

HSBC Global Investment Funds

GLOBAL EQUITY VOLATILITY FOCUSED

Monthly report 31 October 2022 | Share class EC

Investment objective

The Fund aims to provide long term capital growth and income by investing in a portfolio of shares worldwide.

Investment strategy

The Fund is actively managed. In normal market conditions, the Fund will invest at least 90% in shares of companies of any size that are based in, or carry out the larger part of their business activities in, both developed markets and emerging markets. The Fund seeks a portfolio volatility which is lower than that of the MSCI All Country World Index. The Fund uses a quantitative multi-factor investment process to identify stocks from a universe of investable shares, and ranks them from the least attractive to most attractive based upon certain factors, such as value, quality, momentum, low risk and size. The process makes use of proprietary systematic, defensive portfolio construction techniques aiming to maximize risk-adjusted return whilst reducing volatility and drawdowns during period of market turbulence. The Fund can invest up to 20% in China A and China B-shares. For China A-shares, up to 10% through the Shanghai-Hong Kong Stock Connect and/or the Shenzhen-Hong Kong Stock Connect, and up to 10% in CAAPs. The Fund may invest up to 10% in a combination of participation notes and convertible securities, and up to 10% each in securities issued or guaranteed by single sovereign issuers with a non-investment grade rating, REITs and other funds. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

Risk Disclosure

- Different investment styles typically go in and out of favour depending on market conditions and investor sentiment.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Further information on the potential risks can be found in the Key Investor Information Document (KID) and/or the Prospectus or Offering Memorandum.

Benchmark disclosure

The Investment Advisor will use its discretion to invest in securities not included in the reference benchmark based on active investment management strategies and specific investment opportunities. It is foreseen that a significant percentage of the Fund's investments will be components of the reference benchmark. However, their weightings may deviate materially from those of the reference benchmark. Any deviations with respect to the benchmark are monitored within a comprehensive risk framework, which includes monitoring at sector level. The deviation of the Fund's performance relative to the benchmark is monitored, but not constrained, to a defined range.
