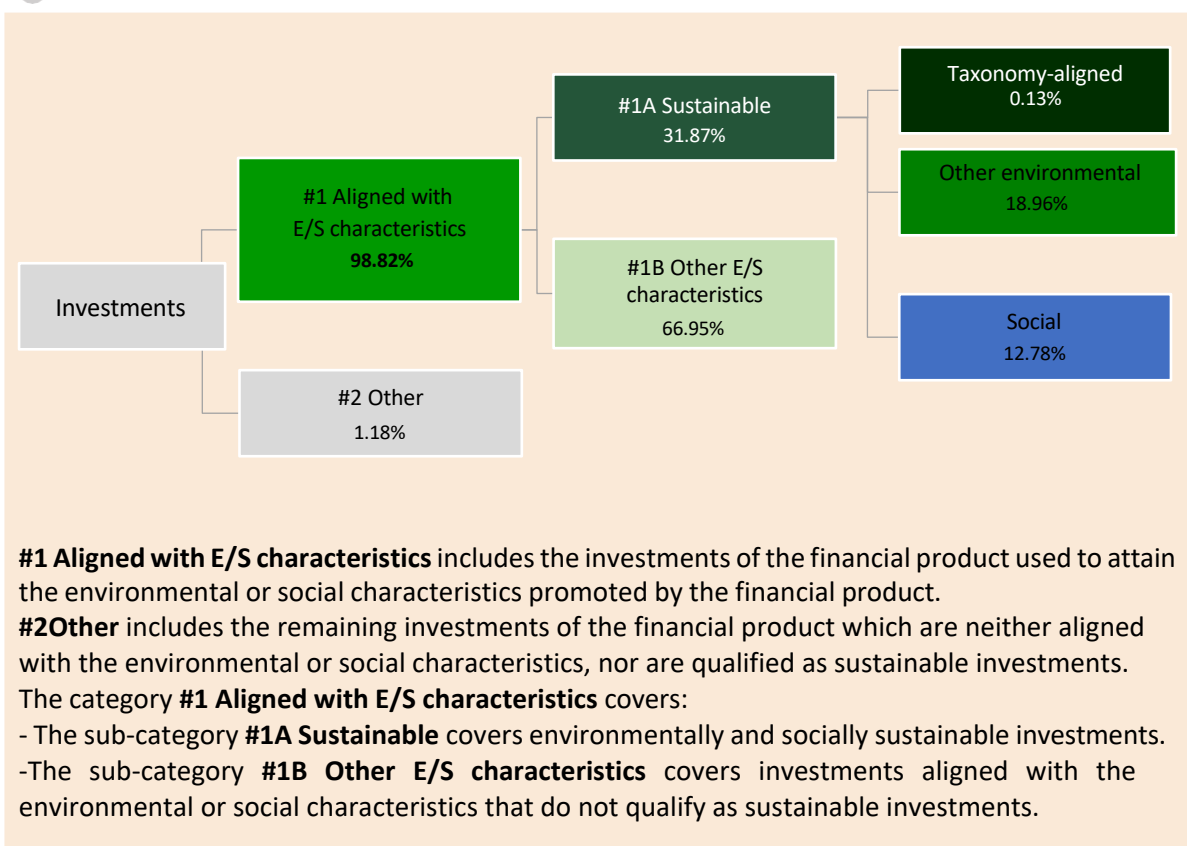

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
APPLE INC	Information Technology	Technology Hardware & Equipment	United States	6.87%
NVIDIA CORP	Information Technology	Semiconductors & Semiconductor Equipment	United States	6.50%
MICROSOFT CORP	Information Technology	Software & Services	United States	6.31%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.13% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.13%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **18.96%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 12.78%.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS ASIA EQUITY FOCUS

Legal entity identifier: 529900JOPK0BJB1JIC13

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective: _____

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **38.77%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI AC ASIA EX JAPAN**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.017 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.086 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.10 (D) and the weighted average ESG rating of the ESG investment universe was -0.09 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

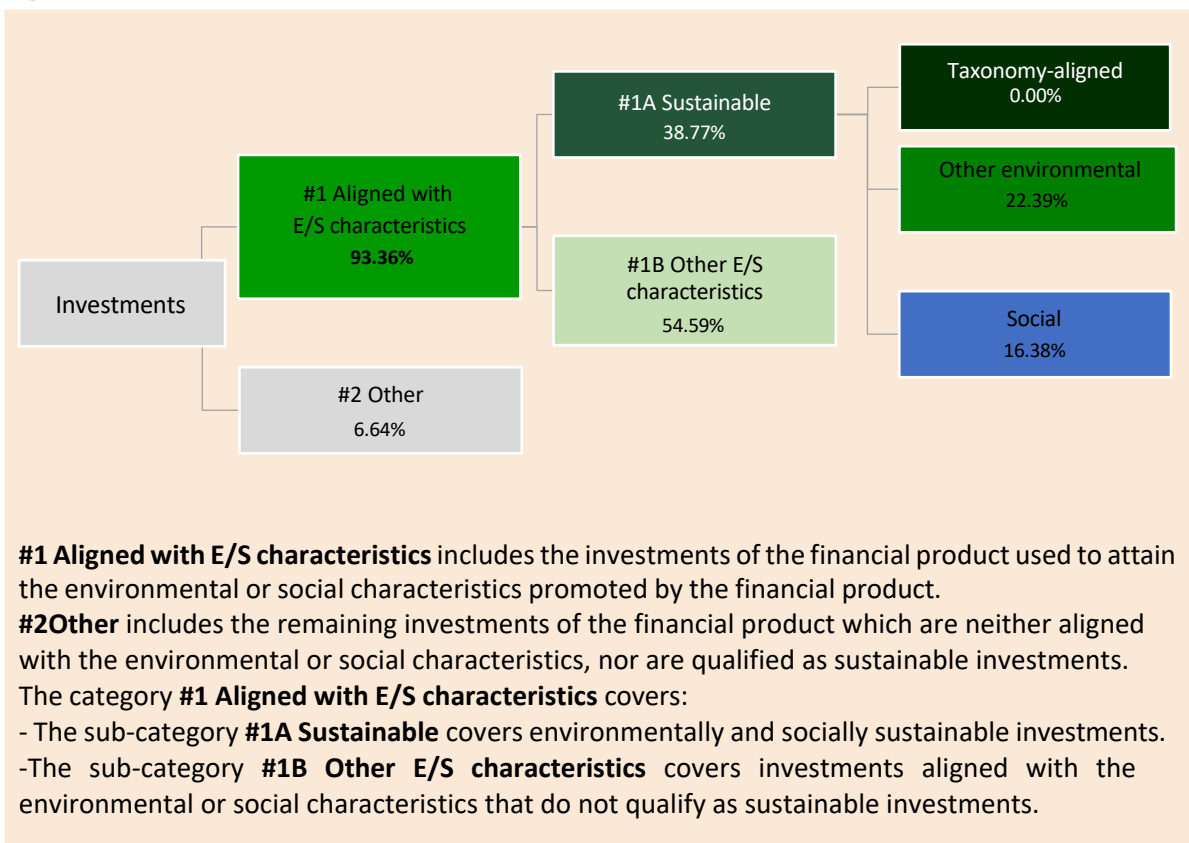

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
TAIWAN SEMICONDUCTOR MANUFACTURING	Information Technology	Semiconductors & Semiconductor Equipment	Taiwan	9.72%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **22.39%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 16.38%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS CHINA A SHARES

Legal entity identifier: 213800SWM4W1H6YGZF46

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **25.56%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI CHINA A ONSHORE**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.608 (E)**.
- The weighted average ESG rating of the ESG investment universe is **-1.133 (E)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.86 (E) and the weighted average ESG rating of the ESG investment universe was -1.03 (E).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

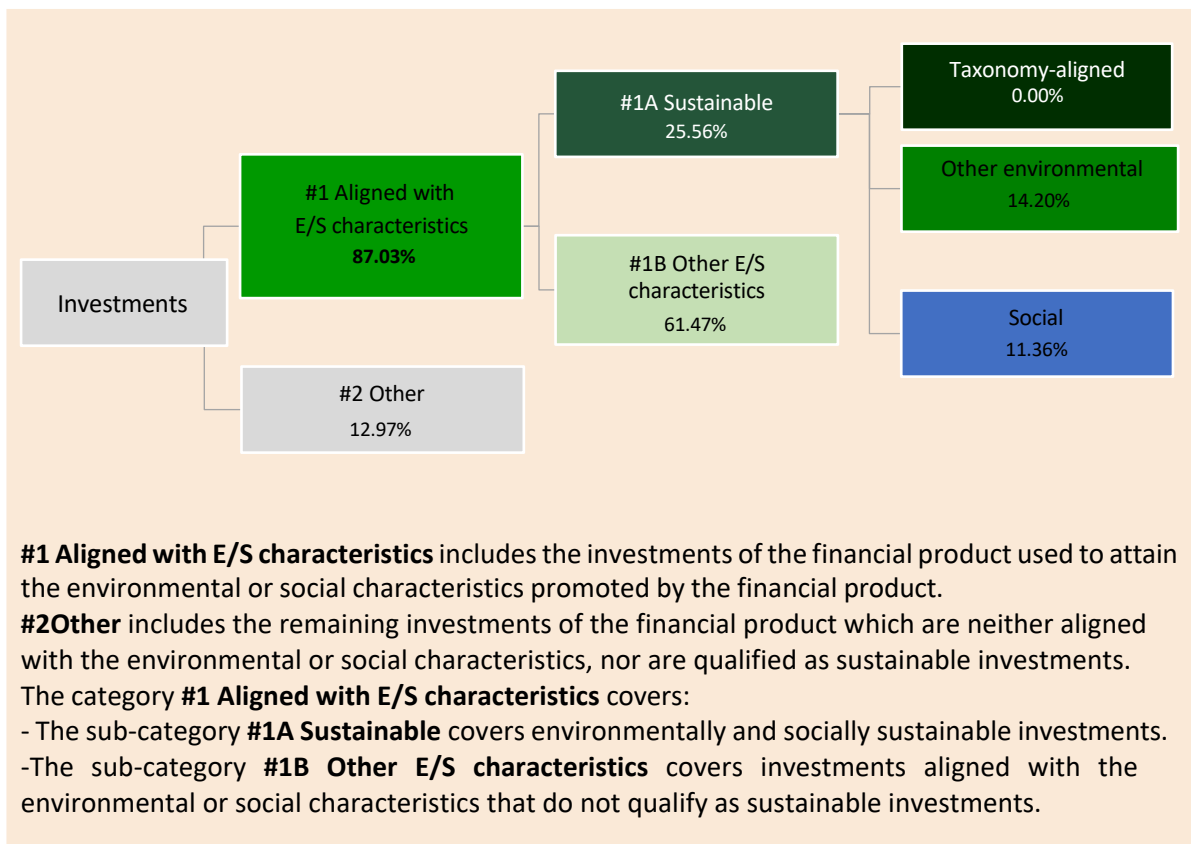

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:
 In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **14.20%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 11.36%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

How does the reference benchmark differ from a broad market index ?

This product does not have an ESG Benchmark.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

This product does not have an ESG Benchmark.

- **How did this financial product perform compared with the reference benchmark ?**

This product does not have an ESG Benchmark.

- **How did this financial product perform compared with the broad market index ?**

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS CHINA EQUITY

Legal entity identifier: 549300Y1J7CKLI10B145

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **30.83%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ^X

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI CHINA 10/40**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.468 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.732 (E)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was - 0.41 (D) and the weighted average ESG rating of the ESG investment universe was -0.58 (E).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

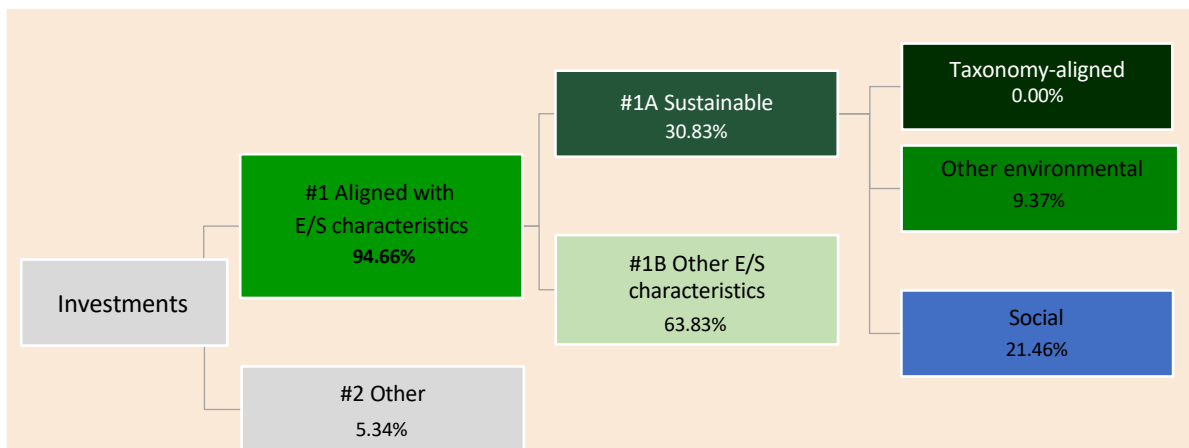

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
TENCENT HOLDINGS LTD	Communication Services	Media & Entertainment	Cayman Islands	9.82%
ALIBABA GROUP HOLDING LTD	Consumer Discretionary	Consumer Discretionary Distribution & Retail	Cayman Islands	7.68%
PDD HOLDINGS INC	Consumer Discretionary	Consumer Discretionary Distribution & Retail	Cayman Islands	6.00%
MEITUAN-CLASS B	Consumer Discretionary	Consumer Services	Cayman Islands	4.24%
PING AN INSURANCE	Financials	Insurance	China	3.17%
TRIP.COM GROUP LTD	Consumer Discretionary	Consumer Services	Cayman Islands	2.14%
NETEASE INC	Communication Services	Media & Entertainment	Cayman Islands	2.12%
CHINA MERCHANTS BK H	Financials	Banks	China	1.92%
TAL EDUCATION GROUP-ADR	Consumer Discretionary	Consumer Services	Cayman Islands	1.76%
NETEASE INC-ADR	Communication Services	Media & Entertainment	Cayman Islands	1.69%
SAMSONITE INTERNATIONAL SA	Consumer Discretionary	Consumer Durables & Apparel	Luxembourg	1.57%
CHINA RES LAND LTD	Real Estate	Real Estate Management & Development	Cayman Islands	1.55%
IND & COMM BK OF CHINA-H	Financials	Banks	China	1.54%
CHINA OILFIELD SERV.	Energy	Energy Equipment & Services	China	1.47%
SITC INTERNA COMPANY LTD	Industrials	Transportation	Cayman Islands	1.34%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	Sub-Sector	% Assets
<i>Communication Services</i>	<i>Media & Entertainment</i>	<i>17.63%</i>
<i>Consumer Discretionary</i>	<i>Consumer Discretionary Distribution & Retail</i>	<i>15.46%</i>
<i>Consumer Discretionary</i>	<i>Consumer Services</i>	<i>15.42%</i>
<i>Consumer Discretionary</i>	<i>Consumer Durables & Apparel</i>	<i>6.03%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **9.37%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 21.46%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EMERGING EUROPE MIDDLE EAST AND
AFRICA

Legal entity identifier:
549300QA3E8RYX3KUC78

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **28.54%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EM EMEA**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.024 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.300 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.03 (D) and the weighted average ESG rating of the ESG investment universe was -0.32 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

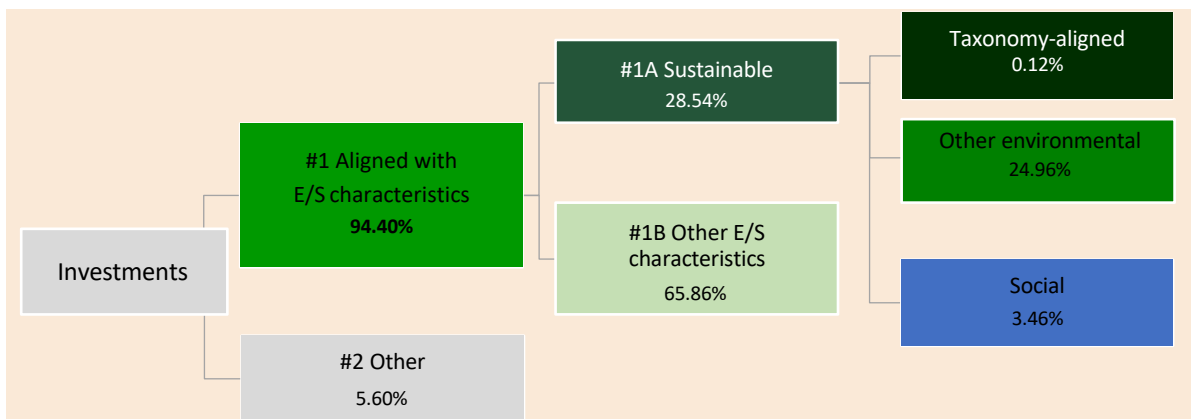

Largest Investments	Sector	Sub-Sector	Country	% Assets
EUROBANK ERGASIAS SA	Financials	Banks	Greece	4.48%

ABU DHABI NATIONAL OIL COMP	Consumer Discretionary	Consumer Discretionary Distribution & Retail	United Arab Emirates	1.75%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Financials</i>	<i>Banks</i>	36.56%
<i>Consumer Discretionary</i>	<i>Consumer Discretionary Distribution & Retail</i>	9.91%
<i>Industrials</i>	<i>Capital goods</i>	7.57%
<i>Consumer Staples</i>	<i>Consumer Staples Distribution & Retail</i>	5.58%
<i>Materials</i>	<i>Metals & Mining</i>	5.49%
<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	4.70%

<i>Information Technology</i>	<i>Software & Services</i>	0.54%

<i>Utilities</i>	<i>Water Utilities</i>	<i>0.27%</i>
<i>Financials</i>	<i>Mutual Funds</i>	<i>0.00%</i>
<i>Forex</i>	<i>Forex</i>	<i>-0.00%</i>
<i>Cash</i>	<i>Cash</i>	<i>1.94%</i>

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.12% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.45% and the share of investment in enabling activities was 1.29%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **24.96%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 3.46%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EMERGING MARKETS EQUITY FOCUS

Legal entity identifier:
529900SQFJZNLOBO8Z15

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **42.48%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EM (EMERGING MARKETS)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.103 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.099 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.08 (D) and the weighted average ESG rating of the ESG investment universe was -0.10 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi’s voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi’s Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi’s funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

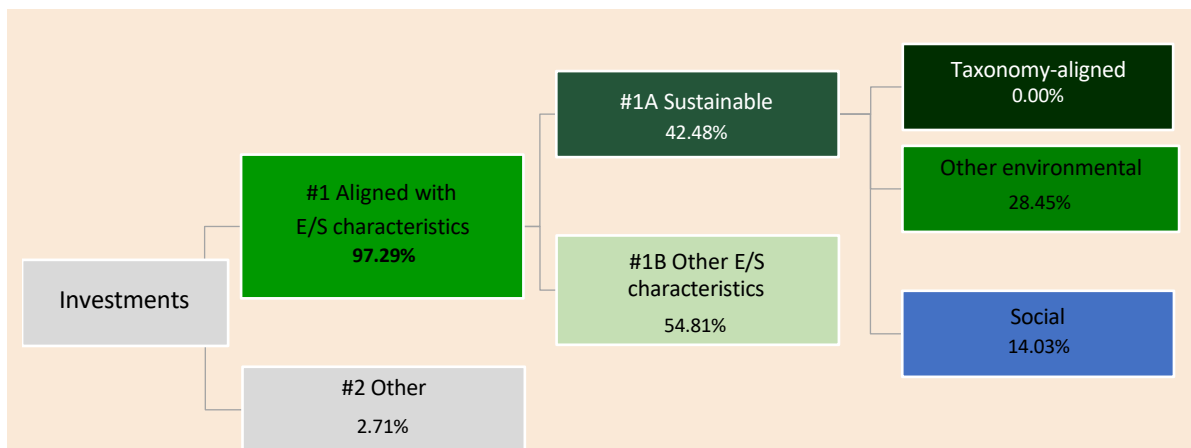

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
TAIWAN SEMICONDUCTOR MANUFAC	Information Technology	Semiconductors & Semiconductor Equipment	Taiwan	9.66%
TENCENT HOLDINGS LTD	Communication Services	Media & Entertainment	Cayman Islands	5.03%
SAMSUNG ELECT-PFD	Information Technology	Technology Hardware & Equipment	Korea	3.88%
SAMSUNG ELECTRONICS	Information Technology	Technology Hardware & Equipment	Korea	2.62%
RELIANCE INDUSTRIES LTD	Energy	Oil, Gas & Consumable Fuels	India	2.30%

HANA FINANCIAL HLDG	Financials	Banks	Korea	1.06%
EMAAR PROPERTIES	Real Estate	Real Estate Management & Development	United Arab Emirates	1.06%
GRUPO FINANCIERO BANORTE-O	Financials	Banks	Mexico	1.00%

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	Sub-Sector	% Assets
<i>Financials</i>	<i>Banks</i>	15.47%
<i>Information Technology</i>	<i>Semiconductors & Semiconductor Equipment</i>	12.29%
<i>Information Technology</i>	<i>Technology Hardware & Equipment</i>	8.37%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.01%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **28.45%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 14.03%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** _____

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **36.10%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EM (EMERGING MARKETS) EX CHINA**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

How did the sustainability indicators perform?

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the

Additional Information (unaudited)

environmental or social characteristics promoted by the financial product are attained.

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.193 (D)**.
- The weighted average ESG rating of the ESG investment universe is **0.097 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

This is the first SFDR periodic report produced for this sub-fund.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion :** Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration :** Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement :** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote :** Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring :** Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Additional Information (unaudited)

comprehensive safety and waste management rules

Yes: In fossil gas In nuclear energy

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.01% and the share of investment in enabling activities was 0.01%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

This is the first SFDR periodic report produced for this sub-fund.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **29.22%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 6.88%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

This product does not have an ESG Benchmark.

- **How did this financial product perform compared with the reference benchmark ?**

This product does not have an ESG Benchmark.

Additional Information (unaudited)

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EMERGING MARKETS EQUITY ESG
IMPROVERS

Legal entity identifier:
213800T17Z9VUK8N7648

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **47.70%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EM (EMERGING MARKETS)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The investment manager has focused the investment process on companies/sectors/countries that had embraced, or will embrace, a positive ESG trajectory within their business. The investment manager identified investment opportunities that were aligned with the aim of generating alpha by focusing in particular on inclusion of companies/sectors/countries that will be strong ESG winners in the future, that have (or will have) a positive ESG profile improvement, while also investing in companies/sectors/countries that are currently ESG stewards.

Further, the Sub-Fund achieved an ESG score of its portfolio greater than that of the Benchmark. The Sub-Fund was compared with the ESG score of its Benchmark after 20% of the lowest ESG rated securities have been excluded from the Benchmark.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.356 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.099 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.37 (D) and the weighted average ESG rating of the ESG investment universe was -0.10 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.

- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or

low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:
 In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.09%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **36.80%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 10.90%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the

environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EMERGING WORLD EQUITY

Legal entity identifier:
529900FMUS31WLI1V843

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **45.02%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EM (EMERGING MARKETS)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.130 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.099 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.07 (D) and the weighted average ESG rating of the ESG investment universe was -0.10 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

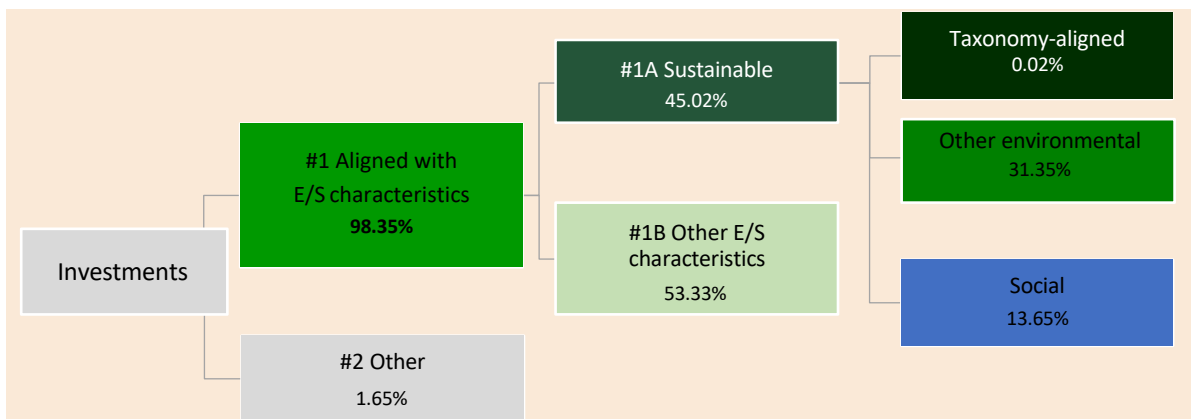

Largest Investments	Sector	Sub-Sector	Country	% Assets
TAIWAN SEMICONDUCTOR MANUFAC	Information Technology	Semiconductors & Semiconductor Equipment	Taiwan	9.66%
TENCENT HOLDINGS LTD	Communication Services	Media & Entertainment	Cayman Islands	4.96%
SAMSUNG ELECTRONICS	Information Technology	Technology Hardware & Equipment	Korea	3.69%
SAMSUNG ELECT-PFD	Information Technology	Technology Hardware & Equipment	Korea	2.26%
RELIANCE INDUSTRIES LTD	Energy	Oil, Gas & Consumable Fuels	India	1.90%
AMUNDI MMST (USD)-OV	Financials	Mutual Funds	Luxembourg	1.78%
A-F CASH USD - Z USD	Financials	Mutual Funds	Luxembourg	1.75%
HDFC BANK LIMITED	Financials	Banks	India	1.62%
HANA FINANCIAL HLDG	Financials	Banks	Korea	1.43%
ALIBABA GROUP HOLDING LTD	Consumer Discretionary	Consumer Discretionary Distribution & Retail	Cayman Islands	1.36%
BANK CENTRAL ASIA PT	Financials	Banks	Indonesia	1.35%
SK HYNIX INC	Information Technology	Semiconductors & Semiconductor Equipment	Korea	1.28%
INFOSYS LTD	Information Technology	Software & Services	India	1.08%
HINDALCO INDS	Materials	Metals & Mining	India	1.04%
BANCO DO BRASIL	Financials	Banks	Brazil	1.02%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Financials</i>	<i>Banks</i>	<i>14.41%</i>
<i>Information Technology</i>	<i>Semiconductors & Semiconductor Equipment</i>	<i>11.26%</i>

<i>Cash</i>	<i>Cash</i>	<i>0.58%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.02% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.02%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **31.35%** at the end of the period.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx)** reflecting green operational activities of investee companies.

are sustainable investments with an

environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 13.65%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Additional Information (unaudited)

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS LATIN AMERICA EQUITY

Legal entity identifier: 529900S2PKB89W9KIR25

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **39.86%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ^X

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EM LATIN AMERICA**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.217 (D)**.
- The weighted average ESG rating of the ESG investment universe is **0.158 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.33 (D) and the weighted average ESG rating of the ESG investment universe was 0.20 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

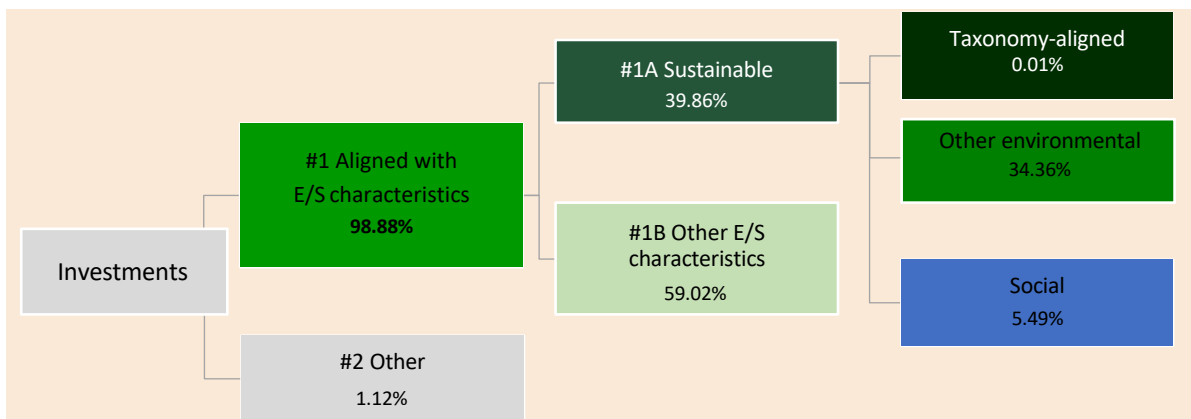

Largest Investments	Sector	Sub-Sector	Country	% Assets
PETROBRAS SA-ADR	Energy	Oil, Gas & Consumable Fuels	Brazil	8.01%
GRUPO FINANCIERO BANORTE-O	Financials	Banks	Mexico	5.11%
FOMENTO ECON-ADR	Consumer Staples	Food, Beverage & Tobacco	Mexico	4.85%
GRUPO MEXICO	Materials	Metals & Mining	Mexico	4.80%
BANCO DO BRASIL	Financials	Banks	Brazil	4.22%
EMBRAER SA-SPON ADR	Industrials	Capital goods	Brazil	3.12%
ITAUSA SA	Financials	Banks	Brazil	2.76%

SUZANO SA	Materials	Paper & Forest Products	Brazil	2.02%
PETROBRAS - PETROLEO BRAS-PFD	Energy	Oil, Gas & Consumable Fuels	Brazil	1.82%
B3 SA - BRASIL BOLSA BALCAO	Financials	Financial Services	Brazil	1.74%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.01% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.07%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **34.36%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 5.49%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS NET ZERO AMBITION EMERGING MARKETS EQUITY

Legal entity identifier: 213800ZEFKN1WHE3HL26

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **49.87%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made a **sustainable investments with a social objective:** _____

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EM CLIMATE PARIS ALIGNED**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund.

During the financial year, the product continuously promoted environmental characteristics by aiming to reduce its carbon intensity by aligning its carbon footprint intensity to that of its Benchmark **MSCI EM CLIMATE PARIS ALIGNED**.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.324 (D)**.
- The weighted average ESG rating of the ESG investment universe is **0.044 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

The sustainability indicator used is the portfolio carbon footprint intensity, which is calculated as an asset weighted portfolio average and compared to the asset weighted carbon footprint intensity of the Benchmark. As a result, securities with relatively low environmental footprints had a higher probability of being selected in the portfolio compared to securities with relatively high environmental footprints.

- The weighted average carbon footprint intensity of the portfolio is **113.98**
- The weighted average carbon footprint intensity of the Benchmark is **128.61**

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was **0.33 (D)** and the weighted average ESG rating of the ESG investment universe was **0.03 (D)**. At the end of the previous period, the weighted average carbon intensity of the portfolio was **161.02** and the weighted average carbon intensity reference index was **226.69**.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.

- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.01% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.01%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.09%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **36.67%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under

Regulation (EU) 2020/852.

The share of socially sustainable investments at the end of the period was 13.19%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The sustainable investment objective is attained by aligning the carbon footprint reduction objectives of the fund with MSCI Emerging Markets Climate Paris Aligned Index. The portfolio carbon footprint intensity is calculated as an asset weighted portfolio average and compared to the asset weighted carbon footprint intensity of the Index.

As a result, securities with relatively low environmental footprints have a higher probability of being selected in the portfolio compared to securities with relatively high environmental footprints. In addition, the fund excludes companies on the basis of controversial behavior and (or) controversial products in accordance with the Responsible Investment Policy.

- The weighted average carbon footprint intensity of the portfolio is **113.98**
- The weighted average carbon footprint intensity of the Benchmark is **128.61**

● ***How does the reference benchmark differ from a broad market index ?***

A broad market index, does not assess or include its constituents according to environment characteristics and therefore is not aligned with environmental characteristics. The index used is a "Paris Aligned Benchmark" which incorporates specific objectives related to emission reductions and the transition to a low-carbon economy through the selection and weighting of underlying constituents.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

- The weighted average ESG rating of the portfolio is **0.324 (D)**.
- The weighted average ESG rating of the ESG investment universe is **0.044 (D)**.

- The weighted average carbon footprint intensity of the portfolio is **113.98**
- The weighted average carbon footprint intensity of the Benchmark is **128.61**

● ***How did this financial product perform compared with the reference benchmark ?***

The sustainable investment objective is attained by aligning the carbon footprint reduction objectives of the fund with MSCI Emerging Markets Climate Paris Aligned Index. The portfolio carbon footprint intensity is calculated as an asset weighted portfolio average and compared to the asset weighted carbon footprint intensity of the Index.

As a result, securities with relatively low environmental footprints have a higher probability of being selected in the portfolio compared to securities with relatively high environmental footprints. In addition, the fund excludes companies on the basis of controversial behavior and (or) controversial products in accordance with the Responsible Investment Policy.

- The weighted average carbon footprint intensity of the portfolio is **113.98**
- The weighted average carbon footprint intensity of the Benchmark is **128.61**

● ***How did this financial product perform compared with the broad market index ?***

A broad market index, does not assess or include its constituents according to environment characteristics and therefore is not aligned with environmental characteristics.

The index used is a "Paris Aligned Benchmark" which incorporates specific objectives related to emission reductions and the transition to a low-carbon economy through the selection and weighting of underlying constituents.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS NEW SILK ROAD

Legal entity identifier: 549300ZD1W6MTTH0G211

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **32.53%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **80% MSCI EM (EMERGING MARKETS) + 20% MSCI FRONTIER MARKETS**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.040 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.130 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.08 (D) and the weighted average ESG rating of the ESG investment universe was -0.14 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

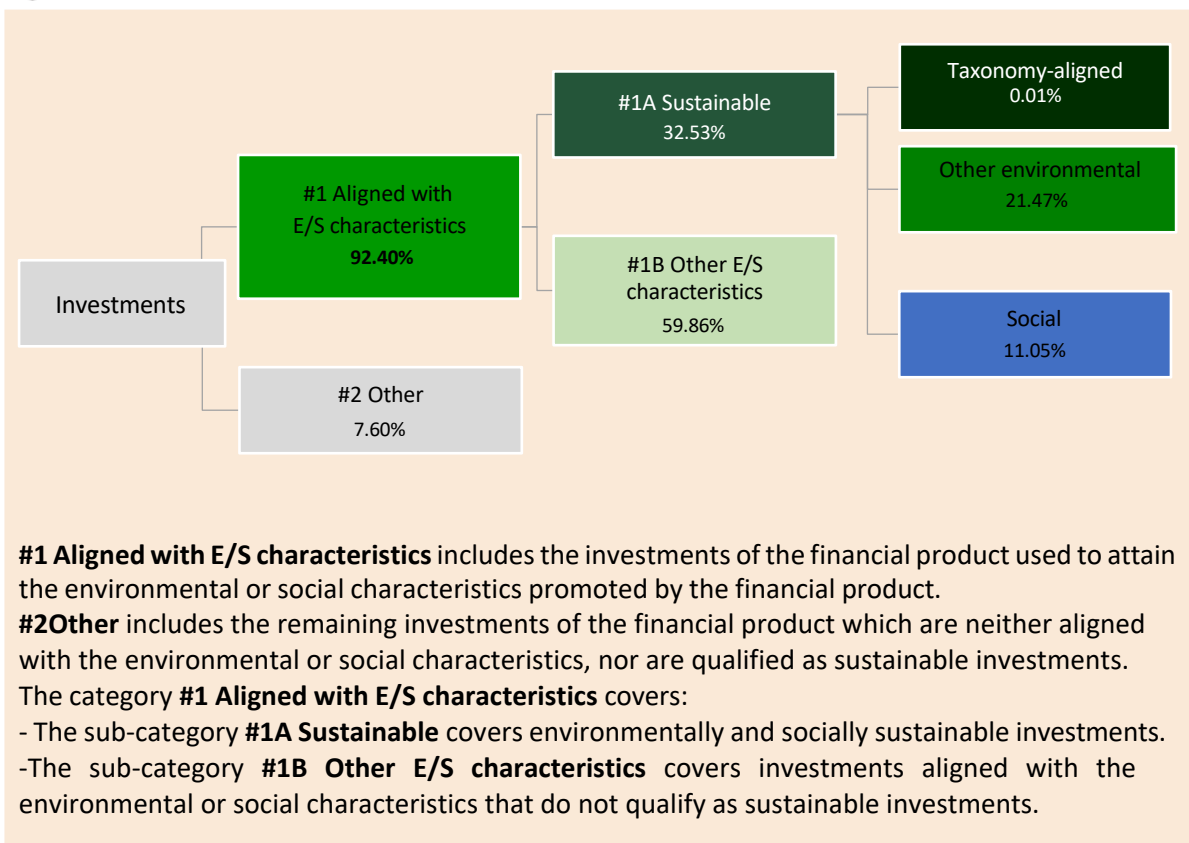

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
TAIWAN SEMICONDUCTOR MANUFACTURING	Information Technology	Semiconductors & Semiconductor Equipment	Taiwan	9.42%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.01% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

- Yes:
- In fossil gas In nuclear energy
- No

low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

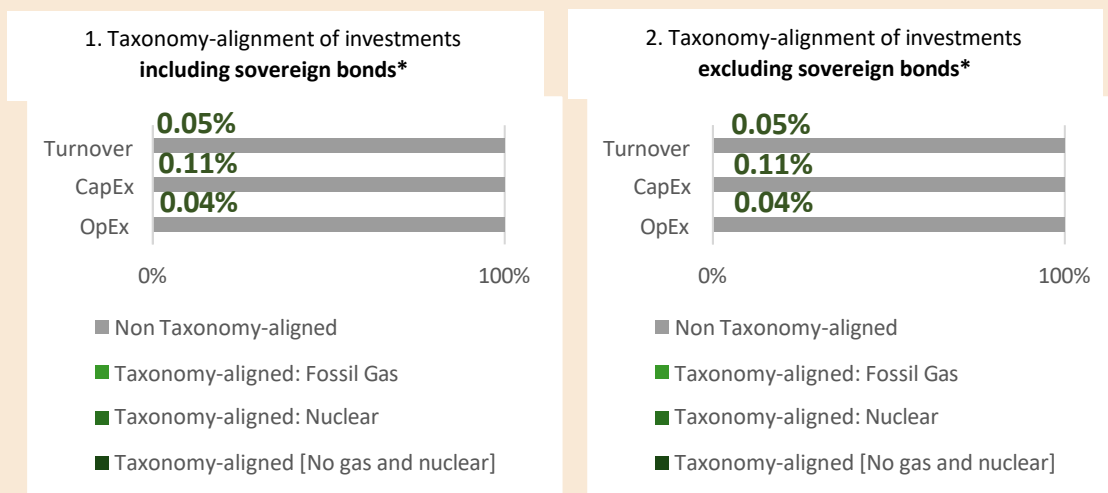

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.02%.

 are sustainable investments with an

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **21.47%** at the end of the period.

environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 11.05%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

Product name: AMUNDI FUNDS
RUSSIAN EQUITY

Legal entity identifier:
549300SIBXZF8M2U7K58

Environmental and/or social characteristics

The sub-fund did not meet the commitment to have at least 75% aligned with E/S characteristics and did not commit to have a minimum of sustainable investments due to the suspension of the NAV calculation in the context of Russia's invasion of Ukraine.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **8.50%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI RUSSIA 10/40**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

How did the sustainability indicators perform?

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or

Additional Information (unaudited)

social characteristics promoted by the financial product are attained.

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.511 (E)**.
- The weighted average ESG rating of the ESG investment universe is **-1.862 (F)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● *... and compared to previous periods?*

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.78 (D) and the weighted average ESG rating of the ESG investment universe was -1.25 (E).

● *What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

- ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

Largest Investments	Sector	Sub-Sector	Country	% Assets
HALYK SAVINGS BK GDR	Financials	Banks	Kazakhstan	8.50%

The list includes the investments constituting the greatest proportion of investments of

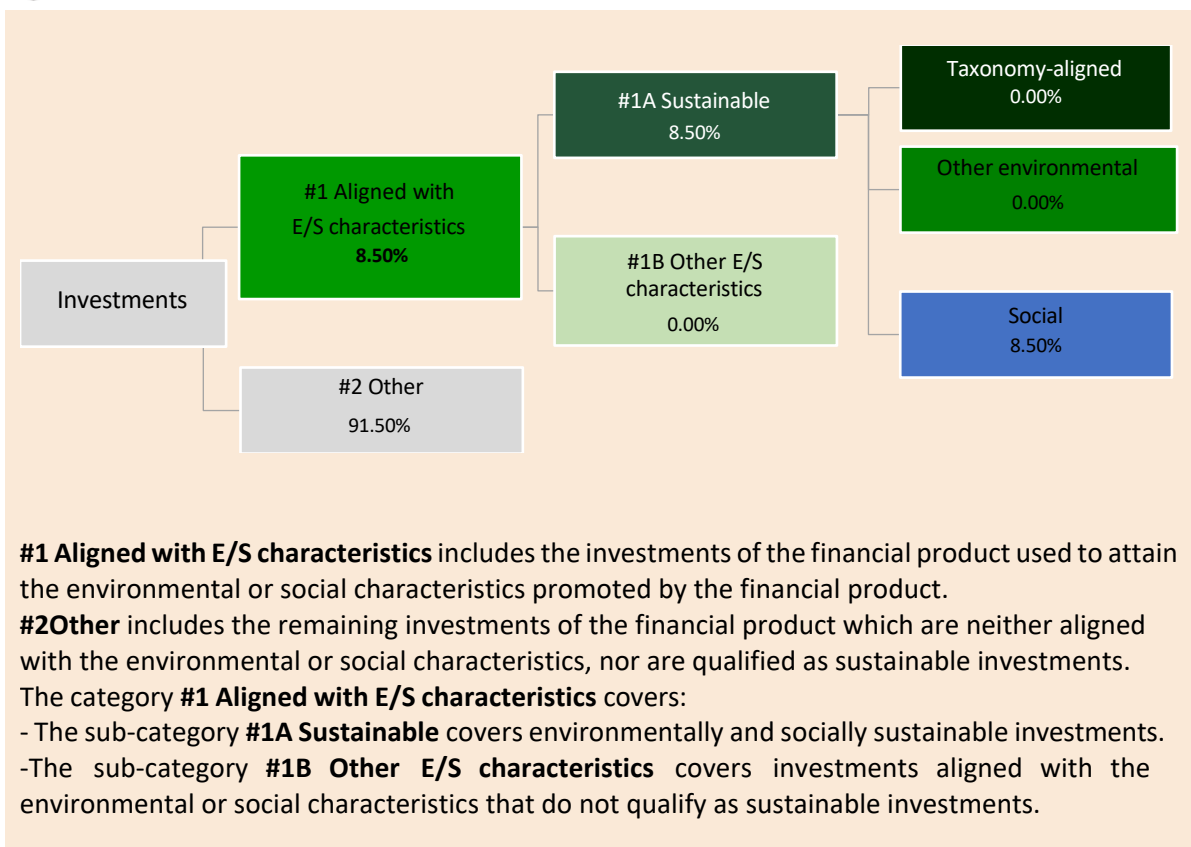

the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

What was the proportion of sustainability-related investments?

The sub-fund did not meet the commitment to have at least 75% aligned with E/S characteristics and did not commit to have a minimum of sustainable investments due to the suspension of the NAV calculation in the context of Russia's invasion of Ukraine.

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

In which economic sectors were the investments made ?

Sector	Sub-Sector	% Assets
Financials	Banks	8.50%
Cash	Cash	91.50%

Additional Information (unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:
 In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

Additional Information (unaudited)

enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **0.00%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 8.50%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the

Additional Information (unaudited)

environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS SBI FM
INDIA EQUITY

Legal entity identifier:
529900VCX77NSWARZC34

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **32.14%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe MSCI India 10/40. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is -0.117 (D)
- The weighted average ESG rating of the reference index is -0.380 (D)

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.05 (D) and the weighted average ESG rating of the reference index was -0.26 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification

of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

- ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of

each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

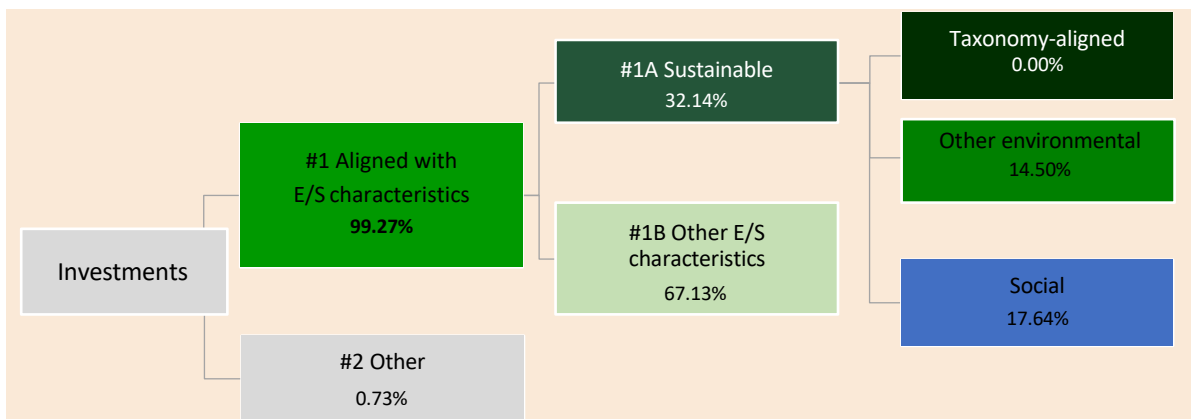

Largest Investments	Sector	Sub-Sector	Country	% Assets
RELIANCE INDUSTRIES LTD	Energy	Oil, Gas & Consumable Fuels	India	7.88%
HDFC BANK LIMITED	Financials	Banks	India	7.54%
ICICI BANK LTD	Financials	Banks	India	6.93%
INFOSYS LTD	Information Technology	Software & Services	India	6.62%
LARSEN & TOUBRO LTD	Industrials	Capital goods	India	5.80%
AXIS BANK LTD	Financials	Banks	India	3.88%
ULTRATECH CEMENT LTD	Materials	Construction Materials	India	3.81%
MARUTI SUZUKI INDIA LTD	Consumer Discretionary	Automobiles & Components	India	3.69%

POWER GRID CORP OF INDIA LTD	Utilities	Electric Utilities	India	2.33%
HINDALCO INDS	Materials	Metals & Mining	India	2.11%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Financials</i>	<i>Banks</i>	<i>24.49%</i>
<i>Industrials</i>	<i>Capital goods</i>	<i>15.05%</i>
<i>Consumer Discretionary</i>	<i>Automobiles & Components</i>	<i>11.87%</i>
<i>Information Technology</i>	<i>Software & Services</i>	<i>8.35%</i>
<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	<i>7.88%</i>
<i>Materials</i>	<i>Construction Materials</i>	<i>5.29%</i>
<i>Materials</i>	<i>Metals & Mining</i>	<i>3.74%</i>

<i>Financials</i>	<i>Insurance</i>	3.40%
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	2.66%
<i>Consumer Discretionary</i>	<i>Consumer Durables & Apparel</i>	2.65%
<i>Materials</i>	<i>Chemicals</i>	2.59%
<i>Financials</i>	<i>Financial Services</i>	2.34%
<i>Utilities</i>	<i>Electric Utilities</i>	2.33%
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	2.02%
<i>Consumer Discretionary</i>	<i>Consumer Services</i>	1.81%
<i>Industrials</i>	<i>Commercial & Professional Services</i>	1.40%
<i>Consumer Discretionary</i>	<i>Consumer Discretionary Distribution & Retail</i>	1.24%
<i>Others</i>	<i>Others</i>	-3.62%
<i>Cash</i>	<i>Cash</i>	4.53%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas

In nuclear energy

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are

expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **14.50%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 17.64%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROLAND EQUITY DYNAMIC MULTI
FACTORS

Legal entity identifier:
549300GS11SOXBNLON64

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **74.53%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made a **sustainable investments with a social objective:** _____

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EMU** Index. In determining the ESG score of the Product and the ESG investment universe, ESG performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product. At the end of the period:

- The weighted average ESG rating of the portfolio is **1.109 (C)**.
- The weighted average ESG rating of the ESG investment universe is **1.03 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period:

- The weighted average ESG rating of the portfolio was **1.14 (C)**.
- The weighted average ESG rating of the ESG investment universe was **1.03 (C)**.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification

of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion** : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

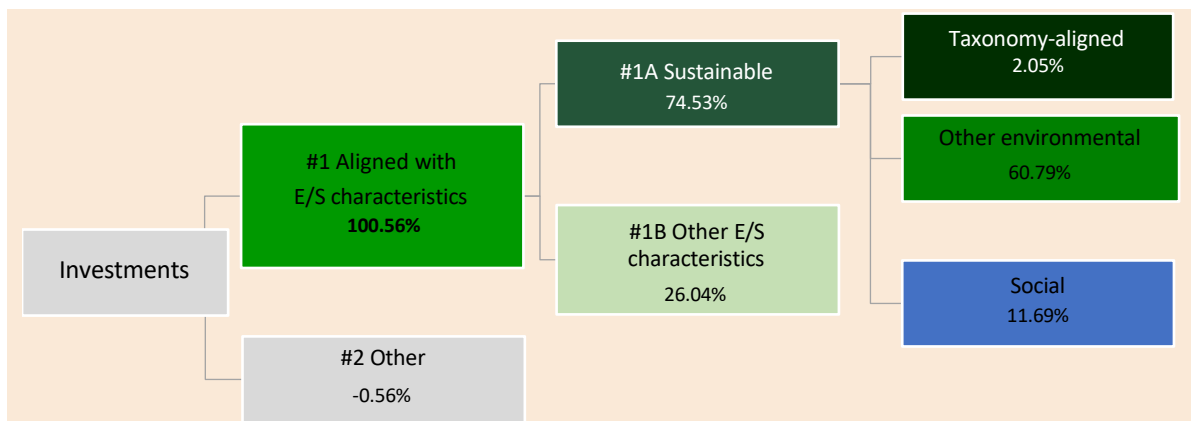

Largest Investments	Sector	Sub-Sector	Country	% Assets
ASML HOLDING NV	Information Technology	Semiconductors & Semiconductor Equipment	Netherlands	5.81%
SAP SE / XETRA	Information Technology	Software & Services	Germany	4.73%
DEUTSCHE TELEKOM NAM (XETRA)	Communication Services	Telecommunication	Germany	2.52%
L OREAL (PARIS)	Consumer Staples	Household & Personal Products	France	2.49%
SCHNEIDER ELECT SE	Industrials	Capital goods	France	2.30%
HERMES INTERNATIONAL	Consumer Discretionary	Consumer Durables & Apparel	France	2.28%
ALLIANZ SE-REG	Financials	Insurance	Germany	2.26%
TOTALENERGIES SE PARIS	Energy	Oil, Gas & Consumable Fuels	France	2.21%
INDUSTRIA DE DISEÑO TEXTIL	Consumer Discretionary	Consumer Discretionary Distribution & Retail	Spain	2.14%
BANCO SANTANDER SA	Financials	Banks	Spain	2.12%
SIEMENS AG-REG	Industrials	Capital goods	Germany	2.06%
SAFRAN SA	Industrials	Capital goods	France	2.02%
STELLANTIS MILAN	Consumer Discretionary	Automobiles & Components	Netherlands	1.86%
LVMH MOET HENNESSY LOUIS VUI	Consumer Discretionary	Consumer Durables & Apparel	France	1.85%
MUENCHENER RUECKVER AG-REG	Financials	Insurance	Germany	1.83%

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	Sub-Sector	% Assets
<i>Industrials</i>	<i>Capital goods</i>	<i>13.65%</i>

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 2.05% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities

are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.08% and the share of investment in enabling activities was 2.25%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 7.09%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **60.79%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 11.69%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark..

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROLAND EQUITY RISK PARITY

Legal entity identifier:
222100TM3VJBCM4GPK90

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **65.84%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI EMU Index**. In determining the ESG score of the Product and the ESG investment universe, ESG performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.057 (C)**.
- The weighted average ESG rating of the ESG investment universe is **1.03 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.12 (C) and the weighted average ESG rating of the ESG investment universe was 1.03 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for

example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human

Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

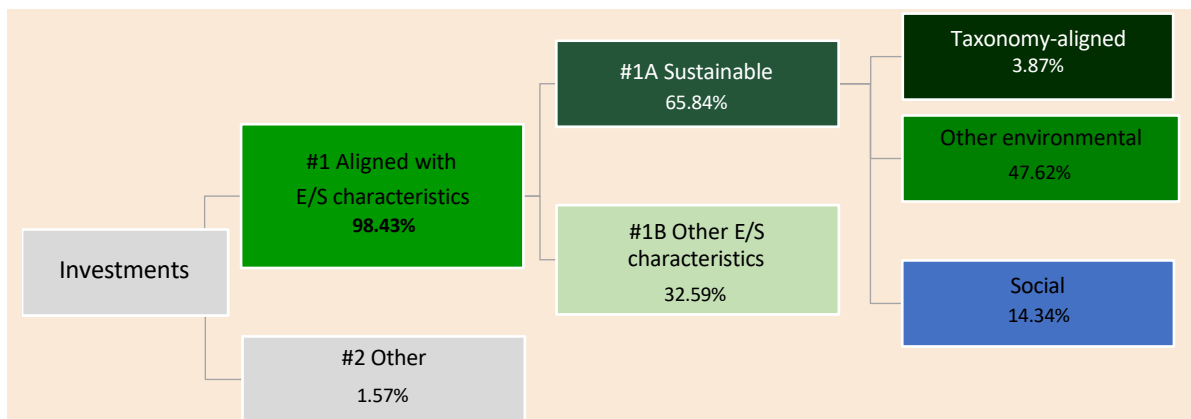

Largest Investments	Sector	Sub-Sector	Country	% Assets
TOTALENERGIES SE PARIS	Energy	Oil, Gas & Consumable Fuels	France	2.02%

What was the proportion of sustainability-related investments?

- **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● ***In which economic sectors were the investments made ?***

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	<i>9.17%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 3.87% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:
 In fossil gas In nuclear energy
 No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.25% and the share of investment in enabling activities was 3.99%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 9.34%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **47.62%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 14.34%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROPEAN EQUITY CONSERVATIVE

Legal entity identifier:
529900CA12DQSLAWW128

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **66.92%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI Europe Index**. In determining the ESG score of the Product and the ESG investment universe, ESG performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is 1.054 (C).
- The weighted average ESG rating of the ESG investment universe is 0.798 (C).

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.96 (C) and the weighted average ESG rating of the ESG investment universe was 0.80 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification

of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion** : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

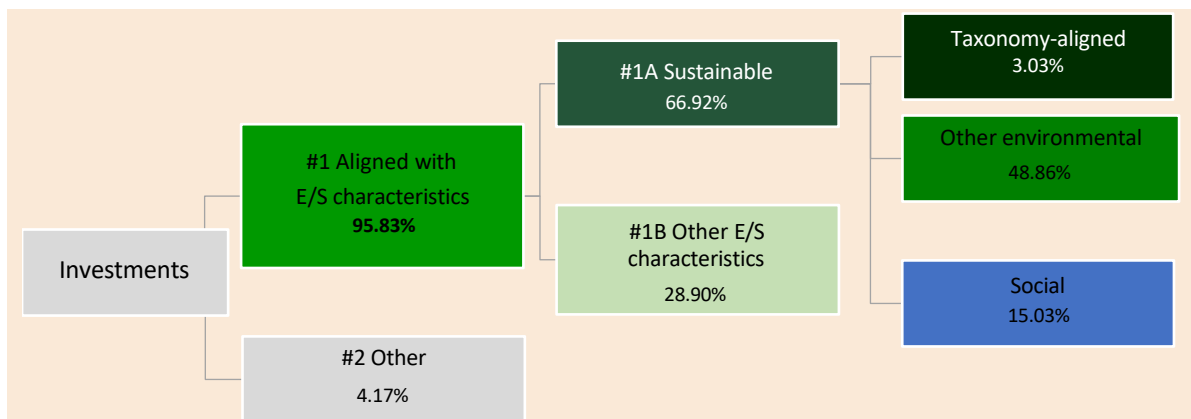

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
NOVARTIS AG-REG	Health Care	Pharmaceuticals Biotech & Life Sciences	Switzerland	2.78%

BEIERSDORF AG	Consumer Staples	Household & Personal Products	Germany	1.78%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

Sector	Sub-Sector	% Assets
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	<i>18.71%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 3.03% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full

emission levels corresponding to the best performance.

criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.08% and the share of investment in enabling activities was 3.01%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 4.42%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **48.86%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 15.03%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Additional Information (unaudited)

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROPEAN EQUITY DYNAMIC MULTI
FACTORS

Legal entity identifier:
5493008YF0WLJMAHCR51

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **66.51%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made a **sustainable investments with a social objective:** _____

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI Europe Index**. In determining the ESG score of the Product and the ESG investment universe, ESG performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.91 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.798 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period:

- The weighted average ESG rating of the portfolio was **1.04 (C)**.
- The weighted average ESG rating of the ESG investment universe was **0.80 (C)**.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best

performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of

each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

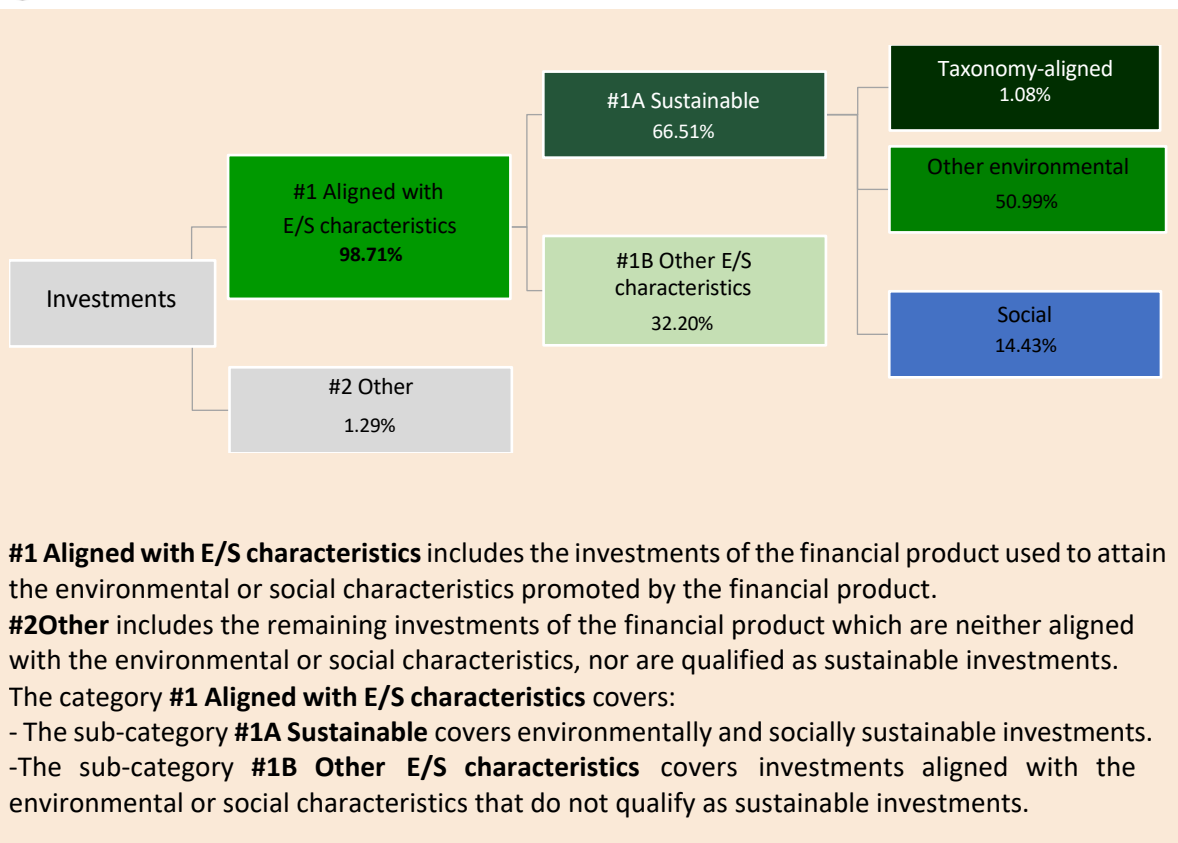

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
NOVO NORDISK A/S-B	Health Care	Pharmaceuticals Biotech & Life Sciences	Denmark	4.48%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.08% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities

are expressed as a share of:

-turnover

reflecting the share of revenue from green activities of investee companies

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx)

reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.06% and the share of investment in enabling activities was 1.32%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 4.70%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **50.99%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 14.43%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

This product does not have an ESG Benchmark.

- **How did this financial product perform compared with the reference benchmark ?**

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EUROPEAN EQUITY RISK PARITY

Legal entity identifier:
549300LGU40UNY8NUK95

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

This sub-fund was liquidated on 7th June 2024 and this report is based on the sub-fund's portfolio composition on the date before the liquidation process started, the 23rd May 2024.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **62,8%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI Europe Index**. In determining the ESG score of the Product and the ESG investment universe, ESG performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.969 (C)**.

- The weighted average ESG rating of the ESG investment universe is **0.792 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was **1.10 (C)** and the weighted average ESG rating of the ESG investment universe was **0.80 (C)**.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for

example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human

Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 23/05/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
ENI SPA MILAN	Energy	Oil, Gas & Consumable Fuels	ITALY	1.06%
TOTALENERGIES SE PARIS	Energy	Oil, Gas & Consumable Fuels	FRANCE	1.05%
OMV AG	Energy	Oil, Gas & Consumable Fuels	AUSTRIA	0.95%
REPSOL SA	Energy	Oil, Gas & Consumable Fuels	SPAIN	0.95%

TELEFONICA SA	Communication Services	Telecommunication Services	SPAIN	0.64%

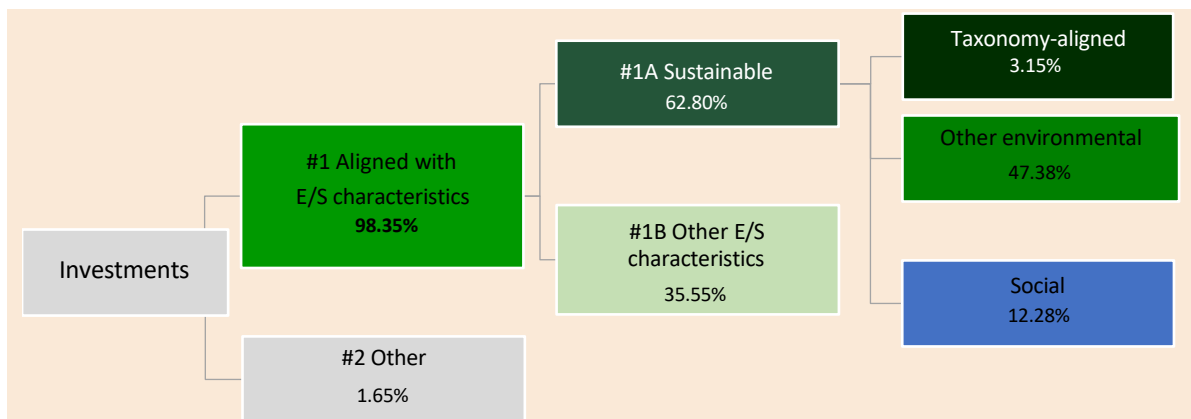

What was the proportion of sustainability-related investments?

This sub-fund was liquidated on 7th June 2024 and this report is based on the sub-fund's portfolio composition on the date before the liquidation process started, the 23rd May 2024.

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Energy</i>	<i>Oil, Gas & Consumable Fuels</i>	<i>8.52%</i>
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	<i>8.39%</i>
<i>Communication Services</i>	<i>Telecommunication Services</i>	<i>7.79%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
 -turnover reflecting the share of revenue from green activities of investee companies
 -capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 3.15% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

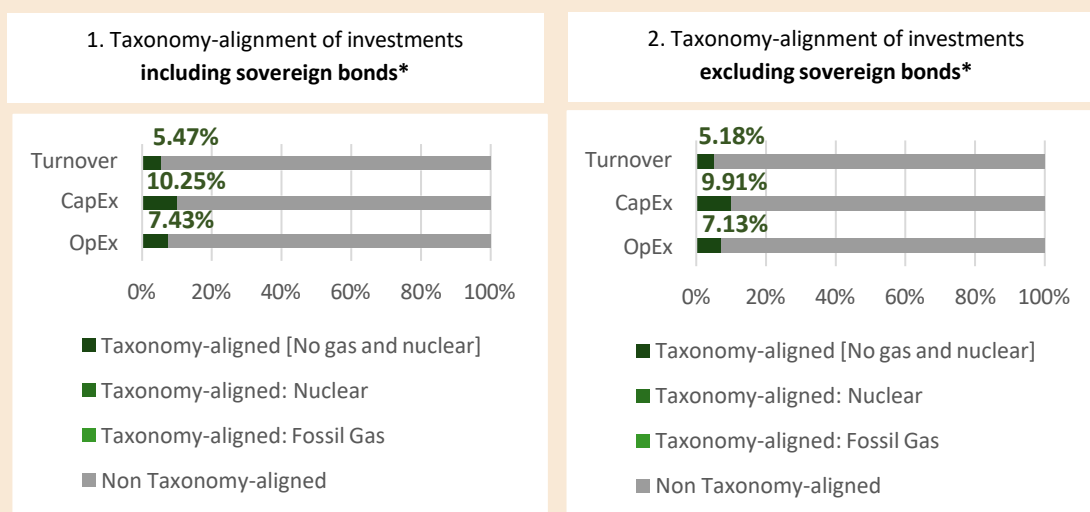

Yes:
 In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 07/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.21% and the share of investment in enabling activities was 2.96%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 7.81%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **47.38%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 12.28%.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

 **What actions have been taken to meet the environmental and/or social characteristics during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

 **How did this financial product perform compared to the reference benchmark ?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
GLOBAL EQUITY CONSERVATIVE

Legal entity identifier:
529900QOYD9Y5ZBAUZ70

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **39.53%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI World Index**. In determining the ESG score of the Product and the ESG investment universe, ESG performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.021 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.179 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.23 (D) and the weighted average ESG rating of the ESG investment universe was -0.12 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for

example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human

Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

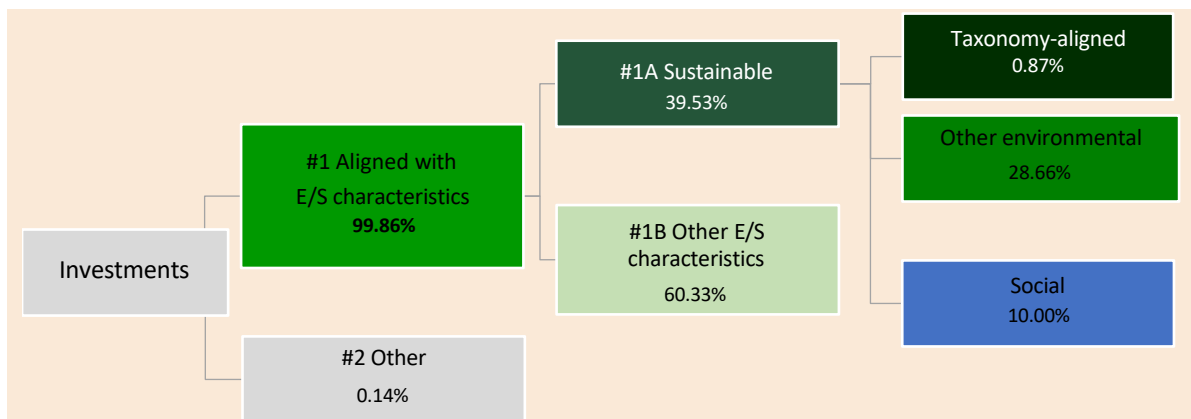

Largest Investments	Sector	Sub-Sector	Country	% Assets
T-MOBILE US INC	Communication Services	Telecommunication	United States	2.20%
WASTE MANAGEMENT INC	Industrials	Commercial & Professional Services	United States	2.19%
NOVARTIS AG-REG	Health Care	Pharmaceuticals Biotech & Life Sciences	Switzerland	2.04%
MERCK & CO. INC.	Health Care	Pharmaceuticals Biotech & Life Sciences	United States	1.99%
COLGATE-PALMOLIVE CO	Consumer Staples	Household & Personal Products	United States	1.89%

MOTOROLA SOLUTIONS INC	Information Technology	Technology Hardware & Equipment	United States	1.60%
MCDONALD S CORP	Consumer Discretionary	Consumer Services	United States	1.60%
ABBVIE INC	Health Care	Pharmaceuticals Biotech & Life Sciences	United States	1.57%
PROCTER & GAMBLE CO/THE	Consumer Staples	Household & Personal Products	United States	1.42%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

Sector	Sub-Sector	% Assets
<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	14.85%
<i>Consumer Staples</i>	<i>Food, Beverage & Tobacco</i>	9.34%
<i>Communication Services</i>	<i>Telecommunication</i>	8.97%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.87% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

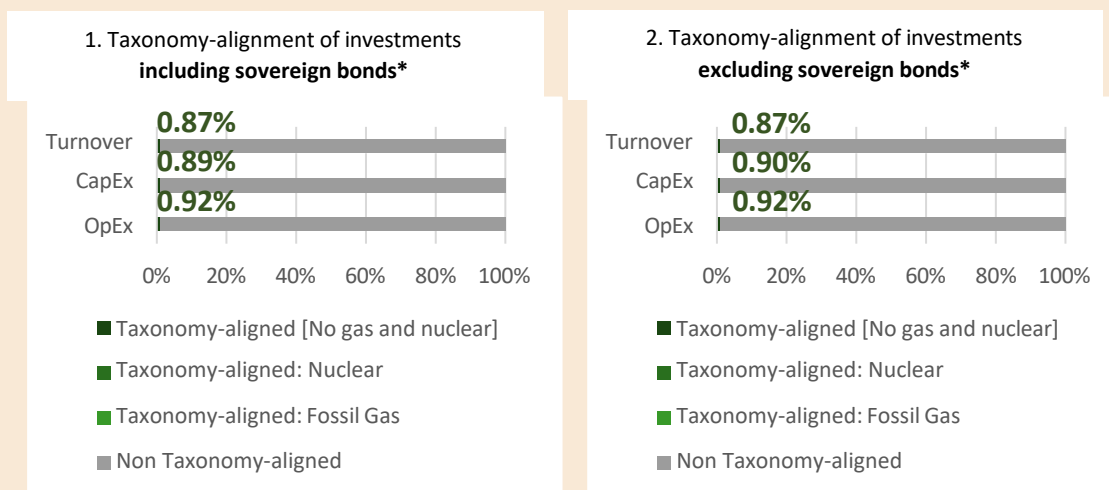

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.75%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.28%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **28.66%** at the end of the period. This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 10.00%.

 **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **36.24%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made a **sustainable investments with a social objective:** _____

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI World (dividend reinvested) Index**. In determining the ESG score of the Product and the ESG investment universe, ESG performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which the companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is - **0.079 (D)**.
- The weighted average ESG rating of the ESG investment universe is -**0.179 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period:

- The weighted average ESG rating of the portfolio was **0.21 (D)**.
- The weighted average ESG rating of the ESG investment universe was -**0.12 (D)**.

● ***What were the objectives of the sustainable investments that the financial product partially***

intends to make and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a

rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of

each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

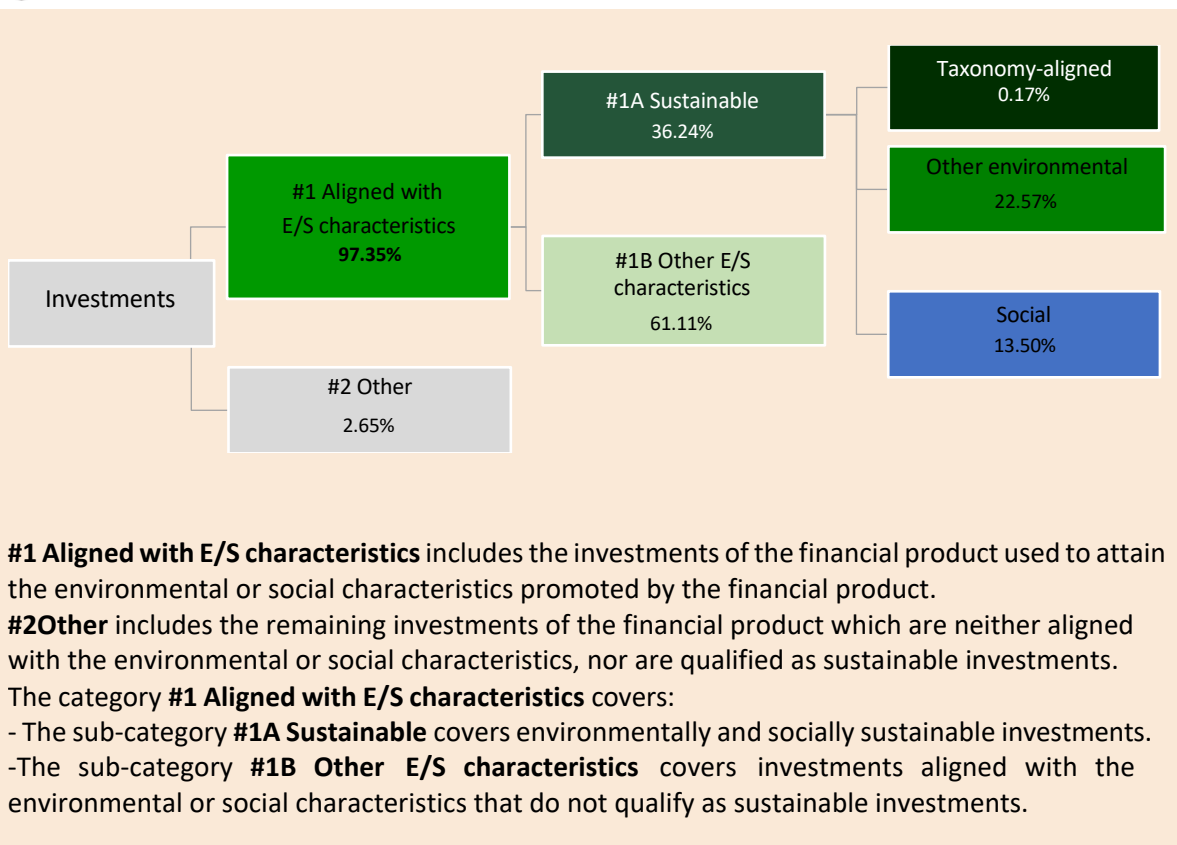

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.17% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.25%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.51%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **22.57%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 13.50%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis..

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Additional Information (unaudited)

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EUROPEAN CONVERTIBLE BOND

Legal entity identifier: 529900644PSS3LALW918

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **67.52%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ^X

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **REFINITIV EUROPEAN CONVERTIBLE HEDGED**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.037 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.675 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.94 (C) and the weighted average ESG rating of the ESG investment universe was 0.71 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

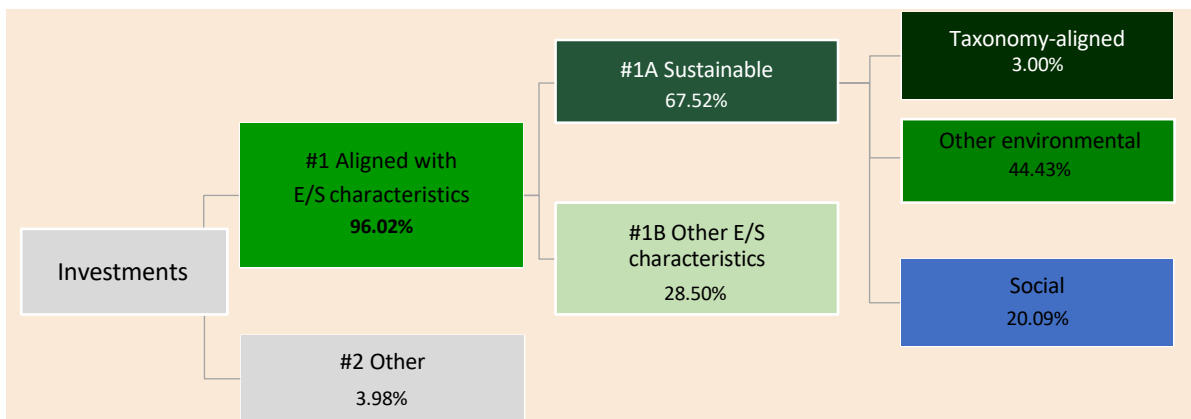

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

Sector	Sub-Sector	% Assets
<i>Industrials</i>	<i>Capital goods</i>	<i>13.68%</i>
<i>Information Technology</i>	<i>Semiconductors & Semiconductor Equipment</i>	<i>9.14%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 3.00% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full

greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.01% and the share of investment in enabling activities was 2.56%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 4.23%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **44.43%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 20.09%.

Regulation (EU)
2020/852.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

How does the reference benchmark differ from a broad market index ?

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
●● Yes	●● X No
<input type="checkbox"/> It made sustainable investments with an environmental objective : _____% of the fund's net assets <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 34.1% of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : _____% of the fund's net assets	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

A Company is identified as sustainable by the asset manager, by applying the methodology described in the ESG Policy available on the website montpensier.com.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund integrates sustainability factors in its investment process, as indicated in more details below and in the chapter "Investment Strategy" of the Prospectus. ESG criteria are taken into account by the fund in order to unify financial performance and the wish to positively influence, when possible, the issuer in terms of ESG performance, by encouraging companies to improve the integration of ESG criteria in their activities and valuing best practices.

The management company applied the policy described in the Pre-Contractual Document for financial products Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852.

34.65% of the invested portfolio excluding cash and cash equivalents and any collective investment schemes (meaning 34.09% of the fund's net asset) is made up of sustainable investments.

The portfolio's weighted average carbon intensity and carbon footprint are significantly lower than its index.

The proportions are similar when Scope 3 Upstream is added: the carbon intensity and carbon footprint of the portfolio are significantly lower than the index.

Additional Information (unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

... and compared to previous periods?

See above.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Montpensier Finance's methodology to identify sustainable investments is based on the following components:

- Evaluating the contribution to a sustainability objective, which rests on a best effort approach, with the aim to select the "best performers" (or to eliminate the "worst performers") on the basis of E and/or S criteria, as well as an approach relying on the Sustainable Development Goals (SDGs) and an exposition to sustainable activities, determined through an internal definition of "activities defined as sustainable";
- Evaluating compliance with the principles of good governance, based on our analysis of the alignment of interests between management, shareholders and stakeholders more generally ;
- Evaluating the "Do Not Significantly Harm" (DNSH) principle, which rests on sectorial exclusions, on Principal Adverse Impacts (PAI) and the monitoring of controversies, including in terms of governance.

For further details, see the Prospectus and the SFDR Pre-contractual Document appended to the prospectus of the UCI, available on the management company's website.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

How were the indicators for adverse impacts on sustainability factors taken into account?

Evaluating the "Do Not Significantly Harm" principle (DNSH) relies on exclusions, Principal Adverse Impacts (PAI) and the monitoring of controversies. In addition, companies with a negative environmental or social MIA impact, or E and S pillars, are considered to derogate the DNSH principle.

For further details, see the Prospectus and the SFDR Pre-contractual Document appended to the prospectus of the UCI, available on the management company's website.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

We exclude from our investment universe companies which are not aligned with certain international norms and conventions, most notably the United Nations Global Compact (UNGC), OECD Guidelines for Multinational Enterprises, the International Labor Organization (ILO) and the United Nations Guiding Principles on Business and Human Rights (UNGPHR). Companies which are subject to a "Red" controversy are excluded from the investment universe. Among these "Red" controversies are companies which are not in line with the United Nations Global Compact (Human Rights, Labor Rights, Environment and Corruption).

The EU Taxonomy sets out a "Do Not Significantly Harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "Do Not Significantly Harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

We take into account the main indicators of negative impacts in the policy of sectoral and normative exclusions, analysis of good governance practices (using the proprietary Montpensier Governance Flag - MGF), the proprietary qualitative analysis of the contribution of companies to environmental and solidarity transitions (Montpensier Impact Assessment – MIA, Montpensier Industry Contributor – MIC), and/or in the analysis of eco- activities that determines the contribution to one or more UN Sustainable Development Goals (SDGs).

The relevance and coverage of these indicators in analysis vary depending on the sector, industry and region in which each company operates.

Information regarding environmental, social and governance (ESG) objectives can be found on the management company's website:

<https://www.montpensier.com/sites/default/files/public/documents/politique-esg.pdf>

The "Do Not Significantly Harm" principle only applies to investments underlying the financial product which take into account the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the European Union's criteria for environmentally sustainable economic activities.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/07/2023 - 30/06/2024

Largest investments	Sector	% Assets	Country

Total weight of top 15 lines vs fund's net assets as at 28/06/24 28.2%

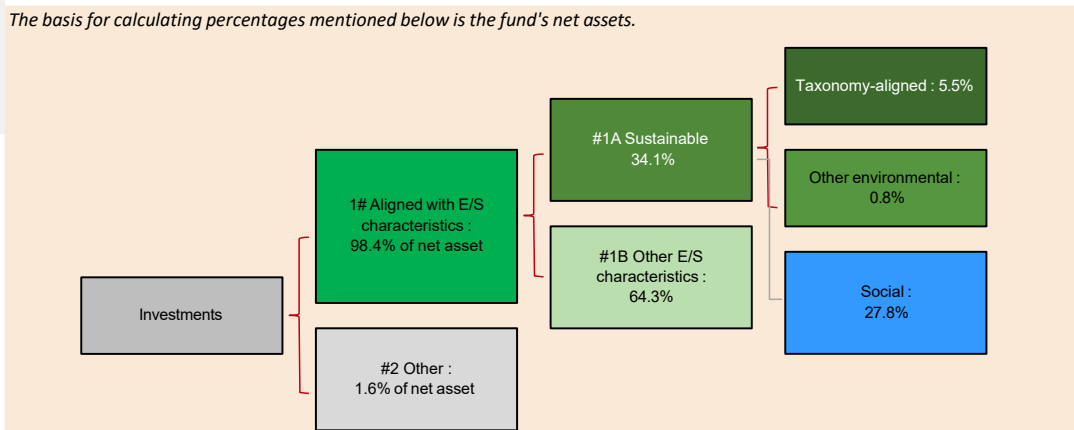

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The basis for calculating percentages mentioned below is the fund's net assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

	% AUM
Technology	13.1%
Industrials	7.6%
Health Care	6.3%
Consumer Staples	1.6%
Utilities	1.5%
Consumer Discretionary	1.4%
Telecommunications	0.9%
Real Estate	0.8%
Financials	0.6%
Energy	0.3%
Total Sustainable Investments	34.1%

of the fund's net assets as at 28/06/24
Industry Classification Benchmark (ICB) classification - 11 Industries Sectors

Additional Information (unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules;

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy ¹ ?

Yes

In fossil gas In nuclear energy

No

Data relating to companies' involvement in fossil gas and/or nuclear energy activities, in line with the taxonomy, are determined by taking into account only data published by companies.

Data on companies' involvement in taxonomy-compliant fossil gas and/or nuclear energy activities are not yet available.

For information, stocks identified as being involved in fossil and/or nuclear energy represent 7.03% of the portfolio, i.e. 5.80% of the portfolio for stocks deriving part of their sales from nuclear energy, and 2.37% for stocks involved in fossil energy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures. Turnover is estimated by MSCI ESG Research according to the methodology described below. CapEx and Opex data take into account only data published by companies.

The percentage of alignment with the taxonomy indicated above represents the portfolio's contribution in weighted average to the alignment with the European taxonomy (based on turnover, CapEx or OpEx) of all sustainable investments whether they have an environmental or social objective.

European Taxonomy alignment

European Taxonomy alignment is estimated by MSCI ESG Research, from the maximum percentage of a company's sales derived from products and services addressing environmental objectives, on the basis of the MSCI Sustainable Impact Metrics framework.

The percentage of sales generated by products and services that meet environmental objectives is reduced to 0 for companies which do not meet the "Do No Significant Harm" and "Minimum Social Safeguards" criteria of the European taxonomy.

The same applies to companies whose revenues derive 5% or more from the supply, distribution or retailing of tobacco products, and companies involved in controversial weapons.

Additional Information (unaudited)

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The fund does not have a minimum proportion of investment in transitional or enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	28/06/24	30/06/23
Alignment on European Taxonomy	% AUM	% AUM
Amundi Funds Montpensier Global Conve	8.4%	9.5%

The percentage indicated above represents the portfolio's contribution to the alignment with the European taxonomy (based on turnover) of all sustainable investments whether they have an environmental or social objective.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

As of the date of this report, 6.3% of net assets were invested in sustainable investments with an environmental objective, whereas 0.8% of net assets were not aligned with the EU Taxonomy.

 **What was the share of socially sustainable investments?**

As of the date of this report, 27.8% of net assets were invested in sustainable investments with a social objective.

 **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

Cash, cash equivalents and any funds or hedging derivatives represent 1.6% of the fund's net assets, and do not offer minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The management company has applied the policy described in the pre-contractual information document for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852.

Montpensier Finance's shareholder engagement policy consists of a voting policy and an engagement policy.

Exercising voting rights is an important element of the dialogue with issuers. It encourages the best governance practices and promotes professional ethic.

Montpensier Finance considers that the exercise of voting rights is an integral part of the investment management process and should be carried out in the best interest of its clients. Montpensier Finance voting rights policy aims to promote the long-term valuation of its funds investments.

To exercise the voting rights attached to the equities held by the fund, the fund managers refer to the principles regarding corporate governance recommendations published by ISS Governance, in its Sustainability Policy. ISS covers all companies held in the portfolios of the funds managed by Montpensier Finance.

Compliance regulations require portfolio managers to carry out their functions independently, particularly with regard to issuers, and in the sole interest of unit/shareholders. Portfolio managers pay particularly attention to resolutions which may prejudice the interests of unit/shareholders.

The full voting policy as well as the latest voting rights exercise report are available on our website.

Additional Information (unaudited)

Montpensier Finance supplements its voting policy with an engagement policy.

The fund management teams are encouraged to raise any concern with companies during meetings, especially when the ESG issues seem insufficiently accounted for, in order to encourage these companies to improve their practices on environmental, social, and

corporate governance issues, all of which are factors of sustainable growth.

The fund managers, assisted by the SRI analysts, will establish a positive and constructive mid-to-longterm rapport with companies held in the portfolio.

This rapport is multi-faceted:

- ✓ Company contacts;
- ✓ Communicating the fund managers' voting intentions to the company prior to the General Meeting.

In addition to direct engagement initiatives we usually conduct directly with Small and Medium Companies, Montpensier Finance also participates in pooled engagement actions implemented by ISS as part of its ISS ESG program especially for larger companies.

This dialogue is conducted with the aim of:

- ✓ Encouraging companies to set up an ESG commitment;
- ✓ Encouraging companies to communicate about their ESG practices.

The full engagement policy as well as the latest engagement report are available on our website.

How did this financial product perform compared to the reference benchmark?

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **85% BLOOMBERG EURO AGGREGATE (E) + 10% ICE BOFA EURO HIGH YIELD INDEX + 5% JP MORGAN EMBI GLOBAL**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.036 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.930 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.15 (C) and the weighted average ESG rating of the ESG investment universe was 0.93 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

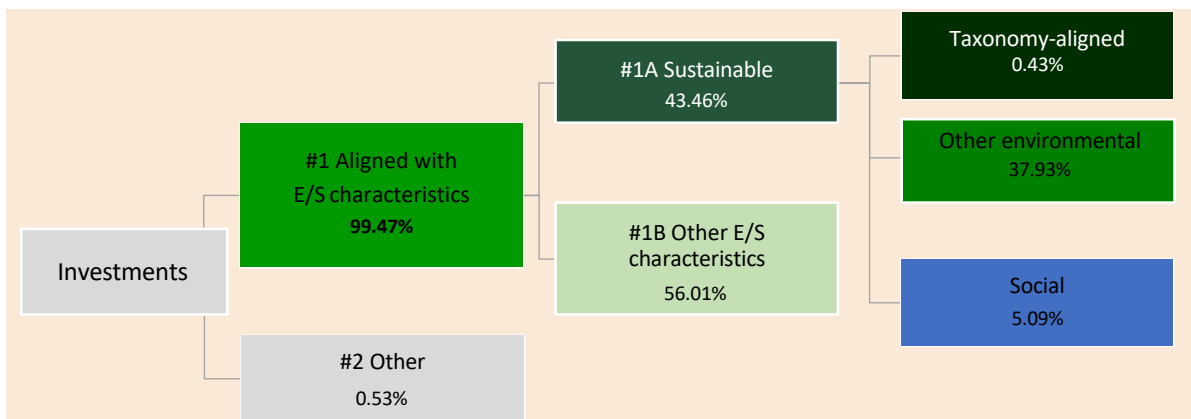

Largest Investments	Sector	Sub-Sector	Country	% Assets
AMUNDI EURO LIQUIDITY SRI - Z (C)	Financials	Mutual Funds	France	2.51%

BELGIUM 4.25% 03/41	Treasuries	Treasuries	Belgium	0.79%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>

<i>Cash</i>	<i>Cash</i>	<i>-0.05%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.43% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.03% and the share of investment in enabling activities was 0.30%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 10.79%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **37.93%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 5.09%.

 **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EURO CORPORATE ESG BOND

Legal entity identifier: EJCJD2QBJY0UVP7HMP10

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **58.49%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **BLOOMBERG EURO AGGREGATE CORPORATE (E)**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **1.030 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.537 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.83 (C) and the weighted average ESG rating of the ESG investment universe was 0.55 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

- ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

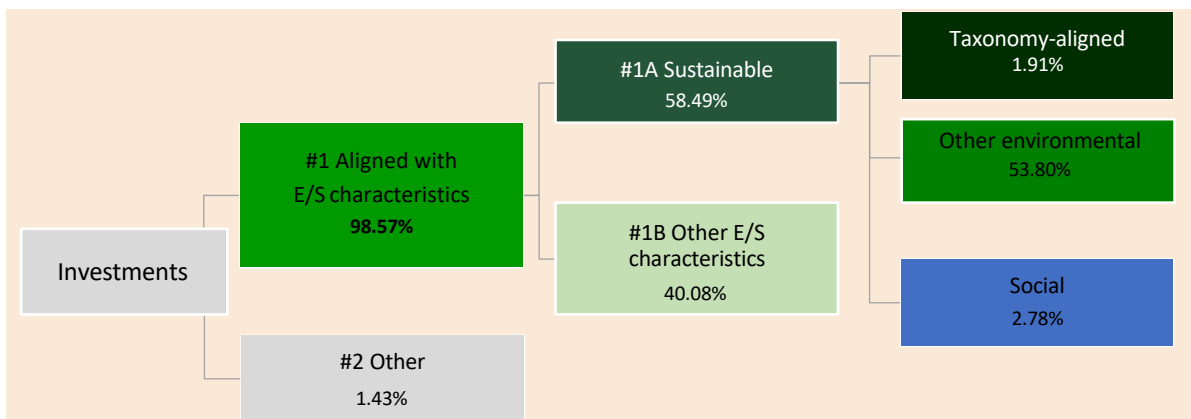

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Corporates</i>	<i>Banking</i>	38.55%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period

switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

the fund invested 1.91% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.09% and the share of investment in enabling activities was 1.22%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 15.27%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **53.80%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 2.78%.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS STRATEGIC BOND

Legal entity identifier: 5493009E9QZ9NKKEW632

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **28.38%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **INDEX AMUNDI RATING D**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.151 (D)**.
- The weighted average ESG rating of the ESG investment universe is **0.000 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.20 (D) and the weighted average ESG rating of the ESG investment universe was 0 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

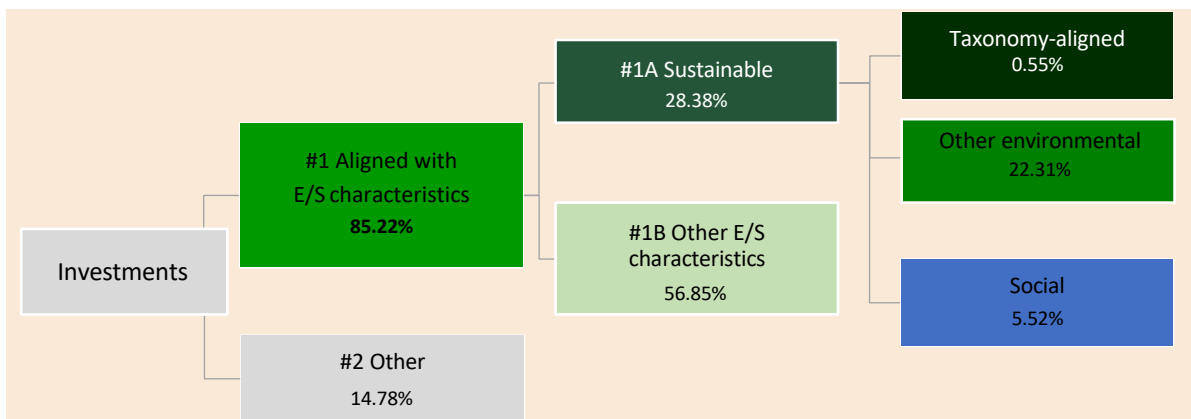

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Corporates</i>	<i>Banking</i>	<i>19.11%</i>

<i>Cash</i>	<i>Cash</i>	<i>1.43%</i>

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.55% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.09% and the share of investment in enabling activities was 0.10%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 3.47%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **22.31%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 5.52%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

"#2 Other" includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **43.32%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **ICE BOFA BB-B EUROPEAN CURRENCY HIGH YIELD CONSTRAINED INDEX HEDGED**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.487 (D)**.
- The weighted average ESG rating of the ESG investment universe is **0.315 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.28 (D) and the weighted average ESG rating of the ESG investment universe was 0.16 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

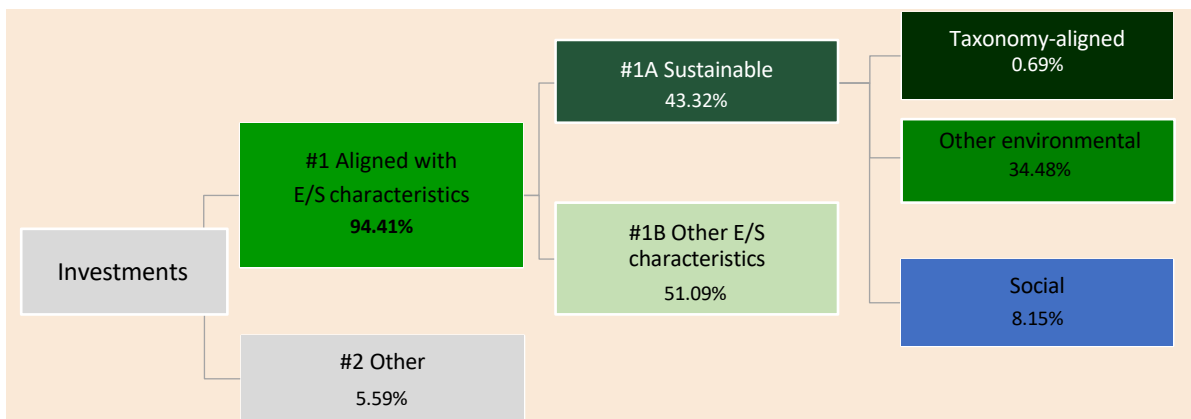

Largest Investments	Sector	Sub-Sector	Country	% Assets
AMUNDI EURO LIQUIDITY SRI - Z (C)	Financials	Mutual Funds	France	4.37%
BFT AUREUS ISR - Z (C)	Financials	Mutual Funds	France	1.85%

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Corporates</i>	<i>Consumer Discretionary</i>	<i>18.68%</i>
<i>Corporates</i>	<i>Communications</i>	<i>18.04%</i>
<i>Corporates</i>	<i>Banking</i>	<i>17.31%</i>
<i>Corporates</i>	<i>Consumer Staples</i>	<i>11.40%</i>
<i>Financials</i>	<i>Mutual Funds</i>	<i>8.50%</i>

<i>Forex</i>	<i>Forex</i>	0.04%
<i>Corporates</i>	<i>Finance Companies</i>	0.00%
<i>Cash</i>	<i>Cash</i>	-1.50%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.69% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

contribution to an environmental objective.

Yes:

In fossil gas In nuclear energy

No

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.02% and the share of investment in enabling activities was 0.37%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 7.54%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **34.48%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 8.15%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

This product does not have an ESG Benchmark.

- **How did this financial product perform compared with the reference benchmark ?**

Additional Information (unaudited)

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EURO HIGH YIELD SHORT TERM BOND

Legal entity identifier: 529900Q3IK91XCA88E07

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective: _____

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **41.45%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **ICE BOFA Q759 CUSTOM INDEX**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.567 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.309 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.34 (D) and the weighted average ESG rating of the ESG investment universe was 0.04 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Corporates</i>	<i>Consumer Discretionary</i>	<i>24.31%</i>
<i>Corporates</i>	<i>Communications</i>	<i>18.44%</i>
<i>Corporates</i>	<i>Consumer Staples</i>	<i>12.05%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.79% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

contribution to an environmental objective.

Yes: In fossil gas In nuclear energy

No

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

-turnover reflecting the share of revenue from green activities of investee companies
-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.01% and the share of investment in enabling activities was 0.27%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 14.63%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **32.05%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 8.61%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

This product does not have an ESG Benchmark.

- **How did this financial product perform compared with the reference benchmark ?**

Additional Information (unaudited)

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
GLOBAL SUBORDINATED BOND

Legal entity identifier:
549300YM7XSURJOGN349

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **41.38%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **30% ICE BOFA CONTINGENT CAPITAL HEDGED INDEX + 15% ICE BOFA PERPETUAL PREFERRED SECURITIES HEDGED INDEX + 37.5% ICE BOFA GLOBAL HYBRID NON-FINANCIAL CORPORATE HEDGED INDEX + 17.5% ICE BOFA GLOBAL HYBRID NON-FINANCIAL HIGH YIELD HEDGED INDEX**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not

intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.560 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.420 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.51 (C) and the weighted average ESG rating of the ESG investment universe was 0.50 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best

performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .

- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

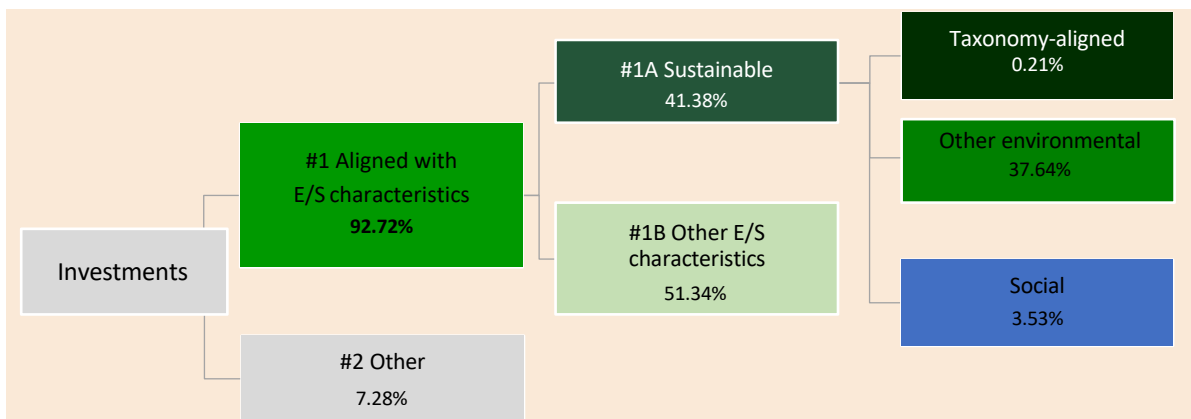

Largest Investments	Sector	Sub-Sector	Country	% Assets
SANTAN VAR PERP	Corporates	Banking	Spain	4.22%

What was the proportion of sustainability-related investments?

- **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Corporates</i>	<i>Banking</i>	<i>47.97%</i>
<i>Corporates</i>	<i>Other Financials</i>	<i>9.93%</i>

Corporates	Transportation	0.61%
Treasuries	Treasuries	0.00%
Corporates	Consumer Discretionary	-0.04%
Forex	Forex	-0.37%
Cash	Cash	6.39%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.21% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.01% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 6.97%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **37.64%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 3.53%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
PIONEER GLOBAL HIGH YIELD BOND

Legal entity identifier:
5493001ZUQBYXT5ICJ95

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **14.50%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy **X**

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **BLOOMBERG GLOBAL HIGH YIELD**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.102 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.259 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was -0.09 (D) and the weighted average ESG rating of the ESG investment universe was -0.24 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

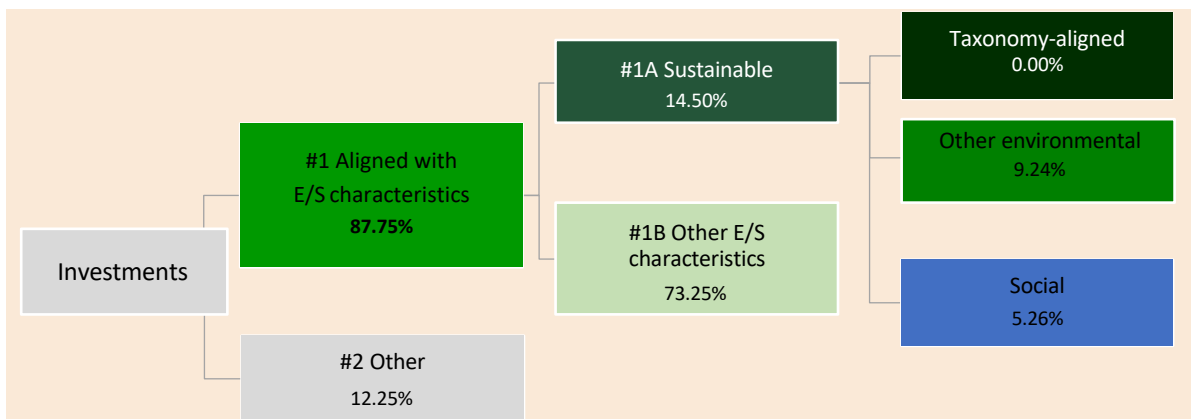

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Corporates</i>	<i>Consumer Discretionary</i>	<i>16.51%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 1.23%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **9.24%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 5.26%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

● ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

● ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
GLOBAL HIGH YIELD ESG IMPROVERS
BOND

Legal entity identifier:
213800O2125EN6NGE460

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **31.60%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **ICE BOFA GLOBAL HIGH YIELD INDEX HEDGED**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The product is labeled SRI (Social and Responsible Investment). It sought throughout the year to promote the 3 dimensions (environmental, social and governance) by taking into account the ESG rating of issuers in the construction of the portfolio.

The ESG rating of issuers aims to assess their ability to manage the potential negative impact of their activities on sustainability factors. This analysis thus aims to assess their Environmental and Societal behaviors in terms of Governance by assigning them an ESG rating ranging from A (best rating) to G (worse rating), so as to achieve a more global assessment of the risks.

1. The portfolio has consistently applied the following Amundi exclusion policy:
 - Legal exclusions on controversial weapons
 - Companies that seriously and repeatedly contravene one or more of the 10 principles of the Global Compact (UN Global Compact), without credible corrective measures;
 - The sectoral exclusions of the Amundi group on Coal and Tobacco; (details of this policy are available in Amundi's Responsible Investment Policy available on the website www.amundi.fr)
2. No investment has been made in issuers rated F or G. For any issuer whose rating has been downgraded to F or G, the securities already present in the portfolio were sold within the timeframe committed to in the prospectus and taking into account financial interest of holders
3. The weighted average ESG score of the portfolio has consistently been higher than the weighted average ESG score of the fund's investment universe after eliminating the 20% of the worst issuers
4. The fund has favored issuers that are leaders in their sector of activity according to the ESG criteria identified by the team of extra-financial analysts of the management company ("best in class" approach). With the exception of the above exclusions, all economic sectors are represented in this approach and the UCI may therefore be exposed to certain controversial sectors.

The investment manager has focused the investment process on companies/sectors/countries that had embraced, or will embrace, a positive ESG trajectory within their business. The investment manager identified investment opportunities that were aligned with the aim of generating alpha by focusing in particular on inclusion of companies/sectors/countries that will be strong ESG winners in the future, that have (or will have) a positive ESG profile improvement, while also investing in companies/sectors/countries that are currently ESG stewards.

Further, the Sub-Fund achieved an ESG score of its portfolio greater than that of the Benchmark. The Sub-Fund was compared with the ESG score of its Benchmark after 20% of the lowest ESG rated securities have been excluded from the Benchmark.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.371 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.303 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG

Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.29 (D) and the weighted average ESG rating of the ESG investment universe was -0.29 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Principal adverse impacts are the most significant negative impacts of

investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.01% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

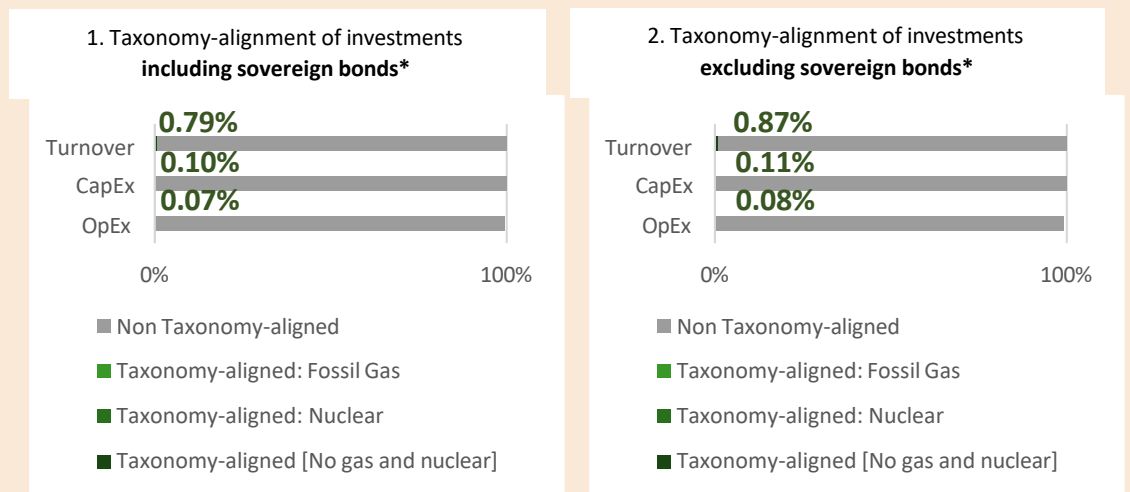

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 1.18%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **24.23%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

● **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 7.36%.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS US HIGH YIELD BOND

Legal entity identifier: 5493003QDKL8L48UQW51

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective: _____

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of **18.26%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **ICE BOFA US HIGH YIELD INDEX**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.238 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.457 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.28 (D) and the weighted average ESG rating of the ESG investment universe was 0.16 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as

material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers.

For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2023 to 30/06/2024**

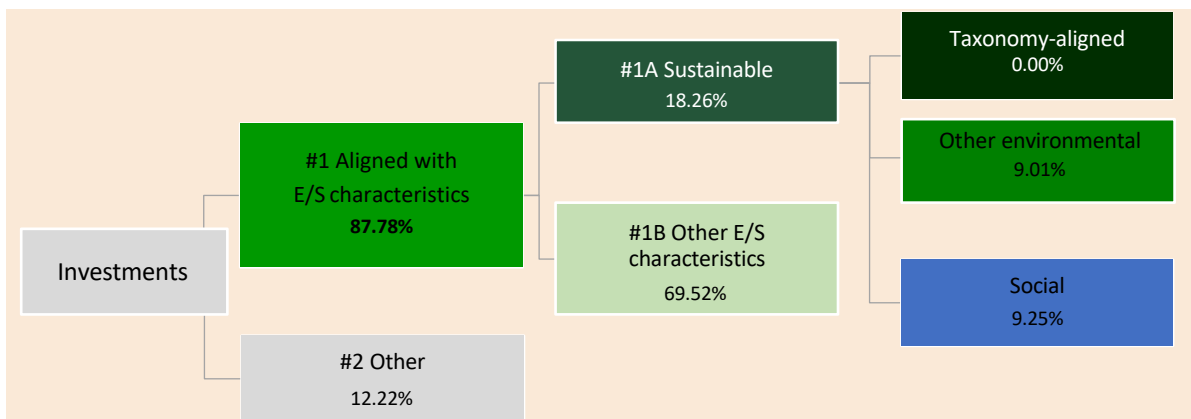

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>
<i>Corporates</i>	<i>Consumer Discretionary</i>	<i>19.39%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period, the percentage of investments with Taxonomy alignment was 0.25%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?
