Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Debt Instruments	such as fixed or floating rate government bonds, corporate bonds, treasury bonds, municipal bonds and commercial paper, of Investment Grade or sub-Investment Grade, and issued by governments, quasi-sovereign entities, institutions, public listed companies (or companies established other than as public listed companies);
Dealing Deadline	means 11.59am (Irish time) on the relevant Dealing Day;
Equity Instruments	means equity and/or equity related securities such as warrants, convertible stocks (which may or may not embed leverage) or preferred stock listed (or about to be listed) or traded on any Recognised Market - of (i) issuers listed or traded on European stock exchanges or (ii) companies considered by the Manager to be European companies and which are listed or traded on other Recognised Markets.
Valuation Point	means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective and Policies

The investment objective of the Fund is to provide long-term capital growth.

The Fund seeks to achieve its investment objective while promoting environmental, social and governance (ESG) characteristics under Article 8 of SFDR as described under "ESG Integration" below. The Fund does not pursue a sustainable objective and thus it is not classified under Article 9 of SFDR.

The Fund will seek to achieve its investment objective by (i) investing directly in Equity Instruments as described in the section headed "Direct Investment" below; and/or (ii) indirectly through the use of Total Return Swaps ("TRS") or through a combination of investment in interest rate swaps ("IRS") and equity swaps, the funding of which will be facilitated by the purchase of Debt Instruments as described in the section headed "Indirect Investment" below. The Fund may be partially invested directly in Equity Instruments and partially invested indirectly through TRS and equity swaps. The allocation of the Fund's portfolio to direct investment in Equity Instruments or indirect investments through the use of FDI will depend on the Manager's assessment of prevailing market conditions and most efficient and cost effective way of achieving the Fund's investment objective.

Benchmark Information

From time to time, the Manager, considering the degree of representativeness of underlying markets and their liquidity, strategically selects a benchmark or index (the "Index") appropriate to the Fund's investment policies, in reference to which the Fund is then managed and compared to which the Fund will seek to achieve a similar rate of return, gross of fees. Currently, the Fund is actively managed in reference to the MSCI Europe ESG Leaders Index (the "Index"). The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

As at the date of this Prospectus, the administrator of the Index, namely MSCI Limited, is availing of the transitional arrangements afforded under Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "Benchmark Regulation"). Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Direct Investment

To implement its investment objective via direct investment, the Fund may invest in Equity Instruments of companies that are domiciled in, or carrying out the main part of their economic activity in Europe and that are listed on Recognised Markets.

Indirect Investment

To implement its investment objective via indirect investment the Fund may:

(i) enter into TRS, and/or equity swaps, that provide the Fund with exposure to an equity index/basket of equity indices/basket of European equities or European equity related securities, in exchange for the performance and/or income of some or all of the Fund's assets which may be a globally diversified portfolio of equities or the Fund's income under the IRS as described below. The Manager will select the global diversified portfolio of equities, according to an evaluation of risk (i.e., country risk, sector risk, maximum drawdown risk - meaning the maximum drop in value of an equity holding) and liquidity risk (i.e., how easy it is to realize these equities). The underlying assets of the TRS and equity swaps may consist of a basket of equities or equity related securities that are selected by the Manager; and/or

(ii) as mentioned on page 1 above, invest up to 100% of its assets in Debt Instruments , following which, the Fund will enter into IRS in which it will swap out an amount equal to the interest rate payments it receives on the Debt Instruments to provide income for the equity swap payments described in (i) above.

The counterparties to the IRS, TRS and equity swaps will comply with Regulation 8 of the Central Bank UCITS Regulations. The counterparties will have no discretion in respect of the TRS and equity swaps and the TRS and equity swaps will be unfunded i.e. no upfront payment is made. The value of the Fund's Shares will be linked to the performance of the underlying assets of the TRS or equity swap it enters.

The Fund will be exposed to the credit risk of the counterparties to the TRS and IRS. If a counterparty defaults on its obligations, the Fund may experience a decline in the value of its portfolio. In the case of the termination and close-out of a TRS or IRS, the Fund will be exposed to the direct holdings of global equity investments and Debt Instruments.

The portfolio of Debt Instruments will be selected by the Manager, who will give preference to investment in Debt Instruments of global governments/corporates when selecting their investments. The Fund's exposure to non-Investment Grade Debt Instruments is limited to a maximum of 20% of the Fund's Net Asset Value.

In addition to the Direct Investments and Indirect Investments described above, the Fund may also invest:

(i) up to 10% of its Net Asset Value in cash or up to 20% of its Net Asset Value in cash where the cash is booked in an account with the Depositary;
(ii) up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein; and/or
(iii) up to 10% of its Net Asset Value in ancillary liquid assets such as money market instruments, including but not limited to certificates of deposit, commercial paper or bankers' acceptances, government bonds.

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule 1 of the Prospectus.

Selecting Equity Instruments

To implement the Fund's investment objective, whether investing directly in equities or indirectly through the use of FDI the Manager will use a proprietary quantitative investment process and qualitative analysis for the selection of the Fund's equity instruments, as more particularly described below.

Selecting Debt Instruments

The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date). The Manager will also select the Debt Instruments which are identified as being sufficiently stable and liquid to allow the Fund to meet its investment objective.

Quantitative Factor Based Analysis

Investment in Equity Instruments and/or the selection of the equity indices/basket of equity indices/ basket of equities or equity related securities to the TRS/equity swapsare driven by an internal proprietary quantitative model developed by the Manager which aims to generate long-term capital appreciation. For the selection of these investments, the Manager will consider one or more of the following quantitative factors (so-called "smart factors") for the purpose of determining which investments to acquire or gain exposure to:

a) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) Value: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) Momentum: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) Minimum Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

e) Dividend: Dividend companies are companies characterised as companies which pay consistently higher dividends than their respective market peers.

f) Size: Small size companies are characterised as companies having a relatively smaller market capitalization than their peers.

g) Growth: Growth companies are companies with a higher than average growth rates in projected earnings.

h) ESG: ESG companies are companies which are characterised by higher ESG ranking than their peers. ESG ranking aims to measure a company's resilience to long-term, financially relevant ESG risks. To arrive at a final ESG ranking, the weighted average of individual Key Issue Scores is normalized relative to ESG ranking of Industry peers. There are three pillars of Key Issues: Environmental, Social and Governance (please see the table "Examples of ESG issues considered by the Manager" further below).

Qualitative Analysis

The choice of the factors will be based on a qualitative assessment of the current macroeconomic situation, as it relates to the sectors and countries in the investable region, and it is subject to the investment policy. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Qualitative research is the use of information for which it is not possible to run historical portfolio simulations on, it is non-numerical information and is information which does not lead to a quantifiable and definitive answer but which will allow the Manager to form an opinion on whether or not to invest in the particular investments mentioned above; i.e. research that is itself based on empirical, explorative and direct research. It serves to understand the reasons and tendencies behind most of the numerical data of quantitative research. Examples of the types of qualitative information and research are public economic reports released by international organizations such as Central Banks and economic research institutes.

ESG Integration

The Manager believes that ESG considerations should be a foundation of any investment process supporting long-term investing. To this purpose, the Manager systematically includes ESG analysis in its investment decision making process pertaining to its Direct Investment as explained above by relying on certain ESG screenings, practices and factors, which are summarised as follows and that can also be found in more detail on the Manager's website at the following link: https://finecoassetmanagement.com/sustainability/ or by requesting information directly from the Manager at: http://finecoassetmanagement.com/contact/

ESG Screenings

1. **Exclusion screenings**: in the process of selection of the permitted instruments, the Manager - in accordance with its exclusion policy (the "Exclusion Policy"), may identify issuers that are allegedly involved in breaches of international norms on, for example, environmental protection, human rights, labour standards and anti-corruption. If an issuer is identified in this screening process, action is taken by the Manager that may lead to the exclusion of such entity from the investment universe of the Fund.

The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

2. **ESG Assessment**: the Manager selects those securities for the Fund that show sound fundamentals and high ESG scores, while being valued at a discount to the Manager's assessment of intrinsic value.

   When considering ESG scores, the Manager has regard to ESG scores assigned by a third party data provider. Further information on ESG scores is available on the Manager's website at the link: http://finecoassetmanagement.com/sustainability/

   The due diligence includes an analysis on ESG risks material to the investee issuers and considers how those entities manage their sustainability risks.

3. **Data Reliance**: the Manager may (i) source data from third-party data providers such as MSCI Inc and Bloomberg, and may apply its discretion on the conclusions of the data providers, and/or (ii) carry out its own internal ESG analyses on issuers. Potential investments for which there is insufficient data available from third-party providers to conduct an ESG analysis, may be deemed not eligible for inclusion in the Fund's investment universe subject to the Manager's own internal ESG analysis and assessment of an issuer which may include engagement with the relevant issuer to understand their approach to ESG matters.

Examples of ESG issues considered by the Manager are:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Climate change and carbon emissions	Customer satisfaction	Board composition
Air and water pollution	Data protection and privacy	Audit committee structure
Biodiversity	Gender and diversity	Bribery and corruption
Deforestation	Employee engagement	Executive compensation
Energy efficiency	Community relations	Lobbying
Waste management	Human rights	Political contributions
Water scarsity	Labor standards	Whistleblower schemes

Use of FDI

The Fund may engage in FDI transactions for investment purposes, for the purposes of efficient portfolio management and for the purposes of hedging. The types of FDI that the Fund may use are total return swaps, equity swaps, IRS, futures and forwards, currency forwards and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled " Securities Financing Transactions.

Total Return Swaps:The Manager may swap some or all of the Fund's portfolio under a Total Return Swap to exchange the performance and income of some or all of the Fund's portfolio in return for the performance and income of the underlying assets in the Total Return Swap. In addition, the Fund may enter into a Total Return Swap on a reference basket of assets the composition of which will be in line with the investment policy. A Total Return Swap is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS as described in this paragraph and in the Investment Objective and Policies section above. It is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS.

Interest Rate Swaps: The Fund may use IRS in order to swap out an amount equal to the interest rate payments it receives from its investment in Debt Instruments for the purposes of generating income for its equity swaps.

Equity Swaps: The Fund may use swaps on equities/equity related securities, baskets of equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Futures and Forwards: The Fund may use future and forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to investments or markets to which the Fund may be exposed to. Futures and forwards contracts may also be used for investment purposes or to allocate investments within the Fund by taking exposure to specific markets or issuers or to increase the Fund's exposure to general global market risk on a temporary basis, or on a long-term basis.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exposure, arising, for instance, from the redenomination of an investment designated in a currency other than the Fund's Base Currency, and for investment purposes. Currency forwards can be used for taking active currency risk where the Manager takes long or short exposure to currencies that it expects to rise or fall in value as the case may be, as determined based on the assessment of the relevant factors that determine the value of currency markets such as global economic conditions, interest rates, capital flows and credit spreads (i.e. difference in yield between debt securities of similar maturities). The Fund's net exposure to long currency forward positions may be up to 100% of the Fund's Net Asset Value and its net exposure to short currency forward positions may be up to 100% of the Fund's Net Asset Value. Due to the fact that currency positions held by the Fund may not correspond with the asset position held by the Fund, the effect of movements in foreign exchange rates may be significantly different in the Fund compared to another fund with similar investments.

Options: The Fund may buy or sell options. These put and call options may be used to gain exposure to investments or for the purposes of hedging in an efficient, liquid and effective way. Put options may be used to hedge investments against the downside market risk by permitting the Fund to sell investments at a fixed price. The Fund may buy call options to provide an efficient market exposure in a rising market. The Fund may sell call or put options to provide an extra income to the Fund or to reduce the costs of purchasing call or put options.

Exposure to Indices: The Fund may take exposure to one or more indices through the use of Total Return Swaps, equity swaps or through futures and forwards on indices or options on indices, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The Fund may as part of its investment strategy hold short equity positions (taken only synthetically through derivatives). In the case of Equity Instruments, such short positions may be used to express a view on price movements of investments or equity markets generally by taking short positions on individual Equity Instruments or selling equity index positions. The expected maximum level of long derivative positions which the Fund may hold is 900% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 900% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI Europe ESG Leaders Index, an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is a capitalization weighted index that provides exposure to companies with high ESG performance relative to their sector peers. The Index consists of large and mid cap companies in 15 developed markets countries in Europe.In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 1000% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of Investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be 40 % of the Fund's Net Asset Value, subject to a maximum exposure of 70 % of the Fund's Net Asset Value.

Collateral Management

All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”.

Investor Profile

The Fund is suitable for investors who seek capital appreciation over the long-term, and are prepared to accept a high level of risk.

Manager

The Fund is managed by the Manager who is responsible for the overall management of the Fund, including discretionary portfolio management of the Fund.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

While the Manager integrates Sustainability Risk into the Fund’s investment decision making process, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

In relation to its Direct Investment, the Fund integrates Sustainability Risk into its investment decision making process as summarised above under “ESG Integration”:

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fundfalls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment and may have an equivalent negative impact on the Net Asset Value of the Fund. The Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund’s approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L ACC	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating
Class K Acc	€100	26 August 2024 - 24 February 2025	Euro	No	No	€100 / €100	Accumulating
Class KH Acc GBP	£100	26 August 2024 - 24 February 2025	GBP	Yes	No	£100 / £100	Accumulating
Class K Acc GBP	£100	26 August 2024 - 24 February 2025	GBP	No	No	£100 / £100	Accumulating
Class J Acc	€10,000	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
Up to 0.80% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge fee is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: Fineco AM Smart Factors Europe Fund
Legal entity identifier: 6354005QDHWPSX4NGJ31

Environmental and/or social characteristics

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?	
☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics promoted by the Fund include:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors is a key element of portfolio construction. The equity instruments in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and/or social characteristics, such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies by the

Manager and/or third party data providers with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive ESG factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a positive impact on the environment or society at large.

2. **Fund Level ESG Scoring: :** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control introduces a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

3. **Negative Screening (Norm-based exclusions)**
For direct holdings, the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which it [or its clients] deems incompatible with minimum responsible investing principles. To align the Fund's investments with this approach, the Manager has adopted a firm wide Exclusion Policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund invested in ESG screened index constituents which demonstrates the Fund's positive ESG tilt;

iii) The underlying direct holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider) and

v) The percentage of the Fund investment universe subject to the Manager's exclusion policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, its internal methodology to determine sustainable investments, which partially relies (for the good governance and positive contribution criteria, as per 1 and 3 below) on its ESG third party data provider's methodology, as also clearly explained in the publicly available document on the Manager's website at the below link. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. A company must meet the criteria described below in order to be considered as contributing to an environmental or social objective:

1. Demonstrate good governance. A company must pass MSCI ESG Research's criteria for the SFDR Article 2 (17) "good governance" (strong overall management and governance structures). Pass indicates that the ESG Rating score is BB or above.

2. Do no significant harm to other environmental or social objectives. The Manager applies its own norms-based Exclusion Policy as the criteria to assess if the company passes or fails the SFDR article 2 (17) "do no significant harm".

3. Make a positive contribution towards an environmental or social objective. A company must derive at least 20% of revenue from economic activities that positively contribute to a social or environmental theme and / or have a carbon emissions reduction target approved by the science-based targets initiative (SBTi). From the perspective of targeting an environmental objective, revenue alignment includes activities focused on climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources. Activities focused on social objectives include access to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services, and bridging the digital divide in least developed countries.

More information on the internal methodology can be found on the website of the Manager: https://finecoassetmanagement.com/responsible-investing

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at portfolio level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or its peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine what the Manager can improve at Fund level and where the Manager can engage with relevant issuers to improve on such indicators.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic

Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through ensuring that the sustainable investments that the Manager makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in investee companies that demonstrates that they do no significant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☑ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided
in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund follows an investment strategy which seeks to provide long term capital appreciation.

The Manager systematically includes ESG analysis in its investment decision making process pertaining by relying on certain ESG screenings, practices and factors, which are summarised as follows and that can also be found in more detail on the Manager's website at the following link: https://finecoassetmanagement.com/sustainability/;

ESG Screenings

1. **Exclusion screenings**: in the process of selection of the permitted instruments, the Manager - in accordance with its exclusion policy (the "Exclusion Policy"), may identify issuers that are allegedly involved in breaches of international norms on, for example, environmental protection, human rights, labour standards and anti-corruption. If an issuer is identified in this screening process, action is taken by the Manager that may lead to the exclusion of such entity from the investment universe of the Fund.

   The exclusions specifically covered by the Manager's Exclusion Policy currently include:

   a. Issuers that breach the principles of the United Nations Global Compact(UNGC);

b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

2. **ESG Assessment**: the Manager selects those securities for the Fund that show sound fundamentals and high ESG scores, while being valued at a discount to the Manager's assessment of intrinsic value.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. Directly held equity investments of the Fund will only be drawn from constituents of ESG screened indices that integrate environmental and social characteristics;
b. Minimum underlying security score of BB by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;
c. Exclusion Policy
The Manager's exclusion policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable

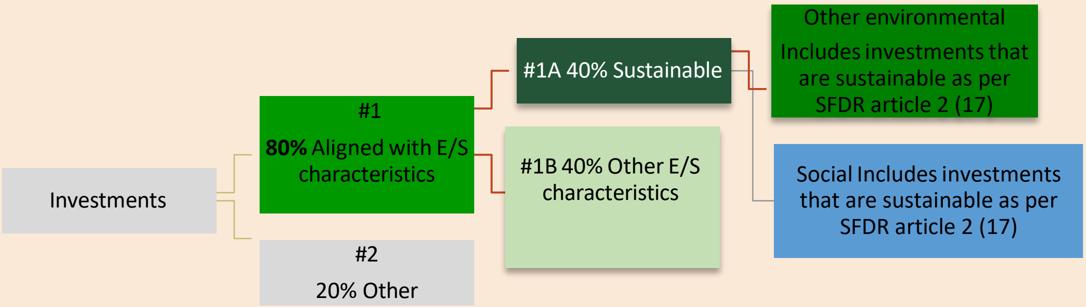
What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products NAV which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also commits to a minimum proportion of 40% in sustainable investments.

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund and not the underlying derivative exposure.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Fund can gain exposure through derivatives to certain ESG screened indices. However, the Manager has determined that it is more appropriate not to look through derivatives employed by its Funds' under management in order to assess the attainment of environmental or social characteristics. Thus, the Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

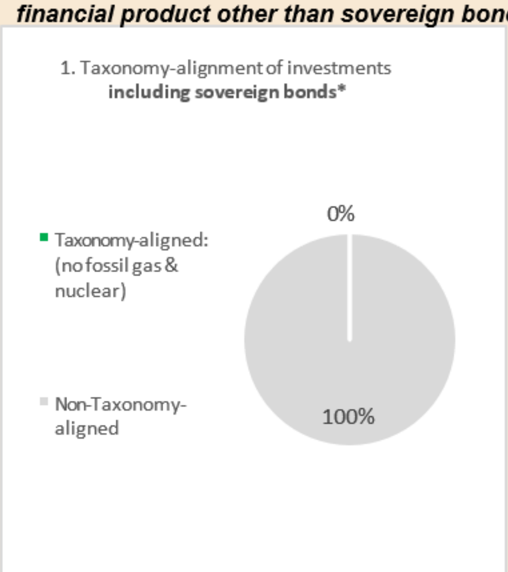
Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy[1]?

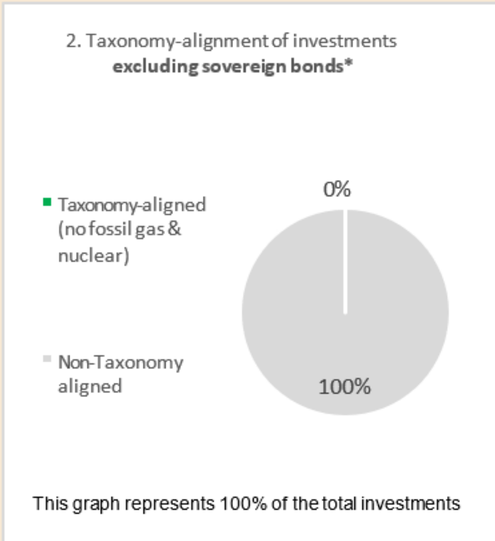
☐ **Yes:**

☐ **In fossil gas** ☐ **In nuclear energy**

☒ **No**

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





This graph represents 100% of the total investments

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

Enabling activities directly enable other activities to make a substantial contribution to an environmental

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%

What is the minimum share of socially sustainable investments?

40%

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund may principally use derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with E&S characteristics promoted by the Fund and not the underlying derivative exposure.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Management Company's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

SMART FACTORS EMERGING MARKETS FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to the **SMART FACTORS EMERGING MARKETS FAM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Fund's Net Asset Value may be subject to increased volatility as a consequence of its investment in equities.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Debt Instruments	such as fixed or floating rate government bonds, corporate bonds, treasury bonds, municipal bonds and commercial paper, of Investment Grade or sub-Investment Grade, and issued by governments, quasi-sovereign entities, institutions, public listed companies (or companies established other than as public listed companies);
Dealing Deadline	means 11.59am (Irish time) on the immediately preceding Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Equity Instruments	means equity and/or equity related securities such as warrants, convertible stocks (which may or may not embed leverage) or preferred stock listed (or about to be listed) or traded on any Recognised Market - of (i) issuers listed or traded on emerging market stock exchanges or (ii) companies considered by the Manager to be emerging market companies and which are listed or traded on other Recognised Markets.
Valuation Point	means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective and Policies

The investment objective of the Fund is to provide long-term capital growth.

The Fund will seek to achieve its investment objective by (i) investing directly in Equity Instruments as described in the section headed "Direct Investment" below; and/or (ii) indirectly through the use of Total Return Swaps ("TRS") or through a combination of investment in interest rate swaps ("IRS") and equity swaps, the funding of which will be facilitated by the purchase of Debt Instruments as described in the section headed "Indirect Investment" below. The Fund may be partially invested directly in Equity Instruments and partially invested indirectly through TRS and equity swaps. The allocation of the Fund's portfolio to direct investment in Equity Instruments or indirect investments through the use of FDI will depend on the Manager's assessment of prevailing market conditions and most efficient and cost effective way of achieving the Fund's investment objective.

Benchmark Information

From time to time, the Manager, considering the degree of representativeness of underlying markets and their liquidity, strategically selects a benchmark or index (the "Index") appropriate to the Fund's investment policies, in reference to which the Fund is then managed and compared to which the Fund will seek to achieve a similar rate of return, gross of fees. Currently, the Fund is actively managed in reference to the MSCI Emerging Markets Index. The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

The above Index is provided by an administrator, MSCI Limited, which was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "Benchmark Regulation").

Direct Investment

To implement its investment objective via direct investment, the Fund may invest in Equity Instruments of companies that are domiciled in, or carrying out the main part of their economic activity in emerging markets and that are listed on Recognised Markets.

Indirect Investment

To implement its investment objective via indirect investment the Fund may:

(i) enter into TRS, and/or equity swaps, that provide the Fund with exposure to an equity index/basket of equity indices/basket of emerging market equities or emerging market equity related securities, in exchange for the performance and/or income of some or all of the Fund's assets which may be a globally diversified portfolio of equities or the Fund's income under the IRS as described below. The Manager will select the global diversified portfolio of equities, according to an evaluation of risk (i.e., country risk, sector risk, maximum drawdown risk - meaning the maximum drop in value of an equity holding) and liquidity risk (i.e., how easy it is to realize these equities). The underlying assets of the TRS and equity swaps may consist of a basket of equities or equity related securities that are selected by the Manager; and/or

(ii) as mentioned on page 1 above, invest up to 100% of its assets in Debt Instruments , following which, the Fund will enter into IRS in which it will swap out an amount equal to the interest rate payments it receives on the Debt Instruments to provide income for the equity swap payments described in (i) above.

The counterparties to the IRS, TRS and equity swaps will comply with Regulation 8 of the Central Bank UCITS Regulations. The counterparties will have no discretion in respect of the TRS and equity swaps and the TRS and equity swaps will be unfunded i.e. no upfront payment is made. The value of the Fund's Shares will be linked to the performance of the underlying assets of the TRS or equity swap it enters.

The Fund will be exposed to the credit risk of the counterparties to the TRS and IRS. If a counterparty defaults on its obligations, the Fund may experience a decline in the value of its portfolio. In the case of the termination and close-out of a TRS or IRS, the Fund will be exposed to the direct holdings of global equity investments and Debt Instruments.

The portfolio of Debt Instruments will be selected by the Manager, who will give preference to investment in Debt Instruments of global governments/corporates when selecting their investments. The Fund's exposure to non-Investment Grade Debt Instruments is limited to a maximum of 20% of the Fund's Net Asset Value.

In addition to the Direct Investments and Indirect Investments described above, the Fund may also invest:

(i) up to 10% of its Net Asset Value in cash or up to 20% of its Net Asset Value in cash where the cash is booked in an account with the Depositary;
(ii) up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein; and/or
(iii) up to 10% of its Net Asset Value in ancillary liquid assets such as money market instruments, including but not limited to certificates of deposit, commercial paper or bankers' acceptances, government bonds.

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule 1 of the Prospectus.

Selecting Equity Instruments

To implement the Fund's investment objective, whether investing directly in equities or indirectly through the use of FDI the Manager will use a proprietary quantitative investment process and qualitative analysis for the selection of the Fund's equity instruments, as more particularly described below.

Selecting Debt Instruments

The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments' particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date). The Manager will also select the Debt Instruments which are identified as being sufficiently stable and liquid to allow the Fund to meet its investment objective.

Quantitative Factor Based Analysis

Investment in Equity Instruments and/or the selection of the equity indices/basket of equity indices/ basket of equities or equity related securities to the TRS/equity swapsare driven by an internal proprietary quantitative model developed by the Manager which aims to generate long-term capital appreciation. For the selection of these investments, the Manager will consider one or more of the following quantitative factors (so-called "smart factors") for the purpose of determining which investments to acquire or gain exposure to:

a) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) Value: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) Momentum: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) Minimum Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

e) Dividend: Dividend companies are companies characterised as companies which pay consistently higher dividends than their respective market peers.

f) Size: Small size companies are characterised as companies having a relatively smaller market capitalization, than their peers.

g) Growth: Growth companies are companies with a higher than average growth rates in projected earnings.

Qualitative Analysis

The choice of the factors will be based on a qualitative assessment of the current macroeconomic situation, as it relates to the sectors and countries in the investable region, and it is subject to the investment policy. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Qualitative research is the use of information for which it is not possible to run historical portfolio simulations on, it is non-numerical information and is information which does not lead to a quantifiable and definitive answer but which will allow the Manager to form an opinion on whether or not to invest in the particular investments mentioned above; i.e. research that is itself based on empirical, explorative and direct research. It serves to understand the reasons and tendencies behind most of the numerical data of quantitative research. Examples of the types of qualitative information and research are public economic reports released by international organizations such as Central Banks and economic research institutes.

Use of FDI

The Fund may engage in FDI transactions for investment purposes, for the purposes of efficient portfolio management and for the purposes of hedging. The types of FDI that the Fund may use are total return swaps, equity swaps, IRS, futures and forwards, currency forwards and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled " Securities Financing Transactions.

<u>Total Return Swaps:</u>The Manager may swap some or all of the Fund's portfolio under a Total Return Swap to exchange the performance and income of some or all of the Fund's portfolio in return for the performance and income of the underlying assets in the Total Return Swap. In addition, the Fund may enter into a Total Return Swap on a reference basket of assets the composition of which will be in line with the investment policy. A Total Return Swap is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS as described in this paragraph and in the Investment Objective and Policies section above. It is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS.

<u>Interest Rate Swaps:</u> The Fund may use IRS in order to swap out an amount equal to the interest rate payments it receives from its investment in Debt Instruments for the purposes of generating income for its equity swaps.

<u>Equity Swaps:</u> The Fund may use swaps on equities/equity related securities, baskets of

equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Futures and Forwards: The Fund may use future and forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to investments or markets to which the Fund may be exposed to. Futures and forwards contracts may also be used for investment purposes or to allocate investments within the Fund by taking exposure to specific markets or issuers or to increase the Fund's exposure to general global market risk on a temporary basis, or on a long-term basis.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exposure, arising, for instance, from the redenomination of an investment designated in a currency other than the Fund's Base Currency, and for investment purposes. Currency forwards can be used for taking active currency risk where the Manager takes long or short exposure to currencies that it expects to rise or fall in value as the case may be, as determined based on the assessment of the relevant factors that determine the value of currency markets such as global economic conditions, interest rates, capital flows and credit spreads (i.e. difference in yield between debt securities of similar maturities). The Fund's net exposure to long currency forward positions may be up to 100% of the Fund's Net Asset Value and its net exposure to short currency forward positions may be up to 100% of the Fund's Net Asset Value. Due to the fact that currency positions held by the Fund may not correspond with the asset position held by the Fund, the effect of movements in foreign exchange rates may be significantly different in the Fund compared to another fund with similar investments.

Options: The Fund may buy or sell options. These put and call options may be used to gain exposure to investments or for the purposes of hedging in an efficient, liquid and effective way. Put options may be used to hedge investments against the downside market risk by permitting the Fund to sell investments at a fixed price. The Fund may buy call options to provide an efficient market exposure in a rising market. The Fund may sell call or put options to provide an extra income to the Fund or to reduce the costs of purchasing call or put options.

Exposure to Indices: The Fund may take exposure to one or more indices through the use of Total Return Swaps, equity swaps or through futures and forwards on indices or options on indices, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The Fund may as part of its investment strategy hold short equity positions (taken only synthetically through derivatives). In the case of Equity Instruments, such short positions may be used to express a view on price movements of investments or equity markets generally by taking short positions on individual Equity Instruments or selling equity index positions. The expected maximum level of long derivative positions which the Fund may hold is 900% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 900% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI Emerging Markets Index, an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index tracks the total returns for the world's developed and emerging markets as a whole, covering approximately 95 percent of the free float market capitalization of the investable stock universe with a variable number of components. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 1000% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of Investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be 40 % of the Fund's Net Asset Value, subject to a maximum exposure of 70 % of the Fund's Net Asset Value.

Collateral Management

All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy".

Investor Profile

The Fund is suitable for investors who seek capital appreciation over the long-term, and are prepared to accept a high level of risk.

Manager

The Fund is managed by the Manager who is responsible for the overall management of the Fund, including discretionary portfolio management of the Fund.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process for Direct Investments as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L ACC	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000 / €100	Accumulating
Class K Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€100 / €100	Accumulating
Class KH Acc GBP	£100	2 December 2022 - 1 June 2023	GBP	Yes	No	£100 / £100	Accumulating
Class K Acc GBP	£100	2 December 2022 - 1 June 2023	GBP	No	No	£100 / £100	Accumulating
Class A Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€500 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
Up to 0.80% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge fee is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

GLOBAL DEFENCE FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **GLOBAL DEFENCE FAM FUND** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	Means 20 May 2021, 20 May 2022, 20 May 2023, 20 May 2024 and 20 May 2025 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to investment grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9 a.m. (Irish time) on the 2nd of March 2020 and will close at 5 p.m. (Irish time) on the 16th of March 2020. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer

Price”).

Maturity Date:	20 May 2025
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Underlying Funds which provide exposure to the above instruments.
Subscription Period:	means from 17 March 2020 to 20 May 2020 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled “Investment Policy” below), (ii) seek to protect the Fund’s Net Asset Value per Share at 85% of the Initial Offer Price at the Maturity Date and (iii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the “Funding Investments”).

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade Debt Instruments issued by credit institutions authorised to operate in the UK and/or credit institutions authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority’s credit institution register. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date). The Debt Instruments in which the Fund invests will be Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupon it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Basket*

The Fund will then use the payments it receives from the coupon swaps discussed at (ii) above to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a cash flow and a return linked to a basket of equities/equity indices/fixed income indices (the "Basket"). The cash flows received by the Fund will be used to partially pay the total expenses of the Fund and to provide a return linked to the Basket which will be actively managed by the Manager.

The Basket will comprise equities and/or equity indices and/or fixed income indices which provide exposure to developed and emerging market regions. The Manager will from time to time determine the optimal composition of the Basket depending on their view of the market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. Analysis of such other macroeconomic factors involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices. In addition the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. The Manager will also employ an internal quantitative model which aims to keep the Basket volatility within a predefined level in order to achieve a positive performance in a market where securities prices are mostly moving upwards, while limiting losses in downward markets where the overall direction of securities prices is downward.

Having regard to the quantitative and qualitative analysis described above, the Basket asset allocation (i.e. the weighting given to specific indices in the Basket) may be made up of the following component parts:

- Stability: the elements of the Basket constituting the stable component have the objective of limiting the volatility of the Basket as they will be selected with low/moderate risk profiles. This stability component may include fixed income and liquidity/money markets indices.
- Performance: the elements of the Basket constituting the performance component are selected with the objective of enhancing the performance side of the Basket i.e. the stable component will look to balance volatility (when and if required) while the performance component will look to select elements that have a level of positive performance over the long term. This performance component may include equity indices.

For further information on the indices that may make up the Basket see below the sub-section entitled "Exposure to Indices".

IV. *Seeking to achieve protection*

In addition to what is described in (iii) above, the Equity Swap will be designed so that it will contain a put option which, at the Maturity Date, protects (**in the absence of OTC counterparty default**) the Net Asset Value per Share of the Fund at 85% of the Initial Offer Price. The put option embedded in this Equity Swap limits, at the Fund's Maturity Date, the maximum loss that this Equity Swap can incur to -15% of its notional amount. The notional amount of this Equity Swap is the number of Shares in issue in the Fund multiplied by the Initial Offer Price. The put option embedded in this Equity Swap can be exercised by the Fund at the Maturity Date, to protect the NAV per Share of the Fund at 85% of the Initial Offer Price.

A put option is an OTC contract sold for a premium that gives the Fund the right, but not the obligation, to sell a specified amount of an underlying instrument (in this case a basket of indices) at a specified price (in this case that specified price being at least 85% of the initial value of the basket of indices which is also 85% of the notional of the Equity Swap), at a specified time.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS") and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the

Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 400% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 400% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 400% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for investors who are able to identify a specific target date when they need to withdraw their investment and who are seeking to avail of a return on their investment over a 5 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	Closed	Euro	No	€1,000	Up to 2%	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 3% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Share.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE FAM FUND 2026

SUPPLEMENT DATED 30 NOVEMBER 2023

This Supplement contains specific information in relation to **GLOBAL DEFENCE FAM FUND 2026** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	Means 30 June 2021, 30 June 2022, 30 June 2023, 30 June 2024, 30 June 2025 and 30 June 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to investment grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets),

mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund closed in May 2020. During the Initial Offer Period, Shares were available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 November 2026.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Underlying Funds which provide exposure to the above instruments.
Subscription Period:	The Subscription Period for the Fund closed in June 2020.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>*Funding Investments*</u>

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively). The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date). The Debt Instruments in which the Fund invests will be Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding investment. This constant monitoring will include asessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and
- engage in the use of forward contracts (as explained in detail below on page 4) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such

forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the

Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 250% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 250% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type

Class L Dist	€100	Closed	Euro	No	€1,000	Up to 2%	€100	Distributing

During the Initial Offer Period Shares were available for subscription at the Initial Offer Price as indicated in the table above. When the Initial Offer Period closed, Shares were available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
As the Subscription Period has closed, the Fund is not accepting any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

SMART GLOBAL DEFENCE FAM FUND 2026

SUPPLEMENT DATED 29 DECEMBER 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE FAM FUND 2026** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	30 September 2021, 30 September 2022, 30 September 2023, 18 December 2024, 17 December 2025 and 30 December 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund closed in 2020. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares were available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 December 2026.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Underlying Funds which provide exposure to the above instruments.
Subscription Period:	The Subscription Period for the Fund closed in 2020.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>*Funding Investments*</u>

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational

Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 4) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

(iv) Generation of additional income

In order to seek to obtain some additional income the Fund may engage in the practice of selling or buying Credit Default Swaps ("CDS") on an index, while simultaneously entering into CDS to either buy or sell all of the individual constituents of the aforementioned index. By doing this form of arbitrage trading (arbitrage meaning the simultaneous buying and selling of securities in different markets or in derivative form in order to take advantage of differing prices for the same asset), the Fund can profit from exploiting price differences between the index, and the individual constituents that make up that index, without being exposed to any default risk in respect of the underlying of the various CDS.

The CDS transactions referred to above allow the Fund to potentially gain some additional income in an economically appropriate manner, with an acceptably low level of risk relative to the expected return.

The price differences in the market which the Fund is looking to exploit are often driven by hedging needs in the market. For example, market participants looking to hedge their overall credit exposure by using an Index CDS can, in some cases, make the price of an Index CDS more expensive than a CDS on the individual index constituents.

Please see below in the section entitled "Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques", a description of how the buying and selling of CDS work and the potential benefits that derive to the Fund therefrom.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use

of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps (“TRS”): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund’s portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund’s assets may be subject to total return swaps on the financial instruments outlined in the Fund’s investment objective and policy and it is expected that, in general, 0%-100% of the Fund’s assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund’s credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 500% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 500% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 750% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	Closed	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	Closed	Euro	No	€1,000	N/A	€100	Distributing

During the Initial Offer Period Shares were available for subscription at the Initial Offer Price as indicated in the table above. When the Initial Offer Period closed, Shares were available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

As the Subscription Period has closed, the Fund is not accepting any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE FAM FUND 2026 II

SUPPLEMENT DATED 29 DECEMBER 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE FAM FUND 2026 II** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	30 September 2021, 30 September 2022, 30 September 2023, 18 December 2024, 17 December 2025 and 30 December 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund closed in 2020. During the Initial Offer Period, Shares were available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 December 2026.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Underlying Funds which provide exposure to the above instruments.
Subscription Period:	The Subscription Period for the Fund closed in 2020.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 4) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

(iv) Generation of additional income

In order to seek to obtain some additional income the Fund may engage in the practice of selling or buying Credit Default Swaps ("CDS") on an index, while simultaneously entering into CDS to either buy or sell all of the individual constituents of the aforementioned index. By doing this form of arbitrage trading (arbitrage meaning the simultaneous buying and selling of securities in different markets or in derivative form in order to take advantage of differing prices for the same asset), the Fund can profit from exploiting price differences between the index, and the individual constituents that make up that index, without being exposed to any default risk in respect of the underlying of the various CDS.

The CDS transactions referred to above allow the Fund to potentially gain some additional income in an economically appropriate manner, with an acceptably low level of risk relative to the expected return.

The price differences in the market which the Fund is looking to exploit are often driven by hedging needs in the market. For example, market participants looking to hedge their overall credit exposure by using an Index CDS can, in some cases, make the price of an Index CDS more expensive than a CDS on the individual index constituents.

Please see below in the section entitled "Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques", a description of how the buying and selling of CDS work and the potential benefits that derive to the Fund therefrom.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use

of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 500% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 500% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 750% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)**. While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	Closed	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	Closed	Euro	No	€1,000	N/A	€100	Distributing

During the Initial Offer Period Shares were available for subscription at the Initial Offer Price as indicated in the table above. When the Initial Offer Period closed, Shares were available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
As the Subscription Period has closed, the Fund is not accepting any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE FAM FUND 2029 ROLL
SUPPLEMENT DATED 31 DECEMBER 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE FAM FUND 2029 ROLL** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	30 December 2021, 30 December 2022, 30 December 2023, 30 December 2024, 7 January 2026, 6 January 2027, 5 January 2028 and 10 January 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period closed on 20 October 2020. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	12 January 2029.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	The Subscription Period for the Fund closed on 2 December 2020.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>Funding Investments</u>
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and
- engage in the use of forward contracts (as explained in detail below on page 4) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250%of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	Closed	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	Closed	Euro	No	€1,000	N/A	€100	Distributing
Class D Accumulating	€100	Closed	Euro	No	€500	No	€100	Accumulating
Class DH Accumulating	€100	Closed	Euro	Yes	€500	No	€100	Accumulating

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. When the Initial Offer Period closed, Shares were available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
As the Subscription Period has closed, the Fund is not accepting any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

INFUSIVE CONSUMER ALPHA GLOBAL LEADERS FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to INFUSIVE CONSUMER ALPHA GLOBAL LEADERS FAM FUND (the "Fund"), a sub-fund of FAM SERIES UCITS ICAV (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Due to the Fund's ability to invest in financial derivative instruments the Fund may have a higher than average degree of risk. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Please see the section of this Supplement entitled "Risk Factors", together with the section of the Prospectus entitled "Risk Factors" for detailed disclosures of the risks associated with an investment in the Fund.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective by investing in a portfolio of equities.

The Investment Manager will target listed companies whose products, goods and services are believed by the Investment Manager to deliver joy and happiness to individuals globally. This belief is based on the Investment Manager's observations of the long-term success of consumer companies and its assessment of six drivers individuals use to fulfil their consumer needs, as outlined further below. The Investment Manager refers to this concept as Consumer Alpha™ and it is the vision that a person's purchasing decisions are driven by one immutable and universal need, the search for pleasure. Pleasure in this context is considered to be the enjoyment or satisfaction derived from those things that an individual likes. The joy and happiness that certain products, goods or services provide to individuals reinforces positive consumption habits and can increase the perceived value of those products, goods or services. The Investment Manager maintains proprietary mappings designed to identify the products, goods and services that are capable of benefiting from this Consumer Alpha™ and it will be this analysis that will help build the Fund's portfolio of equities. The Investment Manager's proprietary mapping involves a process enabling an analysis of the equities available for investment by the Fund against Consumer Alpha™ so that those equities that best match the six drivers discussed below are selected for investment. The Fund's investments will be in those companies believed to be "global leaders" in the delivery of Consumer Alpha™.

The Fund may invest across global geographies and may invest in equities of issuers in any market sector that is considered capable of satisfying Consumer Alpha™. Such markets currently include consumer facing sectors, which, based on MSCI's global industry classification standard ("GICS"), equate to the following four sectors:

1. Consumer Discretionary Sector - this includes market sectors such as the luxury goods sector, the leisure industry, the hotel and restaurant sectors etc.
2. Consumer Staples - this includes the food and beverage as well as those issuers involved in household and personal products.
3. Communication Services - this includes sectors such as media and entertainment.
4. Information Technology - this includes consumer facing digital companies

Direct exposure to the abovementioned investments in India and Russia will be achieved in the following manner:

(i) Direct Investment in India

The Fund may invest up to 5% of its Net Asset Value in the abovementioned investments from issuers in India as a Foreign Portfolio Investor registered with the Securities and Exchange Board of India under the Securities and Exchange Board of India (Foreign Portfolio Investors) Regulations, 2019, as may be amended from time-to-time, and for this purpose, the Fund has registered itself as a Category I FPI. This license will allow the Fund to purchase the abovementioned investments in India. An FPI wishing to invest into India must register itself as a designated depositary participant with SEBI for the purpose of the FPI Regulations under the single window clearance mechanism and must comply with the provisions of the FPI Regulations. Depending on their risk profile, applicants for FPI registration must fall under one of two categories. The Fund will register as a Category I FPI, which is the category that applies to entities that are considered to be appropriately regulated by SEBI.

(ii) Direct Investment in Russia

The Fund may invest up to 5% of its Net Asset Value in the abovementioned investments that are listed or traded on the Moscow Exchange only.

In addition to the above mentioned direct exposure to investments in India and Russia, indirect exposure to China may also be achieved through the acquisition of American Depositary Receipts (ADRs) or participatory notes ("P-Notes") and swaps, which are listed or traded on one of the Recognised Markets listed in Schedule I of the Prospectus.

The Investment Manager initially applies a systematic investment screening process in order to narrow the universe of investible companies. This process involves the filtering of investments in order to identify investible companies that (i) operate in the four consumer facing sectors identified above; and (ii) have highly liquid stocks, as determined by their average daily trading volumes on recognised exchanges. Following this filtering process, the Investment Manager will then turn to a consideration of Consumer AlphaTM and whether the shortlist of equities benefit from it.

The Investment Manager believes that companies which satisfy Consumer Alpha™ will benefit from preferred sales dynamics including: repeat purchases, inelasticity of demand (meaning that individuals are less likely to react negatively to a change in the cost of a product, good or service), steady profit growth and higher pricing power.

In managing the Fund, the Investment Manager employs a top-down investment strategy to select and manage the Fund's investments. This top-down approach involves the identification by the Investment Manager of six drivers consistently relied upon by individuals to fulfil their consumer needs. The six drivers are as follows:

- Status - this driver is linked to a consumer's desire to demonstrate success and portray a certain image, which can be seen in the purchase of aspirational goods. Luxury goods companies go to great lengths to nurture and protect their brand image.
- Indulgence - consumers get joy from indulging in small daily pleasures, such as chocolate, coffee or eating out, and the Investment Manager is of the view this will always be true in moderation.
- Entertainment - individuals have always desired to be entertained, and with more free time and more choices available, it only grows in importance. This is sought from media content, video games, and social media to name a few examples.
- Beauty - the consumer aspires to express her best image and goes to great efforts to ensure that she looks and feels the way she wants. This can be observed in the regular purchase of cosmetics and skincare products.

- Time - the individual is always looking to save time so that they can spend this finite resource on doing what they love. Several digital sub-industries satisfy or facilitate this, including e- commerce, digital payments, and search engines.
- Health and Performance - individuals desire to take care of their bodies and improve their personal performance. This behaviour can be seen in areas like healthy eating or spending on athletic footwear and apparel.

The Investment Manager considers each of the six drivers to have one core purpose, the consistent delivery of joy to the individuals that purchase products, goods and services. From these drivers, the Investment Manager identifies specific products, goods and services that are best placed to provide this joy to individuals.

In utilising a top-down investment strategy to select the Fund's investments, the Investment Manager will make use of (i) the historical knowledge and expertise it has gained from 20 years of investment experience, (ii) databases to design and study global secular trends including Euromonitor, broker research and white papers, (iii) alternative data including customised consumer surveys and the digital footprints of global consumers and (iv) the resulting scores identifying the top performing companies when each piece of information is inputted into the Investment Manager's proprietary criteria for asset selection.

The Investment Manager takes a long-term assessment of companies and appraises investments against the aforementioned six drivers of consumer behaviour. The investment process involves a screening and a rating of companies to identify those stocks whose values are mostly correlated to consumer sentiment in accordance with the Consumer Alpha™ model. Following this appraisal, the Investment Manager conducts a quality assessment on proposed investments meaning an assessment that the companies are well-managed businesses, as demonstrated by consistent operating histories and financial performance. The purpose of the quality assessment is to validate or rule out the relevant stock for selection by the Investment Manager in the Fund's portfolio.

The Investment Manager will seek to establish a portfolio comprising of at least 40 best-in-class Consumer Alpha™ businesses across the globe. Investments will be selected based on the Consumer Alpha™ philosophy set out above. The companies deemed best placed to meet the six drivers set out above and those that are capable of (i) establishing a competitive advantage and are therefore protected by barriers to entry (such as the existence of patents, geographical barriers, economies of scale and strong existing brand identities) in their relevant markets, (ii) successfully manage the allocation of their capital and price elasticity and (iii) those that can take advantage of industry trends, are deemed by the Investment Manager to be the "best-in-class". Consumer Alpha™ is based on the belief that consumers themselves drive the performance of the most enduringly successful products and companies across the globe. Companies that provide these products are considered by the Investment Manager to be the ones that secure themselves the most stable source of demand over the long term.

Furthermore, the Investment Manager will make use of a risk mitigation program of listed derivatives (the "Infusive Risk Program"), as outlined below. The Infusive Risk Program is proprietary to the Investment Manager. The objective of the Infusive Risk Program is to protect the Fund from extreme market declines, as well as to reduce the overall risk of the Fund's equity positions losing money by, in particular, using options listed on indices (including options on volatility indices), single name options and currency forwards. Please see the sub-sections below entitled "Listed Options" and "Currency Forwards" for further detail on the use of these instruments and how they assist in protecting the Fund.

Ultimately, the Infusive Risk Program provides the confidence to stay fully invested throughout market cycles and allows the equity positions to generate long term / multi annual positive returns, capturing the full potential of those positions.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

The Fund's investments will be limited to securities and exchange traded FDIs that are traded on the markets listed in Schedule I of the Prospectus.

Cash Management

In exceptional circumstances, the Fund's assets, for cash management purposes, may be held in government bonds (with a fixed or floating rate) and money market funds. Investment in money market funds will be subject to the aggregate limit of 10% of the Net Asset Value in collective investment schemes.

Use of Financial Derivative instruments ("FDIs") and other instruments and Techniques

The Fund will use FDIs for investment purposes or for efficient portfolio management, including but not limited to for risk reduction purposes. The types of FDIs that the Fund may use are: currency forwards, listed options and total return swaps and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective, to protect risk to capital as well as hedge against currency risk and duration and the expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund will use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of particular Share Classes, where relevant.

Listed Options: The Fund will typically use listed options to hedge certain risks out of the portfolio in accordance with its investment policy. The Fund may also buy listed call options to gain exposure to individual equity securities that the Fund may acquire in accordance with its investment policy and can provide an efficient, liquid and effective mechanism for taking a position in equity securities. Put options may be bought to reduce exposure to equity securities or hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a sell-off and decline in market values. The Fund may write put or call options on equity securities as a means of generating ancillary income or for the purpose of taking or reducing exposure to equity securities.

Total Return Swaps: Occasionally the Fund may enter into total return swaps to gain or reduce exposure to equity securities as listed in the Investment Objective and Policies section. The Fund's maximum exposure to total return swaps, based on the notional value of such instruments, is 150% of its Net Asset Value and is anticipated that the Fund will have exposure in the range of 0% to 50% of its Net Asset Value through total return swaps.

Long/Short Exposure: The Fund may as part of its investment strategy hold short positions exclusively through derivatives including through total return swaps, currency forwards and listed options. Short positions will be used to hedge against the price movements of equities generally by taking short positions in individual equities or indices through the use of swaps. Currency swaps may be used to hedge foreign exchange risk arising when investments are denominated in a currency other than the Fund's Base Currency or to protect against anticipated depreciation in the value of a currency. The expected maximum level of long derivative positions which the Fund may hold is 600% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 600% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Exposure to indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Investment Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Investment Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre- agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 50% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured and calculated daily using the relative value-at-risk (VaR). VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is measured relative to the VaR of the S&P 500, a benchmark which the Investment Manager considers is a comparable benchmark to the Fund's portfolio. The S&P 500 is an index that tracks the stocks of 500 large-cap U.S. companies. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the VaR of the S&P 500 as determined daily using a one-tailed confidence interval of 99%, a holding period of one month and a historical observation period of at least 1 year.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 600% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for investors who seek capital appreciation over a long-term. The Fund is not designed for investors who need current income.

Investment Manager

The Manager has appointed Infusive Asset Management Inc., Suite 1840, One Grand Central Place 60 East 42nd Street, New York, United States of America to act as the investment manager pursuant to an investment management agreement dated 7 October 2020. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Investment Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

i. Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

ii. The Investment Manager will comply with the Manager’s exclusion list (which is based on the Manager’s exclusion policy and compiled by the Manager) whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk. The Manager’s exclusion policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/.The Manager’s exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund’s approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US dollar.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Accumulating	€100	Closed	Euro	No	Yes/ up to *5%*	€ 1,000 / €100	Accumulating
Class LH Accumulating	€100	Closed	Euro	Yes	*Yes/* up to 5%	€ 1,000 / €100	Accumulating
Class A Accumulating	€100	Closed	Euro	No	No	€ 1,000 /€100	Accumulating
Class D Accumulating	€100	2 December 2022 – 1 June 2023	Euro	No	No	€ 500/€100	Accumulating
Class DH Accumulating	€100	2 December 2022 – 1 June 2023	Euro	Yes	No	€ 500/ €100	Accumulating
Class I Accumulating	€100	Closed	Euro	No	No	€ 1,000,000/ €100	Accumulating
Class K Acc	€100	2 December 2022 – 1 June 2023	Euro	No	No	€100/€100	Accumulating

Class KH Acc GBP	£100	2 December 2022 – 1 June 2023	GBP	Yes	No	£100/£100	Accumulating
Class K Acc GBP	£100	2 December 2022 – 1 June 2023	GBP	No	No	£100/£100	Accumulating
Class J Acc	€10,000	2 December 2022 – 1 June 2023	Euro	No	No	€1,000,000/€100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following deadline that shall apply in respect of applications for Shares of the Fund:

"**Dealing Deadline**" means 11:59 am (Irish time) on the relevant Dealing Day.

"**Valuation Point**" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge: Up to 5% of the value of the gross subscription except in respect of unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FIDELITY SUSTAINABLE WATER AND WASTE FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **FIDELITY SUSTAINABLE WATER AND WASTE FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Due to the Fund's ability to invest in emerging markets securities and financial derivative instruments, the Fund may have a higher than average degree of risk. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital growth from a portfolio primarily (at least 70% of the Net Asset Value of the Fund) made up of the equity securities of companies around the world. This Fund seeks to achieve this objective by investing primarily in global companies incorporated anywhere in the world which are involved in the design, manufacture, or sale of products and services used for or in connection with the water and waste management sectors and/or that in the opinion of the Investment Manager demonstrate effective governance and "superior management" (as defined below) of environmental, social and governance issues ("ESG Considerations").

ESG Considerations concern the selection of securities which provide exposure to companies and/or organisations which hold the highest standards of sustainability, ethics and/or corporate governance ("Sustainable Companies"). The environmental element of ESG look at how an organization and/or company performs as a steward of the natural environment. The social element of ESG may examine how an organization and/or company manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organization and/or company's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

By "superior management", reference is made to a company's management attitude of adopting the highest ESG standards in its business ethics, which standards can be identified, for example, in the energy sources utilized for the production of its good or services (e.g. water as a renewable energy source), or in other practices of a company such as labour practices, product safety and data security. In particular, an issuer is deemed to meet "superior management" standards if it has an ESG rating which is above the minimum ESG rating threshold determined by the Investment Manager, from time to time. The current ESG rating threshold determined by the Investment Manager considers companies which are comprised between ratings AAA and BB, according to the MSCI ESG rating system or, alternatively, between A and C, according to the "Fidelity for Sustainability" rating system, i.e. a specific ESG rating methodology which has been built by the Investment Manager. Further information in relation to the ESG rating threshold and the "Fidelity for Sustainability" rating system is available to the investors without charge at the Manager, upon request.

The Investment Manager may use data from proprietary models, local intelligence (intended as the internal "know-how" and expertise that have been developed within and by the Investment Manager's team in relation to the specific strategy), undertake company visits and data provided by external ESG score providers to form an assessment of their sustainable characteristics. Without prejudice to the foregoing, as the Fund may invest globally, it may be exposed either directly and/or indirectly to emerging markets. Additional criteria for the selection of companies which the Fund will invest in are explained in further detail below in the Supplement under section headed "Selection of Investments".

The equity securities in which the Fund will invest include but are not limited to common stock, preferred stock, rights and warrants to subscribe for the purchase of equity securities, and depositary receipts (traded on Recognised Markets). The Fund has a global investment mandate insofar as its investments are not confined to or concentrated in any particular geographic region or market and it may invest up to 20% of its Net Asset Value in emerging market countries. Emerging market countries are those identified by a market leading index provider, in accordance with the prevailing OECD country risk classification.

The Fund may hold money market instruments (such as treasury bills, certificates of deposit, commercial paper and bankers acceptances) or money market funds for ancillary purposes so that it can pay its expenses, satisfy redemption requests or take advantage of investment opportunities by freeing up cash quickly through the disposal of such money market instruments or money market funds. With specific regard to the investment in money market funds, as these funds qualify as "collective investment schemes" within the meaning of Regulation 68(1)(e) of the UCITS Regulations, the investment is limited to 10% of the Fund's Net Asset Value, in accordance with said UCITS Regulations,

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. Indirect exposure to China, India and Russia may be achieved through investment in the abovementioned securities, which are listed or traded on one of the Recognised Markets listed in Schedule I of the Prospectus.

Benchmark Information

From time to time, the Investment Manager, considering the degree of representativeness of underlying markets and their liquidity, may strategically selects a benchmark or index (the "Index") appropriate to the Fund's investment policies, in reference to which the Fund is then managed and compared to which the Fund may seek to achieve a similar rate of return, gross of fees. The Fund is actively managed in reference to the MSCI All Country World Index, which is used as a performance comparator for the Fund. Notwithstanding the above, the Investment Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

The Index is provided by an administrator, MSCI Limited, who was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "Benchmark Regulation").

Direct Investment in China

The Fund may invest up to 10% of its Net Asset Value in shares denominated in Renminbi, issued by companies in China and listed on the Shanghai Stock Exchange ("SSE") and/or the Shenzhen Stock Exchange (the "SZSE"), or such other shares that may in the future be defined as China A and B shares issued by companies in China on the SSE and/or SZSE ("China A and B Shares") and available for investment by using the Shanghai-Hong Kong Stock Connect and the Shenzen-Hong Kong Stock Connect respectively (each a "Stock Connect" and collectively the "Stock Connects"). There are specific risks associated with direct investment in Chinese markets, one of these risks being linked to the fact that this country is classified as "emerging market" and investors' attention is therefore drawn to the section titled "Risk Factors" in the Prospectus, in particular the sub-section "Emerging Markets Risk".

The Shanghai-Hong Kong Stock Connect is a securities trading and clearing links program developed by Hong Kong Exchanges and Clearing Limited ("HKEX"), SSE and the China Securities Depositary and Clearing Corporation Limited ("ChinaClear"). It is comprised of a Northbound Shanghai Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shanghai Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by the Stock Exchange of Hong Kong (the "SEHK"), may be able to trade eligible China A and B Shares listed on the SSE by routing orders to the SSE. Under the Southbound Hong Kong Trading Link, investors in China may trade certain stocks listed on the SEHK.

The Shenzen-Hong Kong Stock Connect is a securities trading and clearing links program developed by HKEX, SZSE and ChinaClear. It is comprised of a Northbound Shenzhen Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shenzhen-Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by SEHK, may be able to trade eligible China A and B Shares listed on the SZSE by routing orders to SZSE. Under the Southbound Hong Kong Trading Link, investors in China will be able to trade certain stocks listed on the SEHK.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Selection of Investments

The selection of investments relies on the following process which at all times is undertaken with overarching ESG Considerations being the main driver of selection of investments from the Investment Manager:

Idea generation
The primary source of ideas for the portfolio composition of the Fund come from the global equity, sector and regional portfolio managers of the Investment Manager. In addition, those individuals are also supported by analysts from the Investment Manager's Sustainable Investing Team.

Research and selection
The Investment Manager monitors over 300 companies that constitute the current investment universe. A bottom-up securities selection process including proprietary and external ESG research leads to the construction of the portfolio consisting of equities in approximately 35-50 companies. The research and selection process relies on the below explained bottom-up analysis.

Bottom-up analysis
The Investment Manager follows a bottom-up investment process by investing in equities which may include 1) value, 2) quality and 3) momentum style characteristics, as defined below, that it believes will deliver outperformance over the long term. This approach combines both the rigor of quantitative approaches (i.e. by relying on internal proprietary quantitative models developed by the Investment Manager) and more qualitative analysis based on the experience, balanced return and risk appraisal of fundamental approaches, that take into account the following investment styles:

1) Value: To identify attractively valued stocks, the Investment Manager looks at how each stock is valued relative to the market and its peers.

2) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

3) Momentum: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

The Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply]. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

Use of Financial Derivative Instruments (FDI) and other Instruments and Techniques.

The Fund may use FDI for investment purposes. The Fund may also engage in transactions with FDI for the purposes of efficient portfolio management and hedging. The types of FDIs that the Fund may use are: options, warrants, futures, forwards, equity linked notes, repurchase and reverse repurchase transactions, Contracts for Differences (CFDs) and equity swaps, the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Equity linked notes: Equity Linked Notes (ELNs), involve a counterparty, such as a financial institution, writing a contract which defines the principal value and the payoff which is intended to move in line with the underlying security specified in the contract. Unlike Financial Derivative Instruments, cash is transferred from the buyer, i.e. the Investment Manager, to the seller, i.e. the above-mentioned counterparty, of the note upon purchase. In the event that the counterparty defaults the risk to the fund is that of the counterparty, irrespective of the value of the underlying security within the note.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Warrants: The Fund may use warrants as a means to gain exposure to certain markets in a most efficient and expeditious manner. For example, certain markets may have a long lead-in time to obtain local market access and warrants may be used during this lead-in time in order to allow quicker market access. The Fund may gain an exposure to warrants of up to 2% of its Net Asset Value. Warrants grant the right to acquire an underlying security from the issuer (as opposed to an option where a third party grants a right to acquire an underlying security as described above) at a fixed price. Warrants have similar characteristics to call options, but are typically issued together with preferred stocks or bonds or in connection with corporate actions.

Futures and Forwards: Futures and forwards may be bought or sold to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to equity securities or markets to which the Fund may be exposed.

Contracts for Differences: Contract for Differences ("CFDs") represent a form of derivative trading. Specifically, a CFD is an agreement, typically between two parties (e.g. an investment manager and a broker), according to which one party (i.e. the broker) will pay the other (i.e. the investment manager) the difference between the value of a security at the start of the contract, and its value at the end of the contract. If the market moves in the direction the investment manager predicted, then the latter will profit from the price difference. The Fund may engage in CFDs within the limit of 10% of the Net Asset Value of the Fund and exclusively for efficient portfolio management purposes and to allow the most efficient access to certain markets. CFDs allow the Fund to take exposure to price movements without the need for ownership of the investments or indices, at a small percentage of the cost of owing the investments or indices.

Equity Swaps: The Fund may use swaps on equities/equity related securities, baskets of equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Financing Transactions

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations.

Repurchase/Reverse Repurchase Agreements: The Fund may use repurchase/ reverse repurchase agreements for efficient portfolio management purposes only. In repurchase transactions the Fund may temporarily transfer its securities to a purchaser, with agreement to buy-back the securities at a pre-agreed time. Under a reverse repurchase agreement, a Fund may purchase securities from a counterparty, with an agreement by the counterparty to repurchase those securities at a pre-agreed time. In entering into such transactions, the Fund will endeavour to increase the returns on its portfolio of securities by receiving a fee for making its securities available to the borrower. Up to 30% of the Fund's assets may be subject to repurchase/reverse repurchase agreements on the financial instruments outlined in the Fund's investment objective and policy. It is expected that in general, 0-30% of the Fund's assets may be exposed to Repurchase/Reverse Repurchase Agreements. Counterparties to any Repurchase/Reverse Repurchase activity will comply with Regulation 8 of the Central Bank UCITS Regulations.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued

or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of a Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management techniques will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

The Investment Manager considers a wide range of environmental and social characteristics on an ongoing basis for the Fund, as set out below. The Investment Manager has discretion to implement additional sustainable requirements and exclusions having regard to their applicable investment process from time to time.

The Investment Manager seeks to ensure 70% of the Fund's net assets are invested in securities deemed to maintain sustainable characteristics.

Sustainable characteristics are defined by reference to a combination of different measurements such as ESG ratings provided by external agencies or Fidelity Sustainability Ratings. Further details on the methodology applied are set out at https://fidelityinternational.com/sustainable-investing-framework/ and may be updated from time to time.

The Investment Manager seeks to ensure not more than 30% of the Fund's net assets are invested in issuers that are not deemed to maintain sustainable characteristics in accordance with the criteria above, but which demonstrate improving sustainable indicators. Improving sustainable indicators are issuers classified as such through the trajectory outlook of Fidelity Sustainability Ratings or issuers which in the view of the Investment Manager demonstrate the potential for improvement through the implementation and execution of a formal engagement plan. The criteria

---

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

used to determine this reference rating may change over time and will be updated at https://fidelityinternational.com/sustainable-investing-framework/.

The Fund adheres to an enhanced principle-based exclusion policy incorporating both norms-based screening and negative screening of certain sectors, companies or practices based on specific ESG criteria to be determined by the Investment Manager from time to time.

The norms-based screening includes issuers which the Investment Manager considers have failed to conduct their business in accordance with accepted international norms, including as set out in the United Nations Global Compact.

The negative screening includes issuers which have exposure, or ties, to:

i. controversial weapons (biological, chemical, incendiary weapons, depleted uranium, non-detectable fragment, blinding lasers, cluster munitions, landmines and nuclear weapons);
ii. production of conventional weapons (a weapon of warfare which is not nuclear, chemical or biological in nature);
iii. production of semi-automatic firearms intended for sale to civilians or sale of semi-automatic firearms to civilians;
iv. tobacco production, retailing, distribution and licensing;
v. or thermal coal extraction and power generation provided that such will be permitted issuers where the revenue share from renewable energy activities exceeds the revenue share from thermal coal activities or where the issuer has made an effective commitment to a Paris Agreement aligned objective based on approved science based targets or alignment with a transition pathway initiative scenario or a reasonably equivalent public commitment.

The Investment Manager may apply revenue thresholds for more refined screens.

Through the investment management process, the Investment Manager aims to ensure that investee companies follow good governance practices.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Investment Manager also applies the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and the Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

The Investment Manager's sustainable investing policy is available at https://fidelityinternational.com/sustainable-investing-policy/

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Investor Profile

The Fund is suitable for retail and institutional investors seeking long-term capital growth and who are willing to accept a moderate to high level of volatility. The Fund should be viewed as a medium to long term investment.

Investment Manager

The Manager has appointed FIL Pensions Management of Beech Gate Millfield Lane, Lower Kingswood, Tadworth, Surrey, United Kingdom, KT20 6RP (Registered Number 2015142) to act as the investment manager pursuant to an investment management agreement dated 22 October 2020. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 4:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.5% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge: Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

For any other risk which is not contemplated in this section, the attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Sustainability Risk: The Fund's focus on ESG Considerations may affect the Fund's investment performance and may result in a return that at times compares unfavourably to similar products without such focus. ESG Considerations used in the Fund's investment policy may result in the Fund foregoing opportunities to buy certain securities when it might otherwise be advantageous to do so, and/or selling securities due to their ESG Considerations, when it might be disadvantaged to do so. In evaluating a security based on the ESG Considerations, the Investment Manager is dependent upon information and data provided by internal research teams and complemented by external ESG score providers, which may be incomplete, inaccurate or unavailable. Consequently, there is a risk that the Investment Manager may incorrectly assess a security or issuer. There is also a risk that the Investment Manager may not apply the relevant ESG considerations, correctly or that a Fund could have exposure to issuers who do not meet the relevant ESG criteria applied by the Fund. In the event that the ESG Considerations of a security held by the Fund change, resulting in the Investment Manager having to sell the security, neither the Fund, neither the Manager nor the Investment Manager accept liability in relation to such change.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: Fidelity Sustainable Water & Waste FAM Fund
Legal entity identifier: 2549002N1GC1ZSIQ9R66

Environmental and/or social characteristics

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund promotes environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics are determined by reference to ESG ratings.

The Fund invests in companies involved in the production of water and the treatment, disposal, and recycling of waste.The Fund partially intends to make sustainable investments.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

  The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes:

  i) the percentage of the Fund invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework;

  ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions (as defined below);

  iii) the percentage of the Fund invested in sustainable investments; and

  iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy; and

  v) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy)

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

  The Fund determines a sustainable investment as follows:

  (a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

  (b) issuers whereby the majority of their business activities (more than 50% of revenue) contribute to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

  (c) issuers which have set a decarbonisation target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which would be considered to contribute to environmental objectives;

  provided they do no significant harm, meet minimum safeguards and good governance criteria.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments are screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer meets minimum safeguards and standards that relate to principal adverse indicators (PAIs) as well as performance on PAI metrics. This includes:

Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below);

Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that are considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and

PAI indicators: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments, as set out above, Fidelity undertakes a quantitative evaluation to identify issuers with challenging performance on PAI indicators. Issuers with a low score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determines that the issuer is not breaching "do no significant harm" requirements, or is on the path to mitigate the adverse impacts through effective management or transition.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens are applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, are not considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes

Principal adverse impacts on sustainability factors are considered through and incorporated into investment decisions through a variety of tools, including:

(i) Due Diligence - analysis of whether principle adverse impacts are material and negative.

(ii) ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts are considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(iii) Exclusions - When investing directly in corporate issuers,the Fund applies the Exclusions (as defined below) to help mitigate PAI through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC.

(iv) Engagement - Fidelity uses engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participates in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voting - Fidelity’s voting policy includes explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.

(vi) Quarterly reviews - monitoring of principal adverse impacts through the Fund’s quarterly review process.

The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability. In certain circumstances, such as indirect investments made by the Fund, PAI may not be considered.

☐ No

What investment strategy does this financial product follow?

The Fund employs a primarily ‘thematic’ investment strategy to achieve its investment objectives, which includes investing in economic themes that are expected to contribute to a sustainable economy. In addition to theme selection, fundamental research is conducted on individual issuers. As part of the research process, environmental and social governance are considered. The factors considered relevant will vary between different issuers and industries and are integrated into investment decisions.

The Fund aims to achieve long-term capital growth from a portfolio primarily made up of securities issued by companies throughout the world and involved in the design, manufacture, or sale of products and services used for or in connection with water and waste management sectors.

The Fund invests in companies involved in the production of water and the treatment, disposal, and recycling of waste.

The water management sector includes but is not limited to, those companies involved in water production, water conditioning, de-salination, supply, bottling, transport and dispatching of water. The waste management sector includes but is not limited to, those companies involved in the collection, recovery and disposal of waste; including recycling, incineration, anaerobic digestion of food waste (biological processes) and landfilling of residual waste. The sector also includes those companies specialising in the treatment of wastewater, sewage, solid, liquid and chemical waste and any consulting or engineering services in connection with these activities.

The Fund adopts a Sustainable Thematic strategy under which a minimum of 90% of the Fund’s assets will be analysed as to whether they maintain favourable ESG characteristics and a minimum of 70% of the Fund’s assets will be invested in securities with favourable ESG characteristics.

Favourable ESG characteristics are determined by reference to ESG ratings provided by external agencies and Fidelity ESG ratings.

Issuers that are not assessed as having favourable ESG characteristics for the purposes of the primary objective (minimum 70% of assets) are eligible for inclusion, with up to 30% of assets, provided they are able to demonstrate that they are on an improving trajectory with respect to their ESG characteristics. When selecting investments, the Fund’s investment universe will be reduced by at least 20% due to the exclusion of issuers on the basis of their ESG characteristics.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

In respect of its direct investments, the Fund is subject to:

a) a firm-wide exclusions list, which includes cluster munitions and anti-personnel landmines, and

b) a principle-based screening policy which includes:

i) norms-based screening of issuers which the investment manager considers have failed to conduct their business in accordance with international norms, including as set out in the UNGC; and

ii) negative screening of certain sectors, issuers or practices based on specific ESG criteria where revenue thresholds may be applied.

c) Fineco Asset Management DAC Investment Exclusion Policy effective on 27 July 2022.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to the website for further information Sustainable investing framework (fidelityinternational.com) and further details on the Exclusion Policy can be found on the Management Company's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

The investment manager also has discretion to implement enhanced, stricter sustainable requirements and exclusions from time to time.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Mandate will invest:

(i) a minimum of 70% of its assets in issuers with favourable ESG characteristics,

(ii) a minimum of 35% in sustainable investments of which a minimum of 0% have an environmental objective (which is aligned with the EU Taxonomy), a minimum of 15% have an environmental objective (which is not aligned with the EU Taxonomy) and a minimum of 0% have a social objective.

A minimum of 90% of the Fund's assets will be analysed as to whether they maintain favourable ESG characteristics. When selecting investments, the Fund's investment universe will be reduced by at least 20% due to the exclusion of issuers on the basis of their ESG characteristics.

In addition, the Fund will systematically apply the Exclusions to direct investments as described above.

In addition, the Fund will systematically apply the Exclusions as described above.

The Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  When selecting investments, the Fund's investment universe will be reduced by at least 20% due to the exclusion of issuers on the basis of their ESG characteristics.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

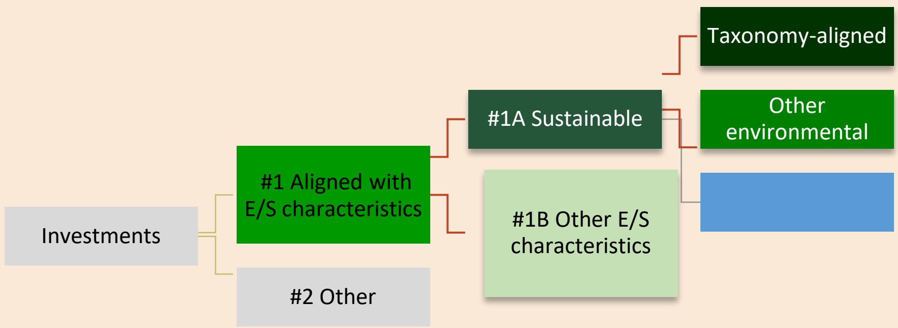
- ***What is the policy to assess good governance practices of the investee companies?***

  The governance practices of issuers are assessed using fundamental research, including Fidelity ESG ratings, data regarding controversies and UN Global Compact violations.

  Key points that are analysed include track record of capital allocation, financial transparency, related party transactions, board independence and size, executive pay, auditors and internal oversight, minority shareholder rights, among other indicators.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

(#1 aligned with E/S characteristics) The Fund aims to invest:

(i) A minimum of 70% of its assets in securities of issuers with favourable ESG characteristics,

(ii) A minimum of 35% in sustainable investments (#1A sustainable)* of which a minimum of 0% have an environmental objective (which is aligned with the EU Taxonomy), a minimum of 15% have an environmental objective (which is not aligned with the EU Taxonomy) and a minimum of 0% have a social objective.

(#1B Other E/S characteristics) Includes securities of issuers with favourable ESG characteristics but are not sustainable investments.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Fidelity determines the minimum overall percentage of sustainable investments on the basis of including issuers, as described above, whereby more than 50% of revenue contributes to a sustainable investment objective.*

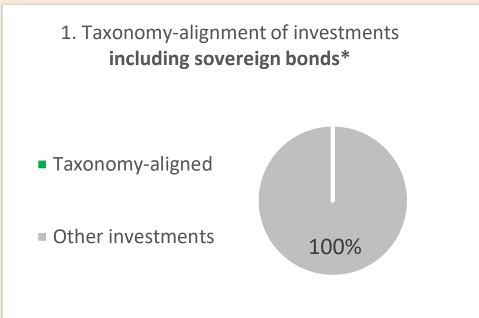
How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

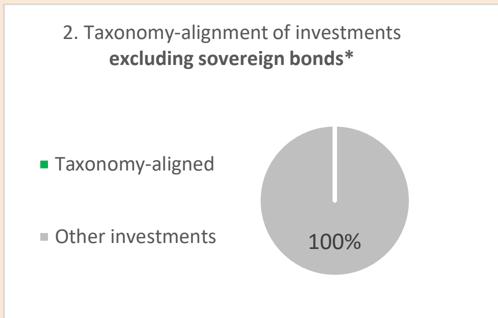
Where the security underlying a derivative has favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework, the derivative may be included in determining the proportion of the Fund dedicated to promotion of environmental or social characteristics.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

This question is not applicable.

The two graphs below show in green the the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

The Fund invests a minimum of 0% in transitional activities and a minimum of 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund invests a minimum of 15% in sustainable investments with an environmental objective that is not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Fund invests a minimum of 0% in sustainable investments with a social objective.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in securities of issuers that are able to demonstrate that they are on an improving trajectory with respect to their ESG characteristics, as well as cash and cash equivalents for liquidity purposes and derivatives which may be used for investment and efficient portfolio management.

As a minimum environmental and social safeguard, the Fund will adhere to the Exclusions.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

This question is not applicable.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

This question is not applicable.

- ***How does the designated index differ from a relevant broad market index?***

This question is not applicable.

- ***Where can the methodology used for the calculation of the designated index be found?***

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Management Company’s website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)]

SMART GLOBAL DEFENCE FAM FUND 2029 USD ROLL

SUPPLEMENT DATED 30 DECEMBER 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE FAM FUND 2029 USD ROLL** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59 am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	30 December 2021, 30 December 2022, 30 December 2023, 30 December 2024, 7 January 2026, 6 January 2027, 5 January 2028 and 10 January 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period closed on 20 October 2020. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	12 January 2029.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	The Subscription Period for the Fund closed on 24 June 2021.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or credit/financial institutions and/or insurance companies authorised to operate in a Member State of the European Union or the European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 4) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, Euro and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the Euro cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the

Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and
(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollars.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class A Dist	$100	Closed	USD	No	$1,000	N/A	$100	Distributing

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. When the Initial Offer Period closed, Shares were available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
As the Subscription Period has closed, the Fund is not accepting any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €15,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE FAM FUND 2023 III

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE FAM FUND 2023 III** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59 am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	30 December 2021, 30 December 2022 and 30 December 2023 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 09:00 AM (Irish time) on 10 March 2021 and will close at 5:00 PM (Irish time) on 10 March 2021. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 December 2023
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 11 March 2021 to 10 May 2021 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>*Funding Investments*</u>
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and
- engage in the use of forward contracts (as explained in detail below on page 4) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

(iv) Generation of additional income

In order to seek to obtain some additional income the Fund may engage in the practice of selling or buying Credit Default Swaps ("CDS") on an index, while simultaneously entering into CDS to either buy or sell all of the individual constituents of the aforementioned index. By doing this form of arbitrage trading (arbitrage meaning the simultaneous buying and selling of securities in different markets or in derivative form in order to take advantage of differing prices for the same asset), the Fund can profit from exploiting price differences between the index, and the individual constituents that make up that index, without being exposed to any default risk in respect of the underlying of the various CDS.

The CDS transactions referred to above allow the Fund to potentially gain some additional income in an economically appropriate manner, with an acceptably low level of risk relative to the expected return.

The price differences in the market which the Fund is looking to exploit are often driven by hedging needs in the market. For example, market participants looking to hedge their overall credit exposure by using an Index CDS can, in some cases, make the price of an Index CDS more expensive than a CDS on the individual index constituents.

Please see below in the section entitled "Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques", a description of how the buying and selling of CDS work and the potential benefits that derive to the Fund therefrom.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 500% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 500% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 750% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	10 March 2021 to 10 March 2021	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	10 March 2021 to 10 March 2021	Euro	No	€1,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator’s Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary’s Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €15,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

TARGET CHINA COUPON 2026 FAM FUND

SUPPLEMENT DATED 11 October 2024

This Supplement contains specific information in relation to **TARGET CHINA COUPON 2026 FAM FUND** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which the CSI 300 and the CSI 500 is published by the relevant index sponsor and on which retail banks and securities markets in Luxembourg, China & Hong Kong are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) two Business Days before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Original Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	30 June 2022, 30 June 2023, 30 June 2024, 30 June 2025 and 30 June 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on European and North American stock exchanges or (ii) companies considered by the Manager to be European or North American companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund has closed. During the Initial Offer Period, Shares were available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 June 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Original Subscription Period:	meant from 23 March 2021 to 30 June 2021. The Original Subscription Period has closed.
Subsequent Subscription Period:	means from 16 October 2024 to 13 November 2024 subject to a maximum extension of 6 months in accordance with the requirements of the Central Bank. Shares will be available for subscription during this time at the prevailing Net Asset Value (NAV) per Share. After the close of the Subsequent Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled "Investment Policy" below) and to (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

(i.i) Invest up to 100% of its assets in Equity Instruments. Once the Fund purchases the Equity Instruments it will then enter into a total return swap ("TRS") on the Equity Instruments in which it will swap out the performance and the income of the Equity Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Equity Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Equity Instruments directly.

In respect of the selection of the Equity Instruments the Manager will focus on selecting equities from European and/or North American companies (as described in the definition of Equity Instruments above) using its own proprietary quantitative investment process and/or a qualitative analysis.

The Manager will consider one or more of the following quantitative factors for the purpose of determining which Equity Instruments to acquire or gain exposure to:

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum** Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

In respect of the qualitative analysis, the Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

(i.ii) Gaining an exposure of up to 50% of the Fund's Net Asset Value either directly or indirectly to Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

The breakdown of the Funding Investments between Equity Instruments and Debt Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular Funding Investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular Funding Investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument.

II. *<u>Exposure to the Basket</u>*

The Fund will then use the return it receives from the exposure to the Funding Investments described above to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to a basket of equity indices (the "Basket"). The Basket will comprise two equity indices, the CSI 300 Index and the CSI 500 Index. The Basket provides the Fund with an indirect exposure to large cap and mid to small-cap Chinese equities.

The CSI 300 Index consists of the 300 largest and most liquid China A-share stocks.

The CSI 500 Index consists of the largest 500 China A-Share stocks after excluding both the CSI 300 Index constituents and the largest 300 stocks that presented the highest average daily market capitalisation during the last year. The CSI 500 Index reflects the overall performance of small-mid cap A-shares.

China A-share stocks are the shares of mainland China-based companies that trade on the two Chinese stock exchanges, the Shanghai Stock Exchange (SSE) and the Shenzhen Stock Exchange (SZSE).

Shareholders should note that at the date of the launch of this Fund, the CSI 500 Index has been historically more volatile than the CSI 300 Index.

Information on the CSI 300 and/or the CSI 500 can be obtained via the following website link http://www.csindex.com.cn/en

It is expected that the Fund will gradually gain exposure to the Basket, starting with an expected exposure of 25% of the Fund's Net Asset Value during the first year and reaching an expected exposure of between 75%-100% of the Fund's Net Asset Value during the year of the Fund's maturity (i.e. in the year of the Maturity Date). The aim of this gradual exposure is to reduce the overall volatility of the Fund's exposure to the Basket while gaining an exposure through different market cycles thus avoiding the impact of short-term price fluctuations in the Chinese market. At any time that the Fund is not fully exposed to the Basket, the remaining percentage of the Fund's portfolio will be made up of the Funding Investments.

The Manager will from time to time modify the gradual exposure to the above listed equity indices and the optimal composition of the Basket depending on their view of the Chinese market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. In addition, the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. To give a practical illustration of a scenario which would potentially cause an alteration of the Basket composition, the Manager will also consider the fact that the CSI 300 is represented by large-cap companies whereas the CSI 500 is represented by medium/small-cap companies. In favourable macro-economic conditions, medium/small-cap companies tend to out-perform large-cap companies. Hence in such a scenario, the Basket might be weighted accordingly (i.e. greater exposure to the CSI 500) to avail of the market opportunity.

The CSI 300 Index and the CSI 500 Index are provided by an administrator, China Securities Index Co., Ltd. (CSI), which was recognised under Article 32 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "Benchmark Regulation").

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". Aside from the indices already mentioned in the Investment Objectives and Policy section above, it is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 60% CSI 300 Index, 15% CSI 500 Index and 25% Bloomberg Euro Aggregate Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most**

prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	Closed	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	Closed	Euro	No	€1,000	N/A	€100	Distributing
Class D Dist	€100	Closed	Euro	No	€500	N/A	€100	Distributing

During the initial offer period Shares were available for subscription at the initial offer price as indicated in the table above. Following the close of the initial offer period, Shares are available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subsequent Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

The Manager shall be entitled to a management fee of up to 2.30% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Risks of Directly Investing in China", "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold. In respect of the risks of directly investing in China, although the Fund will not directly invest in China, the derivative counterparty providing the Fund with exposure to the Chinese indices listed in the Investment Policy section above, may themselves experience risks due to their direct investment in China which in turn allows them to provide the Fund with the relevant indirect exposure to China. This may lead to some risk for the Fund in respect of the relevant counterparty providing the Fund with a valuation for the derivative transaction that the Fund has entered into and thus investors should generally make themselves aware of the potential risks associated with investing directly in China.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

BLUESTAR GLOBAL LOGISTICS INDEX FAM FUND

SUPPLEMENT DATED 6 SEPTEMBER 2024

This Supplement contains specific information in relation to **BLUESTAR GLOBAL LOGISTICS INDEX FAM FUND** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital growth.

The Fund seeks to achieve its investment objective by tracking the performance of the BlueStar Global Logistics Index (the "**Index**", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by MV Index Solutions GmbH acting as the index administrator provider (the "**Index Provider**"), as described below in the sub-heading "Description of the Index".

The Fund may invest up to 100% of its assets in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts as well as rights and warrants of companies located worldwide, each of which are traded on the Recognised Markets listed in Schedule I of the Prospectus (the "**Invested Assets**"), where applicable. The Fund may also enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under section "Investment Techniques and Instruments", sub-heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". When swapping the Invested Assets with a TRS Counterparty, the Fund will be deemed to be taking a short position on TRS, subject to the limits set out under para "Long/Short Exposure" below in this supplement. The value of the Fund's Shares is linked to the Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Index and the Invested Assets or the performance of the Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that a Shareholder may receive will be dependent on the performance of the Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. However, where full replication of the Index is not reasonably possible (for example, as a result of the number of securities or the illiquidity of certain securities within the Index), the Fund will invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index. The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Description of the Index

General Description: The BlueStar Global Logistics Index provides diversified exposure to publicly traded common equity and REIT securities of companies operating in or supporting the global logistics industry. "Logistics" refers to a network of services that supports the physical movement of goods within and across borders. The companies involved provide services that help businesses to deliver and receive goods when and where required in an efficient manner. There is a common long-term macroeconomic trend supporting the financial performance of the securities in the selection universe: growth in global trade. Supporting this trend are the following: growth of the middle-class and middle-class purchasing power, e-commerce's growing share of retail sales, consumer expectations for expeditious delivery and return of goods purchased online in addition to increasingly complex global supply chains.

Composition of the Index: Currently, the index has a tiered equal weight strategy where constituents and sub-theme weights are rebalanced twice a year to the following weights: 35% 3rd Party Logistics Services (3PLs) , 25% Logistics Real Estate (REITs), 20% Express Couriers, 10% Logistics Software, 10% Logistics Automation Equipment. Constituents are rebalanced to equal weight within the prevailing sub-theme weight. The Bloomberg ticker symbol for the Index is BLOGRNTR Index.

Index Provider: The above Index is provided by the Index Provider, as identified above, who was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "**Benchmark Regulation**"). The Index is calculated by Solactive AG as a vendor for calculation services. An outsourcing agreement according to Art. 10 of the Benchmark Regulation was entered into between the Index Provider and Solactive AG for the calculation service.

Index Provider's Disclaimer: The Fund is not sponsored, endorsed, sold or promoted by the Index Provider or by VanEck Associates Corporation or any other VanEck entity (altogether "**VanEck**") and VanEck make no representation or warranty regarding the advisability of investing in the Fund, particularly on the ability of the Fund to track the Index's performance or the accuracy or completeness of this supplement. The Index is the exclusive property of VanEck, which has contracted with Solactive AG to maintain and calculate the Index. Solactive AG uses its best efforts to ensure that the Index is calculated correctly. Irrespective of its obligations towards VanEck, Solactive AG has no obligation to point out errors in the Index to third parties including but not limited to investors and/or financial intermediaries of the financial instrument. The Fund is not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Index and/or Index trade mark or the Index price at any time or in any other respect. Neither publication of the Index by Solactive AG nor the licensing of the Index or Index trade mark for the purpose of use in connection with the Fund constitutes a recommendation by Solactive AG to invest in the Fund nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in the Fund. Solactive AG is not responsible for fulfilling the legal requirements concerning the accuracy and completeness of this supplement. VANECK DOES NOT GUARANTEE THE ACCURACY AND/OR COMPLETENESS OF THE INDEX OF ANY DATA INCLUDED THEREIN AND SHALL NOT HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS, AND MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY OWNERS OF THE FUND OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE FUND.

Publication: The Index is calculated and published by the Index Provider.

Further Information and Website: The Index Provider's Index methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on https://www.mvis-indices.com/indices/sector/bluestar-global-logistics

SFDR Classification*:* Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Sustainability Risk Integration when tracking the Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

When looking to replicate the Index via a Total Return Swap as described in the investment policies section, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great). The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

Sustainability Risk Integration when replicating the Index directly (i.e. by holding some or all of the securities of the Index)

When directly replicating the holdings of some or all of the Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.

Use of Financial Derivative Instruments ("FDI")

The Fund may engage in FDI transactions for investment purposes to generate returns and/or for the purposes of hedging.

The types of FDI that the Fund may use are currency forwards and total return swaps. The specific purpose for using each FDI type is outlined below. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's Investments.

Total Return Swaps: The Fund may enter into Total Return Swaps to gain exposure to the Index, as mentioned in the Investment Objective and Policies section above. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 120% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 120% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Exposure to the Index: The Fund may take exposure to the Index through the use of Total Return Swaps as outlined above. Exposure to the Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the Index by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure.
The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The Index that that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Index, including details of the website where the exact composition of the Index is published, is set out above in the section titled "Description of the Index" and it will also be available upon request from the Manager.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 100% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time. The Fund is not designed for investors who need current income.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A ACC	€100	Closed	Euro	No	No	€1,000/€100	Accumulating
Class I ACC	€100	Closed	Euro	No	No	€1,000,000/€1,000	Accumulating
Class K Acc	€100	9 September 2024 – 7 February 2025	Euro	No	No	€100/€100	Accumulating
Class KH Acc GBP	£100	9 September 2024 – 7 February 2025	GBP	Yes	No	£100/£100	Accumulating
Class K Acc GBP	£100	9 September 2024 – 7 February 2025	GBP	No	No	£100/£100	Accumulating
Class L Acc	€100	9 September 2024 – 7 February 2025	EUR	No	Yes/3%	€1000/€100	Accumulating
Class D Acc	€100	9 September 2024 – 7	EUR	No	No	€500/€100	Accumulating

		February 2025					
Class DH Acc	€100	9 September 2024 – 7 February 2025	EUR	Yes	No	€500/€100	Accumulating
Class J Acc	€10,000	9 September 2024 – 7 February 2025	EUR	No	No	€1,000,000/€100	Accumulating

During the initial offer period, Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of the Fund:

“Business Day” means any weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Provider publishes the Index and (ii) retail banks and securities markets in Luxembourg and relevant securities markets in which the Index has an exposure in America, Europe and/or Asia, are normally open for business;

“Dealing Deadline” means 11:59am (Irish time) on the day before the relevant Dealing Day; and

“Valuation Point” means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
Up to 1.30% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Administrator’s Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary’s Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €15,000 will be borne by the Fund and amortised over the first two years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Sales charge:
Up to 3% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Provider to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund’s performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Provider will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Provider provides descriptions of what the Index is designed to achieve, the Index Provider does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund’s investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled “Description of the Index”); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Provider will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Provider or that the Index will not be amended significantly. Such changes may be made by the Index Provider at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled “Description of the Index”, as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking Error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled “Investment Objectives and Policies”. Investors’ attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the Investments of the Fund and re-weightings of the Index may give rise to various transaction costs (including in relation to the settlement of foreign currency transactions), operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index. Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund’s tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to-time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund’s portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

TARGET GLOBAL COUPON 2026 FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **TARGET GLOBAL COUPON 2026 FAM FUND** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe, the United States, Luxembourg and China & Hong Kong are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) two Business Days before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	30 September 2022, 30 September 2023,30 September 2024,30 September 2025 and 30 September 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or

Instruments:	floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 21 June 2021 and will close at 5:00 PM (Irish time) on 05 July 2021. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 September 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 06 July 2021 to 30 September 2021 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled "Investment Policy" below) and to (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions.

However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

(i.i) Invest up to 100% of its assets in Equity Instruments. Once the Fund purchases the Equity Instruments it will then enter into a total return swap ("TRS") on the Equity Instruments in which it will swap out the performance and the income of the Equity Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Equity Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Equity Instruments directly.

In respect of the selection of the Equity Instruments the Manager will focus on selecting equities from companies (as described in the definition of Equity Instruments above) using its own proprietary quantitative investment process and/or a qualitative analysis.

The Manager will consider one or more of the following quantitative factors for the purpose of determining which Equity Instruments to acquire or gain exposure to:

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum** Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

In respect of the qualitative analysis, the Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

(i.ii) Gaining an exposure of up to 50% of the Fund's Net Asset Value either directly or indirectly to Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

The breakdown of the Funding Investments between Equity Instruments and Debt Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular Funding Investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular Funding Investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument.

II. *Exposure to the Basket*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to a basket of equity indices (the "Basket"). The Basket will comprise a balance of European, American and Chinese equity indices, such as the CSI 300 Index, the CSI 500 Index, MSCI Europe High Dividend Net Total Return and the S&P 500. The Basket provides the Fund with an indirect exposure to large cap and mid to small-cap global equities.

It is expected that the Fund will gradually gain exposure to the Basket, starting with an expected exposure of 25% of the Fund's Net Asset Value during the first year and reaching an expected exposure of between 75%-100% of the Fund's Net Asset Value during the year of the Fund's maturity (i.e. in the year of the Maturity Date). The aim of this gradual exposure is to reduce the overall volatility of the Fund’s exposure to the Basket while gaining an exposure through different market cycles thus avoiding the impact of short-term price fluctuations in the global equity market. At any time that the Fund is not fully exposed to the Basket, the remaining percentage of the Fund’s portfolio will be made up of the Funding Investments.

The Manager will from time to time modify the gradual exposure to the individual equity indices that make up the Basket and the optimal composition of the Basket depending on their view of the global equity market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. In addition, the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. To give a practical illustration of a scenario which would potentially cause an alteration of the Basket composition based on a hypothetical scenario in which the Basket includes the CSI 300 and CSI 500 indices, the Manager will also consider the fact that the CSI 300 is represented by large-cap companies whereas the CSI 500 is represented by medium/small-cap companies. In favourable macro-economic conditions, medium/small-cap companies tend to out-perform large-cap companies. Hence in such a scenario, the Basket might be weighted accordingly (i.e. greater exposure to the CSI 500) to avail of the market opportunity.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager’s exclusion policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund’s approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps (“TRS”), CDS. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions”.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund’s use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund’s use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be inline with the exposure that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net

Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 35% S&P 500 Net Total Return, 20% MSCI Europe High Dividend Net Total Return, 10% CSI 300 Index Net Total Return, 10% CSI 500 Index Net Total Return and 25% Bloomberg Euro Aggregate Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 5 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 21 June 2021 to 05 July 2021	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 21 June 2021 to 05 July 2021	Euro	No	€1,000	N/A	€100	Distributing
Class D Dist	€100	From 21 June 2021 to 5 July 2021	Euro	No	€500	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares

After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Risks of Directly Investing in China", "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold. In respect of the risks of directly investing in China, although the Fund will not directly invest in China, the Fund may engage a derivative counterparty that will provide the Fund with exposure to Chinese indices. Such derivative counterparties may themselves experience risks due to their direct investment in China which in turn allows them to provide the Fund with the relevant indirect exposure to China. This may lead to some risk for the Fund in respect of the relevant counterparty providing the Fund with a valuation for the derivative transaction that the Fund has entered into and thus investors should generally make themselves aware of the potential risks associated with investing directly in China.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

ESG TARGET GLOBAL COUPON 2026 FAM FUND
SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **ESG TARGET GLOBAL COUPON 2026 FAM FUND** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

This is an article 8 Fund under SFDR. Please see the Investment Policy and the section titled "SFDR classification" below.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe, the United States, Luxembourg and China & Hong Kong are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) two Business Days before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.4% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	31 August 2022, 30 August 2023,28 August 2024,27 August 2025 and 26 August 2026or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 21 June 2021 and will close at 5:00 PM (Irish time) on 05 July 2021. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	26 August 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 6 July 2021to 30 August 2021 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled "Investment Policy" below) and to (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its assets in Equity Instruments. Once the Fund purchases the Equity Instruments it will then enter into a total return swap ("TRS") on the Equity Instruments in which it will swap out the performance and the income of the Equity Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Equity Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Equity Instruments directly.

ESG screening

The Equity Instruments will be made up of a minimum of 70% exposure to developed market companies which take account of environmental, social and governance ("ESG") factors. The ESG factors considered include, but are not limited to, the following:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Climate change and emission intensity	Customer Satisfaction	Board composition
Air & Water Pollution	Data Protection and Privacy	Audit Committee Structure
Deforestation	Gender & Diversity	Executive Compensation
Biodiversity	Employee Engagement	Lobbying
Water scarcity	Community Relations	Political Contributions
Waster Management	Human Rights	Whistleblower Schemes
Energy efficiency	Labour Standards	

In selecting the above Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

In determining how a company integrates the above ESG factors, the Manager will use analysis such as a sustainability risk score or ESG ratings provided by a recognised data provider such as Morningstar, MSCI or Bloomberg (or another data source nominated by the Manager). Such ratings and scores will be compared to other peers within the investment universe to select the Equity Instruments with a more favourable ESG rating/score. In addition, the Manager will in particular look to select Equity Instruments of companies that meet the criteria for inclusion in ESG screened indices such as the MSCI Europe ESG Screened Index (EUR). Such ESG screened indices only comprise Equity Instruments of companies which promote, among other characteristics, certain of the ESG factors listed above.

In addition to the ESG factors considered above, the Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum** Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

(i.ii) Gaining an exposure of up to 50% of the Fund's Net Asset Value either directly or indirectly to Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

The breakdown of the Funding Investments between Equity Instruments and Debt Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular Funding Investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular Funding Investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument.

II. *<u>Exposure to the Basket</u>*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to a basket of equity indices (the "Basket"). The Basket will comprise a balance of European, American and Chinese equity indices, such as the CSI 300 Index, the CSI 500 Index, MSCI Europe ESG Screened Index and the S&P 500 ESG Index. The Basket will be substantially weighted in favour of ESG indices that provide the Fund with an indirect exposure to large cap and mid to small-cap global companies which have a focus on ESG factors.

It is expected that the Fund will gradually gain exposure to the Basket, starting with an expected exposure of 25% of the Fund's Net Asset Value during the first year and reaching an expected exposure of between 75%-100% of the Fund's Net Asset Value during the year of the Fund's maturity (i.e. in the year of the Maturity Date). The aim of this gradual exposure is to reduce the overall volatility of the Fund's exposure to the Basket while gaining an exposure through different market cycles thus avoiding the impact of short-term price fluctuations in the global equity market. At any time that the Fund is not fully exposed to the Basket, the remaining percentage of the Fund's portfolio will be made up of the Funding Investments.

The Manager will from time to time modify the gradual exposure to the individual equity indices that make up the Basket and the optimal composition of the Basket depending on their view of the global equity market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. In addition, the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. To give a practical illustration of a scenario which would potentially cause an alteration of the Basket composition based on a hypothetical scenario in which the Basket includes the CSI 300 and CSI 500 indices, the Manager will also consider the fact that the CSI 300 is represented by large-cap companies whereas the CSI 500 is represented by medium/small-cap companies. In favourable macro-economic conditions, medium/small-cap companies tend to out-perform large-cap companies. Hence in such a scenario, the Basket might be weighted accordingly (i.e. greater exposure to the CSI 500) to avail of the market opportunity.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

In addition to what is contained in the Investment Policy section above, the Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be inline with the exposure that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 35% S&P 500 Net Total Return, 20% MSCI Europe High Dividend Net Total Return, 10% CSI 300 Index Net Total Return, 10% CSI 500 Index Net Total Return and 25% Bloomberg Euro Aggregate Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 5 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 21 June 2021 to 5 July 2021	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 21 June 2021 to 5 July 2021	Euro	No	€1,000	N/A	€100	Distributing
Class D Dist	€100	From 21 June 2021 to 5 July 2021	Euro	No	€500	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Risks of Directly Investing in China", "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold. In respect of the risks of directly investing in China, although the Fund will not directly invest in China, the Fund may engage a derivative counterparty that will provide the Fund with exposure to Chinese indices. Such derivative counterparties may themselves experience risks due to their direct investment in China which in turn allows them to provide the Fund with the relevant indirect exposure to China. This may lead to some risk for the Fund in respect of the relevant counterparty providing the Fund with a valuation for the derivative transaction that the Fund has entered into and thus investors should generally make themselves aware of the potential risks associated with investing directly in China.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: ESG TARGET GLOBAL COUPON 2026 FAM FUND
Legal entity identifier: 2549005LVIVCLB15M894

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics promoted by the Fund include:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors is a key element of portfolio construction. The equity instruments in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and/or social characteristics, such as the MSCI Europe ESG Screened Index. In

addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies by the Manager and/or third party data providers with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive ESG factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control introduces a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

3. **Negative Screening (Norm-based exclusions)**
For direct holdings, the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which it [or its clients] deems incompatible with minimum responsible investing principles. To align the Fund's investments with this approach, the Manager has adopted a firm wide Exclusion Policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund invested in ESG screened index constituents which demonstrates the Fund's postive ESG tilt;

iii) The underying direct holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider); and

iv) The percentage of the Fund investment universe subject to the Manager's Exclusion Policy.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

N/A

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

N/A

How have the indicators for adverse impacts on sustainability factors been taken into account?

N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the investments against any applicable mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund follows an investment strategy which seeks to provide Shareholders with a Dividend and which seeks to provide a positive return at the Maturity Date linked to the

Basket exposure. The Funding Investments of the Fund are used to receive a pay out from an OTC counterparty and to facilitate the obtaining of the Basket exposure.

In selecting the Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **The Equity Instruments** will be made up of a minimum of 70% exposure to developed market companies which take account of ESG factors;
  b. **Direct equity investments** of the Fund will only be drawn from constituents of ESG screened indices;
  c. **Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;
  d. **Exclusion Policy**
     The Manager's Exclusion Policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  N/A

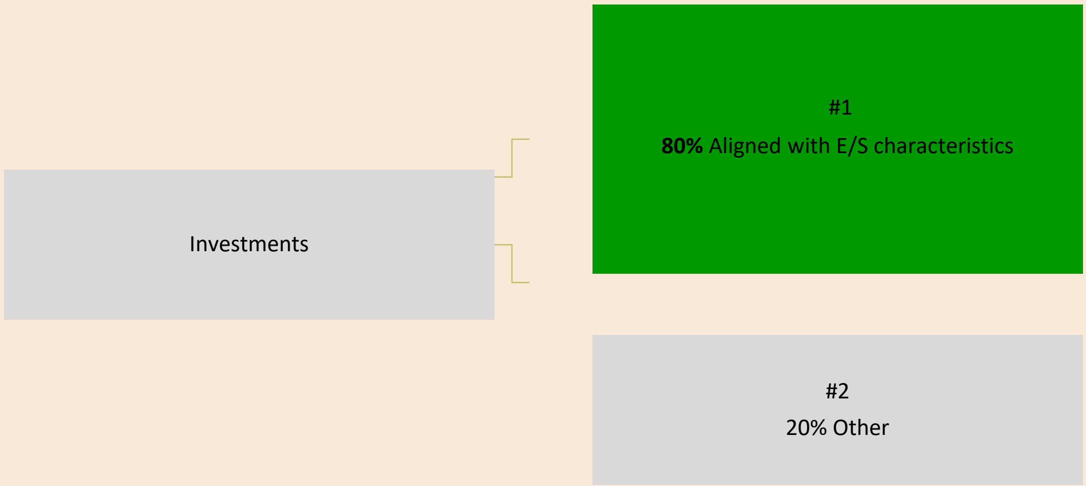
Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund.

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund and not the underying derivative exposure.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

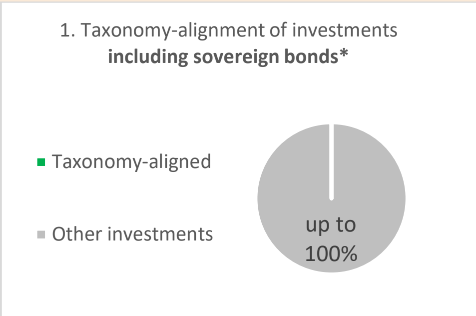
- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

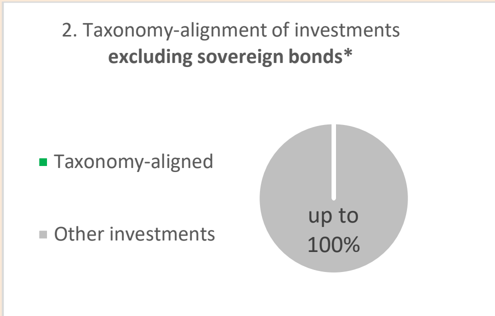
  The Fund gains exposure through the Basket (which is a derivative exposure as described above) to certain ESG screened indices. However, the Manager has determined that it is more appropriate not to look through derivatives employed by its Funds' under management in order to assess the attainment of environmental and/or social characteristics. Thus, the Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A

What is the minimum share of socially sustainable investments?

N/A

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund **and not the underying derivative exposure**.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

ESG TARGET GLOBAL COUPON 2026 FAM FUND II
SUPPLEMENT DATED 01 DECEMBER 2022

This Supplement contains specific information in relation to **ESG TARGET GLOBAL COUPON 2026 FAM FUND II** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe, the United States, Luxembourg and China & Hong Kong are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) two Business Days before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.4% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	2 November 2022, 1 November 2023, 6 November 2024, 5 November 2025 and 28 October 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 26 August 2021 and will close at 5:00 PM (Irish time) on 6 September 2021. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	28 October 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Underlying Funds which provide exposure to the above instruments.
Subscription Period:	means from 7 September 2021 to 8 November 2021 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled "Investment Policy" below) and to (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio

of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its assets in Equity Instruments. Once the Fund purchases the Equity Instruments it will then enter into a total return swap ("TRS") on the Equity Instruments in which it will swap out the performance and the income of the Equity Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Equity Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Equity Instruments directly.

ESG screening

The Equity Instruments will be made up of a minimum of 70% exposure to developed market companies which take account of environmental, social and governance ("ESG") factors. The ESG factors considered include, but are not limited to, the following:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Climate change and emission intensity	Customer Satisfaction	Board composition
Air & Water Pollution	Data Protection and Privacy	Audit Committee Structure
Deforestation	Gender & Diversity	Executive Compensation
Biodiversity	Employee Engagement	Lobbying
Water scarcity	Community Relations	Political Contributions
Waster Management	Human Rights	Whistleblower Schemes
Energy efficiency	Labour Standards	

In selecting the above Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

In determining how a company integrates the above ESG factors, the Manager will use analysis such as a sustainability risk score or ESG ratings provided by a recognised data provider such as Morningstar, MSCI or Bloomberg (or another data source nominated by the Manager). Such ratings and scores will be compared to other peers within the investment universe to select the Equity

Instruments with a more favourable ESG rating/score. In addition, the Manager will in particular look to select Equity Instruments of companies that meet the criteria for inclusion in ESG screened indices such as the MSCI Europe ESG Screened Index (EUR). Such ESG screened indices only comprise Equity Instruments of companies which promote, among other characteristics, certain of the ESG factors listed above.

In addition to the ESG factors considered above, the Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum** Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

(i.ii) Gaining an exposure of up to 50% of the Fund's Net Asset Value either directly or indirectly to Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

The breakdown of the Funding Investments between Equity Instruments and Debt Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular Funding Investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular Funding Investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument.

II. *<u>Exposure to the Basket</u>*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to a basket of equity indices (the "Basket"). The Basket will comprise a balance of European, American and Chinese equity indices, such as the CSI 300 Index, the CSI 500 Index, MSCI Europe ESG Screened Index and the S&P 500 ESG Index. The Basket will be substantially weighted in favour of ESG indices that provide the Fund with an indirect exposure to large cap and mid to small-cap global companies which have a focus on ESG factors.

It is expected that the Fund will gradually gain exposure to the Basket, starting with an expected exposure of 25% of the Fund's Net Asset Value during the first year and reaching an expected exposure of between 75%-100% of the Fund's Net Asset Value during the year of the Fund's maturity (i.e. in the year of the Maturity Date). The aim of this gradual exposure is to reduce the overall volatility of the Fund's exposure to the Basket while gaining an exposure through different market cycles thus avoiding the impact of short-term price fluctuations in the global equity market. At any time that the Fund is not fully exposed to the Basket, the remaining percentage of the Fund's portfolio will be made up of the Funding Investments.

The Manager will from time to time modify the gradual exposure to the individual equity indices that make up the Basket and the optimal composition of the Basket depending on their view of the global equity market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. In addition, the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. To give a practical illustration of a scenario which would potentially cause an alteration of the Basket composition based on a hypothetical scenario in which the Basket includes the CSI 300 and CSI 500 indices, the Manager will also consider the fact that the CSI 300 is represented by large-cap companies whereas the CSI 500 is represented by medium/small-cap companies. In favourable macro-economic conditions, medium/small-cap companies tend to out-perform large-cap companies. Hence in such a scenario, the Basket might be weighted accordingly (i.e. greater exposure to the CSI 500) to avail of the market opportunity.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policy section above, the Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be inline with the exposure that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international

body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 35% S&P 500 Net Total Return, 20% MSCI Europe High Dividend Net Total Return, 10% CSI 300 Index Net Total Return, 10% CSI 500 Index Net Total Return and 25% Bloomberg Euro Aggregate Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 5 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 26 August 2021 to 6 September 2021	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 26 August 2021 to 6 September 2021	Euro	No	€1,000	N/A	€100	Distributing
Class D Dist	€100	From 26 August 2021 to 6 September20	Euro	No	€500	N/A	€100	Distributing

		21						

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Risks of Directly Investing in China", "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold. In respect of the risks of directly investing in China, although the Fund will not directly invest in China, the Fund may engage a derivative counterparty that will provide the Fund with exposure to Chinese indices. Such derivative counterparties may themselves experience risks due to their direct investment in China which in turn allows them to provide the Fund with the relevant indirect exposure to China. This may lead to some risk for the Fund in respect of the relevant counterparty providing the Fund with a valuation for the derivative transaction that the Fund has entered into and thus investors should generally make themselves aware of the potential risks associated with investing directly in China.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: ESG TARGET GLOBAL COUPON 2026 FAM FUND II
Legal entity identifier: 254900HGJG4YNK0UXQ75

Environmental and/or social characteristics

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics promoted by the Fund include:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors is a key element of portfolio construction. The equity instruments in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and/or social characteristics, such as the MSCI Europe ESG Screened Index. In

addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies by the Manager and/or third party data providers with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive ESG factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control introduces a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

3. **Negative Screening (Norm-based exclusions)**
For direct holdings, the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which it [or its clients] deems incompatible with minimum responsible investing principles. To align the Fund's investments with this approach, the Manager has adopted a firm wide Exclusion Policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund invested in ESG screened index constituents which demonstrates the Fund's postive ESG tilt;

iii) The underying direct holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider); and

iv) The percentage of the Fund investment universe subject to the Manager's Exclusion Policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

N/A

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

N/A

How have the indicators for adverse impacts on sustainability factors been taken into account?

N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the investments against any applicable mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund follows an investment strategy which seeks to provide Shareholders with a Dividend and which seeks to provide a positive return at the Maturity Date linked to the

Basket exposure. The Funding Investments of the Fund are used to receive a pay out from an OTC counterparty and to facilitate the obtaining of the Basket exposure.

In selecting the Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **The Equity Instruments** will be made up of a minimum of 70% exposure to developed market companies which take account of ESG factors;
  b. **Direct equity investments** of the Fund will only be drawn from constituents of ESG screened indices;
  c. **Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;
  d. **Exclusion Policy**
  The Manager's Exclusion Policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  N/A

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Investments

#1
80% Aligned with E/S characteristics

#2
20% Other

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund.

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund and not the underying derivative exposure.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Fund gains exposure through the Basket (which is a derivative exposure as described above) to certain ESG screened indices. However, the Manager has determined that it is more appropriate not to look through derivatives employed by its Funds' under management in order to assess the attainment of environmental and/or social characteristics. Thus, the Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

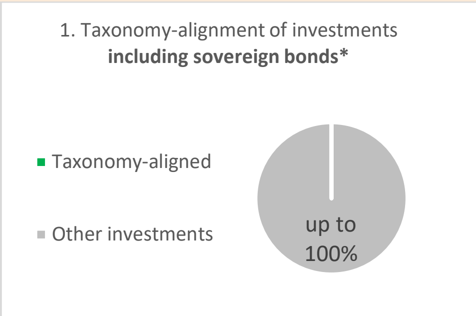
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

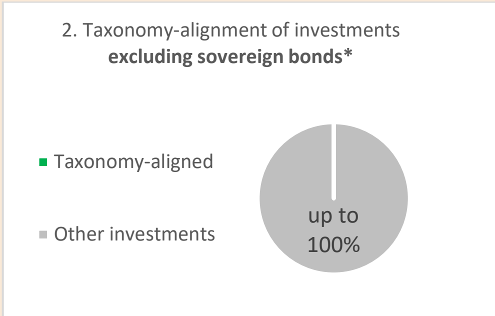
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A

What is the minimum share of socially sustainable investments?

N/A

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund **<u>and not the underying derivative exposure</u>**.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND III

SUPPLEMENT DATED 01 DECEMBER 2022

This Supplement contains specific information in relation to **ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND III** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe, the United States, Luxembourg and China & Hong Kong are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) two Business Days before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.4% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	15 March 2023, 13 March 2024, 12 March 2025 and 11 March 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 09 December 2021 and will close at 5:00 PM (Irish time) on 10 January 2022. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	11 March 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 11 January 2022 to 14 March 2022 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled "Investment Policy" below) and to (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its assets in Equity Instruments. Once the Fund purchases the Equity Instruments it will then enter into a total return swap ("TRS") on the Equity Instruments in which it will swap out the performance and the income of the Equity Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Equity Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Equity Instruments directly.

ESG screening

The Equity Instruments will be made up of a minimum of 70% exposure to developed market companies which take account of environmental, social and governance ("ESG") factors. The ESG factors considered include, but are not limited to, the following:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Climate change and emission intensity	Customer Satisfaction	Board composition
Air & Water Pollution	Data Protection and Privacy	Audit Committee Structure
Deforestation	Gender & Diversity	Executive Compensation
Biodiversity	Employee Engagement	Lobbying
Water scarcity	Community Relations	Political Contributions
Waster Management	Human Rights	Whistleblower Schemes
Energy efficiency	Labour Standards	

In selecting the above Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

In determining how a company integrates the above ESG factors, the Manager will use analysis such as a sustainability risk score or ESG ratings provided by a recognised data provider such as Morningstar, MSCI or Bloomberg (or another data source nominated by the Manager). Such ratings and scores will be compared to other peers within the investment universe to select the Equity Instruments with a more favourable ESG rating/score. In addition, the Manager will in particular look to select Equity Instruments of companies that meet the criteria for inclusion in ESG screened indices such as the MSCI Europe ESG Screened Index (EUR). Such ESG screened indices only comprise Equity Instruments of companies which promote, among other characteristics, certain of the ESG factors listed above.

In addition to the ESG factors considered above, the Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum** Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

(i.ii) Gaining an exposure of up to 50% of the Fund's Net Asset Value either directly or indirectly to Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

The breakdown of the Funding Investments between Equity Instruments and Debt Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular Funding Investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular Funding Investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument.

II. *Exposure to the Basket*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to a basket of equity indices (the "Basket"). The Basket will comprise a balance of European, American and Chinese equity indices, such as the CSI 300 Index, the CSI 500 Index, MSCI Europe ESG Screened Index and the S&P 500 ESG Index. The Basket will be substantially weighted in favour of ESG indices that provide the Fund with an indirect exposure to large cap and mid to small-cap global companies which have a focus on ESG factors.

It is expected that the Fund will gradually gain exposure to the Basket, starting with an expected exposure of 25% of the Fund's Net Asset Value during the first year and reaching an expected exposure of between 75%-100% of the Fund's Net Asset Value during the year of the Fund's maturity (i.e. in the year of the Maturity Date). The aim of this gradual exposure is to reduce the overall volatility of the Fund's exposure to the Basket while gaining an exposure through different market cycles thus avoiding the impact of short-term price fluctuations in the global equity market. At any time that the Fund is not fully exposed to the Basket, the remaining percentage of the Fund's portfolio will be made up of the Funding Investments.

The Manager will from time to time modify the gradual exposure to the individual equity indices that make up the Basket and the optimal composition of the Basket depending on their view of the global equity market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. In addition, the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. To give a practical illustration of a scenario which would potentially cause an alteration of the Basket composition based on a hypothetical scenario in which the Basket includes the CSI 300 and CSI 500 indices, the Manager will also consider the fact that the CSI 300 is represented by large-cap companies whereas the CSI 500 is represented by medium/small-cap companies. In favourable macro-economic conditions, medium/small-cap companies tend to out-perform large-cap companies. Hence in such a scenario, the Basket might be weighted accordingly (i.e. greater exposure to the CSI 500) to avail of the market opportunity.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

In addition to what is contained in the Investment Policy section above, the Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps (“TRS”), CDS. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions”.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund’s use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund’s use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund’s use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps (“TRS”): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund’s portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund’s assets may be subject to total return swaps on the financial instruments outlined in the Fund’s investment objective and policy and it is expected that, in general, 0%-100% of the Fund’s assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be inline with the exposure that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international

body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 35% S&P 500 Net Total Return, 20% MSCI Europe High Dividend Net Total Return, 10% CSI 300 Index Net Total Return, 10% CSI 500 Index Net Total Return and 25% Bloomberg Barclays Euro Aggregate Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 4 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 09 December 2021 to 10 January 2022	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 09 December 2021 to 10 January 2022	Euro	No	€1,000	N/A	€100	Distributing
Class D Dist	€100	From 09 December 2021 to 10	Euro	No	€500	N/A	€100	Distributing

		January 2022						

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator’s Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary’s Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Risks of Directly Investing in China", "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold. In respect of the risks of directly investing in China, although the Fund will not directly invest in China, the Fund may engage a derivative counterparty that will provide the Fund with exposure to Chinese indices. Such derivative counterparties may themselves experience risks due to their direct investment in China which in turn allows them to provide the Fund with the relevant indirect exposure to China. This may lead to some risk for the Fund in respect of the relevant counterparty providing the Fund with a valuation for the derivative transaction that the Fund has entered into and thus investors should generally make themselves aware of the potential risks associated with investing directly in China.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND III
Legal entity identifier: 2549006KWNC5TMPKQL89

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics promoted by the Fund include:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors is a key element of portfolio construction. The equity instruments in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and/or social characteristics, such as the MSCI Europe ESG Screened Index. In

addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies by the Manager and/or third party data providers with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive ESG factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control introduces a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

3. **Negative Screening (Norm-based exclusions)**
For direct holdings, the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which it [or its clients] deems incompatible with minimum responsible investing principles. To align the Fund's investments with this approach, the Manager has adopted a firm wide Exclusion Policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund invested in ESG screened index constituents which demonstrates the Fund's postive ESG tilt;

iii) The underying direct holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider); and

iv) The percentage of the Fund investment universe subject to the Manager's Exclusion Policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

N/A

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

N/A

How have the indicators for adverse impacts on sustainability factors been taken into account?

N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the investments against any applicable mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund follows an investment strategy which seeks to provide Shareholders with a Dividend and which seeks to provide a positive return at the Maturity Date linked to the

Basket exposure. The Funding Investments of the Fund are used to receive a pay out from an OTC counterparty and to facilitate the obtaining of the Basket exposure.

In selecting the Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- **a. The Equity Instruments** will be made up of a minimum of 70% exposure to developed market companies which take account of ESG factors;
- **b. Direct equity investments** of the Fund will only be drawn from constituents of ESG screened indices;
- **c. Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;
- **d. Exclusion Policy**
  The Manager's Exclusion Policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

N/A

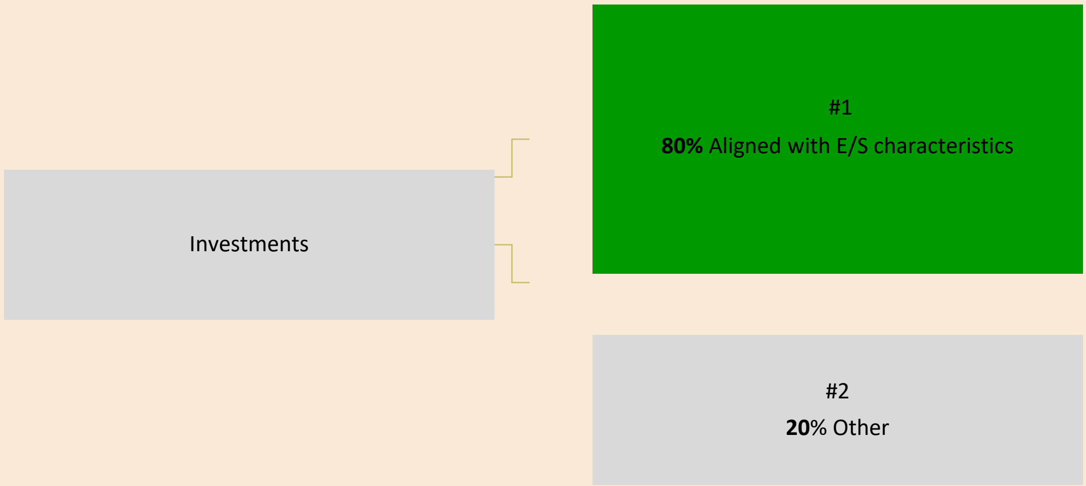
Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund.

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund and not the underying derivative exposure.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Fund gains exposure through the Basket (which is a derivative exposure as described above) to certain ESG screened indices. However, the Manager has determined that it is more appropriate not to look through derivatives employed by its Funds' under management in order to assess the attainment of environmental and/or social characteristics. Thus, the Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

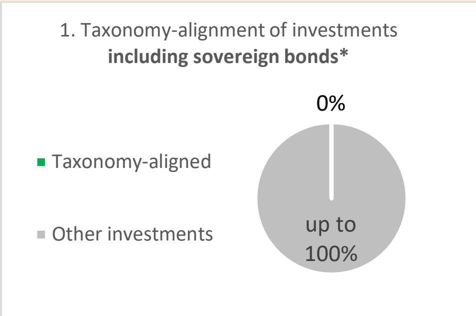
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

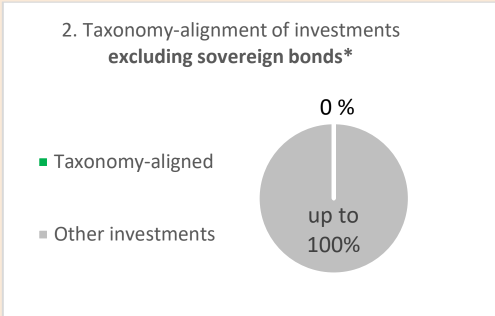
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A

What is the minimum share of socially sustainable investments?

N/A

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund **and not the underying derivative exposure**.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

JP MORGAN CHINA A-SHARES OPPORTUNITIES FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **JPMORGAN CHINA A-SHARES OPPORTUNITIES FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open- ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Due to the Fund's ability to invest in emerging markets securities and financial derivative instruments the Fund may have a higher than average degree of risk. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to provide long-term capital growth by investing primarily in companies of the People's Republic of China (PRC).

The Fund seeks to achieve this objective by investing in equities and equity-related securities of, or linked to, issuers that are in China. At least 67% of assets will be invested in China A Shares (as defined below) of companies that are domiciled, or carrying out the main part of their economic activity, in the PRC through the Shanghai Stock Exchange ("SSE") and/or the Shenzhen Stock Exchange (the "SZSE"), or such other shares that may in the future be defined as China A shares issued by companies in China on the SSE and/or SZSE ("China A Shares") and available for investment by using the Shanghai-Hong Kong Stock Connect and the Shenzen-Hong Kong Stock Connect respectively (each a "Stock Connect" and collectively the "Stock Connects") and through the Renminbi Qualified Foreign Institutional Investor ("RQFII") or Qualified Foreign Institutional Investor ("QFII") quotas (the QFII and RQFII program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access the SSE and SZSE). These investments may include small capitalisation companies. The Fund may be concentrated in a limited number of securities or sectors from time to time. The Fund may invest up to 15% of assets in participation notes to gain exposure to companies that are domiciled, or carrying out the main part of their economic activity, in the PRC. Please refer to "Direct Investment in China" below for further information.

The Fund's investment universe may be across a range of economic sectors, including, but not limited to financial services, real estate, industrials, utilities, consumer discretionary, energy, information technology, materials, health care, consumer staples, and communication services. Exposure to real estate may be achieved through investment in equities and equity-related securities issued by or linked to companies whose principal activities include development, ownership, construction, management or sale of real estate or companies with significant real estate holdings.

The equities and equity-related securities in which the Fund may invest will generally be listed on the recognised exchanges and markets set out in Schedule I of the Prospectus. However, the Fund may invest up to 10% of its Net Asset Value in unlisted equities which are not listed on recognised exchanges and markets but which are permissible investments for UCITS. The Fund has no restrictions as to the proportion of assets allocated to companies of any particular market capitalisation and may invest across a range of economic sectors.

The equities and equity-related securities in which the Fund may invest may include, without limitation, common stock, preferred stock, structured notes issued by financial institutions and offered in the open market and global depository receipts/American depository receipts. Investment in structured notes will not form a significant part of the investment policy of the Fund. To the extent that any structured notes in which a Fund may invest are leveraged or contain embedded derivatives, they will be managed by the Fund as FDI and will be utilized for investment purposes only up to a maximum of 10% of the Fund's Net Asset Value.

While the Fund will invest primarily in equities and equity-related securities, as referred to above, the Fund may, in circumstances of extreme volatility or if market factors require and if considered appropriate to the investment objective, invest on a short term basis in cash, cash equivalents, money market instruments (including, but not limited to, cash deposits, commercial paper and certificates of deposit) or government or corporate bonds (which may be fixed or floating rate and of investment grade).

The investment philosophy of the Fund is based on the domestic China market emphasizes higher growth, higher quality and higher return businesses with a favourable supply-side dynamic in their markets (i.e. with favourable tax, regulatory and monetary policies which encourage production of goods). The basis on which investment will be selected focuses on undervalued companies with durable franchises and strong management, which should generate consistent returns over the long term. Such companies are identified through the Investment Manager's comprehensive research process which involves input from its in-house "Greater China Investment Professionals Team" who have vast expertise and local knowledge to assess and identify such companies. The investment process is primarily driven by:

(a) a bottom-up stock selection process to seek companies whose intrinsic value is greater than the current price of their securities. This approach includes fundamental analysis of a company's financial statements, profitability, management structure, operations, business strategy, product development, and its position within its industry, among other things. The Investment Manager evaluates investment opportunities on a company-by-company basis before considering the impact of general or industry economic trends on the income producing potential of such equities; and
(b) a top-down macro analysis which consists of adapting the portfolio positioning to the Investment Manager's expectations regarding macroeconomic conditions such as growth, inflation and trends in corporate credit quality.

The primary objective of the investment philosophy and process is to deliver strong relative performance in a disciplined manner over the longer-term, which comes from investing, at the right time and price, in well- managed, high quality growth companies that return earnings and dividends fairly to minority shareholders. The Fund will measure its performance against the CSI 300 Net Total Return Index. The CSI 300 Net Total Return Index is a capitalization-weighted stock market index designed to replicate the performance of the top 300 stocks traded on the Shanghai Stock Exchange and the Shenzhen Stock Exchange.

Cash and cash equivalents (such as money market funds, time deposits and treasury bills) may be held by the Fund on an ancillary basis. The Fund may also invest in other Underlying Funds authorised as UCITS by an EEA member state which provide exposures that are consistent with the investment policy of the Fund.

Other than permitted investment in unlisted securities and FDIs, the Fund's investments will be limited to securities and exchange traded FDIs that are traded on the markets listed in Schedule I of the Prospectus. No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Direct Investment in China

As noted above, Fund may invest at least 67% of its Net Asset Value in shares denominated in Renminbi, issued by companies in China and listed on the SSE and/or the SZSE, or such other shares that may in the future be defined as China A Shares and available for investment by using the Stock Connects and through the RQFII or QFII quotas.

The Shanghai-Hong Kong Stock Connect is a securities trading and clearing links program developed by Hong Kong Exchanges and Clearing Limited ("HKEX"), SSE and the China Securities Depositary and Clearing Corporation Limited ("ChinaClear"). It is comprised of a Northbound Shanghai Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shanghai Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by the Stock Exchange of Hong Kong (the "SEHK"), may be able to trade eligible China A Shares listed on the SSE by routing orders to the SSE. Under the Southbound Hong Kong Trading Link, investors in China may trade certain stocks listed on the SEHK.

The Shenzen-Hong Kong Stock Connect is a securities trading and clearing links program developed by HKEX, SZSE and ChinaClear. It is comprised of a Northbound Shenzhen Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shenzhen-Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by SEHK, may be able to trade eligible China A Shares listed on the SZSE by routing orders to SZSE. Under the Southbound Hong Kong Trading Link, investors in China will be able to trade certain stocks listed on the SEHK.

There are specific risks associated with direct investment in China and investors' attention is drawn to the section titled "Risk Factors" in the Prospectus.

Benchmark Information

From time to time, the Investment Manager, considering the degree of representativeness of underlying markets and their liquidity, strategically selects a benchmark or index (the "Index") appropriate to the Fund's investment policies, in reference to which the Fund is then managed and compared to which the Fund will seek to achieve a similar rate of return, gross of fees. Currently, the Fund is actively managed in reference to the CSI 300 Net Total Return Index. Though the majority of its holdings (excluding derivatives) are likely to be components of the Index, the Investment Manager has broad discretion to deviate from its securities, weightings and risk characteristics. The degree to which the Fund may resemble the composition and risk characteristics of the Index will vary overtime and its performance may be meaningfully different.

The above Index is provided by an administrator, China Securities Index Company, Ltd., which was recognized under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "Benchmark Regulation").

Use of Financial Derivative Instruments ("FDIs") and other Instruments and Techniques

The Fund may engage in transactions in FDI for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use are: futures and forwards. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Futures and forwards: Futures and forwards may be used to hedge against downward movements in the value of the Fund's portfolio, either by reference to the equity securities in which it may invest or the markets to which it may be exposed, in accordance with its Investment Objective and Policy (see above). Futures may also be used for investment purposes or to allocate investments within the Fund by taking exposure to specific markets or issuers or to increase the Fund's exposure to general market risk on a temporary basis, or on a long-term basis.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be between 0% and 20% of the Fund's Net Asset Value, subject to a maximum exposure of 20% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

ESG Integration

The Investment Manager strongly believes that ESG considerations (in particular, governance) should be a foundation of any investment process supporting long-term investing and that corporate policies at odds with environmental and social issues are not sustainable in the long term. The Investment Manager is confident that integration of ESG issues in investment analysis and investment decisions is critical to successful investing. To this purpose, the Investment Manager systematically includes ESG analysis in its investment decisions on at least 90% of securities purchased, by relying on the following ESG factors and screenings:

ESG factors

Examples of ESG factors considered by the Investment Manager are:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Air pollution	Workplace safety	Audit committee independence
Noise pollution	Working conditions	Compensation committee independence
Water pollution	Employee health	Political contribution
Resource efficiency / management	Social value creation	Executive compensation
Biodiversity / habitat protection	Child labour ban	Stakeholder engagement
Resource efficiency / management	Emergency preparedness	Code of conduct

Further examples and information on the above ESG factors can be found on the Investment Manager's website at the following link: https://am.jpmorgan.com/lu/en/asset-management/adv/investment- themes/sustainable-investing/ESG-integration/

ESG Screenings

This screening applied by the Investment Manager includes, for example, identifying issuers that are involved in the manufacturing of controversial weapons, thermal coal and tobacco.

The list of screens applied that may result in exclusions can be found on the https://am.jpmorgan.com/lu/en/asset-management/adv/investment-themes/sustainable-investing/capabilities/ website.

Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.The Fund integrates the systematic inclusion of ESG issues in investment analysis and investment decisions. ESG integration for the Fund requires:

- sufficient ESG information on the Funds' investment universe to be available. In this regard, the Investment Manager will use a proprietary methodology to score companies that examines both the exposure to, and performance against, sustainability issues. The methodology focuses on those issues that are material to a firm's business activities on a company by company basis, using a combination of an in-house proprietary ESG framework, fundamental analysis, information gained from any company engagement activities and third-party research and data.
- the Investment Manager to consider proprietary research on the financial materiality of ESG issues on the Fund's investments; and
- the Investment Manager's research views and methodology to be documented throughout the investment process.

The ultimate inclusion of a security in the Fund portfolio, is determined via the Investment Manager's proprietary ESG scoring methodology which also incorporates third party data. Specifically, such process involves the Investment Manager assessing whether or not companies that have been identified as having positive environmental and/or social characteristics - which the Investment Manager considers investing in - also follow good governance practices (i.e. whether or not these companies meet "good ESG characteristics"). In order to determine a security to have "good" ESG characteristics, the following qualitative and, if needed, quantitative analysis is followed:

1. Qualitative analysis: the primary sources used to assess companies rely on the Investment Manager's proprietary 40 question ESG Checklist.
2. Quantitative analysis: Where the Investment Manager's ESG Checklist is not completed, a quantitative score using third party data (such as Bloomberg, MSCI, etc.) is used in the interim until the Investment Manager's analysts have been able to source the information.

ESG integration also requires appropriate monitoring of ESG considerations in ongoing research, risk management, portfolio monitoring and portfolio construction.

Responsible Investing Information

For any additional information on the Investment Manager's sustainable investing approach, please refer to the website https://am.jpmorgan.com/lu/en/asset-management/adv/investment-themes/sustainable-investing/

Investor Profile

The Fund is suitable for retail and institutional investors seeking long-term capital growth and who are willing to accept a high level of volatility. The Fund should be viewed as a medium to long term investment.

This is a value investment style equity fund designed to give exposure to value companies in China. Because value stocks tend to outperform at different times to growth stocks, investors should be prepared for periods of underperformance, although research shows that over the long-term both investment styles have outperformed. Therefore, this Fund can be used both to provide a value tilt to an existing diversified portfolio or as investment in its own right. Investors should understand the risks associated with emerging market equities and China and are willing to accept those risks in search of potential higher returns, including the risk of losing all capital invested and must evaluate the Fund objective and risks in terms of whether they are consistent with their own investment goals and risk tolerances. The Fund is not intended as a complete investment plan.

Base Currency: Chinese Yuan Renminbi (CNH).

Investment Manager

The Manager has appointed JPMorgan Asset Management (UK) Limited of 60 Victoria Embankment, London, EC4Y0JP, to act as the investment manager pursuant to an investment management agreement as amended and restated on 24 August 2021. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

The Investment Manager considers a wide range of environmental, social and governance characteristics on an ongoing basis for the Fund, as set out in the "ESG Integration" section above.

The Investment Manager has discretion to implement additional sustainable requirements and exclusions having regard to their applicable investment process from time to time.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of "Sustainability Risks" in the main body of the Prospectus).

While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described above, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised. below:

(1) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors.

(2) The Investment Manager will comply with its own exclusion policy and the Manager's exclusion list, whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risks given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L	€100	Closed	EUR	No	Yes/ max 5%	€ 1,000 /100	Accumulating
Class LH	€100	Closed	EUR	Yes	Yes, max 5%	€ 1,000 /100	Accumulating

Class A	€100	Closed	EUR	No	No	€ 1,000 /100	Accumulating
Class I	€100	Closed	EUR	No	No	€ 1,000,000 / 100	Accumulating
Class J Acc	€10,000	2 December 2022-1 June 2023	EUR	No	No	€ 1,000,000 / 100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

All Share Classes are offered during the initial offer period (as indicated in the above table).

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"**Business Day**" means every weekday on which retail banks and securities markets in Luxembourg, China & Hong Kong are normally open for business;

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 3:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses
Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Investment Manager's Fee

The Manager shall pay out of its management fee the fee of the Investment Manager.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge: Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations. If a sales charge fee is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

While investors should read and consider the entire "Risk Factors" section of the Prospectus, the risks summarised in the sections entitled "Risks of Directly Investing in China" and "Risks relating to Stock Connects" are particularly relevant to the Fund's portfolio.

Regulatory Risks Relating to the QFII and RQFII

PRC investments by overseas institutions can be made by or through holders of a QFII/RQFII license, as approved under and subject to applicable Chinese regulations and regulatory requirements (the "**QFII/RQFII Regulations**"), which are governed by PRC authorities, including the China Securities Regulatory Commission ("**CSRC**"), the State Administration of Foreign Exchange ("**SAFE**") and the People's Bank of China ("**PBOC**").

The Investment Manager has been granted a QFII/RQFII license ("**QFII/RQFII License**") and, as such, the relevant requirements and restrictions under the QFII/RQFII Regulations apply to the Investment Manager (as the QFII/RQFII License holders) as a whole, and not simply to investments made by the Fund. Shareholders should be aware that violations of any QFII/RQFII Regulations arising from activities through the Investment Manager's QFII/RQFII status other than those conducted by the Fund could result in the revocation of, or other regulatory action in respect of, the Investment Manager's QFII/RQFII status as a whole. As a result, the ability of the Fund to make investments and/or repatriate monies through the Investment Manager's QFII/RQFII status may be affected adversely by the investments or performance by other investors utilizing the Investment Manager's QFII/RQFII status.

As the QFII/RQFII Regulations have a relatively short history and their application and interpretation remain relatively untested, there is uncertainty as to how they will be applied and interpreted by the PRC authorities or how regulators may exercise the wide discretionary powers given to them thereunder in future. Any changes to the relevant rules may have a material adverse impact on investors' investment.

Investors should further note that under the QFII/RQFII Regulations, the QFII/RQFII status could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFII/RQFII status is suspended or revoked, the Fund may be required to dispose of their securities held through the QFII/RQFII and may not be able to access the Chinese securities market via the QFII/RQFII, which may have an adverse effect on the Fund's performance.

Liquidity Risk

Certain securities the Fund may invest into may be difficult or impossible to sell at the time and the price that the seller would like. The seller may have to lower the price to effect a secondary market sale, sell other securities instead or forego an investment opportunity, any of which could have a negative effect on the Fund's management or performance. The investor's attention is also drawn to the heading "Liquidity Risk" set out in "Risk Factors" section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

> **Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

> The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: JP MORGAN CHINA A-SHARES OPPORTUNITIES FAM FUND
Legal entity identifier: 254900X39YSDFXAY5889

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	✓ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10.00% % of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	✓ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	✓ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The Fund promotes a broad range of environmental and/or social characteristics through its inclusion criteria for investments that promote environmental and/or social characteristics. It is required to invest at least 51% of its assets in such securities. It also promotes certain norms and values by excluding particular companies from the portfolio.

Through its inclusion criteria, the Fund promotes environmental characteristics which may include effective management of toxic emissions and waste, as well as good environmental record. It also promotes social characteristics which may include effective sustainability disclosures, positive scores on labour relations and management of safety issues.

Through its exclusion criteria, the Fund promotes certain norms and values such as support for the protection of internationally proclaimed human rights and reducing toxic emissions, by fully excluding companies that are involved in particular activities such as manufacturing controversial weapons and applying maximum revenue, production or distribution percentage thresholds to others such as those that are involved in thermal coal and tobacco. Please refer to the exclusions policy for the Fund on www.jpmorganassetmanagement.lu and FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com) for further information.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No benchmark has been designated for the purpose of attaining the environmental or social characteristics.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

A combination of the Investment Manager's proprietary ESG scoring methodology and/or third party data are used as indicators to measure the attainment of the environmental and/ or social characteristics that the Fund promotes.

The methodology is based on a company's management of relevant environmental or social issues such as its toxic emissions, waste management, labour relations and safety issues. To be included in the 51% of assets promoting environmental and/or characteristics, a company must score in the top 80% relative to its peers on either its environmental score or social score and follow good governance practices. Please refer to "What is the policy to assess good governance practices of the investee companies?" below for further detail on good governance.

To promote certain norms and values, the Investment Manager utilises data to measure a company's participation in certain related activities. Screening on that data results in full exclusions on certain potential investments and partial exclusions based on maximum percentage thresholds on revenue, production or distribution on others. A subset of the "Adverse Sustainability Indicators" as set out in the EU SFDR Regulatory Technical Standards is also incorporated in the screening and the relevant metrics are used to identify and screen out identified violators.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the Sustainable Investments that the Fund partially intends to make may include any individual or combination of the following: Environmental Objectives (i) climate risk mitigation, (ii) transition to a circular economy; Social Objectives (i) inclusive and sustainable communities - increased female executive representation, (ii) inclusive and sustainable communities - increased female representation on boards of directors and (iii) providing a decent working environment and culture.

Contribution to such objectives is determined by either (i) products and services sustainability indicators which may include the percentage of revenue derived from providing products and / or services that contribute to the relevant sustainable objective, such as a company producing solar panels or clean energy technology that meets the Investment Manager's proprietary thresholds contributing to climate risk mitigation; or (ii) being an operational peer group leader contributing to the relevant objective. Being a peer group leader is defined as scoring in the top 20% relative to peers based on certain operational sustainability indicators. For example, scoring in the top 20% relative to peers on total waste impact contributes to a transition to a circular economy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sustainable Investments that the Fund partially intends to make are subject to a screening process that identifies and excludes, from qualifying as a Sustainable Investment, the worst offending companies, in relation to certain environmental considerations such as climate change, protection of water and marine resources, transition to a circular economy, pollution and protection of biodiversity and ecosystems. The Investment Manager also applies a screen to align with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as provided for under the Minimum Safeguards in the EU Taxonomy Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Certain indicators for adverse impacts on sustainability factors as set out in the EU SFDR Regulatory Technical Standards are taken into account to demonstrate that an investment qualifies as a Sustainable Investment. In particular, adverse sustainability indicators 10 and 14 from the EU SFDR Regulatory Technical Standards in relation to violations of the UN Global Compact and controversial weapons have been taken into account through the values and norms-based exclusions described above in the answer to "What environmental and/or social characteristics are promoted by this financial product?".

Further additional adverse sustainability indicators, such as indicators 3, 5, 6 and 9 as set out in the EU SFDR Regulatory Technical Standards in relation to GHG intensity, share of non renewable energy consumption and production, energy consumption and hazardous waste are considered as part of the do no significant harm screen described in the answer to the above question. Issuers below a predefined threshold using the relevant EU SFDR Regulatory Technical Standards metrics will be screened out.

The Investment Manager may consider a broader set of indicators for adverse impacts on sustainability factors at its discretion.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The norms based portfolio exclusions as described above under "What environmental and/or social characteristics are promoted by this financial product?" seek alignment with these guidelines and principles. Third party data is used to identify violators and prohibit relevant investments in these companies.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✓ Yes, The Fund considers select principal adverse impacts on sustainability factors through values and norms-based screening to implement exclusions. Indicators 10 and 14 in relation to violations of the UN Global Compact and controversial weapons from the EU SFDR Regulatory Technical Standards are used in respect of such screening. The Fund also uses certain of the indicators as part of the "Do No Significant Harm" screen as detailed in theresponse to the question directly above to demonstrate that an investment qualifies as a Sustainable Investment.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund's strategy can be considered in respect of its general investment approach and ESG approach as follows: Investment approach

- Uses a fundamental, bottom-up stock selection process.
- Uses a high conviction approach to finding the best investment ideas.
- Seeks to identify high quality companies with superior and sustainable growth potential. ESG approach: ESG Promote
- Excludes certain sectors, companies or practices based on specific values or norms based criteria.

- At least 51% of assets to be invested in companies with positive environmental and/ or social characteristics.
- At least 10% of assets to be invested in Sustainable Investments.
- All companies follow good governance practices.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics are:

- The requirement to invest at least 51% of assets in companies with positive environmental and/or social characteristics.
- The values and norms based screening to implement full exclusions in relation to companies that are involved in certain activities such as manufacturing controversial weapons and applying maximum revenue, production or distribution percentage thresholds to others such as those that are involved in thermal coal and tobacco.
- The requirement for all companies in the portfolio to follow good governance practices.

The Fund also commits to investing at least 10% of assets in Sustainable Investments.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

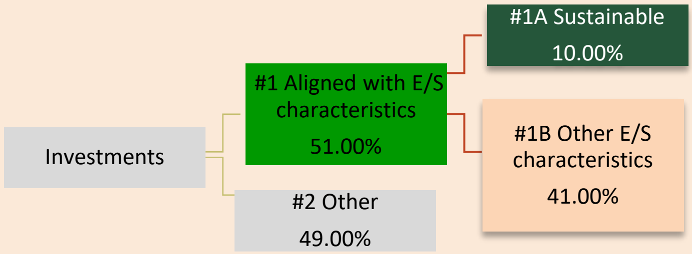
The Fund does not apply such a committed minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

All investments (excluding cash and derivatives) are screened to exclude known violators of good governance practices. In addition, for those investments included in the 51% of assets promoting environmental and/or social characteristics or qualifying Sustainable Investments, additional considerations apply. For these investments, the Fund incorporates a peer group comparison and screens out companies that do not score in the top 80% relative to peers based on good governance indicators.

What is the asset allocation planned for this financial product?



Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Fund plans to allocate at least 51% of its assets to companies with positive environmental and / or social characteristics and a minimum of 10% of assets to Sustainable Investments. The Fund does not commit to investing any proportion of assets specifically in companies exhibiting positive environmental characteristics or specifically in positive social characteristics nor is there any commitment to any **specific** individual or combination of environmental or social objectives in respect of the Sustainable Investments. Therefore, there are no specific minimum allocations to environmental or social objectives referred to in the diagram below.

Ancillary Liquid Assets, Deposits with Credit Institutions, money market instruments / funds (for managing cash subscriptions and redemptions as well as current and exceptional payments) and derivatives for EPM are not included in the % of assets set out in the table below. These holdings fluctuate depending on investment flows and are ancillary to the investment policy with minimal or no impact on investment operations.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***
  Derivatives are not used to attain the environmental or social characteristics promoted by the Fund.

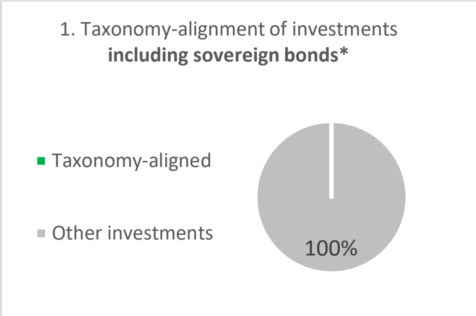
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

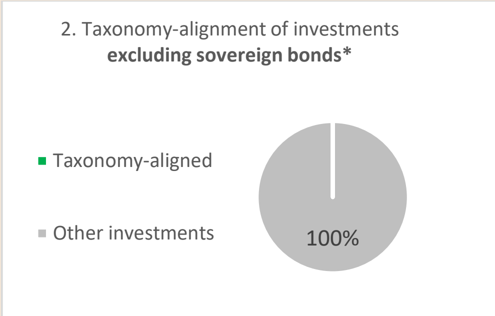
The Fund invests at least 10% of assets in Sustainable Investments, however, 0% of assets are committed to Sustainable Investments with an environmental objective aligned with the EU Taxonomy.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





*   *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

The Fund invests at least 10% of assets in Sustainable Investments, however, 0% of assets are committed to Sustainable Investments with an environmental objective aligned with the EU Taxonomy. Accordingly, 0% of assets are committed to transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund invests at least 10% of assets in Sustainable Investments, typically across both environmental and social objectives. It does not commit to any specific individual or combination of Sustainable Investment objectives and therefore there is no committed minimum share.

What is the minimum share of socially sustainable investments?

The Fund invests at least 10% of assets in Sustainable Investments, typically across both environmental and social objectives. It does not commit to any specific individual or combination of Sustainable Investment objectives and therefore there is no committed minimum share.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The "other" investments are comprised of companies that did not meet the criteria described in response to above question entitled, "What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?" to qualify as exhibiting positive environmental and/or social characteristics. They are investments for diversification purposes.

All investments, including “other” investments are subject to the following ESG Minimum Safeguards/principle:

- The minimum safeguards as outlined by Article 18 of the EU Taxonomy Regulation (including alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights).
- Application of good governance practices (these include sound management structures, employee relations, remuneration of staff and tax compliance).
- Compliance with the Do No Significant Harm principle as prescribed under the definition of Sustainable Investment in EU SFDR.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  Not applicable

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  Not applicable

- ***How does the designated index differ from a relevant broad market index?***

  Not applicable

- ***Where can the methodology used for the calculation of the designated index be found?***

  Not applicable

Where can I find more product specific information online?

FINECO AM EURO INFLATION-LINKED GOVERNMENT BOND FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **FINECO AM EURO INFLATION-LINKED GOVERNMENT BOND FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Investment Objective and Policies

The investment objective of the Fund is to achieve capital growth over the medium to long term.

The Fund seeks to achieve its investment objective while promoting environmental and/or social characteristics under Article 8 of SFDR as described under "ESG Integration" below. The Fund does not pursue a sustainable objective and thus it is not classified under Article 9 of SFDR.

The Fund will look to achieve its objective by investing in European and non-European Debt Instruments, as defined below and within the below listed limits, with a focus on Inflation-Linked Bonds ("ILBs").

"**Debt Instruments**" mean

(i) sovereign and/or supranational and/or government-agency issued fixed income securities i.e. treasury bills, sovereign, supranational and municipal bonds, ILBs, and

(ii) corporate fixed income securities i.e. debentures and commercial paper, which are rated Investment Grade (at the time of investment) and with either a fixed or floating rate.

The Fund will invest:

- At least 80% of its Net Asset Value in European government bonds categorized as ILBs, being securities issued by sovereign governments/government agencies that contractually link the bond's principal and interest payment to a nationally/supernationally recognised inflation measure such as the European Harmonized Index of Consumer Prices (HICP); and

- Maximum 20% of its Net Asset Value in European corporate bonds issued by companies of any capitalization across the European region.

By "**European**" in the above, reference is made to Debt Instruments that are issued by governmental or corporate entities based in the Euro zone, meaning in any country within the European Union that has adopted the Euro as its national currency (the "**Euro Zone**").

The Fund may also invest up to 20% of its Net Asset Value in non-European Debt Instruments, meaning in Debt Instruments that are not issued by governmental or corporate entities within the Euro Zone.

Selection of Debt Instruments

The Manager will select the bonds to be acquired by focusing on fundamental research and bottom-up security selection analysis. The Manager's government and corporate bond analysis provides a fundamental assessment of a country or company's financial health. This involves assessing the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for such bonds. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this respect, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bond to acquire on behalf of the Fund. ESG integration will also be a key consideration in assessing the merits of any investment and will be integrated into the process as a core part of understanding the risk profile of any investment. When an investment in a bond is made, it will be closely monitored by the Manager, taking into account the above limits. In addition, where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Other than permitted investment in unlisted securities and FDIs, as described below, the Fund's investments will be limited to securities and exchange traded FDIs that are traded on the markets listed in Schedule I of the Prospectus.

Benchmark Information

The Fund is actively managed. The Manager has selected the Bloomberg Euro Government Inflation-Linked Bond Index (the "Index"), which is used for performance comparison purposes only. The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index, or which are present in different proportions.

ESG Integration

The Fund seeks to promote ESG characteristics through the active incorporation of ESG factors and considerations into the investment decision making framework, and portfolio analysis and monitoring activities, using inputs from internal and external data sources.

ESG Screenings

Exclusion screenings: In the process of selection of the permitted instruments, the Manager's exclusion policy will apply.

The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list which is derived from the exclusion policy may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

ESG Assessment: The Manager selects those securities for the Fund that show sound fundamentals and high ESG scores, while being valued at a discount to the Manager's assessment of intrinsic value.

When considering ESG scores, the Manager has regard to ESG scores assigned by a third party data provider. Further information on ESG scores is available on the Manager's website at the link: http://finecoassetmanagement.com/sustainability/

The due diligence includes an analysis on ESG risks material to the investee issuers and considers how those entities manage their sustainability risks.

Data Reliance: The Manager will (i) source data from third-party data providers such as MSCI Inc and Bloomberg, and will apply its discretion on the conclusions of the data providers, and/or (ii) carry out its own internal ESG analyses on issuers. Potential investments for which there is insufficient data available from third party providers to conduct an ESG analysis, may be deemed not eligible for inclusion in the Fund's investment universe subject to the Manager's own internal ESG analysis and assessment of an issuer which may include engagement with the relevant issuer to understand their approach to ESG matters.

ESG factors

The list of ESG factors considered by the Manager for each investment will differ according to the sector, industry and business activity the issuer is engaged in. Examples of ESG factors considered by the Manager are:

Environmental Issues	**Social Issue**	**Corporate Governances Issues**
Air pollution	Workplace safety	Audit committee independence
Waste & Hazardous Materials Management	Working conditions	Compensation committee independence
Water pollution	Employee health	Political contribution

Resource efficiency / management	Social value creation	Executive compensation
Biodiversity / habitat protection	Child labour ban	Stakeholder engagement
Material Sourcing & Efficiency/ management	Emergency preparedness	Code of conduct

<u>Responsible Investing Information</u>

For any additional information on the Manager's sustainable investing approach, please refer to the Manager's website at the following link: https://finecoassetmanagement.com/sustainability/

Use of Financial Derivative Instruments (FDIs) and other Instruments and Techniques

The Fund may engage in transactions in listed and/or unlisted FDIs for investment purposes, efficient portfolio management, risk reduction and hedging.

The types of FDIs that the Fund may use are interest rate swaps, inflation swaps, futures and forwards, including currency forwards ("FX Forwards"), and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Interest Rate swaps: The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates.

Inflation swaps: An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Futures and Forwards: Futures and forwards may be used, and if used they are expected to be used to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to bonds or to markets to which the Fund may be exposed. The Fund may use FX forwards for investment purposes, for efficient portfolio management and for hedging. The Fund is primarily hedged back to its base currency.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 0-30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value. In respect of the direct/indirect costs and fees arising from securities lending, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement – Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition.

The Fund integrates Sustainability Risk into its investment decision making process as summarised above under "ESG Integration".

While the Manager integrates Sustainability Risk into the Fund's investment decision making process, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that such an assessment of Sustainability Risks may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Investor Profile

The Fund is suitable for both institutional and retails investors seeking active exposure to European government and corporate bonds, with particular focus on ILBs, who are willing to accept medium levels of volatility, seeking to increase the value of their investment over the medium to long term.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares, each denominated in Euro, are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
L Acc	€100	Closed	Euro	No	Yes / Up to 3%	€1,000/€100	Accumulating

L Dist	€100	Closed	Euro	No	Yes / Up to 3%	€1,000/€100	Distributing
A Acc	€100	Closed	Euro	No	No	€1,000/€100	Accumulating
I Acc	€100	Closed	Euro	No	No	€1,000,000/€100	Accumulating
J Acc	€10,000	Closed	EUR	No	No	€ 1,000,000/€100	Accumulating
J Dist	€10,000	Closed	EUR	No	No	€1,000,000 /€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day; and

"Valuation Point" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge:
Up to 3% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. Investors should particularly pay attention to the following risk factors: “Investment Risk”, “Liquidity Risk”, “Credit Risk”, “Derivatives Risk”, “Changes in Interest Rates”.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: FINECO AM EURO INFLATION-LINKED GOVERNMENT BOND FUND
Legal entity identifier: 2549007CZ0H065KTQF64

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics of this product include:

1. **Positive Screening**: Consideration of ESG factors are a key element of portfolio construction. The Manager will determine how such companies integrate E&S characteristics by analysing Environmental and/or Social ratings attributed to such companies with the exclusion of Environmental and/or Social "laggards" from the Fund's investment portfolio. By incorporating positive Environmental and/or Social factors as part of the overall portfolio construction process, the Fund through its

investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better Environmental and/or Social Characteristics..

3. **Negative Screening (Norm-based exclusions)**
For direct holdings the Manager (see link to Exclusion Policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this approach, the Manager has adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data receievd from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider) and;

iii) The percentage of the Fund investment universe subject to the Manager's exclusion policy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

  - N/A

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

- N/A

How have the indicators for adverse impacts on sustainability factors been taken into account?

- N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

- N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve capital growth over the medium to long term.

The Fund will look to achieve its objective by investing in European and non-European Debt Instruments, as defined in the supplement, with a focus on Inflation-Linked Bonds ("ILBs").

The Fund will invest:

- At least 80% of its Net Asset Value in European government bonds categorized as ILBs, being securities issued by sovereign governments/government agencies that contractually link the bond's principal and interest payment to a nationally/supernationally recognised inflation measure such as the European Harmonized Index of Consumer Prices (HICP); and

- Maximum 20% of its Net Asset Value in European corporate bonds issued by companies of any capitalization across the European region.

The Manager systematically includes ESG analysis in its investment decision making process by relying on certain ESG screenings, practices and factors, which are summarised as follows and that can also be found in more detail on the Manager's website at the following link: https://finecoassetmanagement.com/sustainability/;

ESG Screenings

1. **Exclusion screenings**: in the process of selection of the permitted instruments, the Manager - in accordance with its exclusion policy (the "Exclusion Policy"), may identify issuers that are allegedly involved in breaches of international norms on, for example, environmental protection, human rights, labour standards and anti-corruption. If an issuer is identified in this screening process, action is taken by the Manager that may lead to the exclusion of such entity from the investment universe of the Fund.

   The exclusions specifically covered by the Manager's Exclusion Policy currently include:

   a. Issuers that breach the principles of the United Nations Global Compact (UNGC);
   b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
   c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
   d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
   e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

2. **ESG Assessment**: the Manager selects those securities for the Fund that show sound fundamentals and higher ESG scores, while being

valued at a discount to the Manager's assessment of intrinsic value.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

a. **Minimum underying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;

b. **Exclusion Policy**

The Manager's exclusion policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

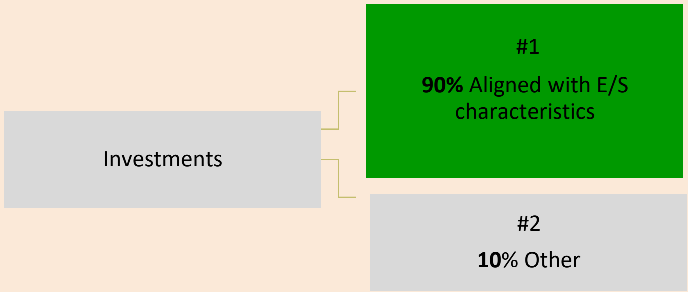
Not applicable

What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the asset allocation planned for this financial product?

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

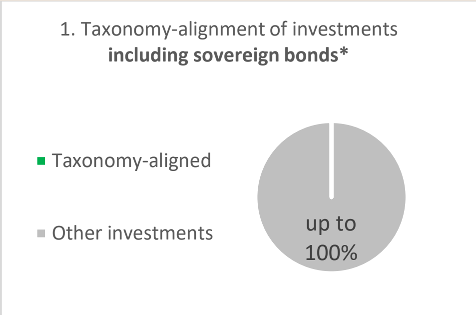
The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

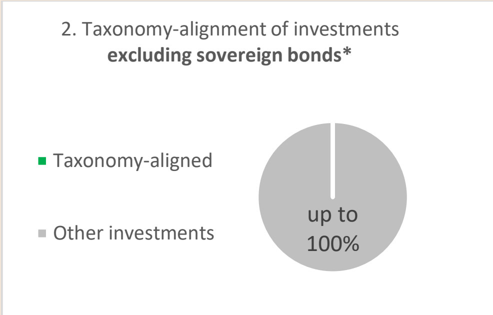
- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**
  Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?
N/A

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A

What is the minimum share of socially sustainable investments?

N/A

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Management Company's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

EUROPEAN STARS EQUITY FAM FUND

SUPPLEMENT DATED 1 December 2022

This Supplement contains specific information in relation to **European STARS Equity FAM Fund** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital growth from a portfolio primarily (at least 75% of the Net Asset Value of the Fund) made up of the equity securities of companies across any sector and market capitalisation that are domiciled in, or carrying out the main part of their economic activity in, Europe.

In actively managing the Fund's portfolio, the Investment Manager selects companies with a particular focus on their ability to comply with international standards for environmental, social and corporate governance ("**ESG**"), as described in more detail further below under "ESG Integration" section.

The equity securities in which the Fund will invest include common stocks, convertible stocks, preferred stocks, rights and warrants to subscribe for the purchase of equity securities, and depositary receipts (traded on Recognised Markets). The Fund may also invest up to 10% of its Net Asset Value in unlisted equities which are not listed on recognised exchanges and markets but which are permissible investments for UCITS.

The Fund may hold money market instruments (such as treasury bills, certificates of deposit, commercial paper and bankers acceptances) or money market funds for ancillary purposes so that it can pay its expenses, satisfy redemption requests or take advantage of investment opportunities by freeing up cash quickly through the disposal of such money market instruments or money market funds. With specific regard to the investment in money market funds, as these funds qualify as "collective investment schemes" within the meaning of Regulation 68(1)(e) of the UCITS Regulations, the investment is limited to 10% of the Fund's Net Asset Value, in accordance with said UCITS Regulations.

At any time, the Fund may invest up to 25% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected the MSCI Europe Index (Net Return) (the "Index"), which is used for performance comparison purposes only. The Invetment Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Selection of Investments

The selection of equity investments relies on the following bottom-up analysis which at all times is undertaken with overarching ESG considerations being the main driver of selection of investments from the Investment Manager, as explained in more detail further below under "ESG Integration". In this way, the Investment Manager only selects those companies for the Fund's investment universe that show sound fundamentals along with high ESG scores only (as per its "Stars Strategy", defined below). When considering a company's sound foundamentals, the Investment Manager mainly look at:

1) competition in the industry;

2) potential of new entrants into the industry;
3) power of suppliers;
4) power of customers and
5) threat of substitutes.

The Investment Manager believes that companies with competitive advantages tend to have better long-term opportunities of profitability.

Bottom-up analysis

The Investment Manager follows a bottom-up investment process by investing in equities which may include 1) value, 2) quality and 3) growth style characteristics, as defined below, that it believes will deliver outperformance over the long term. This approach combines both the rigor of quantitative approaches (by relying on internal proprietary quantitative models developed by the Investment Manager) and more qualitative analysis as described above from 1) to 5) under "*Selection of Investments*", that take into account the following investment styles:

1) Value: To identify attractively valued stocks, the Investment Manager looks at how each stock is valued relative to the market and its peers.

2) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

3) Growth: Growth companies are companies with higher-than-average growth rates in projected earnings.

The above-mentioned quantitative model developed by the Investment Manager is used as a decision making tool for portfolio construction to assist the Investment Manager in determining the optimal weight that a stock should have in the portfolio given the stock specific valuation expectation and its contribution to portfolio risk-adjusted returns.

ESG Integration

The Investment Manager believes that ESG considerations should be a foundation of any investment process supporting long-term investing. To this purpose, the Investment Manager systematically includes ESG analysis in its investment decision making process by relying on certain ESG screenings and factors, which are summarised as follows and that can also be found in more detail on Nordea Asset Management ("NAM")'s website: www.nordea.lu – "Responsible Investment" section:

ESG Screenings

1. **"Stars Strategy":** the Investment Manager use a proprietary ESG scoring system and bespoke analysis carried out by its Responsible Investments team and financial analysts. This system focuses on conducting an enhanced due diligence on investee companies and selecting those for the Fund's investment universe that show sound fundamentals and high ESG scores only. The above enhanced due diligence includes an analysis on ESG risks material to the investee company and considers how companies manage their sustainability risks. The relevant company will then be assigned an ESG score from C (lowest) to A (highest). Eligible investments must have an ESG score of B or A. .

2. **Exclusion List**: in the equity selection process, the Investment Manager may identify companies that are allegedly involved in breaches of international norms on, for example, environmental protection, human rights, labour standards and anti-corruption. If a company is identified in this screening process, action is taken by the Investment Manager that may lead to the exclusion of such company from the investment universe of the Fund. The updated exclusion list is made available to investors on the Investment Manager's website on https://www.nordea.com/en/sustainability/exclusion. Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment

Manager’s more stringent rule(s) will apply. The Manager’s exclusion policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/. The Manager’s exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

3. **Data Reliance:** The Investment Manager sources data from several third-party data providers such as MSCI Inc, ISS ESG, Bloomberg, TruValue Labs, SASB, CDP, RepRisk, Impact-cubed, Maplescroft, NGO’s as input for the above ESG score. Potential investments for which there is not sufficient data available to conduct the ESG analysis (as described in this section) are not eligible for inclusion in the Fund’s investment universe.

4. **Principal Adverse Impact (“PAI”) Integration:** The environmental and social impact of the activities of the investee companies is assessed on an ongoing basis through PAI integration. Companies identified as outliers on one or more PAI indicators, are analysed further which may result in a recommendation for action, such as the exclusion of such company from the investment universe of the Fund. For more information, please see NAM’s Responsible Investment Policy and disclosure statement on the integration of Principal Adverse Impact indicators which can be found on the Investment Manager’s website on www.nordea.lu – “Responsible Investment” section.

ESG factors

Examples of ESG factors considered by the Investment Manager are:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Air pollution	Workplace safety	Audit committee independence
Waste & Hazardous Materials Management	Working conditions	Compensation committee independence
Water pollution	Employee health	Political contribution
Resource efficiency / management	Social value creation	Executive compensation
Biodiversity / habitat protection	Child labour ban	Stakeholder engagement
Material Sourcing & Efficiency/ management	Emergency preparedness	Code of conduct

Responsible Investing Information

For any additional information on the Investment Manager’s sustainable investing approach, please refer to the website www.nordea.lu – “Responsible Investment” section.

Use of Financial Derivative Instruments (FDIs) and other Instruments and Techniques.

The Fund may engage in transactions in listed and/or non-listed FDIs for investment purposes, efficient portfolio management, risk reduction and hedging. The types of FDIs that the Fund may use are: equity swaps, options, warrants, futures, forwards, the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the ProspectuENEGAGEs.

Equity Swaps: The Fund may use swaps on equities/equity related securities, baskets of equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Warrants: The Fund may use warrants as a means to gain exposure to certain markets in a most efficient and expeditious manner. For example, certain markets may have a long lead-in time to obtain local market access and warrants may be used during this lead-in time in order to allow quicker market access. The Fund may gain an exposure to warrants of up to 2% of its Net Asset Value. Warrants grant the right to acquire an underlying security from the issuer (as opposed to an option where a third party grants a right to acquire an underlying security as described above) at a fixed price. Warrants have similar characteristics to call options, but are typically issued together with preferred stocks or bonds or in connection with corporate actions.

Futures and Forwards: Futures and forwards may be bought or sold to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to equity securities or markets to which the Fund may be exposed.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Investment Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Investment Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund.

Securities Financing Transactions

*Securities Lending Agreements***:** Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 0-30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. In respect of the direct/indirect costs and fees arising from securities lending, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of a Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management techniques will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Risk Measurement – Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of "Sustainability Risks" in the main body of the Prospectus).

While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described above, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risks given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

The Investment Manager's sustainable investing policy is available at https://www.nordea.lu/en/professional/responsible-investing/.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

---

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

Investor Profile

The Fund is suitable for retail and institutional investors seeking long-term capital growth and who are willing to accept a high level of volatility. The Fund should be viewed as long term investment.

Investment Manager

The Manager has appointed Nordea Investment Management AB, acting through its Danish Branch, at Strandgade 3, 1401 Copenhagen, Denmark to act as the investment manager pursuant to an investment management agreement, as amended and restated on 7 December 2021. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Base Currency: EUR

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day;

"Valuation Point" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge: Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Pre-contractual disclosure for the financial Funds referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Fund name: European STARS Equity FAM Fund

Legal entity identifier: 254900TOMCSFNB6RAO25

The Management Company has populated this Annex using information provided by the Investment Manager of the Fund, BNP Paribas Asset Management France.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☑ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective**: ___%	☑ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☑ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
☐ It will make a minimum of **sustainable investments with a social objective**: ___%	☑ with a social objective
	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial Fund?

The environmental and/or social characteristics ("E/S") characteristics of this Fund include:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Minimum proportion of sustainable investments The Fund partly invests in sustainable investments, which means companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN SDGs and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives.

ESG scoring The Fund invests in companies that have been analysed and scored in NAM's proprietary ESG tool to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion.

Sector- and value-based exclusions Exclusion filters are applied to the portfolio construction process to restrict investments in companies and issuers with material exposure to certain activities deemed to be detrimental to the environment or the society at large, including tobacco companies and fossil fuel companies.

NAM's Paris-Aligned Fossil Fuel policy whereby the Fund will not invest in companies that have significant exposure to fossil fuels unless they have a credible transition strategy.

The Fund uses a benchmark that is not aligned with the Funds's E/S characteristics. This Fund does not have a specific index designated as a reference benchmark to determine whether this financial Fund is aligned with the environmental or social characteristics that it promotes.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial Fund?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Violations of United Nations Global Compact

What are the objectives of the sustainable investments that the financial Fund partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy aligned activities. Sustainable investments contribute to the objectives through the Fund's investments in companies that support the UN SDGs or Taxonomy aligned activities by passing a minimum threshold for revenue alignment with UN SDGs or the EU Taxonomy.

How do the sustainable investments that the financial Fund partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments are screened to ensure that they do not significantly harm any other social or environmental objectives (DNSH test) as defined by the EU Taxonomy or any SDGs as adopted by the UN.

How have the indicators for adverse impacts on sustainability factors been taken into account?

NAM has developed a proprietary quantitative methodology that assesses the environmental and social impact of NAM´s investment universe (direct investments mainly) using multiple principal adverse impact ("PAI") indicators from Table 1 and/or Table 2 and/or Table 3 of Annex 1 of the SFDR RTS (the "PAI tool"). The methodology utilises a diverse range of data sources in order to ensure that investee companies' performance is appropriately analysed. PAI indicators are assessed in NAM's PAI tool and the results are a material part of the DNSH test.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the Sustainable Investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, is confirmed as part of the process to identify sustainable investments using NAM's PAI tool.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial Fund consider principal adverse impacts on sustainability factors?

☐ No,

☑ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM´s investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAIs metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors will be made available in the periodic reporting pursuant to SFDR Article 11(2).

What investment strategy does this financial Fund follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Fund is managed according to the Stars investment strategy which includes a commitment to apply the NAM proprietary ESG framework to analyse and select investments that epitomize the ESG characteristics of the Fund.
The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the investee company. Furthermore, each company's business model alignment with relevant UN SDGs is taken into consideration as well as the company's approach to managing ESG risks. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. Stars eligible investments must have an ESG score in the B or A range.

Companies and issuers are analysed and screened using NAM's proprietary methodology to identify and select sustainable investments that will contribute to the proportion of such investments.

More information on the general investment policy of the Fund can be found in the Investment Guidelines

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial Fund?

- Direct investments must meet the minimum threshold for ESG score.
- Minimum 50% of the Fund is invested in sustainable investments as defined by NAM's proprietary methodology that identifies sustainable investments.
- Sector- or value-based exclusions prevent investments into activities that are deemed to be inappropriate for the strategy. More information is available in the sustainability-related website information in accordance with SFDR article 10.
- NAM's Paris-Aligned Fossil Fuel Policy sets thresholds for companies' exposure to fossil fuel Fundion, distribution and services. This means that the Fund will not invest in companies with material involvement in fossil fuel Fundion, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement.
- The Fund adheres to NAM's Responsible Investment Policy and does not invest in companies that are on Nordea's exclusion list due to violation of international norms or involvement in controversial business activities.

The binding elements are documented and monitored on an ongoing basis. Separately, NAM has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging – especially for smaller companies and less developed markets.

In addition to the exclusions of the Investment Manager, the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

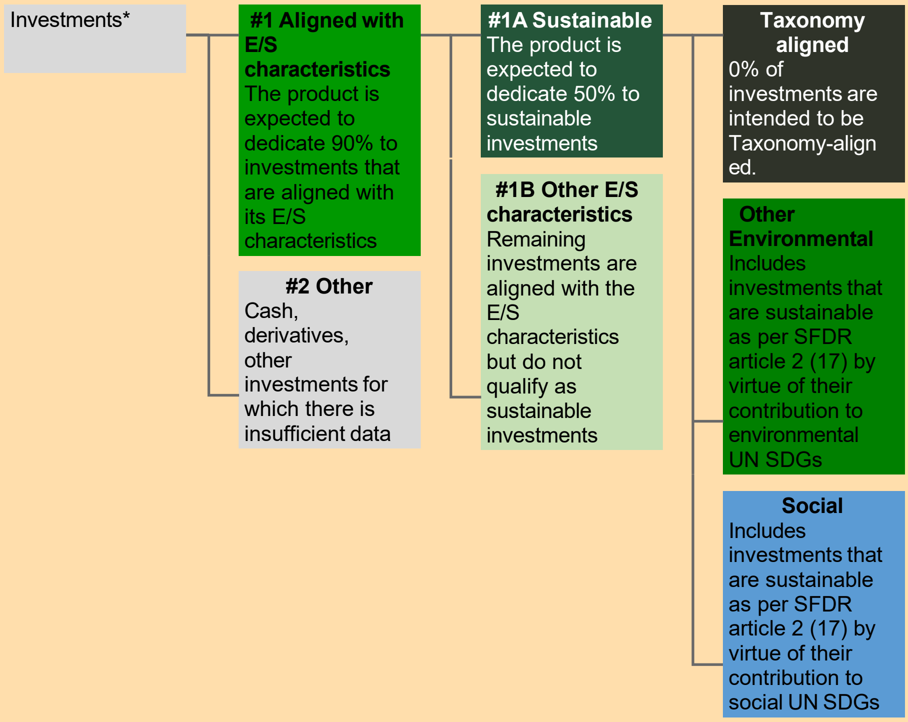
What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies is addressed in various layers of the security selection process. Governance safeguards are inherent in the NAM level norms-based screening as well as the NAM PAI processes. Additionally, at the Fund level, companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars; 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial Fund?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products NAV which is the total market value of the product.

The asset allocation may change over time and percentages should be seen as an average over an extended period of time. Calculations may rely on incomplete or inaccurate company or third party data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

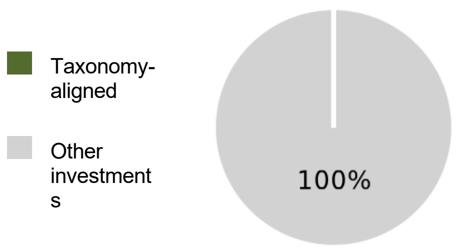
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

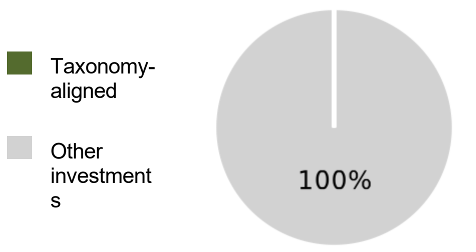
Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this Fund. It cannot be excluded that some of the Fund’s holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



2. Taxonomy-alignment of investments **excluding sovereign bonds***



** For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund may invest in economic activities that are not yet eligible to be environmentally sustainable economic activities. Company data of EU Taxonomy-alignment is not yet widely available from public disclosures by investee companies. The minimum proportion of such investments is 0%.

What is the minimum share of socially sustainable investments?

The Fund contains investments with both an environmental and a social objective. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The Fund may use derivatives and other techniques for the purposes described in the investment guidelines. This category may also include securities for which relevant data is not available.

Where can I find more Fund specific information online?

More Fund-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Management Company’s website at the following links FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

NORTH AMERICAN STARS EQUITY FAM FUND

SUPPLEMENT DATED 1 December 2022

This Supplement contains specific information in relation to **North American STARS Equity FAM Fund** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital growth from a portfolio primarily (at least 75% of the Net Asset Value of the Fund) made up of the equity securities of companies across any sector and market capitalisation that are domiciled in, or carrying out the main part of their economic activity in, North America.

In actively managing the Fund's portfolio, the Investment Manager selects companies with a particular focus on their ability to comply with international standards for environmental, social and corporate governance ("**ESG**"), as described in more detail further below under "ESG Integration" section.

The equity securities in which the Fund will invest include common stocks, convertible stocks, preferred stocks, rights and warrants to subscribe for the purchase of equity securities, and depositary receipts (traded on Recognised Markets). The Fund may also invest up to 10% of its Net Asset Value in unlisted equities which are not listed on recognised exchanges and markets but which are permissible investments for UCITS.

The Fund may hold money market instruments (such as treasury bills, certificates of deposit, commercial paper and bankers acceptances) or money market funds for ancillary purposes so that it can pay its expenses, satisfy redemption requests or take advantage of investment opportunities by freeing up cash quickly through the disposal of such money market instruments or money market funds. With specific regard to the investment in money market funds, as these funds qualify as "collective investment schemes" within the meaning of Regulation 68(1)(e) of the UCITS Regulations, the investment is limited to 10% of the Fund's Net Asset Value, in accordance with said UCITS Regulations.

At any time, the Fund may invest up to 25% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected the Russell 3000 Index (Net Return) (the "Index"), which is used for performance comparison purposes only. The Invetment Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Selection of Investments

The selection of equity investments relies on the following bottom-up analysis which at all times is undertaken with overarching ESG considerations being the main driver of selection of investments from the Investment Manager, as explained in more detail further below under "ESG Integration". In this way, the Investment Manager only selects those companies for the Fund's investment universe that show sound fundamentals along with high ESG scores only (as per its "Stars Strategy", defined below). When considering a company's sound foundamentals, the Investment Manager mainly look at:

1) competition in the industry;
2) potential of new entrants into the industry;
3) power of suppliers;
4) power of customers and
5) threat of substitutes.

The Investment Manager believes that companies with competitive advantages tend to have better long-term opportunities of profitability.

Bottom-up analysis

The Investment Manager follows a bottom-up investment process by investing in equities which may include 1) value, 2) quality and 4) growth style characteristics, as defined below, that it believes will deliver outperformance over the long term. This approach combines both the rigor of quantitative approaches (by relying on internal proprietary quantitative models developed by the Investment Manager) and more qualitative analysis based on the experience, balanced return and risk appraisal of fundamental approaches, as described above from 1) to 5) under "*Selection of Investments*", that take into account the following investment styles:

1) Value: To identify attractively valued stocks, the Investment Manager looks at how each stock is valued relative to the market and its peers.

2) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

3) Growth: Growth companies are companies with higher-than-average growth rates in projected earnings.

The above-mentioned quantitative model developed by the Investment Manager is used as a decision making tool for portfolio construction to assist the Investment Manager in determining the optimal weight that a stock should have in the portfolio given the stock specific valuation expectation and its contribution to portfolio risk-adjusted returns.

ESG Integration

The Investment Manager believes that ESG considerations should be a foundation of any investment process supporting long-term investing. To this purpose, the Investment Manager systematically includes ESG analysis in its investment decision making process by relying on certain ESG screenings and factors, which are summarised as follows and that can also be found in more detail on Nordea Asset Management ("NAM")'s website: www.nordea.lu – "Responsible Investment" section:

ESG Screenings

1. **"Stars Strategy":** the Investment Manager use a proprietary ESG scoring system and bespoke analysis carried out by its Responsible Investments team and financial analysts. This system focuses on conducting an enhanced due diligence on investee companies and selecting those for the Fund's investment universe that show sound fundamentals and high ESG scores only. The above enhanced due diligence includes an analysis on ESG risks material to the investee company and considers how companies manage their sustainability risks. The relevant company will then be assigned an ESG score from C (lowest) to A (highest). Eligible investments must have an ESG score of B or A.

2. **Exclusion List**: in the equity selection process, the Investment Manager may identify companies that are allegedly involved in breaches of international norms on, for example, environmental protection, human rights, labour standards and anti-corruption. If a company is identified in this screening process, action is taken by the Investment Manager that may lead to the exclusion of such company from the investment universe of the Fund. The updated exclusion list is made available to investors on the Investment Manager's website on https://www.nordea.com/en/sustainability/exclusion. Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in

a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

3. **Data Reliance:** The Investment Manager sources data from several third-party data providers such as MSCI Inc., ISS ESG, Bloomberg, TruValue Labs, SASB, CDP, RepRisk, Impact-cubed, Maplescroft, NGO's as input for the above ESG score. Potential investments for which there is not sufficient data available to conduct the ESG analysis (as described in this section) are not eligible for inclusion in the Fund's investment universe.

4. **Principal Adverse Impact ("PAI") Integration:** The environmental and social impact of the activities of the investee companies is assessed on an ongoing basis through PAI integration. Companies identified as outliers on one or more PAI indicators, are analysed further which may result in a recommendation for action, such as the exclusion of such company from the investment universe of the Fund. For more information, please see NAM's Responsible Investment Policy and disclosure statement on the integration of Principal Adverse Impact indicators which can be found on the Investment Manager's website on www.nordea.lu – "Responsible Investment" section.

ESG factors

Examples of ESG factors considered by the Investment Manager are:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Air pollution	Workplace safety	Audit committee independence
Waste & Hazardous Materials Management	Working conditions	Compensation committee independence
Water pollution	Employee health	Political contribution
Resource efficiency / management	Social value creation	Executive compensation
Biodiversity / habitat protection	Child labour ban	Stakeholder engagement
Material Sourcing & Efficiency	Emergency preparedness	Code of conduct

Responsible Investing Information

For any additional information on the Investment Manager's sustainable investing approach, please refer to the website www.nordea.lu – "Responsible Investment" section.

Use of Financial Derivative Instruments (FDIs) and other Instruments and Techniques.

The Fund may enagage in transactions in listed and/or non-listed FDIs for investment purposes, efficient portfolio management, risk reduction and hedging. The types of FDIs that the Fund may use are: equity swaps, options, warrants, futures, forwards, the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Equity Swaps: The Fund may use swaps on equities/equity related securities, baskets of equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Warrants: The Fund may use warrants as a means to gain exposure to certain markets in a most efficient and expeditious manner. For example, certain markets may have a long lead-in time to obtain local market access and warrants may be used during this lead-in time in order to allow quicker market access. The Fund may gain an exposure to warrants of up to 2% of its Net Asset Value. Warrants grant the right to acquire an underlying security from the issuer (as opposed to an option where a third party grants a right to acquire an underlying security as described above) at a fixed price. Warrants have similar characteristics to call options, but are typically issued together with preferred stocks or bonds or in connection with corporate actions.

Futures and Forwards: Futures and forwards may be bought or sold to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to equity securities or markets to which the Fund may be exposed.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Investment Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Investment Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund.

Securities Financing Transactions

*Securities Lending Agreements***:** Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 0-30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. In respect of the direct/indirect costs and fees arising from securities lending, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of a Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management techniques will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed “Collateral Policy”.

Risk Measurement – Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund’s Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of “Sustainability Risks” in the main body of the Prospectus).

While the Investment Manager integrates Sustainability Risk into the Fund’s investment decision making process as described above, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risks given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund’s approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund’s portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The Investment Manager's sustainable investing policy is available at https://www.nordea.lu/en/professional/responsible-investing/.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

Investor Profile

The Fund is suitable for retail and institutional investors seeking long-term capital growth and who are willing to accept high levels of volatility. The Fund should be viewed as a long term investment.

Investment Manager

The Manager has appointed Nordea Investment Management AB, acting through its Danish Branch, at Strandgade 3, 1401 Copenhagen, Denmark to act as the investment manager pursuant to an investment management agreement, as amended and restated on 7 December 2021. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Base Currency: USD

Offer of Shares

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day;

"Valuation Point" means 11:59pm (Irish time) on the relevant Dealing Day;

"**Dealing Day**" means every weekday on which retail banks and securities markets in Luxembourg and the United States of America are open for business.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
The Manager shall be entitled to a management fee of up to 2.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager’s fees and not out of the assets of the Fund.

Administrator’s Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary’s Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge: Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: North American STARS Equity FAM Fund

Legal entity identifier: 254900AWYCN71JRUY496

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, est-ablishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ Yes	☑ No
☐ It will make a minimum of **sustainable investments with an environmental objective**: ___%	☑ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☑ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
☐ It will make a minimum of **sustainable investments with a social objective**: ___%	☑ with a social objective
	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics ("E/S") characteristics of this product include:

Minimum proportion of sustainable investments The Fund partly invests in sustainable investments, which means companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN SDGs and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives.

ESG scoring The Fund invests in companies that have been analysed and scored in NAM's proprietary ESG tool to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion.

Sector- and value-based exclusions Exclusion filters are applied to the portfolio construction process to restrict investments in companies and issuers with material exposure to certain activities deemed to be detrimental to the environment or the society at large, including tobacco companies and fossil fuel companies.

The Investment Manager's ("NAM") Paris-Aligned Fossil Fuel policy whereby the Fund will not invest in companies that have significant exposure to fossil fuels unless they have a credible transition strategy.

The Fund uses a benchmark that is not aligned with the Fund's E/S characteristics. This Fund does not have a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promotes.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Violations of United Nations Global Compact

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy aligned activities. Sustainable investments contribute to the objectives through the product's investments in companies that support the UN SDGs or Taxonomy aligned activities by passing a minimum threshold for revenue alignment with UN SDGs or the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments are screened to ensure that they do not significantly harm any other social or environmental objectives (DNSH test) as defined by the EU Taxonomy or any SDGs as adopted by the UN.

How have the indicators for adverse impacts on sustainability factors been taken into account?

NAM has developed a proprietary quantitative methodology that assesses the environmental and social impact of NAM´s investment universe (direct investments mainly) using multiple principal adverse impact ("PAI") indicators from Table 1 and/or Table 2 and/or Table 3 of Annex 1 of the SFDR RTS (the "PAI tool"). The methodology utilises a diverse range of data sources in order to ensure that investee companies' performance is appropriately analysed. PAI indicators are assessed in NAM's PAI tool and the results are a material part of the DNSH test.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the Sustainable Investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, is confirmed as part of the process to identify sustainable investments using NAM's PAI tool.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No,

☑ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM´s investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAIs metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors will be made available in the periodic reporting pursuant to SFDR Article 11(2).

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The Fund is managed according to the Stars investment strategy which includes a commitment to apply the NAM proprietary ESG framework to analyse and select investments that epitomize the ESG characteristics of the Fund.
The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the investee company. Furthermore, each company's business model alignment with relevant UN SDGs is taken into consideration as well as the company's approach to managing ESG risks. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. Stars eligible investments must have an ESG score in the B or A range.

Companies and issuers are analysed and screened using NAM's proprietary methodology to identify and select sustainable investments that will contribute to the proportion of such investments.

More information on the general investment policy of the Fund can be found in the Investment Guidelines

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments must meet the minimum threshold for ESG score.
- Minimum 50% of the product is invested in sustainable investments as defined by NAM's proprietary methodology that identifies sustainable investments.
- Sector- or value-based exclusions prevent investments into activities that are deemed to be inappropriate for the strategy. More information is available in the sustainability-related website information in accordance with SFDR article 10.
- NAM's Paris-Aligned Fossil Fuel Policy sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the product will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement.
- The product adheres to NAM's Responsible Investment Policy and does not invest in companies that are on Nordea's exclusion list due to violation of international norms or involvement in controversial business activities.

The binding elements are documented and monitored on an ongoing basis. Separately, NAM has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging – especially for smaller companies and less developed markets.

In addition to the exclusions of the Investment Manager, the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

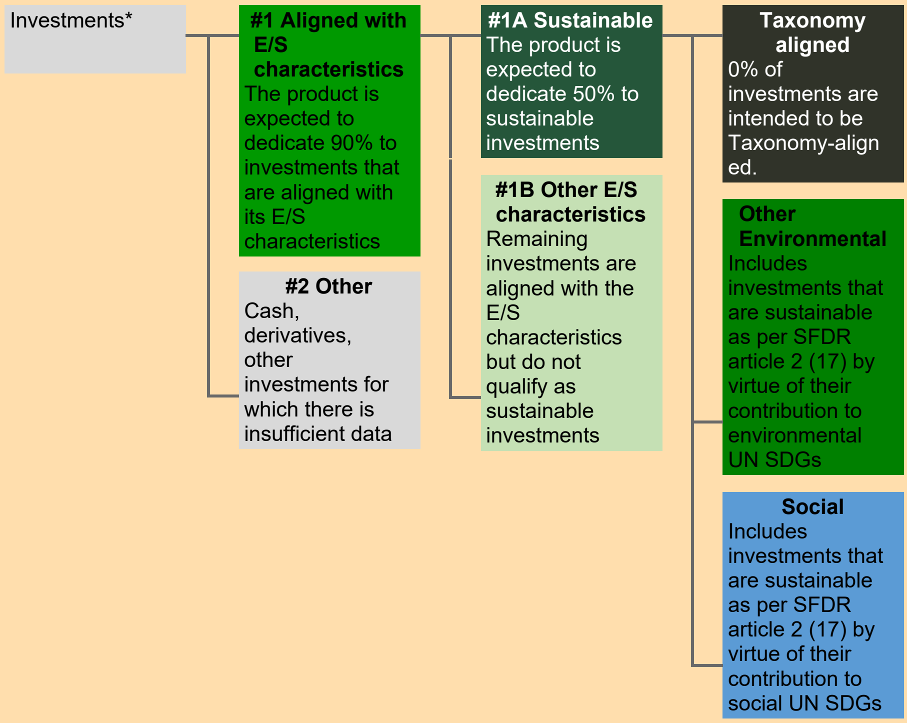
What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies is addressed in various layers of the security selection process. Governance safeguards are inherent in the NAM level norms-based screening as well as the NAM PAI processes. Additionally, at the product level, companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars; 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products NAV which is the total market value of the product.

The asset allocation may change over time and percentages should be seen as an average over an extended period of time. Calculations may rely on incomplete or inaccurate company or third party data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

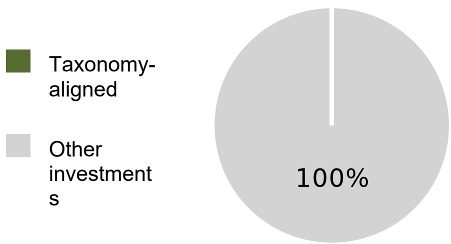
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

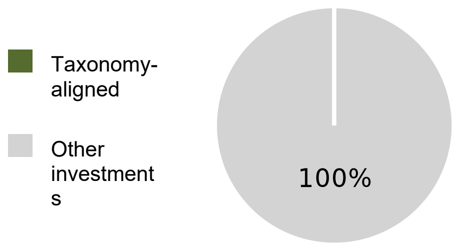
Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this product. It cannot be excluded that some of the products holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



2. Taxonomy-alignment of investments **excluding sovereign bonds***



** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund may invest in economic activities that are not yet eligible to be environmentally sustainable economic activities. Company data of EU Taxonomy-alignment is not yet widely available from public disclosures by investee companies. The minimum proportion of such investments is 0%.

What is the minimum share of socially sustainable investments?

The Fund contains investments with both an environmental and a social objective. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The Fund may use derivatives and other techniques for the purposes described in the investment guidelines. This category may also include securities for which relevant data is not available.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and exclusion policy can be found on the Manager’s website at the following link; http://finecoassetmanagement.com/sustainability/

DIVERSITY AND INCLUSION FAM FUND

SUPPLEMENT DATED 18 December 2024

This Supplement contains specific information in relation to **DIVERSITY AND INCLUSION FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the Addendum thereto (together the "Prospectus").

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Diversity Companies	means companies that demonstrate sustainability and gender and/or ethnic diversity. Diversity Companies must have at least 30% women and/or 30% ethnic minority representation on boards at the time of purchase. Diversity Companies acquired for their ethnic minority representation must also have no single ethnicity representing more 70% of the board at the time of purchase. The Investment Manager also considers other measures of gender and/or ethnic diversity as described in the EQL framework below in assessing the contribution of Diversity Companies to the sustainable objective.
Inclusion Companies	means companies that are considered by the Investment Manager to deliver solutions to empower social equality and as further described in the ESG criteria and sustainability criteria described below, these can be understood by reference to the United Nations Sustainable Development Goals framework as companies that are focused on matters such as sustainable development goals such as good health and wellbeing, quality education; gender equality; decent work and economic growth; industry, innovation and infrastructure; reduced inequalities; peace, justice and strong institutions; or other companies which the Investment Manager considers appropriate to invest in pursuit of the sustainable objective.

Investment Objective and Policies

The investment objective of the Fund is to maximise total returns through a combination of income and capital appreciation through investing in companies that have demonstrable gender and/or ethnic diversity, or which provide solutions empowering social equality.

The Fund seeks to achieve its investment objective by investing at least 80% of its Net Asset Value in equity securities and equity related securities such as common stock or preferred stock of Diversity Companies and Inclusion Companies. The Fund holds at least 15% and typically a maximum of 30% of its Net Asset Value in Inclusion Companies.

The Fund may invest in equity securities of Diversity Companies and Inclusion Companies operating in any market sector or with any market capitalisation and that may be domiciled, incorporated or listed in any country, including up to 20% of the Fund's Net Asset Value that may be invested in emerging markets issuers.

The Fund may invest up to 20% of its Net Asset Value in deposits, money market instruments such as T-bills, certificates of deposit, commercial paper and bankers' acceptances, and warrants. Investment in warrants will not be leveraged and will be limited to 10% of the Fund's Net Asset Value.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected the MSCI ACWI Net Return Index ("Index") that will be used as a comparison for the investment performance only. The Index is designed to represent performance of a broad range of large and mid-cap stocks from around the world, including developed markets and emerging markets. The Index is not an ESG benchmark and is not consistent with ESG or sustainability criteria. The Investment Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule I of the Prospectus

Selection of Investments and ESG Integration

Sustainability considerations are integrated into the Investment Manager's investment process with a focus on the long-term sustainability of investments and for this purpose the Investment Manager systematically includes ESG analysis in its investment decision making process by relying on certain ESG screenings and ESG quality assessment, which are summarised below.

ESG screening:
The Investment Manager performs a screening of the investible universe against its ESG criteria and sustainability criteria and excludes investments that do not comply with the Fund's investment objective. The following types of exclusions apply to the Fund:

- Norms-based exclusions: investments that are assessed to be in breach of commonly accepted standards of behaviour related to human rights, labour rights, environment and anti-corruption, including companies that are deemed to be in breach of the United Nations Global Compact Principles are excluded.
- Sector-based and/or values-based exclusions: investments and/or sectors exposed to business activities that are assessed to be damaging to human health, societal wellbeing, the environment, or otherwise assessed to be misaligned with the Fund's values-based criteria such as munitions manufactures, adult entertainment or gambling.
- Other exclusions: investments assessed to be otherwise in conflict with the ESG Criteria and sustainability criteria such as thermal coal and oil gas extraction.

Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

ESG Quality Assessment:
The Investment Manager then assesses the sustainability credentials of the remaining investible universe.

Diversity Companies eligible for investments are those that meet the criteria of a fundamental assessment performed by the Investment Manager (known as the Investment Manager's "EQL framework") as follows:

- ESG Credentials: environmental and social responsibility characteristics evidenced by strong governance and sustainable business practices.
- Quality Credentials: the quality and durability of the company's business model and its ability to produce sustainable economic returns.
- Leading Diversity: the company's commitment towards diversity leadership through diversity representation, policies and targets.

Inclusion Companies eligible for investment are those that meet the criteria of a fundamental assessment performed by the Investment Manager (known as a III framework focusing on Investment, Intention and Impact):

- Investment Credentials: the quality and durability of the company's business model and its ability to produce sustainable economic returns.
- Intention: the company's purpose as evidenced by the alignment of its mission statement with its corporate strategy and actions.
- Impact: the scale of the net positive societal impact and the company's progress in addressing social equality challenges.

From the list of eligible Diversity and Inclusion Companies (or "watchlist") the Investment Manager seeks to invest in three categories of companies: (i) companies whose products or services have or could have a transformational effect on social equality (known as "pioneers"), (ii) companies that provide the tools for others to empower social equality (known as "enablers"), and (iii) companies that spearhead and mainstream sustainability in industries empowering social equality, but which may have more established profitability than pioneers (known as "leaders").

When constructing the portfolio the Investment Manager selects investments from the watchlist. The Investment Manager focuses on valuation, using scenario based analysis which assigns values and probabilities to a range of bullish to bearish market conditions, in order to estimate an intrinsic value. The Portfolio Manager typically seeks an attractive margin of safety between its assessment of intrinsic value and the share price before investing.

For any additional information on the Investment Manager's sustainable investing approach, please refer to the website https://www.mandgplc.com/our-business/mandg-investments/responsible-investing-at-mandg-investments – "Responsible Investment" section.

Use of Financial Derivative Instruments ("FDIs") and other Instruments and Techniques

The Fund may engage in transactions in FDI for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use are listed and/or unlisted: currency forwards, futures and forward contracts, exchange traded futures and options as described below and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective, to protect risk to capital as well as hedge against currency risk. The expected effect of the use of these instruments will be to enhance returns and/or to reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures and forwards: Futures and forwards may be used to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to individual equities or markets to which the Fund may be exposed.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be between 0% and 30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 9 of SFDR for products which have sustainable investment as their objective, as further described in Annex III at the end of this Supplement[1].

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of "Sustainability Risks"" in the main body of the Prospectus).

While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors.

[1] The information contained in Annex III has been completed using information provided by the Investment Manager of the Fund.

(ii) The Investment Manager will comply with its own exclusion policy and the Manager's exclusion list, whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 9 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

While the Fund has sustainable investment as its objective within the meaning of Article 9 of the SFDR, it should be noted that as the investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Investor Profile

The Fund is suitable for investors seeking income and capital growth from investment in issuers that demonstrate a commitment towards diversity leadership or provide solutions empowering social equality. The Fund is suitable for investors who are willing to accept a moderate to high level of volatility and should be viewed as a medium to long term investment.

Base Currency: US Dollar

Investment Manager

The Manager has appointed M&G Investment Management Limited of 10 Fenchurch Avenue London, EC3M 5AG, United Kingdom to act as the investment manager pursuant to an investment management agreement dated 31 July 2018 as may be amended and updated from time to time. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Offer of Shares

The following Classes of Shares are available for subscription:

Share	Initial	Initial	Currency	Sales	Minimum	Distribution

Class	Offer Price	Offer Period	Denomination and Hedged Class		Charge	Initial Subscription and Minimum Subsequent Subscription	Type
Class L Acc	€100	Closed	Euro	No	Yes/5%	€1,000 / €100	Accumulating
Class L Dist	€100	Closed	Euro	No	Yes/5%	€1,000 / €100	Distributing
Class LH Acc	€100	Closed	Euro	Yes	Yes/5%	€1,000 / €100	Accumulating
Class A Acc	€100	19 December 2024 – 19 June 2025	Euro	No	No	€1,000 / €100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Acc	€10000	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Dist	€10000	19 December 2024 – 19 June 2025	Euro	No	No	€1,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 12.00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge:
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX III

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Diversity and Inclusion FAM Fund
Legal entity identifier: 254900CFRFO6N4U4IW65

Sustainable investment objective

Does this financial product have a sustainable investment objective?

☒ **Yes**	☐ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It will make a minimum of **sustainable investments with a social objective:** 80%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

To invest in companies that have demonstrable gender and/or ethnic diversity, or which provide solutions empowering social equality.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

For each stock held in the portfolio, the Investment Manager will use the following sustainability indicators:
• Year-on-Year Change of women on the board
• Year-on-Year Change of women in leadership roles
• Year-on-Year Change of ethnic diversity on the board
• Year-on-Year Change of ethnic diversity in leadership roles
• Percentage (%) NAV with board gender diversity (more than 30%), as reported by the company
• Percentage (%) NAV with board ethnic diversity (more than 30%), as reported by the company
• Percentage (%) NAV considered by the Investment Manager to have leadership diversity, based on data
reported by the company
• Percentage (%) of NAV in investments aligned to United Nations Sustainable Development Goals ("SDGs"):
‣ SDG3 - Good Health and Wellbeing,
‣ SDG4 - Quality Education;
‣ SDG5 - Gender Equality;
‣ SDG8 - Decent Work and Economic Growth;
‣ SDG9 - Industry, Innovation and Infrastructure;
‣ SDG10 - Reduced Inequalities; and
‣ SDG16 - Peace, Justice and Strong Institutions

In addition, for each investment considered to be SDG-aligned, the Investment Manager will assess the strength of contribution to the relevant SDG(s).

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective as they are required to pass a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful.
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas).
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions. The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

Does this financial product consider principal adverse impacts on sustainability factors?

✔ Yes, for sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund invests in Diversity Companies and Inclusion Companies.

Diversity Companies are companies that demonstrate sustainability and gender and/or ethnic diversity. They must have at least 30% women and/or 30% ethnic minority representation on boards at the time of purchase. Diversity Companies bought for their ethnic minority representation must also have no single ethnicity representing more than 70% of the board at the time of purchase. The Investment Manager also considers other measures of gender and/or ethnic diversity in assessing the contribution of Diversity Companies to the sustainable objective. Diversity Companies are subject to fundamental assessment using the Fund's sustainable investment process ("EQL framework") described below.

The EQL Framework assesses:

- ESG Credentials: environmental and social responsibility characteristics evidenced by strong governance and sustainable business practices.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

• Quality: the quality and durability of the company’s business model and its ability to produce sustainable
economic returns.

• Leading Diversity: the company’s commitment towards diversity leadership through diversity representation, policies and targets.

Inclusion Companies are companies that deliver solutions to empower social equality. These can be understood by reference to the United Nations Sustainable Development Goals (“SDGs”) framework as companies which are focused on sustainable development goals such as Good Health and Wellbeing, Quality Education; Gender Equality; Decent Work and Economic Growth; Industry, Innovation and Infrastructure; Reduced Inequalities; and Peace, Justice and Strong Institutions; or other companies which the Investment Manager considers appropriate to invest in pursuit of the sustainable objective. These companies are assessed using the Investment Manager’s impact assessment methodology (“Impact Methodology”) described below.

The Impact Methodology focuses on three criteria:

• Investment Credentials: the quality and durability of the company’s business model and its ability to produce sustainable economic returns;

• Intention: the company’s purpose as evidenced by the alignment of its mission statement with its corporate strategy and actions; and

• Impact: the scale of the net positive societal impact and the company’s progress in addressing social equality challenges.

The outputs of the Impact Methodology enable the Fund to allocate to the following three investment types:

• “Pioneers”, whose products or services have or could have a transformational effect on social equality.

• “Enablers”, which provide the tools for others to empower social equality.

• “Leaders”, which spearhead and mainstream sustainability in industries empowering social equality, but which may have more established profitability than pioneers.

The Investment Manager’s engagement with the companies in which the Fund invests is key to the investment approach. Sustainability considerations, encompassing ESG factors, are fully integrated into analysis and investment decisions, and play an important role in determining the investment universe and portfolio construction. In order to identify securities for purchase, the Investment Manager reduces the potential investment universe as
follows:

1. The exclusions listed in the ESG Criteria are screened out.
2. The Investment Manager then assesses the sustainability credentials of the remaining companies:
    • a. Diversity Companies are assessed using the EQL framework; and
    • b. Inclusion Companies are identified by reference to the relevant SDGs, and assessed using the Impact Methodology.
3. The Investment Manager then performs further analysis to consider the valuation of these companies and the appropriate time to purchase in consideration of the Fund’s financial objective.

The Manager’s exclusion list which is based on the Manager’s exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The following elements are binding:

- The Fund’s exclusions;
- The Fund’s asset allocation (as disclosed below); and
- Minimum levels of sustainable investments.

Where it is in the best interests of investors, the Fund may temporarily deviate from one or more of these elements, for example if the Investment Manager considers it prudent to hold high levels of cash in response to market conditions.

Good governance practices include sound management structures, employee relations, remuneration of staff ad tax compliance.

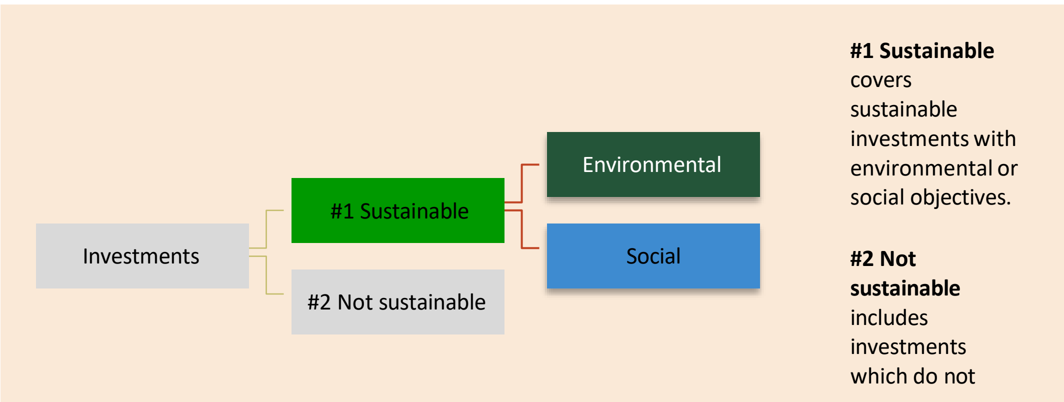
What is the policy to assess good governance practices of the investee companies?

The Investment Manager operates data driven quantitative good governance tests used to consider investments into companies. The Investment Manager excludes investments in securities that are considered as failing the Investment Manager’s good governance tests.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Investment Manager expects at least 80% of the Fund to be invested in sustainable investments with a social objective: 80%



How does the use of derivatives attain the sustainable investment objective?

Derivatives are not used to attain the sustainable investment objective.

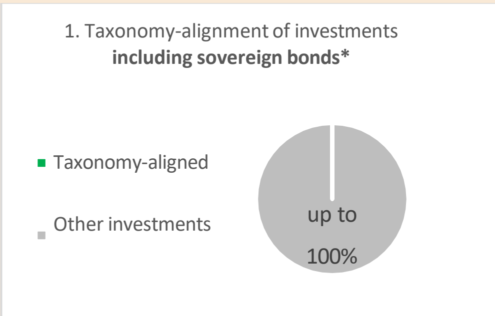
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

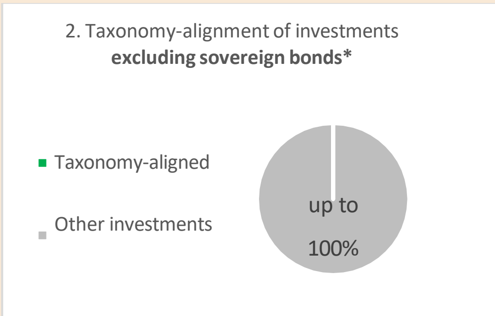
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

0%

What is the minimum share of sustainable investments with a social objective?

80%

are environmentally sustainable investments that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments are included under “#2 Not sustainable”, what is their purpose and are there any minimum environmental or social safeguards?

The Fund may hold cash, near cash and money market funds, and derivatives as “Other” investments, for hedging purposes or in connection with cash held for ancillary liquidity. No minimum environmental or social safeguards are applied, other than as stated below.

Where derivatives are used to take investment exposure to diversified financial indices, these will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test.

It is also possible that the Fund may hold investments that are not in line with the promoted characteristics, e.g. as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors, but may not always be able to do so immediately.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No

- ***How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?***

  Not Applicable

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  Not Applicable

- ***How does the designated index differ from a relevant broad market index*?**

  Not Applicable

- ***Where can the methodology used for the calculation of the designated index be found?***

  Not Applicable

Where can I find more product specific information online?

GLOBAL LISTED INFRASTRUCTURE FAM FUND

SUPPLEMENT DATED 18 December 2024

This Supplement contains specific information in relation to **GLOBAL LISTED INFRASTRUCTURE FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to deliver a higher total return (combination of capital growth and income) than that of global equities markets over any five-year period.

In managing the Fund's portfolio, the Investment Manager takes into account environmental, social and corporate governance ("ESG") considerations and the ability of issuers to comply with international ESG standards as described below under the section "ESG Integration".

The Fund seeks to achieve its objective by investing at least 80% of its Net Asset Value in equity securities issued by infrastructure companies, investment trusts and real estate investment trusts ("REITs") that may be domiciled in any country. The Funds investment in REITs will be limited to no more than 30% of its Net Asset Value. The Investment Manager will target investments it believes offer capital appreciation and will deliver an income stream that increases every year based on an assessment of long-term earnings growth described below.

The types of infrastructure companies the Fund may acquire include companies that operate in the following sectors: utilities, energy, transport, health, education, security, communications and transactions.

The Fund has a global investment mandate insofar as its investments are not confined to or concentrated in any particular geographic region or market and it may invest up to 20% of its Net Asset Value in emerging market countries. Emerging market countries are those identified by a market leading index provider, in accordance with the prevailing OECD country risk classification.

The equity securities in which the Fund will invest include but are not limited to common stock, preferred stock, and convertible bonds (provided that no more than 20% of the Fund's Net Asset value may be invested in convertible bonds).

The Fund may also invest in deposits, warrants, money market instruments such as T-bills, certificates of deposit, commercial paper and bankers' acceptances. Investment in warrants will not be leveraged and will be limited to 10% of the Fund's Net Asset Value.

The Fund may invest up to 10% of its Net Asset Value in shares denominated in Renminbi, issued by companies in China and listed on the Shanghai Stock Exchange ("SSE") and/or the Shenzhen Stock Exchange ("SZSE"), or such other shares that may in the future be defined as China A shares issued by companies in China on the SSE and/or SZSE ("China A Shares") and available for investment by using the Shanghai-Hong Kong Stock Connect or the Shenzhen-Hong Kong Stock Connect respectively (each a "Stock Connect" and collectively the "Stock Connects. There are specific risks associated with direct investment in Chinese markets and investors' attention is drawn to the risks disclosed in the section headed "Risk Factors" in the Prospectus.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected the MSCI ACWI Net Return Index ("Index") that will be used as a comparison for the investment performance only. The Index is designed to represent performance of a broad range of large and mid-cap stocks from around the world, including developed markets and emerging markets. The Index is not an ESG benchmark and is not consistent with ESG or sustainability criteria. The Investment Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule I of the Prospectus.

Selection of Investments

The selection of equity securities is based on an assessment of an issuer's investment credentials which includes a fundamental analysis and a bottom-up evaluation of companies. The Investment Manager's fundamental analysis focuses on matters such as valuation levels, including an analysis of a company's financial statements, earnings performance and growth, and appraisal of a company's management. In respect of the bottom-up evaluation of companies the Investment Manager takes a long-term assessment of companies and appraises company characteristics such as:

1) *Value*: To identify attractively valued stocks, the Investment Manager looks at how each stock is valued relative to the market and its peers, as well as on an absolute basis assessing long-term cashflows.
2) *Quality*: Quality companies are characterized as companies with durable business models (meaning companies with stable cashflows and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle and strong balance sheets.
3) *Growth*: Growth companies are companies with higher-than-average growth rates in projected earnings.

ESG Integration

Sustainability considerations are integrated into the investment process with a focus on the long-term sustainability of underlying infrastructure assets. For this purpose, the Investment Manager systematically includes ESG analysis in its investment decision making process by relying on certain ESG screenings and ESG quality assessment, which are summarised below.

ESG screening: The Investment Manager performs a screening of the investible universe against its ESG criteria and sustainability criteria. The norms-based screening for example includes issuers which the Investment Manager considers have failed to conduct their business in accordance with accepted international norms, including as set out in the United Nations Global Compact or companies that are listed on the Investment Manager's exclusion list are screened out.

ESG Quality Assessment: When selecting investments the Investment Manager assess their eligibility from an ESG perspective based on its proprietary infrastructure sector-specific quality assessment. The Investment Manager pays particular emphasis on ESG factors that it considers are of particular relevance to the Fund's investible universe. Examples of ESG factors considered by the Investment Manager are:

Environmental	Social	Governance

Water usage	Health and safety	Shareholder rights
Resource scarcity	Working conditions	Board independence
Waste and pollution	Supply chains	Dividend policy
Compliance and regulation	Community relations	Remuneration and incentives
Carbon / green house gases	Stakeholder management	Audit and internal control
Climate change		Cyber security
energy efficiency		Bribery and corruption

Quantification of ESG Risks: The Investment Manager attempts to quantify ESG risks of investments and determine whether these have been accounted for in a company's valuation. The Investment Manager's quantification of ESG risk encompasses matter such as scenario analysis, revenue modelling and cost modelling in order to assess a company's preparedness and ability to manage ESG risks.

For any additional information on the Investment Manager's sustainable investing approach, please refer to the website https://www.mandgplc.com/our-business/mandg-investments/responsible-investing-at-mandg-investments – "Responsible Investment" section.

The Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

Use of Financial Derivative Instruments ("FDIs") and other Instruments and Techniques

The Fund may engage in transactions in FDI for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use are listed and/or unlisted: currency forwards, futures and forward contracts, exchange traded futures and options as described below and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective, to protect risk to capital as well as hedge against currency risk. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures and forwards: Futures and forwards may be used to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to individual equities or markets to which the Fund may be exposed.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be between 0% and 30% of the Fund's Net

Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of "Sustainability Risks"" in the main body of the Prospectus).

While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors.

(ii) The Investment Manager will comply with its own exclusion policy and the Manager's exclusion list, whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risks given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Investor Profile

The Fund is suitable for investors seeking income and capital growth, and who are willing to accept a moderate to a high level of volatility. The Fund should be viewed as a long term investment.

Base Currency: US Dollar

Investment Manager

The Manager has appointed M&G Investment Management Limited of 10 Fenchurch Avenue London, EC3M 5AG, United Kingdom to act as the investment manager pursuant to an investment management agreement dated 31 July 2018 as may be amended and updated from time to time. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Offer of Shares

Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
L ACC	€100	Closed	Euro	No	Yes/ 5%	€1,000 / €100	Accumulating
LH ACC	€100	Closed	Euro	Yes	Yes/ 5%	€1,000 / €100	Accumulating
L DIST	€100	Closed	Euro	No	Yes/ 5%	€1,000 / €100	Distributing
I ACC	€100	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
J ACC	€10000	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
J DIST	€10000	Closed	Euro	No	No	€1,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 12.00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge:
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: GLOBAL LISTED INFRASTRUCTURE FAM FUND
Legal entity identifier: 254900K08VD3YVM3ZV45

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The Fund promotes the use of an Exclusionary Approach and it makes investments that are SDG-aligned (as defined below):

The Fund excludes certain potential investments from its investment universe to mitigate potential negative effects on the environment and society and to assist it in delivering more sustainable outcomes ("Exclusionary Approach").

The Fund considers the UN Sustainable Development Goals (SDGs) as part of its investment process and the sustainability themes considered by the Investment Manager are based on the SDGs as a relevant framework to measure contribution to sustainability factors ("SDG-alignment"). At least 70% of the Fund's investments by value will be in investments considered by the Investment Manager to be related to sustainability themes.

No reference benchmark has been designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The sustainability indicators selected to demonstrate the attainment of the promoted environmental and/or social characteristics are:

- Exclusionary approach: Percentage (%) of NAV held in excluded investments
- SDG-alignment: Percentage (%) of investments by value that is SDG-aligned

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Fund may allocate to sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager uses a series of proprietary tests based on available data to determine whether and how an investment makes positive contribution(s) towards environmental and social objectives.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or

social sustainable investment objective as they are required to pass a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

sustainable investment

How have the indicators for adverse impacts on sustainability factors been taken into account?

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund.

Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, for sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Sustainability considerations, encompassing ESG factors, are fully integrated into analysis and investment decisions, and play an important role in determining the investment universe and portfolio construction. The Fund considers the UN Sustainable Development Goals (SDGs) as part of its investment process and the sustainability themes considered by the Investment Manager are based on the SDGs as a relevant framework to measure contribution to sustainability factors ("SDG-alignment").

In doing so, the Investment Manager assesses investee companies as "relating to a sustainability theme" if at least 50% of its revenue is SDG-aligned. For the avoidance of doubt this assessment can include alignment to more than one SDG as part of a broader theme. At least 70% of the Fund's investments by value will be in investments considered by the Investment Manager to be related to sustainability themes. In order to identify securities for purchase, the Investment Manager reduces the potential investment universe as follows:

1. The exclusions listed in the Investment Policy are screened out.
2. The Investment Manager then identifies the companies that are considered suitable for further analysis. The Investment Manager analyses these companies from an ESG perspective using a proprietary infrastructure sector-specific quality assessment. This includes an assessment of ESG Factors, alongside other financial and operational characteristics. Following the ESG-related quality assessment, the Investment Manager then quantifies ESG risks for these companies, to determine whether these have been accounted for in a company's valuation.
3. From this narrowed investment universe, the Investment Manager then performs further analysis, including consideration of ESG factors, to identify and take advantage of investment opportunities.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The following elements are binding:

- The Fund’s exclusions;
- The amount of the Fund aligned to the promoted environmental and/or social characteristics; and
- Minimum levels of sustainable investments.

Where it is in the best interests of investors, the Fund may temporarily deviate from one or more of these elements, for example if the Investment Manager considers it prudent to hold high levels of cash in response to market conditions.

The Manager’s exclusion list which is based on the Manager’s exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

20%

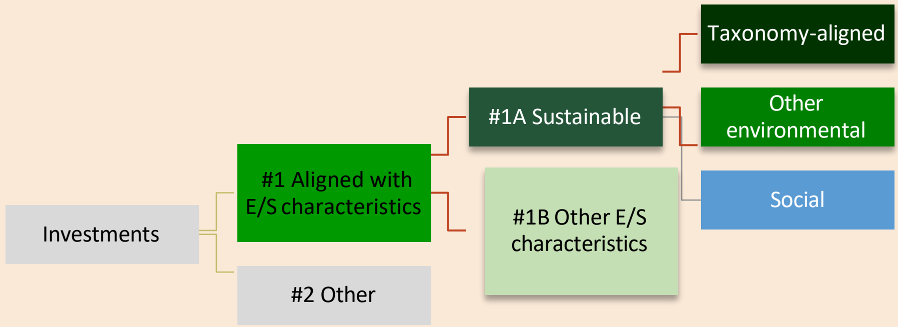
Whilst any commitment on the minimum rate to reduce the scope of the investments considered prior to the application of the investment strategy as a result of the Fund’s exclusions is intended to be binding, as this is calculated by considering the Fund’s exclusions against a proxy for the investment universe (such as a financial index) outside the control of the Investment Manager, and as additional exclusions will require an update of fund materials, it is possible that the Fund may temporarily be out of compliance with this commitment.

What is the policy to assess good governance practices of the investee companies?

The Investment Manager operates a data driven quantitative good governance test used to consider investments into companies. M&G excludes investments in securities that are considered as failing the Investment Manager’s good governance test.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The Investment Manager expects at least 70% of the Fund to be aligned to the promoted E/S characteristics. At least 51% of the Fund will be in Sustainable Investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

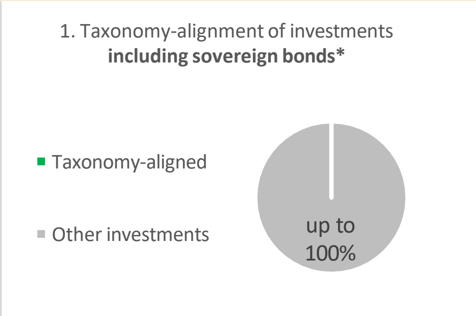
Derivatives are not used to attain the promoted environmental and/or social characteristics.

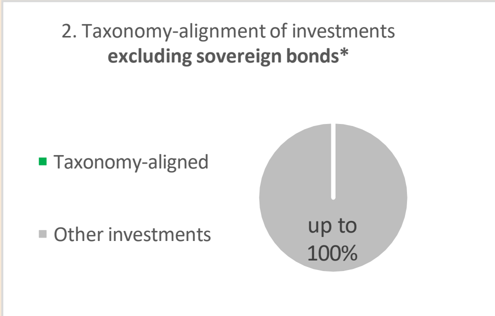
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

5%

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

5%

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The Fund may hold cash, near cash and money market funds and derivatives as "Other" investments, for any purpose permitted by the Fund's investment policy. No minimum environmental or social safeguards are applied, other than as set out below.

Derivatives used to take investment exposure to diversified financial indices, and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund's investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test. No minimum environmental or social safeguards are applied to FX derivatives.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments' alignment with the promoted characteristics. It is also possible that the Fund may hold investments that are not in line with the promoted characteristics, e.g. as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors, but may not always be able to do so immediately.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  Not Applicable

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  Not Applicable

- ***How does the designated index differ from a relevant broad market index?***

  Not Applicable

- ***Where can the methodology used for the calculation of the designated index be found?***

  Not Applicable

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)]

GLOBAL SUSTAIN PARIS ALIGNED FAM FUND

SUPPLEMENT DATED 18 December 2024

This Supplement contains specific information in relation to **GLOBAL SUSTAIN PARIS ALIGNED FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Due to the Fund's ability to invest in emerging markets securities the Fund may have a higher than average degree of risk. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to provide a higher total return (capital growth plus income) than that of global equity markets over any five-year period and to invest in companies that contribute towards the Paris Agreement climate change goal. The "Paris Agreement" is an international treaty on climate change, adopted by 196 parties at the Paris climate conference (COP21) in December 2015. The Paris Agreement sets out a global framework to avoid dangerous climate change by limiting global warming this century to well below 2°C and pursuing efforts to limit it to 1.5°C compared to pre-industrial levels. It also aims to strengthen countries' ability to deal with the impacts of climate change and support them in their efforts.

The Fund seeks to achieve its objective by investing at least 80% of its Net Asset Value in equity securities of sustainable companies that may operate in any sector and with any market capitalization and that may be domiciled in any country, including up to 20% of the Fund's Net Asset Value that may be invested in emerging markets. The sustainable companies that the Fund invests in are companies that contribute to the long-term global warming objectives of the Paris Agreement by either having a Low Carbon Intensity and/or a Reducing Carbon Intensity. The Fund is expected to have a concentrated portfolio of usually fewer than 40 companies.

The equity securities in which the Fund will invest includes common stock and preferred stock. The Fund has a global investment mandate and its investments are not confined to or concentrated in any particular geographic region or market and it may invest in emerging market countries. Emerging market countries are those identified by a market leading index provider, in accordance with the prevailing OECD country risk classification.

The Fund may also invest in deposits, warrants, money market instruments such as T-bills, certificates of deposit, commercial paper and bankers' acceptances. Investment in warrants will not be leveraged and will be limited to 10% of the Fund's Net Asset Value.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Benchmark Information

The Investment Manager has selected the MSCI World Net Return Index ("Index") to measure the Fund's performance. The Index captures large and mid-cap representation across the world developed markets equity universe. The Index is not an ESG benchmark and is not consistent with

ESG criteria. The Index is also used to define the carbon profile of companies. The Investment Manager considers the Fund's weighted average carbon intensity against the Index when constructing the portfolio, however the Index does not constrain the Fund's portfolio construction. The Fund is actively managed and the Investment Manager has freedom in selecting investments. The Fund's holdings may deviate significantly from the Index's constituents and as a result the Fund's performance may deviate materially from the Index.

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule I of the Prospectus.

Selection of Investments

The Investment Manager screens the investible universe against its ESG criteria and sustainability criteria and excludes investments that do not comply with the Fund's objectives.

The following types of exclusions apply to the Fund:

- Norms-based exclusions: investments that are assessed to be in breach of commonly accepted standards of behaviour related to human rights, labour rights, environment and anti-corruption, including companies that are deemed to be in breach of the United Nations Global Compact Principles are excluded.
- Sector-based and/or values-based exclusions: investments and/or sectors exposed to business activities that are assessed to be damaging to the environment, human health, societal wellbeing or otherwise assessed to be misaligned with the Fund's values-based criteria such as thermal coal and oil gas extraction.
- Other exclusions: investments assessed to be otherwise in conflict with the ESG criteria and sustainability criteria.

Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

To achieve the Fund's sustainable objective, the Investment Manager invests in companies that contribute towards the Paris Agreement climate change goal to limit global warming by either having a low and/or a reducing carbon intensity. "Carbon intensity" corresponds to the amount of Co2 emitted by a company per dollar of sales. The portfolio's weighted average carbon intensity will typically be lower than 50% of the weighted average carbon intensity of the Index.

Low Carbon Intensity means a carbon intensity lower than 50% of the weighted average carbon intensity of the Index. Reducing Carbon Intensity means companies that have science based targets aligned with the Paris Agreement, or have committed to have them in place within a defined time period. Science-based targets mean carbon reduction targets that are in line with what the latest climate science deems necessary to meet the goals of the Paris Agreement - limiting global warming to well-below 2°C above pre-industrial levels and pursuing efforts to limit warming to 1.5°C. The Fund may also invest in companies that provide direct solutions to the climate challenge via their products and services.

The Investment Manager employs a bottom-up stock picking approach that is driven by fundamental analysis of individual companies, including factors such as the sustainability of their business models, their competitive position, their financial strength, the quality of their management and their valuations.

The Investment Manager seeks to invest in companies that have long term competitive advantages to protect their profitability and have ongoing commitment to decarbonisation. Sources of competitive advantages include but are not limited to scale, brand, innovation and culture.

Sustainability considerations, encompassing ESG factors are fully integrated into the investment process through ongoing engagement with investee companies.

The Investment Manager uses probability weighted scenario analysis to estimate the intrinsic value of a stock. The value of a company is assessed for a range of different market scenarios from bullish to bearish with a probability applied to each scenario materialising to derive the intrinsic value. Typically the Investment Manager waits for shorter-term issues that create an attractive margin of safety between its assessment of intrinsic value and the share price before investing.

For any additional information on the Investment Manager's sustainable investing approach, please refer to the website https://www.mandgplc.com/our-business/mandginvestments/ responsible-investing-at-mandg-investments – "Responsible Investment" section.

Use of Financial Derivative Instruments ("FDIs") and other Instruments and Techniques

The Fund may engage in transactions in FDI for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use are listed and/or unlisted: currency forwards, futures and forward contracts, exchange traded futures and options as described below and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective, to protect risk to capital as well as hedge against currency risk. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures and forwards: Futures and forwards may be used to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to individual equities or markets to which the Fund may be exposed.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be between 0% and 30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 9 of SFDR for products which have sustainable investment as their objective, as further described in Annex III at the end of this Supplement[1].

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of "Sustainability Risks" in the main body of the Prospectus)).

While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors.

(ii) The Investment Manager will comply with its own exclusion policy and the Manager's exclusion list, whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 9 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

While the Fund has sustainable investment as its objective within the meaning of Article 9 of the SFDR, it should be noted that as the investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It

[1] The information contained in Annex III has been completed using information provided by the Investment Manager of the Fund.

follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Investor Profile

The Fund is suitable for investors seeking income and capital growth, and who are willing to accept a high level of volatility. The Fund should be viewed as a long term investment.

Base Currency: US Dollar

Investment Manager

The Manager has appointed M&G Investment Management Limited of 10 Fenchurch Avenue London, EC3M 5AG, United Kingdom to act as the investment manager pursuant to an investment management agreement dated 31 July 2018 as may be amended and updated from time to time. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager’s principal business and occupation is to provide investment management services to clients.

Offer of Shares

Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
L ACC	€100	Closed	Euro	No	Yes/ up to 5%	€1,000 / €100	Accumulating
LH ACC	€100	Closed	Euro	Yes	Yes/ up to 5%	€1,000 / €100	Accumulating
L DIST	€100	Closed	Euro	No	Yes/ up to 5%	€1,000 / €100	Distributing
A ACC	€100	19 December 2024 - 19 June 2025	Euro	No	No	€1,000/€100	Accumulating
D ACC	€100	19 December 2024 - 19 June 2025	Euro	No	No	€500/€100	Accumulating
DH ACC	€100	19 December 2024 - 19 June 2025	Euro	Yes	No	€500/€100	Accumulating

I ACC	€100	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
J ACC	€10000	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
J DIST	€10000	19 December 2024 - 19 June 2025	Euro	No	No	€1,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Business Day" means every weekday on which retail banks and securities markets in Luxembourg and England are normally open for business;

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 12.00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge:
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the

principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX III

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Global Sustain Paris Aligned FAM Fund
Legal entity identifier: 2549005BYRQXNZPSR450

Sustainable investment objective

Does this financial product have a sustainable investment objective?

☑ **Yes**	☐ **No**
☑ It will make a minimum of **sustainable investments with an environmental objective:** 80%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☑ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

To invest in companies that contribute towards the Paris Agreement climate change goal.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

Fund level sustainability indicators:

- Percentage (%) of NAV committed to Science-Based Targets (SBTs)
- Percentage (%) of NAV with ratified Science-Based Targets
- Percentage (%) of NAV participating in Task Force on Climate-Related Financial Disclosures (TCFD) reporting
- Total renewable energy produced (megawatt hours)
- The weighted average carbon intensity (WACI) of the Fund relative to the WACI for the investment universe

Security level sustainability indicators:

- Avoided carbon emissions – for companies that provide direct solutions to the climate challenge via their products and services

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective as they are required to pass a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful.

2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas).

3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund.

Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, a described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

Does this financial product consider principal adverse impacts on sustainability factors?

☑ Yes, for sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund invests in Low Carbon Intensity Companies and Reducing Carbon Intensity Companies.

Low Carbon Intensity Companies have a carbon intensity lower than 50% of the weighted average carbon intensity of the Fund's investment universe, and an ongoing commitment to decarbonisation.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Reducing Carbon Intensity Companies have science based targets aligned with the Paris Agreement or have committed to have them in place within a defined time period, and an ongoing commitment to decarbonisation.

The Fund also considers non-mandatory factors such as whether companies are providing solutions to the climate change challenge.

The Fund will typically have a weighted average carbon intensity of less than half of its investment universe ("Positive ESG Outcome").

Sustainability considerations, encompassing ESG factors, are fully integrated into analysis and investment decisions, and play an important role in determining the investment universe and portfolio construction. In order to identify securities for purchase, the Investment Manager reduces the potential investment universe as follows:

1. The exclusions listed in the ESG Criteria are screened out.

2. The Investment Manager then assesses the sustainability credentials of the remaining companies. Potential investments are identified by reference to their carbon intensity and whether they provide solutions to the climate change challenge. The Investment Manager analyses these companies using internal and external research, combining qualitative and quantitative methods with an assessment of ESG Factors to build a watchlist of companies assessed to have sustainable business models.

3. The Investment Manager then performs further analysis to consider the valuation of these companies and the appropriate time to purchase in consideration of the Fund's financial objective. The Investment Manager favours issuers with lower carbon intensity where this is not detrimental to the pursuit of the investment objective. This process typically results in a portfolio with lower carbon intensity than less than half of its investment universe. In constructing a portfolio which favours investments with lower carbon intensity, the Investment Manager may nonetheless invest in investments across the full spectrum of carbon intensity. The Fund's calculation methodology does not include those securities that do not have carbon intensity data respectively, or cash, near cash, some derivatives and some collective investment schemes.

Good governance practices include sound management structures, employee relations, remuneration of staff ad tax compliance.

The Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The following elements are binding:

- The Fund's exclusions;
- The Fund's asset allocation (as disclosed below); and
- Minimum levels of sustainable investments.

Where it is in the best interests of investors, the Fund may temporarily deviate from one or more of these elements, for example if the Investment Manager considers it prudent to hold high levels of cash in response to market conditions.

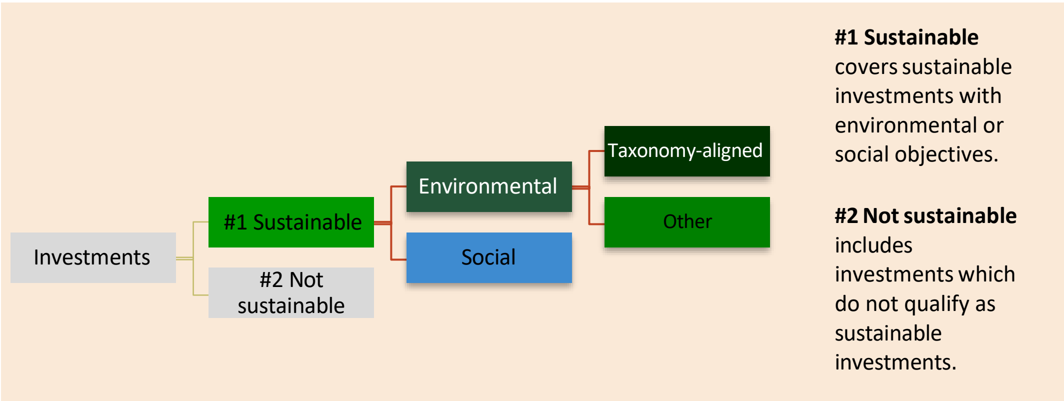
What is the policy to assess good governance practices of the investee companies?

The Investment Manager operates data driven quantitative good governance tests used to consider investments into companies. The Investment Manager excludes investments in securities that are considered as failing the Investment Manager's good governance tests.

What is the asset allocation and the minimum share of sustainable investments?

The Investment Manager expects at least 80% of the Fund to be invested in environmental sustainable investments, in pursuit of the environmental sustainable investment objective.

The Fund is not required to favour any specific type of environmental sustainable investment.



Asset allocation describes the share of investments in specific assets.

How does the use of derivatives attain the sustainable investment objective?
Derivatives are not used to attain the sustainable investment objective.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

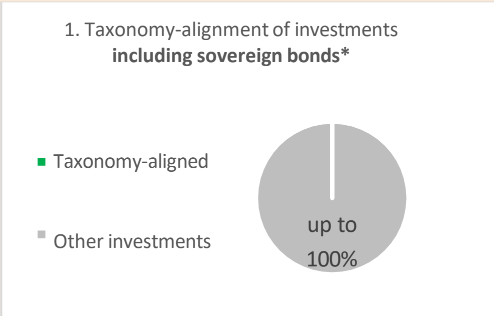
Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

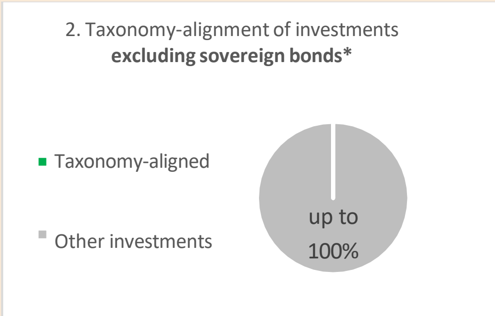
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

5%

What is the minimum share of sustainable investments with a social objective?

0%

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

are environmentally sustainable investments that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Fund may hold cash, near cash and money market funds, and derivatives as "Other" investments, for hedging purposes or in connection with cash held for ancillary liquidity. No minimum environmental or social safeguards are applied, other than as stated below.

Where derivatives are used to take investment exposure to diversified financial indices, these will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test.

It is also possible that the Fund may hold investments that are not in line with the promoted characteristics, e.g. as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors, but may not always be able to do so immediately.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- ***How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?***

  Not Applicable

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  Not Applicable

- ***How does the designated index differ from a relevant broad market index*?**

  Not Applicable

- ***Where can the methodology used for the calculation of the designated index be found?***

  Not Applicable

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manger’s website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

GLOBAL STARS EQUITY FAM FUND

SUPPLEMENT DATED 1 December 2022

This Supplement contains specific information in relation to **Global STARS Equity FAM Fund** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital growth from a portfolio primarily (at least 75% of the Net Asset Value of the Fund) made up of the equity securities of companies across any sector and market capitalisation from anywhere in the world, including those in countries considered to be emerging markets.

In actively managing the Fund's portfolio, the Investment Manager selects companies with a particular focus on their ability to comply with international standards for environmental, social and corporate governance ("**ESG**"), as described in more detail further below under "ESG Integration" section.

The equity securities in which the Fund will invest include common stocks, preferred stocks, convertible stocks, rights and warrants to subscribe for the purchase of equity securities, and depositary receipts, including American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs) (traded on Recognised Markets listed in Schedule I of the Prospectus). The Fund may also invest up to 10% of its Net Asset Value in unlisted equities which are not listed on Recognised Markets but which are permissible investments for UCITS.

Selection of Investments

The selection of equity investments relies on the following bottom-up analysis which at all times is undertaken with overarching ESG considerations being the main driver of selection of investments from the Investment Manager, as explained in more detail further below under "ESG Integration". In this way, the Investment Manager only selects those companies for the Fund's investment universe that show sound fundamentals along with high ESG scores only (as per its "Stars Strategy", defined below). When considering a company's sound foundamentals, the Investment Manager mainly look at:
1) competition in the industry;
2) potential of new entrants into the industry;
3) power of suppliers;
4) power of customers and
5) threat of substitutes.

The Investment Manager believes that companies with competitive advantages tend to have better long-term opportunities of profitability.

Bottom-up analysis

The Investment Manager follows a bottom-up investment process by investing in equities which may include 1) value, 2) quality and 4) growth style characteristics, as defined below, that it believes will deliver outperformance over the long term. This approach combines both the rigor of quantitative approaches (by relying on internal proprietary quantitative models developed by the Investment Manager) and more qualitative analysis based on the experience, balanced return and risk appraisal of fundamental approaches, as described above from 1) to 5) under "*Selection of Investments*", that take into account the following investment styles:

1) Value: To identify attractively valued stocks, the Investment Manager looks at how each stock is valued relative to the market and its peers.

2) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

3) Growth: Growth companies are companies with higher-than-average growth rates in projected earnings.

The above-mentioned quantitative model developed by the Investment Manager is used as a decision making tool for portfolio construction to assist the Investment Manager in determining the optimal weight that a stock should have in the portfolio given the stock specific valuation expectation and its contribution to portfolio risk adjusted returns.

ESG Integration

The Investment Manager believes that ESG considerations should be a foundation of any investment process supporting long-term investing. To this purpose, the Investment Manager systematically includes ESG analysis in its investment decision making process by relying on certain ESG screenings and factors, which are summarised as follows and that can also be found in more detail on Nordea Asset Management ("NAM")'s website: www.nordea.lu – "Responsible Investment" section:

ESG Screenings

1. **"Stars Strategy":** the Investment Manager use a proprietary ESG scoring system and bespoke analysis carried out by its Responsible Investments team and financial analysts. This system focuses on conducting an enhanced due diligence on investee companies and selecting those for the Fund's investment universe that show sound fundamentals and high ESG scores only. The above enhanced due diligence includes an analysis on ESG risks material to the investee company and considers how companies manage their sustainability risks. The relevant company will then be assigned an ESG score from C (lowest) to A (highest). Eligible investments must have an ESG score of B or A. .

2. **Exclusion List**: in the equity selection process, the Investment Manager may identify companies that are allegedly involved in breaches of international norms on, for example, environmental protection, human rights, labour standards and anti-corruption. If a company is identified in this screening process, action is taken by the Investment Manager that may lead to the exclusion of such company from the investment universe of the Fund. The updated exclusion list is made available to investors on the Investment Manager's website on https://www.nordea.com/en/sustainability/exclusion. Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

3. **Data Reliance:** The Investment Manager sources data from several third-party data providers such as MSCI Inc., ISS ESG, Bloomberg, TruValue Labs, SASB, CDP, RepRisk, Impact-cubed, Maplescroft, NGO's as input for the above ESG score. Potential investments for which there is not sufficient data available to conduct the ESG analysis (as described in this section) are not eligible for inclusion in the Fund's investment universe.

4. **Principal Adverse Impact ("PAI") Integration:** The environmental and social impact of the activities of the investee companies is assessed on an ongoing basis through PAI integration. Companies identified as outliers on one or more PAI indicators, are analysed further which may result in a recommendation for action, such as the exclusion of such company from the investment universe of the Fund. For more information, please see NAM's Responsible Investment Policy and disclosure statement on the integration of Principal Adverse Impact indicators which can be found on the Investment Manager's website on www.nordea.lu – "Responsible Investment" section.

ESG factors

Examples of ESG factors considered by the Investment Manager are:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Air pollution	Workplace safety	Audit committee independence
Waste & Hazardous Materials Management	Working conditions	Compensation committee independence
Water pollution	Employee health	Political contribution
Resource efficiency / management	Social value creation	Executive compensation
Biodiversity / habitat protection	Child labour ban	Stakeholder engagement
Material Sourcing & Efficiency	Emergency preparedness	Code of conduct

Responsible Investing Information

For any additional information on the Investment Manager's sustainable investing approach, please refer to the website www.nordea.lu – "Responsible Investment" section.

Direct exposure to the abovementioned investments in China, India and Russia will be achieved in the following manner:

Direct Investment in China, India and Russia

(i) Direct Investment in China
The Fund may invest up to 20% of its Net Asset Value in China A Shares and China B Shares, as defined below, in aggregate or such other shares that may in the future be defined as China A or China B shares.

A Shares
A Shares are securities issued by companies in China and listed on the Shanghai Stock Exchange ("SSE") and/or the Shenzhen Stock Exchange (the "SZSE") and available for investment by using the Shanghai-Hong Kong Stock Connect and the Shenzen-Hong Kong Stock Connect respectively (each a "Stock Connect" and collectively the "Stock Connects"). They are traded in Renminbi (Chinese Yuan). They can only be traded by residents of the People's Republic of China ("PRC") or under the Qualified Foreign Institutional Investor (QFII), the Renminbi Qualified Foreign Institutional Investor (RQFII) rules, or via the Stock Connects programs (the QFII and RQFII program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access the SSE and SZSE).

B Shares
B Shares are securities issued by companies in China and listed on the SSE (where they are traded in US dollars) and/or SZSE (where they are traded in Hong Kong dollars). They can be traded by non-residents of the People's Republic of China and also residents of the People's Republic of China with appropriate foreign currency dealing accounts.

The Shanghai-Hong Kong Stock Connect is a securities trading and clearing links program developed by Hong Kong Exchanges and Clearing Limited ("HKEX"), SSE and the China Securities Depositary and Clearing Corporation Limited ("ChinaClear"). It is comprised of a Northbound Shanghai Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shanghai Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by the Stock Exchange of Hong Kong (the "SEHK"), may be able to trade eligible China A Shares listed on the SSE by routing orders to the SSE. Under the Southbound Hong Kong Trading Link, investors in China may trade certain stocks listed on the SEHK.

The Shenzen-Hong Kong Stock Connect is a securities trading and clearing links program developed by HKEX, SZSE and ChinaClear. It is comprised of a Northbound Shenzhen Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shenzhen-Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by SEHK, may be able to trade eligible China A Shares listed on the SZSE by routing orders to SZSE. Under the Southbound Hong Kong Trading Link, investors in China will be able to trade certain stocks listed on the SEHK.

There are specific risks associated with direct investment in Chinese markets and investors' attention is drawn to the section titled "Risk Factors" in the Prospectus as well as to the “Regulatory Risks Relating to the QFII and RQFII” further below.

(ii) Direct Investment in India

The Fund may invest up to 5% of its Net Asset Value in the abovementioned investments from issuers in India as a Foreign Portfolio Investor registered with the Securities and Exchange Board of India under the Securities and Exchange Board of India (Foreign Portfolio Investors) Regulations, 2019, as may be amended from time-to-time, and for this purpose, the Fund has registered itself as a Category I FPI. This license will allow the Fund to purchase the abovementioned investments in India. An FPI wishing to invest into India must register itself as a designated depositary participant with SEBI for the purpose of the FPI Regulations under the single window clearance mechanism and must comply with the provisions of the FPI Regulations. Depending on their risk profile, applicants for FPI registration must fall under one of two categories. The Fund will register as a Category I FPI, which is the category that applies to entities that are considered to be appropriately regulated by SEBI.

(iii) Direct Investment in Russia

The Fund may invest up to 5% of its Net Asset Value in the abovementioned investments that are listed or traded on the Moscow Exchange only.

Indirect Investment in China, India and Russia

In addition to the above mentioned direct exposure to investments in China, India and Russia, indirect exposure to China, India and Russia may also be achieved through investment in the abovementioned investments, which are listed or traded on one of the Recognised Markets. In particular, such indirect exposure to China, India and Russia will be achieved via investments in American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs).

The Fund may hold money market instruments (such as treasury bills, certificates of deposit, commercial paper and bankers acceptances) or money market funds for ancillary purposes so that it can pay its expenses, satisfy redemption requests or take advantage of investment opportunities by freeing up cash quickly through the disposal of such money market instruments or money market funds. With specific regard to the investment in money market funds, as these funds qualify as “collective investment schemes” within the meaning of Regulation 68(1)(e) of the UCITS Regulations, the investment is limited to 10% of the Fund’s Net Asset Value, in accordance with said UCITS Regulations.

At any time, the Fund may invest up to 25% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

No more than 10% of the Fund’s Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected the MSCI ACWI Index (Net Return) (the “Index”), which is used for performance comparison purposes only. The Invetment Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Use of Financial Derivative Instruments (FDIs) and other Instruments and Techniques.

The Fund may engage in transactions in listed and/or non-listed FDIs for investment purposes, efficient portfolio management, risk reduction and hedging. The types of FDIs that the Fund may use are: equity swaps, options, warrants, futures, forwards, the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Equity Swaps: The Fund may use swaps on equities/equity related securities, baskets of equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Warrants: The Fund may use warrants as a means to gain exposure to certain markets in a most efficient and expeditious manner. For example, certain markets may have a long lead-in time to obtain local market access and warrants may be used during this lead-in time in order to allow quicker market access. The Fund may gain an exposure to warrants of up to 2% of its Net Asset Value. Warrants grant the right to acquire an underlying security from the issuer (as opposed to an option where a third party grants a right to acquire an underlying security as described above) at a fixed price. Warrants have similar characteristics to call options, but are typically issued together with preferred stocks or bonds or in connection with corporate actions.

Futures and Forwards: Futures and forwards may be bought or sold to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to equity securities or markets to which the Fund may be exposed.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Investment Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Investment Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund.

Securities Financing Transactions

*Securities Lending Agreements***:** Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 0-30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. In respect of the direct/indirect costs and fees arising from securities lending, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of a Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management techniques will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Risk Measurement – Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of "Sustainability Risks" in the main body of the Prospectus).

While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described above, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risks given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

The Investment Manager's sustainable investing policy is available at https://www.nordea.lu/en/professional/responsible-investing/.

Taxonomy Disclosure

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Investor Profile

The Fund is suitable for retail and institutional investors seeking long-term capital growth and who are willing to accept medium to high levels of volatility. The Fund should be viewed as a long-term investment.

Investment Manager

The Manager has appointed Nordea Investment Management AB, acting through its Danish Branch, at Strandgade 3, 1401 Copenhagen, Denmark to act as the investment manager pursuant to an investment management agreement, as amended and restated on 16 December 2021. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Base Currency: USD

Offer of Shares

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day;

"Valuation Point" means 11:59pm (Irish time) on the relevant Dealing Day;

“**Dealing Day**” means every weekday on which retail banks and securities markets in Luxembourg and the United States of America are open for business.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
The Manager shall be entitled to a management fee of up to 2.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager’s fees and not out of the assets of the Fund.

Administrator’s Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary’s Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge: Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus, in particular with respect to the risks pertaining to investing in emerging markets. In addition, investors should pay particular attention to the below Regulatory Risks for investments in China via the QFII and RQFII.

Regulatory Risks Relating to the QFII and RQFII

PRC investments by overseas institutions can be made by or through holders of a QFII/RQFII license, as approved under and subject to applicable Chinese regulations and regulatory requirements (the “**QFII/RQFII Regulations**”), which are governed by PRC authorities, including the China Securities Regulatory Commission (“**CSRC**”), the State Administration of Foreign Exchange (“**SAFE**”) and the People’s Bank of China (“**PBOC**”).

The Investment Manager has been granted a QFII/RQFII license (“**QFII/RQFII License**”) and, as such, the relevant requirements and restrictions under the QFII/RQFII Regulations apply to the Investment Manager (as the QFII/RQFII License holders) as a whole, and not simply to investments made by the Fund. Shareholders should be aware that violations of any QFII/RQFII Regulations arising from activities through the Investment Manager’s QFII/RQFII status other than those conducted by the Fund could result in the revocation of, or other regulatory action in respect of, the Investment Manager's QFII/RQFII status as a whole. As a result, the ability of the Fund to make investments and/or repatriate monies through the Investment Manager’s QFII/RQFII status may be affected adversely by the investments or performance by other investors utilizing the Investment Manager's QFII/RQFII status.

As the QFII/RQFII Regulations have a relatively short history and their application and interpretation remain relatively untested, there is uncertainty as to how they will be applied and interpreted by the PRC authorities or how regulators may exercise the wide discretionary powers given to them thereunder in future. Any changes to the relevant rules may have a material adverse impact on investors’ investment.

Investors should further note that under the QFII/RQFII Regulations, the QFII/RQFII status could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFII/RQFII status is suspended or revoked, the Fund may be required to dispose of their securities held through the QFII/RQFII and may not be able to access the Chinese securities market via the QFII/RQFII, which may have an adverse effect on the Fund's performance.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, est-ablishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Global Stars Equity FAM FUND

Legal entity identifier: 254900PEW9O0DN154A24

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☑ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective**: ___%	☑ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☑ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
☐ It will make a minimum of **sustainable investments with a social objective**: ___%	☑ with a social objective
	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The environmental and/or social characteristics ("E/S") characteristics of this Fund include:

Minimum proportion of sustainable investments The Fund partly invests in sustainable investments, which means companies and issuers involved in activities that contribute to an environmental or social objective as outlined in UN SDGs and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives.

ESG scoring The Fund invests in companies that have been analysed and scored in NAM's proprietary ESG tool to ensure that only securities issued by companies that meet the minimum required ESG score are eligible for inclusion.

Sector- and value-based exclusions Exclusion filters are applied to the portfolio construction process to restrict investments in companies and issuers with material exposure to certain activities deemed to be detrimental to the environment or the society at large, including tobacco companies and fossil fuel companies.

NAM's Paris-Aligned Fossil Fuel policy whereby the Fund will not invest in companies that have significant exposure to fossil fuels unless they have a credible transition strategy.

The Fund uses a benchmark that is not aligned with the product's E/S characteristics. This Fund does not have a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promotes.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental or social characteristics, the investment manager will use the following indicators:

- Carbon Footprint
- Violations of United Nations Global Compact

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund partially intends to make, is to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy aligned activities. Sustainable investments contribute to the objectives through the Fund 's investments in companies that support the UN SDGs or Taxonomy aligned activities by passing a minimum threshold for revenue alignment with UN SDGs or the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments are screened to ensure that they do not significantly harm any other social or environmental objectives (DNSH test) as defined by the EU Taxonomy or any SDGs as adopted by the UN.

How have the indicators for adverse impacts on sustainability factors been taken into account?

NAM has developed a proprietary quantitative methodology that assesses the environmental and social impact of NAM´s investment universe (direct investments mainly) using multiple principal adverse impact ("PAI") indicators from Table 1 and/or Table 2 and/or Table 3 of Annex 1 of the SFDR RTS (the "PAI tool"). The methodology utilises a diverse range of data sources in order to ensure that investee companies' performance is appropriately analysed. PAI indicators are assessed in NAM's PAI tool and the results are a material part of the DNSH test.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Alignment of the Sustainable Investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, is confirmed as part of the process to identify sustainable investments using NAM's PAI tool.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ No,

☑ Yes, NAM's proprietary quantitative PAI tool assesses the impact of NAM´s investment universe (direct investments mainly) across multiple PAI indicators. Investment teams have access to both absolute PAIs metrics and normalised scale values, allowing them to identify outliers and adjust their view of investee companies and issuers accordingly. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

Information on PAI on sustainability factors will be made available in the periodic reporting pursuant to SFDR Article 11(2).

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Fund is managed according to the Stars investment strategy which includes a commitment to apply the NAM proprietary ESG framework to analyse and select investments that epitomize the ESG characteristics of the product.
The analysis is performed via an enhanced due diligence on material ESG issues that are relevant to the investee company. Furthermore, each company's business model alignment with relevant UN SDGs is taken into consideration as well as the company's approach to managing ESG risks. Depending on the outcome of the analysis, the company will be assigned an ESG score from C to A. Stars eligible investments must have an ESG score in the B or A range.

Companies and issuers are analysed and screened using NAM's proprietary methodology to identify and select sustainable investments that will contribute to the proportion of such investments.

More information on the general investment policy of the product can be found in the Investment Guidelines

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- Direct investments must meet the minimum threshold for ESG score.
- Minimum 50% of the product is invested in sustainable investments as defined by NAM's proprietary methodology that identifies sustainable investments.
- Sector- or value-based exclusions prevent investments into activities that are deemed to be inappropriate for the strategy. More information is available in the sustainability-related website information in accordance with SFDR article 10.
- NAM's Paris-Aligned Fossil Fuel Policy sets thresholds for companies' exposure to fossil fuel production, distribution and services. This means that the product will not invest in companies with material involvement in fossil fuel production, distribution or services if they do not have a documented transition strategy that aligns with the Paris Agreement.
- The product adheres to NAM's Responsible Investment Policy and does not invest in companies that are on Nordea's exclusion list due to violation of international norms or involvement in controversial business activities.

The binding elements are documented and monitored on an ongoing basis. Separately, NAM has risk management processes in place to control financial and regulatory risk and ensure appropriate escalation of any potential issues within a clear governance structure.

NAM conducts a thorough due diligence on external data vendors to clarify applied methodologies and verify data quality. However, as the regulation and standards of non-financial reporting is rapidly developing, data quality, coverage and accessibility remains challenging – especially for smaller companies and less developed markets.

In addition to the exclusions of the Investment Manager, the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

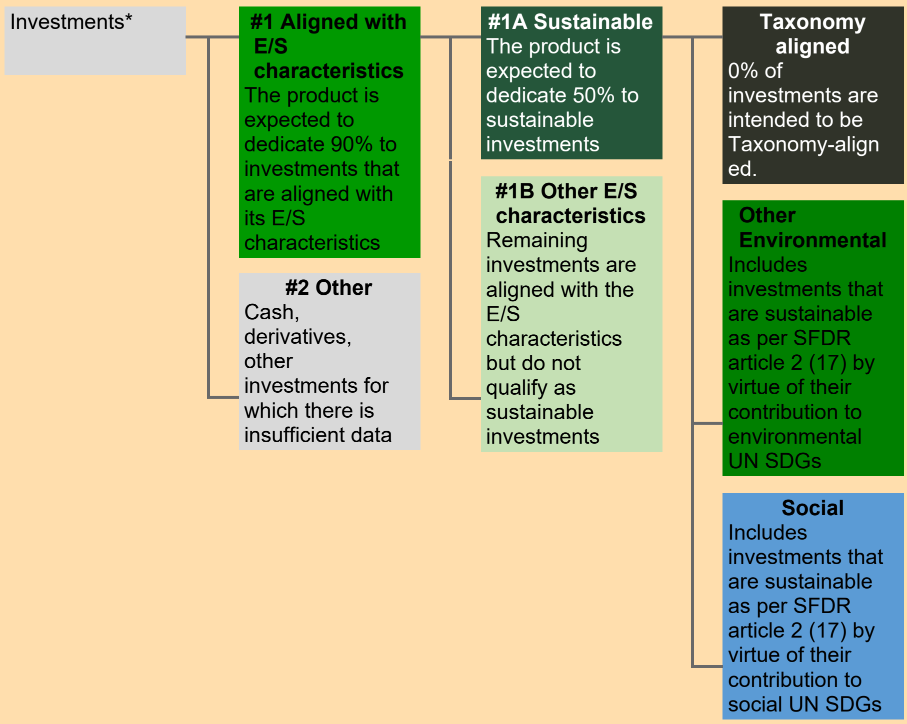
What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies is addressed in various layers of the security selection process. Governance safeguards are inherent in the NAM level norms-based screening as well as the NAM PAI processes. Additionally, at the product level, companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on three pillars; 1) The principles of governance (democratic governance), 2) Execution of governance and 3) Efficiency of governance.

What is the asset allocation planned for the financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products NAV which is the total market value of the product.

The asset allocation may change over time and percentages should be seen as an average over an extended period of time. Calculations may rely on incomplete or inaccurate company or third party data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

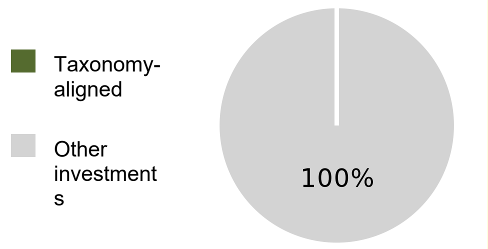
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

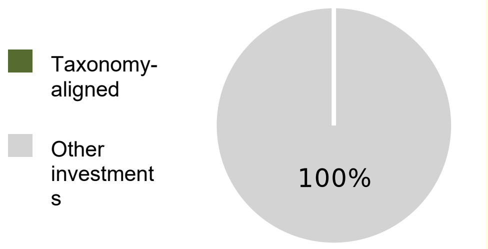
Sufficiently reliable data on Taxonomy-alignment is scarce and the data coverage remains too low to support a meaningful commitment to a minimum proportion of Taxonomy-aligned investments in this product. It cannot be excluded that some of the products holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on taxonomy-alignment will develop as the EU framework evolves and data is made available by companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



2. Taxonomy-alignment of investments **excluding sovereign bonds***



** For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund may invest in economic activities that are not yet eligible to be environmentally sustainable economic activities. Company data of EU Taxonomy-alignment is not yet widely available from public disclosures by investee companies. The minimum proportion of such investments is 0%.

What is the minimum share of socially sustainable investments?

The Fund contains investments with both an environmental and a social objective. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

Cash may be held as ancillary liquidity or for risk balancing purposes. The Fund may use derivatives and other techniques for the purposes described in the investment guidelines. This category may also include securities for which relevant data is not available.

Where can I find more product specific information online

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and exclusion policy can be found on the Manager's website at the following link; http://finecoassetmanagement.com/sustainability/

GLOBAL DISRUPTIVE OPPORTUNITIES FAM FUND

SUPPLEMENT DATED 28 NOVEMBER 2023

This Supplement contains specific information in relation to **GLOBAL DISRUPTIVE OPPORTUNITIES FAM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to provide capital appreciation over the long term.

The Fund seeks to achieve its objective by investing (in accordance with the limits outlined below) in a diversified portfolio of global equity securities of companies which either establish or derive revenue from disruptive business models and that can demonstrate their ability to comply with international sectoral standards for ESG, as described in more detail below in the sub-section "ESG Integration".

In actively managing the Fund, the Investment Manager will invest at least 75% of its net assets in equity and equity-linked securities including warrants (up to 5% of the Fund's net assets), preferred stocks and convertible preferred stocks, American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs) listed (or about to be listed) or traded on any Recognised Market listed in Schedule I of the Prospectus issued by Disruptive Companies (as defined below). Fund does not have a specific geographic or sector exposure nor is the potential universe of equities constrained by the size of a company (i.e. market capitalisation).
The Fund will not purchase any debt instrument but the Fund may receive debt instruments (which includes fixed and/or floating rate transferable debt securities of all types, including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities, convertible bonds) denominated in any currency and issued by corporate issuers located anywhere in the world, mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus) on foot of corporate actions for a maximum exposure of 5% of its net assets.

Selection of Investments
The Investment Manager has defined companies involved in disruptive business models as companies which create a new market or transform an existing market by adopting disruptive technologies ("Disruptive Companies"), namely those innovations that significantly alter the way consumers, industries or businesses operate. Disruptive technologies challenge and ultimately overtake existing business models because they have attributes that are recognisably superior (e.g. an innovation or invention that makes a product or service affordable, simple and accessible to a wider population). Disruptive Companies generally change industry norms with smarter, more convenient, faster and/or cheaper working models. Disruptive Companies improve products or services in ways that the market neither demands, nor expects, but which become rapidly recognised as the optimum consumer or enterprise choice. Disruption might occur in all countries, including emerging markets, and all economic sectors, for example, healthcare, information, technology, industrials, environment, financials.

When considering the investment universe of companies in which the Fund will invest, the Investment Manager believes that all business converges through the four main themes listed below. The Investment Manager seeks to capture the full spectrum of Disruptive Companies by always being exposed to the four themes. Exposure to the four themes may fluctuate based on stock conviction level, market cycle, monetary and fiscal policies. Each theme encompasses specific market sectors such as the following and thus it is within these themes through which the Investment Manager narrows its universe of potential investments (please note that the Investment Manager can add to or deviate from the below listed market sectors over the life of the Fund given that new disruptive business models are being created on a daily basis and thus certain Disruptive Companies which the Fund may want to invest in today, may not exist at the moment nor potentially does their relevant market sector):

Theme	Market sectors within the relevant Theme
Digital Economy	Big Data, Digital Marketing, Digital Enablers, Cloud, Fintech, E-Commerce, Cybersecurity, etc..
Life science & health	E-Health Biotech, Diagnostic, Healthcare Enablers, MedTech, etc…
Industry 4.0	Smart factories, Electric Vehicles & Autonomous driving, Robotic & AI, etc..
Earth	Energy Storage, Energy Efficiency, Climate Enablers, CleanTech, etc..

The Investment Manager will notify the Manager should any new market sectors be added or removed to/from the above described sectors and the Manager will seek to update the Supplement and the Key Investor Information document of the Fund, subject to Central Bank approval.

Further to the above described top-down approach to narrow the investment universe, the Investment Manager will carry out fundamental analysis and a bottom-up evaluation of companies with the aim of selecting equities of companies with the best intrinsic value relative to their peers. This analysis is undertaken with overarching ESG considerations being a driver of selection of investments from the Investment Manager, as explained further below under "ESG Integration". In this way, the Investment Manager only selects those companies for the Fund's investment universe that show sound fundamentals along with a ESG score, based on the Investment Manager's ESG Rating methodology, described below.

The Investment Manager's fundamental analysis will focus on earning growth, gross and net margins, the structure of the balance sheet, valuation levels, earnings performance and appraisal of a company's management. In respect of the bottom-up evaluation of companies the Investment Manager will take a long-term assessment of companies and will appraise company characteristics such as:

1. Value - to identify attractively valued stocks, the Investment Manager looks at how each stock is valued relative to the market and its peers;
2. Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage;
3. Momentum: Momentum companies are characterized as companies which show a continuing positive stock price trend over certain time horizons;
4. Growth: Growth companies are companies with higher-than-average growth rates in projected earnings.

When the Investment Manager considers it is appropriate, the Fund may invest up to 10% of its net assets in Underlying Funds (within the meaning of Regulation 68(1)(e) of the UCITS Regulations) and ancillary liquid assets such as money market instruments, which include cash deposits, certificates of deposit, commercial paper bankers' acceptances, promissory noted and treasury bills, namely those classes of highly liquid instruments with a maturity of less than a year which are normally dealt with in on the money market.

The Fund may invest up to 10% of its Net Asset Value in unlisted equities which are not listed on recognised exchanges and markets but which are permissible investments for UCITS.

ESG Integration
In integrating ESG into the Fund's investment process, the Investment Manager has developed its own proprietary ESG rating approach. The Investment Manager's ESG rating process aims to measure the ESG performance of an issuer, i.e. its ability to anticipate and manage Sustainability Risks and opportunities inherent to its own sector.

ESG rating and analysis is performed within the ESG analysis team of the Investment Manager. The Investment Manager's ESG rating is made up of an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the ESG Rating scale, the securities belonging to the exclusion list, which may be made available to investors upon request to the Manager, correspond to an F or G. In further determining an ESG rating the Investment Manager may also use measurements provided by external service providers such as MSCI which quantify the reputational risk and operational efficiency of a company related to ESG issues If a company is flagged as the subject of severe ESG controversy by at least two external service providers, it is excluded from the portfolio. For instance, according to the analysis conducted by MSCI, companies with a score of 0 (over 0 to 10 range, where 10 represents the absence of incidents) are flagged.

The Investment Manager further measures ESG performance by comparison of the relevant issuer with the average performance of its industry, through the three following ESG dimensions:

1. **Environmental dimension:** this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity;

2. **Social dimension**: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of human rights in general; and

3. **Governance dimension**: this assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The ESG rating methodology applies an extensive criteria of categories relevant to each sector considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Within the list of criteria of categories, the Investment Manager may consider "emissions and energy use" which examines the issuers' consumption of natural resources and their impact on gas emissions and "green investing" which examines how the issuers integrate social and environmental criteria (i.e. categorization, impact assessment, consultation) in the decision process to allocate funding, in investment decisions. Additional details on the list of criteria of categories may be made available to the investors, free of charge, upon request to the Manager

The ESG rating process also considers potential negative impacts of the issuer's activities on Sustainability (principal adverse impact of investment decisions on sustainability factors, as determined by the Investment Manager) including on the following indicators:

- Greenhouse gas emission and Energy Performance (Emissions and Energy Use criteria)
- Biodiversity (Waste, recycling, biodiversity and pollution criteria, Responsible Management Forest Criteria);
- Water (Water criteria);
- Waste (Waste, recycling, biodiversity and pollution criteria);
- Social and employee matters (Community involvement and human rights criteria employment practices, Board Structure and Labour criteria);
- Human rights (Community involvement & Human Rights Criteria)
- Anti-corruption and anti-bribery (Ethics Criteria)

The Investment Manager seeks to achieve an ESG score for the Fund's portfolio greater than that of its reference Index (as defined below).

For any further information pertaining to the Investment Manager's exclusion policy, ESG scoring and rating methodology, the Shareholders' attention is drawn to the Responsible Investment Policy of the Investment Manager available at https://www.cpram.com/retail/Responsible-Investment..

Direct Investment in China

The Fund may invest up to 25% of the Net Asset Value in China A Shares (as defined below) of companies that are domiciled, or carrying out the main part of their economic activity, in the People's Republic of China ("PRC") through the Shanghai Stock Exchange ("SSE") and/or the Shenzhen Stock Exchange (the "SZSE"), or such other shares that may in the future be defined as China A shares issued by companies in China on the SSE and/or SZSE ("China A Shares") and available for investment by using the Shanghai-Hong Kong Stock Connect and the Shenzen-Hong Kong Stock Connect respectively (each a "Stock Connect" and collectively the "Stock Connects") and through the Renminbi Qualified Foreign Institutional Investor ("RQFII") or Qualified Foreign Institutional Investor ("QFII") quotas (the QFII and RQFII program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access the SSE and SZSE). These investments may include small capitalisation companies.

The Shanghai-Hong Kong Stock Connect is a securities trading and clearing links program developed by Hong Kong Exchanges and Clearing Limited ("HKEX"), SSE and the China Securities Depositary and Clearing Corporation Limited ("ChinaClear"). It is comprised of a Northbound Shanghai Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shanghai Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by the Stock Exchange of Hong Kong (the "SEHK"), may be able to trade eligible China A Shares listed on the SSE by routing orders to the SSE. Under the Southbound Hong Kong Trading Link, investors in China may trade certain stocks listed on the SEHK.

The Shenzen-Hong Kong Stock Connect is a securities trading and clearing links program developed by HKEX, SZSE and ChinaClear. It is comprised of a Northbound Shenzhen Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shenzhen-Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by SEHK, may be able to trade eligible China A Shares listed on the SZSE by routing orders to SZSE. Under the Southbound Hong Kong Trading Link, investors in China will be able to trade certain stocks listed on the SEHK.

There are specific risks associated with direct investment in China and investors' attention is drawn to the section titled "Risk Factors" below.

Direct Investment in India

The Fund may invest up to 10% of its Net Asset Value in the abovementioned investments from issuers in India as a Foreign Portfolio Investor registered with the Securities and Exchange Board of India under the Securities and Exchange Board of India (Foreign Portfolio Investors) Regulations, 2019, as may be amended from time-to-time, and for this purpose, the Fund has registered itself as a Category I FPI. This license will allow the Fund to purchase the abovementioned investments in India. An FPI wishing to invest into India must register itself as a designated depositary participant with SEBI for the purpose of the FPI Regulations under the single window clearance mechanism and must comply with the provisions of the FPI Regulations. Depending on their risk profile, applicants for FPI registration must fall under one of two categories. The Fund will register as a Category I FPI, which is the category that applies to entities that are considered to be appropriately regulated by SEBI;

There are specific risks associated with direct investment in India and investors' attention is drawn to the section titled "Risk Factors" in the Prospectus.

Indirect Investment in China and India

In addition to the above-mentioned direct exposure to investments in China and India, indirect exposure to China and India may also be achieved through investment in the abovementioned investments, which are listed or traded on one of the Recognised Markets listed in Schedule I of the Prospectus

Other than permitted investment in unlisted securities and FDIs, the Fund's investments will be limited to securities and exchange traded FDIs that are traded on the markets listed in Schedule I of the Prospectus.

<u>*Benchmark Information*</u>

The Fund is actively managed. The Investment Manager has selected the MSCI World Net Return Index (the "Index") that is used for performance comparison purposes only. The Investment Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Use of Financial Derivative Instruments ("FDI") and other Instruments and Techniques

The Fund may engage in transactions in listed and/or non-listed FDI for investment purposes, efficient portfolio management, risk reduction and hedging. The types of FDIs that the Fund may use are currency forwards, futures contracts, options, warrants, equity swaps. as described below and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Also, the Fund may enter into repurchase/reverse repurchase and securities lending transactions ("Securities Financing Transactions"). Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective, to protect risk to capital as well as hedge against currency risk. For information in relation to the risks associated with the use of FDIs and Securities Financing Transactions, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from Securities Financing Transactions, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures Contracts: The Fund may use futures contracts for the purpose of hedging against market risk or to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to individual equities or markets to which the Fund may be exposed. The Fund may also use futures contracts to reduce identified market risk (Growth, Value, Momentum, etc for an efficient portfolio management in adverse market environments.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities/equity indices and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values. Options will only be used on financial instruments outlined in the Fund's investment objective and policy.

Warrants: The Fund may use warrants as a means to gain exposure to certain markets in a most efficient and expeditious manner. For example, certain markets may have a long lead-in time to obtain local market access and warrants may be used during this lead-in time in order to allow quicker market access. Warrants grant the right to acquire an underlying security from the issuer (as opposed to an option where a third party grants a right to acquire an underlying security as described above) at a fixed price. Warrants have similar characteristics to call options, but are typically issued together with preferred stocks or bonds or in connection with corporate actions. Options will only be used on financial instruments outlined in the Fund's investment objective and policy.

Equity Swaps: The Fund may use swaps on equities/equity related securities, baskets of equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Investment Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Investment Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Investment Manager.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 15% of the Fund's Net Asset Value, subject to a maximum exposure of 40% of the Fund's Net Asset Value.

Repurchase/Reverse Repurchase Agreements:
The Fund may use repurchase/ reverse repurchase with the purpose of endeavouring to increase the returns on its portfolio of securities by receiving a fee for making its securities available to a borrower. In repurchase transactions the Fund may temporarily transfer its securities to a purchaser, with agreement to buy-back the securities at a pre-agreed time. Under a reverse repurchase agreement, a Fund may purchase securities from a counterparty, with an agreement by the counterparty to repurchase those securities at a pre-agreed time. A maximum of 10% of the Fund's assets may be subject to repurchase agreements and a maximum of 20% of the Fund's assets may be subject to reverse repurchase agreements, on the financial instruments outlined in the Fund's investment objective and policy. It is expected that in general, 5% of the Fund's assets may be exposed to reverse repurchase agreements and 0-10% of the Fund's assets may be exposed to repurchase agreements. Counterparties to any Repurchase/Reverse Repurchase activity will comply with Regulation 8 of the Central Bank UCITS Regulations.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of a Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management techniques will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

The Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as disclosed below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Investment Manager also applies the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and the Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review,

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro

Investor Profile

The Fund is suitable for retail and institutional investors seeking long-term capital growth and who are willing to accept a high level of volatility. The Fund should be viewed as a long-term investment.

Investment Manager

The Manager has appointed CPR Asset Management of 91-93, Boulevard Pasteur, 75015 Paris, France to act as the investment manager pursuant to an investment management agreement dated 28 November 2023 . The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	Closed	Euro	No	Yes/up to 5%	€1,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Acc	€10000	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Dist	€10000	29 November 2023 – 28 May 2024	Euro	No	No	€1,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Business Day" means any day on which banks and Recognised Markets are open in Luxembourg, Paris and New York;

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day; and

"Valuation Point" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.80% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

If a sales charge fee is incurred, Shareholders should view their investment as long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In addition, investors should pay particular attention to the below Regulatory Risks for investments in China.

Regulatory Risks Relating to the QFII and RQFII

PRC investments by overseas institutions can be made by or through holders of a QFII/RQFII license, as approved under and subject to applicable Chinese regulations and regulatory requirements (the "QFII/RQFII Regulations"), which are governed by PRC authorities, including the China Securities Regulatory Commission ("CSRC"), the State Administration of Foreign Exchange ("SAFE") and the People's Bank of China ("PBOC").

The Investment Manager has been granted a QFII/RQFII license ("QFII/RQFII License") and, as such, the relevant requirements and restrictions under the QFII/RQFII Regulations apply to the Investment Manager (as the QFII/RQFII License holders) as a whole, and not simply to investments made by the Fund. Shareholders should be aware that violations of any QFII/RQFII Regulations arising from activities through the Investment Manager's QFII/RQFII status other than those conducted by the Fund could result in the revocation of, or other regulatory action in respect of, the Investment Manager's QFII/RQFII status as a whole. As a result, the ability of the Fund to make investments and/or repatriate monies through the Investment Manager's QFII/RQFII status may be affected adversely by the investments or performance by other investors utilizing the Investment Manager's QFII/RQFII status.

As the QFII/RQFII Regulations have a relatively short history and their application and interpretation remain relatively untested, there is uncertainty as to how they will be applied and interpreted by the PRC authorities or how regulators may exercise the wide discretionary powers given to them thereunder in future. Any changes to the relevant rules may have a material adverse impact on investors' investment.

Investors should further note that under the QFII/RQFII Regulations, the QFII/RQFII status could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFII/RQFII status is suspended or revoked, the Fund may be required to dispose of their securities held through the QFII/RQFII and may not be able to access the Chinese securities market via the QFII/RQFII, which may have an adverse effect on the Fund's performance.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Global Disruptive Opportunities FAM Fund
Legal entity identifier: 254900PT325H9KEZSA22

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Fund promotes environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of the MSCI World Net Return Index (the "Benchmark"). In determining the ESG score of The Fund and the Benchmark, ESG performance is assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three ESG characteristics of environmental, social and governance. The Benchmark is a broad market index which does not assess or include constituents according to environmental and/or social characteristics and therefore is not intended to be consistent with the characteristics promoted by The Fund. No sustainability reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

  The sustainability indicator used is the ESG score of the Fund that is measured against the ESG score of the Benchmark of the Fund.

  The Investment Manager relies on Amundi's in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

  The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

  - Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.

  - Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;

  - Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

  The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

  For more information on ESG scores and criteria, please refer to the Amundi Group ESG Regulatory Statement available at www.cpram.com

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1) follow best environmental and social practices; and

2) avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a best performer be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi Group ESG Regulatory Statement available at www.cpram.com.

To contribute to the above objectives, the investee company shall not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

- The first DNSH test filter relies on monitoring the mandatory Principal Adverse Impacts indicators in SFDR Annex 1, Table 1 of the RTS where robust data is available (e.g. Greenhouse Gas intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector). Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

- Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above:

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in SFDR Annex 1, Table 1 of the RTS where robust data is available via the combination of following indicators and specific thresholds or rules :

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights, and
- Be cleared of any controversy in relation to biodiversity and pollution.

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labor relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts will evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, the Fund considers all the mandatory Principal Adverse Impacts applying to the Fund's strategy and relies on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement and voting approaches.

- Exclusion: Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by SFDR.

- ESG factors integration: Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark).The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement: Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories : to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote: Amundi's voting policy responds to an holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information please refer to Amundi's Voting Policy.
- Controversies monitoring: Amundi has developed a controversy tracking system that relies on three external data providers to systematically track

controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution and is applied for the Fund

For any indication on how mandatory Principal Adverse Impact indicators are used, please refer to the Amundi Group ESG Regulatory Statement available at www.cpram.com

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The investment objective of the Fund is to provide capital appreciation over the long term

The Investment Manager has selected the MSCI World Net Return Index (the "Index") that is used for performance comparison purposes only.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

All securities held in the Fund are subject to the ESG Criteria. This is achieved through the use of Amundi's proprietary methodology and/or third party ESG information.

The Fund first applies Amundi's exclusion policy including the following rules:

- legal exclusions on controversial weapons (anti-personnel mines, cluster bombs, chemical weapons, biological weapons and depleted uranium weapons, etc.);
- companies that seriously and repeatedly violate one or more of the 10 principles of the Global Compact, without credible corrective measures;
- the sectoral exclusions of the Amundi group on Coal and Tobacco (details of this policy are available in CPR's Responsible Investment Policy available on the website of www.cpram.com).

The Fund as a binding elements aims to have a higher ESG score than the ESG score of the MSCI World Net Return Index.

In addition, the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link to the Manager's website for more detail on the application of the exclusion policy.

The Fund ESG Criteria apply to at least:

- 90% of equities issued by large capitalisation companies in developed countries; debt securities, money market instruments with an investment grade credit rating; and sovereign debt issued by developed countries;

- 75% of equities issued by large capitalisation companies in emerging market countries; equities issued by small and mid-capitalisation companies in any country; debt securities and money market instruments with a high yield credit rating; and sovereign debt issued by emerging market countries.

Furthermore and in consideration of the minimum commitment of 10% of Sustainable Investments with an environmental objective, the Fund invests in investee companies considered as "best performer" when benefiting over the best top three rating (A, B or C, out of a rating scale going from A to G) within their sector on at least one material environmental or social factor.

Limits to the best-in-class approach:

The best-in-class approach does not exclude any sector of activity in principle. All economic sectors are therefore represented in this approach and the Fund may therefore be exposed to some controversial sectors. In order to limit the potential non-financial risks for these sectors, the Fund applies the exclusions set out above.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

There is no minimum committed rate for the Fund.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

We rely on Amundi Group ESG scoring methodology. Amundi Group's ESG scoring is based on a proprietary ESG analysis framework, which accounts for 38 general and sector-specific criteria, including governance criteria. In the Governance dimension, we assess an issuer's ability to ensure an effective corporate governance framework that guarantees it will meet its long-term objectives (e.g. guaranteeing the issuer's value over the long term) The governance sub-criteria considered are: board structure, audit and control, remuneration, shareholders' rights, ethics, tax practices and ESG strategy.

Amundi Group ESG Rating scale contains seven grades, ranging from A to G, where A is the best and G the worst rating. G-rated companies are excluded from our investment universe.
Each corporate security (shares, bonds, single name derivatives, ESG equity and fixed income ETFs) included in investment portfolios has been assessed for good governance practices applying a normative screen against UN Global Compact (UN GC) principles on the associated issuer. The assessment is performed on an ongoing basis. Amundi's ESG ratings Committee reviews lists of companies in breach of the UN GC monthly, leading to rating downgrades to G. Divestment from securities downgraded to G is carried out by default within 90 days.

The Amundi Stewardship Policy (engagement and voting) related to governance complements this approach.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 75% of the Fund's securities and instruments will be used to meet the promoted environmental or social characteristics in accordance with the binding elements of the investment strategy of the Fund. Furthermore, the Fund commits to have a minimum of 10% of sustainable investments as per the below chart.

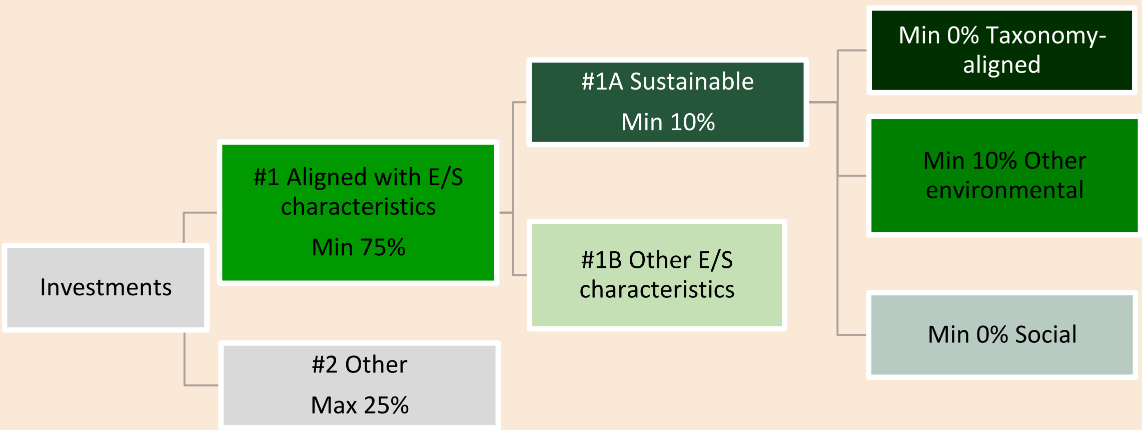
Investments aligned with other E/S characteristics (#1B) will represent the difference between the actual proportion of investments aligned with environmental or social characteristics (#1) and the actual proportion of sustainable investments (#1A). The planned proportion of the other environmental investment represents a minimum of 10 and may change as the actual proportions of Taxonomy-aligned and/or Social investments increase.

Taxonomy-aligned activities are expressed as a share of:

-turnover reflecting the share of revenue from green activities of investee companies

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:
-The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
-The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?
The Fund currently has no minimum commitment to sustainable investments with

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

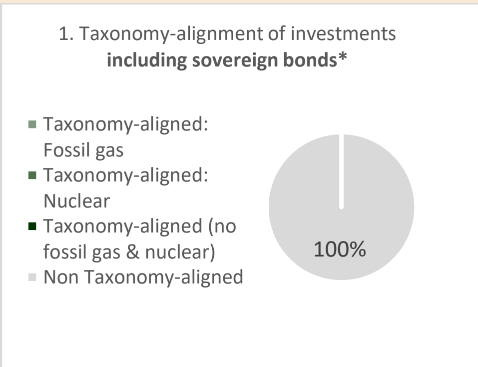
are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

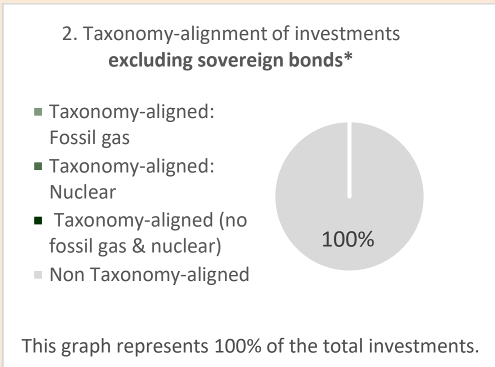
an environmental objective aligned with the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy [1]?**

☐ Yes:
☐ In fossil gas ☐ In nuclear energy
☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





***** ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.***

What is the minimum share of investments in transitional and enabling activities?

The Fund has no minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund has a minimum commitment of 10% of sustainable investments with an environmental objective with no commitment on their alignment with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Fund has no defined minimum share.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Included in “#2 Other” are cash and unrated instruments for the purpose of liquidity and portfolio risk management. Unrated instruments may also include securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.
Investors should note that it may not be practicable to perform ESG analysis on cash, near cash, some derivatives and some collective investment schemes, to the same standards as for the other investments. The ESG calculation methodology will not include those securities that do not have an ESG rating, nor cash, near cash, some derivatives and some collective investment schemes.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This Fund does not have a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

MEDTECH FAM FUND

SUPPLEMENT DATED 28 NOVEMBER 2023

This Supplement contains specific information in relation to **MEDTECH FAM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to provide capital appreciation over the long term.

The Fund seeks to achieve its objective by investing (in accordance with the limits outlined below) in a diversified portfolio of global equity securities of companies involved in the medical technology ecosystem that can demonstrate their ability to comply with international sectoral standards for ESG, as described in more detail below in the sub-section "*ESG Integration*".

In actively managing the Fund, the Investment Manager will invest at least 75% of its net assets in equity and equity-linked securities including warrants up to 5% of the Fund's net assets, preferred stocks, convertible preferred stocks, American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs) listed (or about to be listed) or traded on any Recognised Market listed in Schedule I of the Prospectus) issued by companies involved in all aspects of medical technology. The Fund does not have a specific geographic exposure nor is the potential universe of investable equities constrained by the size of a company (i.e. market capitalisation).

When the Investment Manager considers it is appropriate, the Fund may invest up to 10% of its net assets in Underlying Funds (within the meaning of Regulation 68(1)(e) of the UCITS Regulations) and/or up to 10% in ancillary liquid assets such as money market instruments, which include cash deposits, certificates of deposit, commercial paper, bankers' acceptances, promissory notes and treasury bills, namely those classes of highly liquid instruments with a maturity of less than a year which are normally dealt with in on the money market.

The Fund may invest up to 10% of its Net Asset Value in unlisted equities which are not listed on recognised exchanges and markets but which are permissible investments for UCITS.

The Fund will not purchase any debt instrument but the Fund may receive debt instruments (which includes fixed and/or floating rate transferable debt securities of all types, including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities, convertible bonds) denominated in any currency and issued by corporate issuers located anywhere in the world, mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus) on foot of corporate actions for a maximum exposure of 5% of its net assets.

Selection of Investments

In respect of selecting the equities in which the Fund will invest, the Investment Manager has split the investable universe into several categories related to the medical technology ecosystem. These categories are patient-oriented and/or medical professional oriented technologies and are as follows (please note that the Investment Manager can add or deviate from the below categories over the life of the Fund depending on new categories arising related to the medical technology ecosystem):

Non-invasive devices (glasses, hearing aids, dental, respiratory, etc.)	Surgery

Medical supplies	Blood/dialysis

Diagnosis (tools & consumables)	Imaging/radiotherapy
Orthopaedics	Cardiology/neurology
IT tools and services (software, laboratories, etc.)	

In further selecting the equities for investment, the Investment Manager will carry out fundamental analysis and a bottom-up evaluation of companies with the aim of selecting equities of companies with the best financial prospects. This analysis is undertaken with overarching ESG considerations being a driver of selection of investments from the Investment Manager, as explained further below under "*ESG Integration*". In this way, the Investment Manager only selects those companies for the Fund's investment universe that show sound fundamentals (e.g., high earnings per share (earnings per share is the portion of a company's profit that is allocated to every individual share of the stock) and strong return on equity (return on equity measures the rate of return that the owners of common stock of a company receive on their shareholding) which both serve as indicators of a company's profitability) along with high ESG scores, based on the Investment Manager's ESG Rating methodology, described below.
The Investment Manager's fundamental analysis will focus on valuation levels, earnings performance, and appraisal of a company's management (i.e. innovation strategy, professional development). In respect of the bottom-up evaluation of companies the Investment Manager will take a long-term assessment of companies and will appraise company characteristics such as:

1. **Value:** to identify attractively valued stocks, the Investment Manager looks at how each stock is valued relative to the market and its peers.
2. **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.
3. **Momentum**: Momentum companies are characterized as companies which show a continuing positive stock price trend over certain time horizons.
4. **Growth**: Growth companies are companies with higher-than-average growth rates in projected earnings.

ESG Integration
In integrating ESG into the Fund's investment process, the Investment Manager has developed its own proprietary ESG rating approach. The Investment Manager's ESG rating process aims to measure the ESG performance of an issuer, i.e. its ability to anticipate and manage Sustainability Risks and opportunities inherent to its own sector which in the Fund's case is the medical technology sector.

ESG rating and analysis is performed within the ESG analysis team of the Investment Manager. The Investment Manager's ESG rating is made up of an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the ESG Rating scale, the securities belonging to the exclusion list which may be provided to shareholders, free of charge, upon request to the Manager, correspond to a G. For any further information pertaining to the Investment Manager's exclusion policy, the shareholders' attention is drawn to the Responsible Investment Policy accessible via the following link: https://www.cpr-am.com/retail/Responsible-Investment.

In further determining an ESG rating the Investment Manager may also use measurements provided by external service providers such as MSCI.

The Investment Manager further measures ESG performance by comparison of the relevant issuer with the average performance of its industry, through the three following ESG dimensions:

1. **Environmental dimension:** this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity;

2. **Social dimension**: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of human rights in general; and

3. **Governance dimension**: this assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The ESG rating methodology applies an extensive criteria of categories relevant to the medical technology sector considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer.

The ESG rating process also considers potential negative impacts of the issuer's activities on Sustainability (principal adverse impact of investment decisions on sustainability factors, as determined by the Investment Manager) including on the following indicators:

- Greenhouse gas emission and Energy Performance (Emissions and Energy Use criteria)
- Biodiversity (Waste, recycling, biodiversity and pollution criteria, Responsible Management Forest Criteria);
- Water (Water criteria);
- Waste (Waste, recycling, biodiversity and pollution criteria);
- Social and employee matters (Community involvement and human rights criteria employment practices, Board Structure and Labour criteria);
- Human rights (Community involvement & Human Rights Criteria)
- Anti-corruption and anti-bribery (Ethics Criteria)

The Investment Manager seeks to achieve an ESG score for the Fund's portfolio greater than that of its reference Index (as defined below).

More detailed information including the Investment Manager's Responsible Investment Policy and rating methodology are available at https://www.cpr-am.com/retail/Responsible-Investment.

Direct Investment in China

The Fund may invest up to 25% of the Net Asset Value in China A Shares (as defined below) of companies that are domiciled, or carrying out the main part of their economic activity, in the People's Republic of China ("PRC") through the Shanghai Stock Exchange ("SSE") and/or the Shenzhen Stock Exchange (the "SZSE"), or such other shares that may in the future be defined as China A shares issued by companies in China on the SSE and/or SZSE ("China A Shares") and available for investment by using the Shanghai-Hong Kong Stock Connect and the Shenzen-Hong Kong Stock Connect respectively (each a "Stock Connect" and collectively the "Stock Connects") and through the Renminbi Qualified Foreign Institutional Investor ("RQFII") or Qualified Foreign Institutional Investor ("QFII") quotas (the QFII and RQFII program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access the SSE and SZSE). These investments may include small capitalisation companies.

The Shanghai-Hong Kong Stock Connect is a securities trading and clearing links program developed by Hong Kong Exchanges and Clearing Limited ("HKEX"), SSE and the China Securities Depositary and Clearing Corporation Limited ("ChinaClear"). It is comprised of a Northbound Shanghai Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shanghai Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by the Stock Exchange of Hong Kong (the "SEHK"), may be able to trade eligible China A Shares listed on the SSE by routing orders to the SSE. Under the Southbound Hong Kong Trading Link, investors in China may trade certain stocks listed on the SEHK.

The Shenzen-Hong Kong Stock Connect is a securities trading and clearing links program developed by HKEX, SZSE and ChinaClear. It is comprised of a Northbound Shenzhen Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shenzhen-Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by SEHK, may be able to trade eligible China A Shares listed on the SZSE by routing orders to SZSE. Under the Southbound Hong Kong Trading Link, investors in China will be able to trade certain stocks listed on the SEHK.

There are specific risks associated with direct investment in China and investors' attention is drawn to the section titled "Risk Factors" below.

Direct Investment in India

The Fund may invest up to 10% of its Net Asset Value in the abovementioned investments from issuers in India as a Foreign Portfolio Investor registered with the Securities and Exchange Board of India under the Securities and Exchange Board of India (Foreign Portfolio Investors) Regulations, 2019, as may be amended from time-to-time, and for this purpose, the Fund has registered itself as a Category I FPI. This license will allow the Fund to purchase the abovementioned investments in India. An FPI wishing to invest into India must register itself as a designated depositary participant with SEBI for the purpose of the FPI Regulations under the single window clearance mechanism and must comply with the provisions of the FPI Regulations. Depending on their risk profile, applicants for FPI registration must fall under one of two categories. The Fund will register as a Category I FPI, which is the category that applies to entities that are considered to be appropriately regulated by SEBI; and

There are specific risks associated with direct investment in India and investors' attention is drawn to the section titled "Risk Factors" in the Prospectus.

Indirect Investment in China and India

In addition to the above-mentioned direct exposure to investments in China and India, indirect exposure to China and India may also be achieved through investment in the abovementioned investments, which are listed or traded on one of the Recognised Markets listed in Schedule I of the Prospectus

Other than permitted investment in unlisted securities and FDIs, the Fund’s investments will be limited to securities and exchange traded FDIs that are traded on the markets listed in Schedule I of the Prospectus.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected the MSCI World Health Care Equipment and Supplies 10/40 Index NR (the “Index”) that is used for performance comparison purposes only. The Investment Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Use of Financial Derivative Instruments (“FDI”) and other Instruments and Techniques

The Fund may engage in transactions in in listed and/or non-listed FDI for investment purposes, efficient portfolio management, risk reduction and hedging. The types of FDIs that the Fund may use are currency forwards, futures contracts, options, warrants, equity swaps. as described below and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Also, the Fund may enter into repurchase/reverse repurchase and securities lending agreements (“Securities Financing Transactions”). Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective, to protect risk to capital as well as hedge against currency risk. For information in relation to the risks associated with the use of FDIs and Securities Financing Transactions, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from Securities Financing

Transactions, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures Contracts: The Fund may use futures contracts for the purpose of hedging against market risk or to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to individual equities or markets to which the Fund may be exposed. The Fund may also use futures contracts to reduce identified market risk (Growth, Value, Momentum, etc) for an efficient portfolio management in adverse market environments.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities/equity indices and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values. Options will only be used on financial instruments outlined in the Fund's investment objective and policy.

Warrants: The Fund may use warrants as a means to gain exposure to certain markets in a most efficient and expeditious manner. For example, certain markets may have a long lead-in time to obtain local market access and warrants may be used during this lead-in time in order to allow quicker market access. Warrants grant the right to acquire an underlying security from the issuer (as opposed to an option where a third party grants a right to acquire an underlying security as described above) at a fixed price. Warrants have similar characteristics to call options, but are typically issued together with preferred stocks or bonds or in connection with corporate actions. Options will only be used on financial instruments outlined in the Fund's investment objective and policy.

Equity Swaps: The Fund may use swaps on equities/equity related securities, baskets of equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Investment Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Investment Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Investment Manager.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 15% of the Fund's Net Asset Value, subject to a maximum exposure of 40% of the Fund's Net Asset Value.

Repurchase/Reverse Repurchase Agreements:
The Fund may use repurchase/ reverse repurchase with the purpose of endeavouring to increase the returns on its portfolio of securities by receiving a fee for making its securities available to a borrower. In repurchase transactions the Fund may temporarily transfer its securities to a purchaser, with agreement to buy-back the securities at a pre-agreed time. Under a reverse repurchase agreement, a Fund may purchase securities from a counterparty, with an agreement by the counterparty to repurchase those securities at a pre-agreed time. A maximum of 10% of the Fund's assets may be subject to repurchase agreements and a maximum of 20% of the Fund's assets may be subject to reverse repurchase agreements, on the financial instruments outlined in the Fund's investment objective and policy. It is expected that in general, 5% of the Fund's assets may be exposed to reverse repurchase agreements and 0-10% of the Fund's assets may be exposed to repurchase agreements. Counterparties to any Repurchase/Reverse Repurchase activity will comply with Regulation 8 of the Central Bank UCITS Regulations.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of a Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management techniques will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

The Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as disclosed below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Investment Manager also applies the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and the Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar (USD)

Investor Profile

The Fund is suitable for retail and institutional investors seeking long-term capital growth and who are willing to accept a high level of volatility. The Fund should be viewed as a long-term investment.

Investment Manager

The Manager has appointed CPR Asset Management of 91-93, Boulevard Pasteur, 75015 Paris, Franceto act as the investment manager pursuant to an investment management agreement dated 28 November 2023. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Yes/Up to 5%	€1,000 / €100	Accumulating
Class L Dist	€100	29 November 2023 – 28 May 2024	Euro	No	Yes/Up to 5%	€1,000 / €100	Distributing
Class LH Acc	€100	Closed	Euro	Yes	Yes/Up to 5%	€1,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Acc	€10000	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Dist	€10000	29 November 2023– 28 May 2024	Euro	No	No	€1,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Business Day" means any day on which banks and Recognised Markets are open in Luxembourg, Paris and New York;

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day; and

"Valuation Point" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager’s Fee
The Manager shall be entitled to a management fee of up to 2.80% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager’s fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

If a sales charge fee is incurred, Shareholders should view their investment as long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In addition, investors should pay particular attention to the below Regulatory Risks for investments in China.

Regulatory Risks Relating to the QFII and RQFII

PRC investments by overseas institutions can be made by or through holders of a QFII/RQFII license, as approved under and subject to applicable Chinese regulations and regulatory requirements (the “**QFII/RQFII Regulations**”), which are governed by PRC authorities, including the China Securities Regulatory Commission (“**CSRC**”), the State Administration of Foreign Exchange (“**SAFE**”) and the People’s Bank of China (“**PBOC**”).

The Investment Manager has been granted a QFII/RQFII license (“**QFII/RQFII License**”) and, as such, the relevant requirements and restrictions under the QFII/RQFII Regulations apply to the Investment Manager (as the QFII/RQFII License holders) as a whole, and not simply to investments made by the Fund. Shareholders should be aware that violations of any QFII/RQFII Regulations arising from activities through the Investment Manager’s QFII/RQFII status other than those conducted by the Fund could result in the revocation of, or other regulatory action in respect of, the Investment Manager's QFII/RQFII status as a whole. As a result, the ability of the Fund to make investments and/or repatriate monies through the Investment Manager’s QFII/RQFII status may be affected adversely by the investments or performance by other investors utilizing the Investment Manager's QFII/RQFII status.

As the QFII/RQFII Regulations have a relatively short history and their application and interpretation remain relatively untested, there is uncertainty as to how they will be applied and interpreted by the PRC authorities or how regulators may exercise the wide discretionary powers given to them thereunder in future. Any changes to the relevant rules may have a material adverse impact on investors’ investment.

Investors should further note that under the QFII/RQFII Regulations, the QFII/RQFII status could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFII/RQFII status is suspended or revoked, the Fund may be required to dispose of their securities held through the QFII/RQFII and may not be able to access the Chinese securities market via the QFII/RQFII, which may have an adverse effect on the Fund's performance.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Medtech FAM Fund
Legal entity identifier: 254900HQ05SNSPZCOS64

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The Fund promotes environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of the MSCI World Health Care Equipment and Supplies 10/40 Index NR (the "Benchmark"). In determining the ESG score of the Fund and the Benchmark, ESG performance is assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three ESG characteristics of environmental, social and governance. The Benchmark is a broad market index which does not assess or include constituents according to environmental and/or social characteristics and therefore is not intended to be consistent with the characteristics promoted by the Fund. No sustainability reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The sustainability indicator used is the ESG score of the Fund that is measured against the ESG score of the Benchmark of the Fund.

The Investment Manager relies on Amundi's in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

For more information on ESG scores and criteria, please refer to the Amundi Group

ESG Regulatory Statement available at www.cpram.com.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1) follow best environmental and social practices; and

2) avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a best performer be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi Group ESG Regulatory Statement available at www.cpram.com.

To contribute to the above objectives, the investee company shall not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

- The first DNSH test filter relies on monitoring the mandatory Principal

Adverse Impacts indicators in SFDR Annex 1, Table 1 of the RTS where robust data is available (e.g. Greenhouse Gas intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector). Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

- Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above:

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in SFDR Annex 1, Table 1 of the RTS where robust data is available via the combination of following indicators and specific thresholds or rules :

- Have a CO_2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights, and
- Be cleared of any controversy in relation to biodiversity and pollution.

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labor relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts will evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, the Fund considers all the mandatory Principal Adverse Impacts applying to the Fund's strategy and relies on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement and voting approaches.

- Exclusion: Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the SFDR.

- ESG factors integration: Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark).The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement: Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories : to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy..
- Vote: Amundi's voting policy responds to an holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information please refer to Amundi's Voting Policy.

- Controversies monitoring: Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution and is applied for the Fund..

For any indication on how mandatory Principal Adverse Impact indicators are used, please refer to the Amundi Group ESG Regulatory Statement available at www.cpram.com.

No

What investment strategy does this financial product follow?

The investment objective of the Fund is to provide capital appreciation over the long term.

The Investment Manager has selected the MSCI World Health Care Equipment and Supplies 10/40 Index NR (the "Index") that is used for performance comparison purposes only.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

All securities held in the Fund are subject to the ESG Criteria. This is achieved through the use of Amundi's proprietary methodology and/or third party ESG information.

The Fund first applies Amundi's exclusion policy including the following rules:

- legal exclusions on controversial weapons (anti-personnel mines, cluster bombs, chemical weapons, biological weapons and depleted uranium weapons, etc.);
- companies that seriously and repeatedly violate one or more of the 10 principles of the Global Compact, without credible corrective measures;
- the sectoral exclusions of the Amundi group on Coal and Tobacco (details of this policy are available in CPR's Responsible Investment Policy available on the website of www.cpram.com.)

The Fund as a binding elements aims to have a higher ESG score than the ESG score of the MSCI World Health Care Equipment and Supplies 10/40 Index NR.

In addition, the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link to the Manager's website for more detail on the application of the exclusion policy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The Fund ESG Criteria apply to at least:

- 90% of equities issued by large capitalisation companies in developed countries; debt securities, money market instruments with an investment grade credit rating; and sovereign debt issued by developed countries;
- 75% of equities issued by large capitalisation companies in emerging market countries; equities issued by small and mid-capitalisation companies in any country; debt securities and money market instruments with a high yield credit rating; and sovereign debt issued by emerging market countries.

Furthermore and in consideration of the minimum commitment of 10% of Sustainable Investments with an environmental objective, the Fund invests in investee companies considered as "best performer" when benefiting over the best top three rating (A, B or C, out of a rating scale going from A to G) within their sector on at least one material environmental or social factor.

Additional sustainable approach:

The Investment Manager integrates a sustainable approach by excluding companies based on the following:

- worst overall ESG ratings ;
- worst ratings on E, S and G specific criteria deemed relevant for the medical technology ecosystem;
- high ESG controversies ;

Limits to the best-in-class approach:

The best-in-class approach does not exclude any sector of activity in principle. All economic sectors are therefore represented in this approach and the Fund may therefore be exposed to some controversial sectors. In order to limit the potential non-financial risks for these sectors, the Fund applies the exclusions set out above.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

There is no minimum committed rate for the Fund

- ***What is the policy to assess good governance practices of the investee companies?***

We rely on Amundi Group ESG scoring methodology. Amundi Group's ESG scoring is based on a proprietary ESG analysis framework, which accounts for 38 general and sector-specific criteria, including governance criteria. In the Governance dimension, we assess an issuer's ability to ensure an effective corporate governance framework that guarantees it will meet its long-term objectives (e.g. guaranteeing the issuer's value over the long term) The governance sub-criteria considered are: board structure, audit and control, remuneration, shareholders' rights, ethics, tax practices and ESG strategy.

Amundi Group ESG Rating scale contains seven grades, ranging from A to G, where A is the best and G the worst rating. G-rated companies are excluded from our investment universe.

Each corporate security (shares, bonds, single name derivatives, ESG equity and fixed income ETFs) included in investment portfolios has been assessed for good governance practices applying a normative screen against UN Global Compact (UN GC) principles on the associated issuer. The assessment is performed on an ongoing basis. Amundi's ESG ratings Committee reviews lists of companies in breach of the UN GC monthly, leading to rating downgrades to G. Divestment from securities downgraded to G is carried out by default within 90 days.

The Amundi Stewardship Policy (engagement and voting) related to governance complements this approach.

What is the asset allocation planned for this financial product?

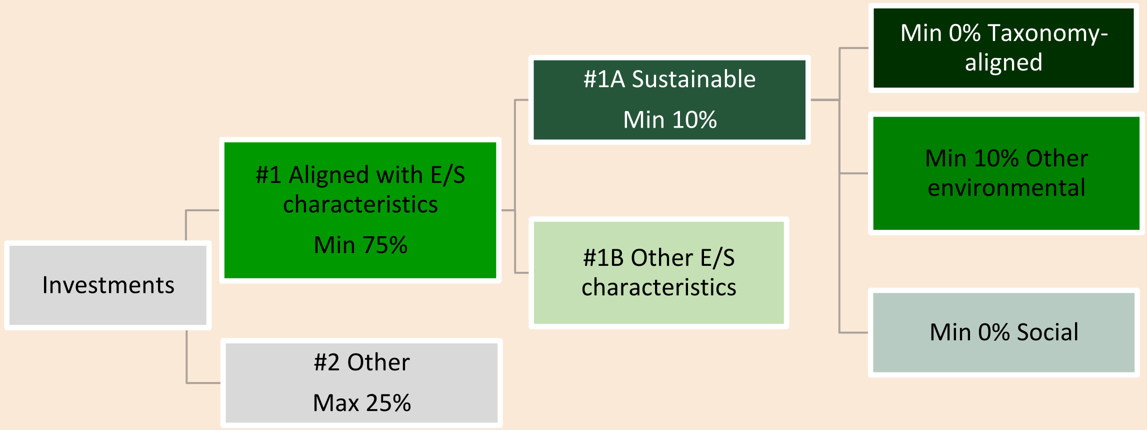
Asset allocation describes the share of investments in specific assets.

At least 75% of the Fund's securities and instruments will be used to meet the promoted environmental or social characteristics in accordance with the binding elements of the investment strategy of the Fund.

Furthermore, the Fund commits to have a minimum of 10% of sustainable investments as per the below chart.

Investments aligned with other E/S characteristics (#1B) will represent the difference between the actual proportion of investments aligned with environmental or social characteristics (#1) and the actual proportion of sustainable investments (#1A). The planned proportion of the other environmental investment represents a minimum of 10% and may change as the actual proportions of Taxonomy-aligned and/or Social investments increase.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:
-The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
-The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund currently has no minimum commitment to sustainable investments with an environmental objective aligned with the EU Taxonomy.

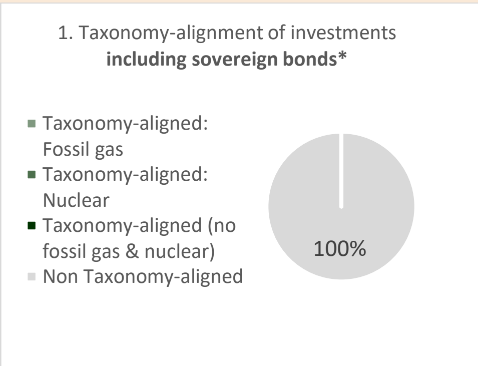
- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?**

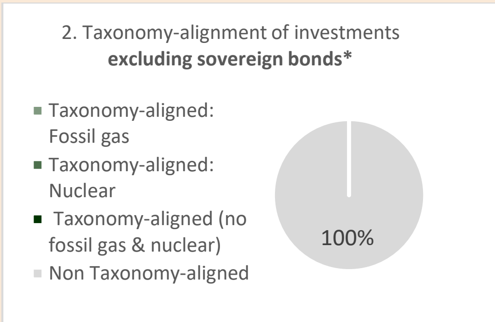
☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





This graph represents 100% of the total investments.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentaly sustainable economic activities under the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities? The Fund has no minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund has a minimum commitment of 10% of Sustainable Investments with an environmental objective with no commitment on their alignment with the EU Taxonomy.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Fund has no defined minimum share.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

Included in "#2 Other" are cash and unrated instruments for the purpose of liquidity and portfolio risk management. Unrated instruments may also include securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

Investors should note that it may not be practicable to perform ESG analysis on cash, near cash, some derivatives and some collective investment schemes, to the same standards as for the other investments. The ESG calculation methodology will not include those securities that do not have an ESG rating, nor cash, near cash, some derivatives and some collective investment schemes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This Fund does not have a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

SUSTAINABLE FUTURE CONNECTIVITY FAM FUND

SUPPLEMENT DATED 05 APRIL 2024

This Supplement contains specific information in relation to **SUSTAINABLE FUTURE CONNECTIVITY FAM FUND** (the “Fund”), a sub-fund of **FAM SERIES UCITS ICAV** (the “ICAV”), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the Addendum thereto (together the “Prospectus”).

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital growth from a portfolio made up for at least 70% of the equity securities of companies around the world, including those in countries considered to be emerging markets, deemed to maintain environmental, social and governance (“ESG”) characteristics, as described below under “*ESG Integration*” section.

Investments in equities will be linked to the theme of “**Future Connectivity**” (concerning the so called “Enablers”, “Networks” and beneficiaries or “Innovators” of next generation communications as described below under “*Selection of Equities”)* and will include, but are not limited to, companies that are involved in the roll out of cellular networks, wired networks, internet infrastructure, social media, online content production, streaming and e-commerce. E-commerce or “electronic commerce” refers to the process of buying and selling goods over the Internet conducted via a “smart” device such as a computer, tablet or smartphone, which transaction therefore occurs between buyer and seller in a virtual or online store as opposed to a physical store.

The equity securities in which the Fund will invest include but are not limited to common stock, preferred stock, rights and warrants to subscribe for the purchase of equity securities, and depositary receipts such as American, European, and Global Depository Receipts (traded on Recognised Markets). Exposure to warrants will be limited to maximum 5% of the Fund's net assets.

Selection of Equities

The Investment Manager will look to identify stocks that fit the following three buckets based on the identified themes in the Future Connectivity universe:

1. **Enablers**: Typically, technology companies that provide equipment and devices that power super-fast networks.
2. **Networks**: Typically, Telecom businesses that are owners and operators of connectivity networks.
3. **Innovators**: Usually internet companies taking advantage of the shift to online and mobile, to provide innovative new applications and services.

The selection process relies on the below bottom-up analysis, and it is undertaken with overarching ESG considerations being a main driver of selection of investments from the Investment Manager, as explained further below under “*ESG Integration*”.

In respect of the bottom-up evaluation of companies the Investment Manager will take a long-term assessment of companies and will appraise company characteristics such as:

1. **Value:** to identify attractively valued stocks, the Investment Manager looks at how each stock is valued relative to the market and its peers.

2. **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.
3. **Momentum**: Momentum companies are characterized as companies which show a continuing positive stock price trend over certain time horizons.
4. **Growth**: Growth companies are companies with higher-than-average growth rates in projected earnings.

ESG Integration

As an Art. 8 SFDR product-type, the Fund promotes, among other things, ESG characteristics, as explained below. Please also refer to the "SFDR Classification" and "SFDR Disclosure" sections below.

The Investment Manager generally considers a wide range of ESG characteristics or issues on an ongoing basis for the Fund, such as climate impact, equal opportunities, responsible product sourcing, bribery and corruption issues In addition to the above, given the Future Connectivity theme of this Fund and the type of business the investee companies will be involved in (e.g. internet), "digital ethics", as defined below, will be a particularly relevant ESG issue considered by the Investment Manager for the Fund. This means that the Investment Manager will have a sustainability focus on how the investee companies approach digital ethics, which issue that can be defined via the following six pillars:

i. **Cybersecurity**: What measures are companies taking to protect customers from fraud/how vulnerable are they to cyberattacks, ransomware, fraud, etc?
ii. **Data governance**: The extent to which businesses respect and safeguard users' personal data;
iii. **Misinformation**: Whether or not internet sites/social media apps are being used to disseminate false or misleading information ('fake news');
iv. **Ethical Artificial Intelligence**: Are companies considering or utilising an ethical framework for development and use of artificial intelligence?
v. **Online welfare**: How seriously do internet firms take online welfare issues (cyber bullying, suicide and self-harm promotion, etc)
vi. **Digital inclusion**: What overarching policies do businesses have to promote a trustworthy digital ecosystem that leaves no one behind?

The Investment Manager has the discretion to implement enhanced, stricter ESG characteristics and exclusions from time to time.

The Investment Manager believes that traditional fundamental analysis does not reveal all risks and therefore its equity selection process also focuses on analysing sustainability risks. These can vary depending on the types of companies under analysis, with typical ESG issues considered for each category cited below as a non-exhaustive list:

1. **Enablers**: Sustainable sourcing, clean technology, and supply chain management.
2. **Networks**: Environmental impact, sustainable sourcing, privacy, and supply chain.
3. **Innovators**: Data governance, misinformation, online welfare, cybersecurity, ethical use of AI, content control, carbon footprint, equality, health & safety, ethics & culture, carbon emission and corporate governance.

ESG characteristics for the Fund are defined by reference to a combination of different measurements such as ESG ratings provided by external agencies (such as MSCI) and the Investment Manager's proprietary rating system named "Fidelity Sustainability Ratings" whose methodology criteria are available to investors on the webpage: https://fidelityinternational.com/sustainable-investing-framework/.

The exclusion screening applied by the Investment Manager includes issuers which are deemed to have failed to conduct their business in accordance with accepted international norms, including as set out in the United Nations Global Compact. The Fund is subject to the following two exclusion lists:

1. a "**Firm-Wide Exclusion List**", which includes, but is not limited to, cluster munitions and anti-

personnel landmines, and

2. a "**Sustainable Fund Exclusion List**", which includes, but is not limited to, tobacco, weapons and thermal coal.

The above exclusion lists are available to investors upon request.

Also, through the investment management process, the Investment Manager aims to ensure that investee companies follow good governance practices.
For any further information pertaining to the Investment Manager's ESG approach, the investors' attention is drawn to the following website: https://fidelityinternational.com/sustainable-investing-framework/

Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

Direct exposure to the abovementioned investments in China, India and Russia will be achieved in the following manner:

Direct Investment in China, India and Russia

(i) Direct Investment in China
The Fund may invest up to 25% of its Net Asset Value in China A Shares and China B Shares, as defined below, in aggregate or such other shares that may in the future be defined as China A or China B shares.

A Shares
A Shares are securities issued by companies in China and listed on the Shanghai Stock Exchange ("SSE") and/or the Shenzhen Stock Exchange (the "SZSE") and available for investment by using the Shanghai-Hong Kong Stock Connect and the Shenzen-Hong Kong Stock Connect respectively (each a "Stock Connect" and collectively the "Stock Connects"). They are traded in Renminbi (Chinese Yuan). They can only be traded by residents of the People's Republic of China ("PRC") or under the Qualified Foreign Institutional Investor (QFII), the Renminbi Qualified Foreign Institutional Investor (RQFII) rules, or via the Stock Connects programs (the QFII and RQFII program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access the SSE and SZSE).

B Shares
B Shares are securities issued by companies in China and listed on the SSE (where they are traded in US dollars) and/or SZSE (where they are traded in Hong Kong dollars). They can be traded by non-residents of the People's Republic of China and also residents of the People's Republic of China with appropriate foreign currency dealing accounts. .

The Shanghai-Hong Kong Stock Connect is a securities trading and clearing links program developed by Hong Kong Exchanges and Clearing Limited ("HKEX"), SSE and the China Securities Depositary and Clearing Corporation Limited ("ChinaClear"). It is comprised of a Northbound Shanghai Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shanghai Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by the Stock Exchange of Hong Kong (the "SEHK"), may be able to trade eligible China A Shares listed on the SSE by routing orders to the SSE. Under the Southbound Hong Kong Trading Link, investors in China may trade certain stocks listed on the SEHK.

The Shenzen-Hong Kong Stock Connect is a securities trading and clearing links program developed by HKEX, SZSE and ChinaClear. It is comprised of a Northbound Shenzhen Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shenzhen-Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by SEHK, may be able to trade eligible China A Shares listed on the

SZSE by routing orders to SZSE. Under the Southbound Hong Kong Trading Link, investors in China will be able to trade certain stocks listed on the SEHK.

There are specific risks associated with direct investment in Chinese markets and investors' attention is drawn to the section titled "Risk Factors" in the Prospectus as well as to the “Regulatory Risks Relating to the QFII and RQFII” further below.

(ii) Direct Investment in India
The Fund may invest up to 5% of its Net Asset Value in the abovementioned investments from issuers in India as a Foreign Portfolio Investor registered with the Securities and Exchange Board of India under the Securities and Exchange Board of India (Foreign Portfolio Investors) Regulations, 2019, as may be amended from time-to-time, and for this purpose, the Fund has registered itself as a Category I FPI. This license will allow the Fund to purchase the abovementioned investments in India. An FPI wishing to invest into India must register itself as a designated depositary participant with SEBI for the purpose of the FPI Regulations under the single window clearance mechanism and must comply with the provisions of the FPI Regulations. Depending on their risk profile, applicants for FPI registration must fall under one of two categories. The Fund will register as a Category I FPI, which is the category that applies to entities that are considered to be appropriately regulated by SEBI.

(iii) Direct Investment in Russia
The Fund may invest up to 5% of its Net Asset Value in the abovementioned investments that are listed or traded on the Moscow Exchange only.

Indirect Investment in China, India and Russia

In addition to the above mentioned direct exposure to investments in China, India and Russia, indirect exposure to China, India and Russia may also be achieved through investment in the abovementioned investments, which are listed or traded on one of the Recognised Markets listed in Schedule I of the Prospectus, in particular via American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs). It is not excluded, however, that such an indirect exposure may also be taken via the other equity securities listed under “Investment Objective and Policies” above in this supplement.

The Fund may hold money market instruments (such as treasury bills, certificates of deposit, commercial paper and bankers acceptances) or money market funds for ancillary purposes so that it can pay its expenses, satisfy redemption requests or take advantage of investment opportunities by freeing up cash quickly through the disposal of such money market instruments or money market funds.

No more than 10% of the Fund’s Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Other than permitted investment in unlisted securities and FDIs, the Fund’s investment will be limited to securities and exchange traded FDIs that are traded on the markets listed in Schedule I of the Prospectus.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected the MSCI ACWI Index (the “Index”) that is used for performance comparison purposes only. The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Use of Financial Derivative Instruments (FDI) and other Instruments and Techniques

The Fund may use FDI for investment purposes. The Fund may also engage in transactions with FDI for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use are: options, futures, forwards and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Futures and Forwards: Futures and forwards may be bought or sold to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to equity securities or markets to which the Fund may be exposed.

Long/Short Exposure
The expected maximum level of long derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis with the exclusion of hedging arrangements, using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 0% of its Net Asset Value, measured on a gross basis with the exclusion of hedging arrangements, using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 0-30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement – Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for retail and institutional investors seeking long-term capital growth and who are willing to accept a high level of volatility. The Fund should be viewed as a long-term investment.

Investment Manager

The Manager has appointed FIL Pensions Management of Beech Gate Millfield Lane, Lower Kingswood, Tadworth, Surrey, United Kingdom, KT20 6RP (Registered Number 2015142) to act as the investment manager pursuant to an investment management agreement, as amended and restated on 19 January 2022. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

***SFDR Classification**:* The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

A minimum of 70% of the Fund's net assets are invested in securities deemed to maintain sustainable characteristics.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in**

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Investment Manager also applies the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and the Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: USD

Offer of Shares

The following Classes of Shares, each denominated in Euro, are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day;

"Valuation Point" means 11:59pm (Irish time) on the relevant Dealing Day;

"**Dealing Day**" means every weekday on which retail banks and securities markets in Luxembourg and in the United Kingdom are normally open for business.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.65% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge:
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus, in particular with respect to the risks pertaining to investing in emerging markets. In addition, investors should pay particular attention to the below Regulatory Risks for investments in China via the QFII and RQFII.

Regulatory Risks Relating to the QFII and RQFII

PRC investments by overseas institutions can be made by or through holders of a QFII/RQFII license, as approved under and subject to applicable Chinese regulations and regulatory requirements (the "**QFII/RQFII Regulations**"), which are governed by PRC authorities, including the China Securities Regulatory Commission ("**CSRC**"), the State Administration of Foreign Exchange ("**SAFE**") and the People's Bank of China ("**PBOC**").

The Investment Manager has been granted a QFII/RQFII license ("**QFII/RQFII License**") and, as such, the relevant requirements and restrictions under the QFII/RQFII Regulations apply to the Investment Manager (as the QFII/RQFII License holders) as a whole, and not simply to investments made by the Fund. Shareholders should be aware that violations of any QFII/RQFII Regulations arising from activities through the Investment Manager's QFII/RQFII status other than those conducted by the Fund could result in the revocation of, or other regulatory action in respect of, the Investment Manager's QFII/RQFII status as a whole. As a result, the ability of the Fund to make investments and/or repatriate monies through the Investment Manager's QFII/RQFII status may be affected adversely by the investments or performance by other investors utilizing the Investment Manager's QFII/RQFII status.

As the QFII/RQFII Regulations have a relatively short history and their application and interpretation remain relatively untested, there is uncertainty as to how they will be applied and interpreted by the PRC authorities or how regulators may exercise the wide discretionary powers given to them thereunder in future. Any changes to the relevant rules may have a material adverse impact on investors' investment.

Investors should further note that under the QFII/RQFII Regulations, the QFII/RQFII status could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFII/RQFII status is suspended or revoked, the Fund may be required to dispose of their securities held through the QFII/RQFII and may not be able to access the Chinese securities market via the QFII/RQFII, which may have an adverse effect on the Fund's performance.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Sustainable Future Connectivity FAM Fund
Legal entity identifier: 254900RJHZPU7LT4ZQ41

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The Fund promotes environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics are determined by reference to ESG ratings.

The Fund invests in the equity securities of companies throughout the world, that are linked to the theme of future connectivity (the enablers, networks and beneficiaries of next generation communications). Investments may be made in companies that are involved in the roll out of cellular networks, wired networks, internet infrastructure and online content production.The Fund partially intends to make sustainable investments.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes:

i) the percentage of the Fund invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework;

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions (as defined below);

iii) the percentage of the Fund invested in sustainable investments.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Fund determines a sustainable investment as follows:

(a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(b) issuers whereby the majority of their business activities (more than 50% of revenue) contribute to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(c) issuers which have set a decarbonisation target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which would be considered to contribute to environmental objectives;

provided they do no significant harm, meet minimum safeguards and good governance criteria.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments are screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer meets minimum safeguards and standards that relate to principal adverse indicators (PAIs) as well as performance on PAI metrics. This includes:

Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below);

Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

issuers that are considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and

PAI indicators: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments, as set out above, Fidelity undertakes a quantitative evaluation to identify issuers with challenging performance on PAI indicators. Issuers with a low score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determines that the issuer is not breaching "do no significant harm" requirements, or is on the path to mitigate the adverse impacts through effective management or transition.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens are applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, are not considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes,

Principal adverse impacts on sustainability factors are considered through and incorporated into investment decisions through a variety of tools, including:

(i) Due Diligence - analysis of whether principle adverse impacts are material and negative.

(ii) ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts are considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(iii) Exclusions - When investing directly in corporate issuers,the Fund applies the Exclusions (as defined below) to help mitigate PAI through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC.

(iv) Engagement - Fidelity uses engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participates in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.

(vi) Quarterly reviews - monitoring of principal adverse impacts through the Fund's quarterly review process.

The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability. In certain circumstances, such as indirect investments made by the Fund, PAI may not be considered.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long-term capital growth from a portfolio made up for at least 70% of the equity securities of companies around the world, including those in countries considered to be emerging markets, deemed to maintain environmental, social and governance ("ESG") characteristics, as described below under "ESG Integration" section.

Investments in equities will be linked to the theme of "Future Connectivity" (concerning the so called "Enablers", "Networks" and beneficiaries or "Innovators" of next generation communications as described below under "Selection of Equities") and will include, but are not limited to, companies that are involved in the roll out of cellular networks, wired networks, internet infrastructure, social media, online content production, streaming and e-commerce. E-commerce or "electronic commerce" refers to the process of buying and selling goods over the Internet conducted via a "smart" device such as a computer, tablet or smartphone, which transaction therefore occurs between buyer and seller in a virtual or online store as opposed to a physical store.

The equity securities in which the portfolio will invest include but are not limited to common stock, preferred stock, rights and warrants to subscribe for the purchase of equity securities, and depositary receipts such as American, European, and Global Depository Receipts (traded on Recognised Markets). Exposure to warrants will be limited to maximum 5% of the Fund's net assets.

In respect of its direct investments, the Fund is subject to:

1) Firm-wide exclusions list, which includes cluster munitions and anti-personnel landmines, and
2) a "Sustainable Fund Exclusion List", which includes, but is not limited to, tobacco, weapons and thermal coal and
3) a principle-based screening policy which includes:
    a) norms-based screening of issuers which the investment manager considers have failed to conduct their business in accordance with international norms, including as set out in the UNGC; and
    b) negative screening of certain sectors, issuers or practices based on specific ESG criteria where revenue thresholds may be applied.
4) Fineco Asset Management DAC Investment Exclusion Policy effective on 27 July 2022.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to the website for further information on the Sustainable investing framework (fidelityinternational.com) and further details on the Exclusion Policy can be found on the Management Company's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

The investment manager also has discretion to implement enhanced, stricter sustainable requirements and exclusions from time to time.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Mandate will invest:

(i) a minimum of 70% of its assets in issuers with favourable ESG characteristics,

(ii) a minimum of 5% in sustainable investments of which a minimum of 0% have an environmental objective (which is aligned with the EU Taxonomy), a minimum of 0% have an environmental objective (which is not aligned with the EU Taxonomy) and a minimum of 0% have a social objective.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

In addition, the Fund will systematically apply the Exclusions as described above.

The Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link above to the Manager's website for more detail on the application of the exclusion policy.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

When selecting investments, the Fund's investment universe will be reduced by at least 20% due to the exclusion of issuers on the basis of their ESG characteristics.

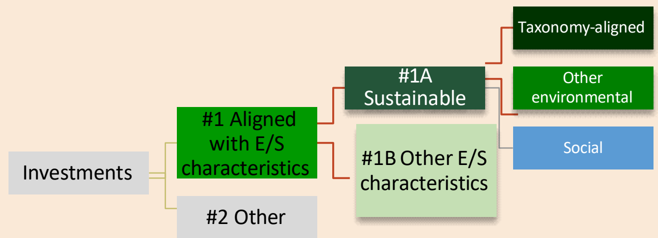
What is the policy to assess good governance practices of the investee companies?

The governance practices of issuers are assessed using fundamental research, including Fidelity ESG ratings, data regarding controversies and UN Global Compact violations.

Key points that are analysed include track record of capital allocation, financial transparency, related party transactions, board independence and size, executive pay, auditors and internal oversight, minority shareholder rights, among other indicators.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

(#1 aligned with E/S characteristics) The Fund aims to invest:

(i) A minimum of 70% of its assets in securities of issuers with favourable ESG characteristics,

(ii) A minimum of 5% in sustainable investments (#1A sustainable)* of which a minimum of 0% have an environmental objective (which is aligned with the EU Taxonomy), a minimum of 0% have an environmental objective (which is not aligned with the EU Taxonomy) and a minimum of 0% have a social objective.

**Fidelity determines the minimum overall percentage of sustainable investments on the basis of including issuers, as described above, whereby more than 50% of revenue contributes to a sustainable investment objective.*

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Where the security underlying a derivative has favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework, the derivative may be included in determining the proportion of the Fund dedicated to promotion of environmental or social characteristics.

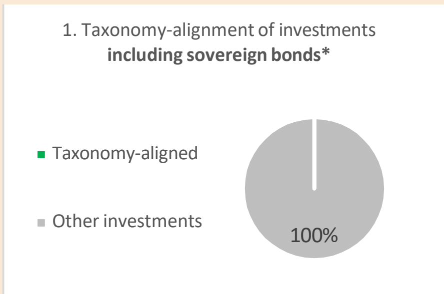
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

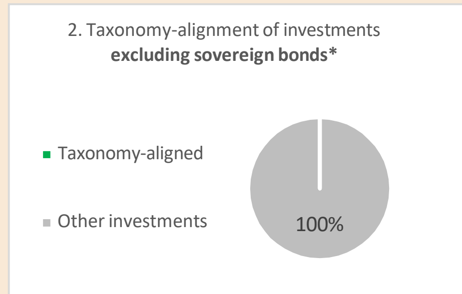
The Fund invests a minimum of 0% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





*   *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

The Fund invests a minimum of 0% in transitional activities and a minimum of 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund invests a minimum of 0% in sustainable investments with an environmental objective that is not aligned with the EU Taxonomy

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Fund invests a minimum of 0% in sustainable investments with a social objective

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in securities of issuers that are able to demonstrate that they are on an improving trajectory with respect to their ESG characteristics, as well as cash and cash equivalents for liquidity purposes and derivatives which may be used for investment and efficient portfolio management.

As a minimum environmental and social safeguard, the Fund will adhere to the Exclusions.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  This question is not applicable.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  This question is not applicable.

- ***How does the designated index differ from a relevant broad market index?***

  This question is not applicable.

- ***Where can the methodology used for the calculation of the designated index be found?***

  This question is not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Management Company's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

CHANGING LIFESTYLES FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **CHANGING LIFESTYLES FAM FUND** (the “Fund”), a sub-fund of the **FAM SERIES UCITS ICAV** (the “ICAV”), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to provide capital growth by investing in equity and equity related securities of companies worldwide that the Investment Manager believes will benefit from the changing requirements of modern consumers.

The Fund is actively managed and will invest at least 67% of the Fund’s Net Asset Value in equity and equity related securities of companies worldwide.

The equities and equity related securities that the Fund will invest include common stocks, preferred stocks, convertible stocks, rights and warrants to subscribe for the purchase of equity securities and depositary receipts, including American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs) (traded on Recognised Markets). The Fund has a global investment mandate insofar as its investments are not confined to or concentrated in any particular geographic region or market and it may invest up to 50% of its Net Asset Value in emerging market countries. Emerging market countries are those identified by a market leading index provider, in accordance with the prevailing OECD country risk classification.

The Fund may also invest up to 33% of its Net Asset Value in deposits, cash and money market instruments, including but not limited to T-bills, certificates of deposit, commercial paper and bankers’ acceptances.

No more than 10% of the Fund’s Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Other than permitted investment in unlisted securities and FDIs, the Fund’s investments will be limited to securities and exchange traded FDIs that are traded on the Recognised Markets listed in Schedule I of the Prospectus.

The Fund maintains a higher overall sustainability score than MSCI All Country World Net Total Return index, based on the Investment Manager’s rating system SustainEx. SustainEx is a proprietary model which is the Investment Manager’s proprietary measure of the potential social and environmental impact that a company may create. More details on the investment process used to achieve this can be found in the Investment Process section below.

Further information on Schroders' approach to sustainable investment can be found in the following Schroder group site: https://www.schroders.com/en/lu/private-investor/strategic-capabilities/sustainability/

Direct exposure to the abovementioned investments in China, India and Russia will be achieved in the following manner:

Direct Investment in China, India and Russia

(i) Direct Investment in China

The Fund may invest up to 20% of its Net Asset Value in China A Shares issued by companies in China and listed on the Shanghai Stock Exchange ("SSE") and/or the Shenzhen Stock Exchange (the "SZSE"), or such other shares that may in the future be defined as China A Shares issued by companies in China on the SSE and/or SZSE and available for investment by using the Shanghai-Hong Kong Stock Connect and the Shenzhen-Hong Kong Stock Connect respectively (each a "Stock Connect" and collectively the "Stock Connects").

The Shanghai-Hong Kong Stock Connect is a securities trading and clearing links program developed by Hong Kong Exchanges and Clearing Limited ("HKEX"), SSE and the China Securities Depositary and Clearing Corporation Limited ("ChinaClear"). It is comprised of a Northbound Shanghai Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shanghai Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by the Stock Exchange of Hong Kong (the "SEHK"), may be able to trade eligible China A Shares listed on the SSE by routing orders to the SSE. Under the Southbound Hong Kong Trading Link, investors in China may trade certain stocks listed on the SEHK.

The Shenzhen-Hong Kong Stock Connect is a securities trading and clearing links program developed by HKEX, SZSE and ChinaClear. It is comprised of a Northbound Shenzhen Trading Link and a Southbound Hong Kong Trading Link. Under the Northbound Shenzhen Trading Link, Hong Kong and overseas investors (including the Fund), through their Hong Kong brokers and a securities trading service company established by SEHK, may be able to trade eligible China A Shares listed on the SZSE by routing orders to SZSE. Under the Southbound Hong Kong Trading Link, investors in China will be able to trade certain stocks listed on the SEHK.

There are specific risks associated with direct investment in Chinese markets and investors' attention is drawn to the section titled "Risk Factors" in the Prospectus.

(ii) Direct Investment in India

The Fund may invest up to 10% of its Net Asset Value in the abovementioned investments from issuers in India as a Foreign Portfolio Investor registered with the Securities and Exchange Board of India under the Securities and Exchange Board of India (Foreign Portfolio Investors) Regulations, 2019, as may be amended from time-to-time, and for this purpose, the Fund has registered itself as a Category I FPI. This license will allow the Fund to purchase the abovementioned investments in India. An FPI wishing to invest into India must register itself as a designated depositary participant with SEBI for the purpose of the FPI Regulations under the single window clearance mechanism and must comply with the provisions of the FPI Regulations. Depending on their risk profile, applicants for FPI registration must fall under one of two categories. The Fund will register as a Category I FPI, which is the category that applies to entities that are considered to be appropriately regulated by SEBI.

(iii) Direct Investment in Russia

The Fund may invest up to 5% of its Net Asset Value in the abovementioned investments that are listed or traded on the Moscow Exchange only.

Indirect Investment in China, India and Russia

In addition to the abovementioned direct exposure to investments in China, India and Russia, indirect exposure to China, India and Russia may also be achieved through investment in the abovementioned investments, which are listed or traded on one of the Recognised Markets.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected the MSCI All Country World Net Total Return Index (the "Index") that is used for performance comparison purposes only. The Index is not an ESG benchmark and is not consistent with ESG criteria. The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Investment Process

The Fund aims to provide investors with exposure to companies participating in evolving consumer patterns across multiple areas of consumers' lives. The Investment Manager seeks to invest in companies that it believes will enjoy superior growth because they satisfy the tastes and expectations of consumers in a technologically enabled world.

The Investment Manager's investment process is theme-based and driven by proprietary bottom-up fundamental stock selection. The three key steps of the process are as follows:

Idea Generation

The Investment Manager's regionally-based analysts supplement the research of the portfolio manager providing an idea pool of interesting consumer related companies.

As part of the Investment Manager's global & international equity team, the portfolio manager also benefits from the research insights and stock recommendations of the Investment Manager's global & international equity team's global sector specialists. The research views of the team's relevant global sector specialists in areas such as IT, communication services and consumer sectors can also be a source of ideas for the Fund. In addition, the portfolio manager will also make use of the team's proprietary screens which rank over 4,000 companies against a number of metrics designed to indicate the direction of revenue, earnings and cash flow fundamentals, valuation and quality. This assists in providing a dynamic overview of the investible universe and areas of potential interest.

The Investment Manager combines this bottom-up stock research with a top-down thematic appraisal of changing lifestyles. The thematic appraisal focuses on four distinct sub-themes which play to the overall theme of changing lifestyles:

1. Identity: social media is making devices consumer's personal brand portals as consumers signal values and attributes, whether wealth, virtue, health or connoisseurship, through consumption choices.

2. Accessibility: customers are increasingly demanding in their expectations of immediacy, price and convenience.

3. Experiences: technology is accelerating customers' ability to see, access and value customer experiences, with on-line communities growing as 'in-person' is challenged by the Coronavirus (Covid-19).

4. Wellbeing: there is greater awareness and personal responsibility around healthy living as informed consumers make healthier choices.

The Investment Manger believes this focus is important as it offers investors an opportunity to remain uniquely exposed to the developers of these new technologies as well as those that can monetise the benefits, rather than the users.

Stock selection

Fundamental research forms the basis of each investment decision, focusing on identifying companies where the forward earnings growth is not yet identified by the market and consensus earnings will be adjusted higher, typically over a 3 to 5 year time horizon. The analysts build detailed earnings and cashflow models and conduct regular company meetings with company management to develop their investment thesis and devise an earnings roadmap for each stock. This roadmap is essentially an articulation of each company's trajectory of earnings growth and the dynamics which influence it. In building their thesis, additional insight and clarity is derived from the Investment Manager's firm-wide research capability comprising portfolio managers and analysts in equities, fixed income and multi-asset across the world. The expertise of the Investment Manager's Sustainable Investment team is also leveraged to incorporate ESG factors into stock selection while the Investment Manager's Data Insights Unit seeks to help the portfolio manager make better investment decisions by equipping them with timely, relevant, industry-leading and usable data.

Portfolio Construction

Portfolio construction is undertaken by the portfolio manager. Risk-adjusted return expectations and conviction level determines the position size of each stock. Stocks with a higher relative upside, lower fundamental risk profile and higher liquidity will receive higher active weights in the portfolio.

The Investment Manager seeks to deliver a concentrated portfolio typically comprising 30 to 45 companies exhibiting under-appreciated growth potential. As a relatively concentrated portfolio there is a natural competition for capital created by new stock ideas. This creates a hurdle for any new ideas that have been identified which most displace existing holdings from the portfolio in the absence of a sell candidate. Sector and regional exposures are a function of stock selection. There is no targeted size bias in the strategy's approach.

ESG Integration

The Investment Manager applies governance and sustainability criteria when selecting investments for the Fund by relying on ESG screenings and factors, which are summarised as follows.

The Investment Manager evaluates issuers against a range of ESG factors in order to decide whether an issuer is eligible for the Fund's portfolio. Examples of ESG factors considered by the Investment Manager are:

ESG Factors

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Climate change and emission intensity	Customer Satisfaction	Board composition and diversity
Air pollution	Workplace safety	Audit committee independence
Noise pollution	Working conditions	Compensation committee independence
Water pollution	Employee health	Political contribution
Resource efficiency / management	Social value creation	Executive compensation
Biodiversity / habitat protection	Human Rights	Stakeholder engagement
Resource efficiency / management	Emergency preparedness	Code of conduct

ESG Screening

The Investment Manager performs a screening of the investible universe against its ESG criteria and sustainability criteria, incorporating and negative screening to identify issuers that are subject to an exclusion based on the Fund's exclusion list.

The negative screening excludes issuers from the investible universe of the Fund which have exposure, or ties, to:

i. thermal coal mining
ii. thermal coal power generation
iii. tobacco production
iv. tobacco retailing, distribution and licensing; and
v. controversial weapons (cluster munitions, anti-personnel mines, and chemical and biological weapons) listed in the Investment Manager's curated list available on the website: https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/

The Investment Manager may apply revenue thresholds for more refined screens. The Fund's exclusion list is available to Shareholders upon request from the Investment Manager.

Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

This ESG analysis is performed by the Investment Manager's global sector specialists and local analyst teams and is supported by the Investment Manager's dedicated Sustainable Investment team. The Investment Manager uses proprietary sustainability tools to provide a baseline assessment that contributes to the overall ESG appraisal of company. Additionally, meetings with company management inform the Investment Manager's view, providing further insights on corporate culture and senior management commitment to corporate social responsibility, with third party ESG research from several third-party data providers such as MSCI ESG research, Bloomberg, EIRiS, Refinitiv and Sustainalytics used primarily as a benchmarking exercise to confirm proprietary analysis.

Each stock in the portfolio is assigned an ESG risk score from 1 – 10 (1 indicating a low ESG risk score and 10 indicating high ESG risk) by the relevant analyst. A low ESG rating would not automatically preclude investment in a stock but rather is one of many factors considered in assessing a stock's risk adjusted return expectations. Risk-adjusted return expectations and conviction level then determine the position size of each stock.

More details on the Investment Manager's approach and its engagement with companies are available on the website: www.schroders.com/en/lu/private-investor/strategic-capabilities/sustainability/disclosures.

The Investment Manager ensures that at least:

- 90% of equities issued by large companies domiciled in developed countries; and money market instruments with an investment grade rating; and

- 75% of equities issued by large companies domiciled in emerging countries and equities issued by small and medium companies; fixed or floating rate securities and money market instruments with a high yield credit rating; and sovereign debt issued by emerging countries;

held in the Fund's portfolio are rated against the sustainability criteria. For the purposes of this test, small companies are those with market capitalisation below €5 billion, medium companies are those between €5 billion and €10 billion and large companies are those about €10 billion.

Use of Financial Derivative Instruments (FDI) and other Instruments and Techniques

The Fund may also engage in transactions with FDI for the purposes of efficient portfolio management and hedging. The types of FDIs that the Fund may use are: equity linked notes, equity swaps, options, warrants, currency forwards, futures, forwards, the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Equity linked notes: Equity Linked Notes (ELNs), involve a counterparty, such as a financial institution, writing a contract which defines the principal value and the payoff which is intended to move in line with the underlying security specified in the contract. Unlike other Financial Derivative Instruments, cash is transferred from the buyer, i.e. the Investment Manager, to the seller, i.e. the above-mentioned counterparty, of the note upon purchase. In the event that the counterparty defaults the risk to the fund is that of the counterparty, irrespective of the value of the underlying security within the note.

Equity Swaps: The Fund may use swaps on equities/equity related securities, baskets of equities/equity related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Warrants: Warrants grant the right to acquire an underlying security from the issuer (as opposed to an option where a third party grants a right to acquire an underlying security as described above) at a fixed price. Warrants have similar characteristics to call options, but are typically issued together with preferred stocks or bonds or in connection with corporate actions.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures and Forwards: Futures and forwards may be bought or sold to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to equity securities or markets to which the Fund may be exposed.

Exposure to Indices: The Fund may take exposure to one or more indices through the use of FDI as described in this section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Positions: The Fund may hold long/short positions though the use of FDI as described in this section for the purposes of efficient portfolio management. The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be between 0% and 30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Management - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking long-term growth and who are willing to accept a medium to high level of volatility. The Fund should be viewed as a long-term investment.

Investment Manager

The Manager has appointed Schroder Investment Management Limited of 1 London Wall Place, London, EC2Y 5AU, United Kingdom to act as the investment manager pursuant to an investment management agreement dated 31 July 2018 as may be amended and updated from time to time. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of "Sustainability Risks"" in the main body of the Prospectus).

While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors.

(ii) The Investment Manager will comply with its own exclusion policy and the Manager's exclusion list, whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risks given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

than 0% of its assets in investments aligned with the Taxonomy Regulation. The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: USD.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	Closed	Euro	No	Yes/ up to 5%	€1,000 / €100	Accumulating
Class LH Acc	€100	Closed	Euro	Yes	Yes/ up to 5%	€1,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Acc	€10000	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Dist	€10000	2 December 2022 – 1 June 2023	Euro	No	No	€1,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day; and

"Valuation Point" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

The Manager shall be entitled to a management fee of up to 2.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge

Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double- charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If as sales charge is incurred, Shareholders should view their investment as long-

term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Changing Lifestyles FAM Fund
Legal entity identifier: 254900QNFKPR5TD69926

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

[ ] **Yes**	[x] **No**
[ ] It will make a minimum of **sustainable investments with an environmental objective:** ___%	[x] It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments
[ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[x] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[x] with a social objective
[ ] It will make a minimum of **sustainable investments with a social objective:** ___%	[ ] It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

The Fund maintains a higher overall sustainability score than the MSCI All Country World (Net TR) index, based on the Investment Manager's rating system. This benchmark (which is a broad market index) does not take into account the environmental and social characteristics promoted by the Fund.

No reference benchmark has been designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schroders own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage. The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes $2 of relative notional positive impact (i.e., benefits to society) per $100 of sales. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schroders' proprietary tool.

The Fund invests at least 25% of its assets in sustainable investments, which are investments that the Investment Manager expects to contribute towards the advancement of one or more environmental and/or social objective(s).

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

1. The Investment Manager monitors compliance with the characteristic to maintain a higher overall sustainability score than the MSCI All Country World (Net TR) index by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the MSCI All Country World (Net TR) index in Schroders' proprietary tool over the previous six-month period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.
2. The Investment Manager monitors compliance with the characteristic to invest at least 25% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this is monitored daily via the Investment Manager's automated compliance controls. The Fund also applies certain exclusions, with which the Investment Manager monitors compliance on an ongoing basis via its portfolio compliance framework.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

In respect of the proportion of the Fund's portfolio that is invested in sustainable investments, each sustainable investment demonstrates a net positive effect on one or more environmental or social objectives, as scored by Schroders' proprietary tool. The environmental or social objectives of the sustainable investments that the Fund partially intends to make may include, but are not limited to, increasing environmental and/or social benefits such as greater water access or fair pay and reducing environmental, and/or social costs such as carbon emissions or food waste. For example, greater water access as measured by Schroders' proprietary tool are the estimated societal benefits of the provision of clean drinking water to human health.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager’s approach to not causing significant harm to any environmental or social sustainable investment objective includes the following:

- Firm-wide exclusions apply to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/

- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excludes companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as the Investment Manager considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list is monitored via the Investment Manager’s automated compliance controls. Exceptions may apply, if there is evidence to demonstrate that the company has addressed the violation and is not causing significant harm as described above.

- The Fund also excludes companies that derive revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal extraction and coal fired power generation.

- The Fund may also apply certain other exclusions.

- In addition to the exclusions of the Investment Manager, the Manager’s exclusion list which is based on the Manager’s exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

- Wherever possible, in the context of an incomplete and developing data landscape, the Investment Manager sets levels or principles for what would be deemed to cause significant harm by applying appropriate values in relation to the principal adverse impacts applicable to sustainable products. Investee companies deemed to be in breach of these levels would not be eligible to be considered as a sustainable investment. The Investment Manager’s framework is subject to ongoing review, particularly as the availability, and quality, of the data evolves.

- For further information on the consideration of all principal adverse impacts in the Investment Manager’s investment process, please refer to the section, ‘Does this financial product consider principal adverse impacts on sustainability factors?’

How have the indicators for adverse impacts on sustainability factors been taken into account?

Wherever the Investment Manager deems possible, in the context of an incomplete and developing data landscape, the Investment Manager sets levels or principles for what would be deemed to cause significant harm by applying appropriate values in relation to the principal adverse impacts applicable to sustainable products. Investee companies deemed to be in breach of these levels would not be eligible to be considered as a sustainable investment. The Investment Manager's framework is subject to ongoing review, particularly as the availability, and quality, of the data evolves.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager use a list of UNGC violators as provided by a third party. Issuers on that list cannot be categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator include those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, the Investment Manager's approach to considering principal adverse impacts on sustainability factors involves classifying the indicators into three categories:

1. Set thresholds: these involve very explicit thresholds for considering an investment to be a "sustainable investment". For example, PAI 10 violations of UNGC principles.

2. Active ownership: these involve indicators on which we have a plan to engage with the underlying holding as set out in the Schroders Group document, accessed via https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022-1.pdf, outlining the Investment Manager's approach to active ownership. For example, PAI 1, 2 and 3 covering GHG emissions and PAI 13 on board gender diversity.

3. Improve coverage: these involve indicators where we consider data coverage to be too sparse to properly consider them and the Invevstment Manager's focus is primarily on engaging with the underlying holdings to increase reporting. For example, PAI 7 on biodiversity, PAI 9 on hazardous waste ratio and PAI 12 on the gender pay gap.

The Investment Manager's approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

Relevant information on principal adverse impacts on sustainability factors will also be disclosed in due course in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Fund is actively managed and invests at least two-thirds of its assets in equity and equity related securities of companies worldwide.

The Fund aims to provide investors with exposure to companies participating in evolving consumption patterns across multiple areas of consumers' lives. The Investment Manager seeks to invest in companies that it believes will enjoy superior growth because they satisfy the tastes and expectations of consumers in a technologically enabled world.

The Fund may also invest up to 33% of its Net Asset Value in deposits, cash and money market instruments, including but not limited to T-bills, certificates of deposit, commercial paper and bankers' acceptances.

The Fund maintains a higher overall sustainability score than the MSCI All Country World (net TR) index based on the Investment Manager's rating criteria.

The Investment Manager applies governance and sustainability criteria when selecting investments for the Fund.

The Investment Manager evaluates issuers against a range of environmental, social and governance factors in order to decide whether an issuer is eligible for the Fund's portfolio. This analysis is performed by global sector specialists and local analyst teams and is supported by Schroders' dedicated Sustainable Investment team. The Investment Manager uses Schroders' proprietary sustainability tools to provide a baseline assessment that contributes to the overall ESG appraisal of a company. Additionally, meetings with company management inform the Investment Manager's view, providing further insights on corporate culture and senior management commitment to corporate social responsibility, with third party ESG research used primarily as a benchmarking exercise to confirm proprietary analysis.

The Investment Manager ensures that at least:

- 90% of equities issued by large companies domiciled in developed countries and money market instruments with an investment grade rating; ; and

- 75% of equities issued by large companies domiciled in emerging countries andequities issued by small and medium companies; fixed or floating rate securities and money market instruments with a high yield credit rating; and sovereign debt issued by emerging countries;

held in the Fund's portfolio are rated against the sustainability criteria. For the purposes of this test, small companies are those with market capitalisation below €5 billion, medium companies are those between €5 billion and €10 billion and large companies are those about €10 billion.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The following binding elements are applied throughout the investment process:

- The Fund maintains a higher overall sustainability score than the MSCI All Country World (Net TR) index based on the Investment Manager's rating criteria.

- The Fund invests at least 25% of its assets in sustainable investments and such investments do not cause significant environmental or social harm.

- The Fund applies certain exclusions relating to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. The Fund also excludes companies that derive revenues above certain thresholds from activities related to tobacco and thermal coal, especially companies that generate at least 10% of their revenues from tobacco production, companies that generate at least 25% of their revenues from any other part of the tobacco value chain (suppliers, distributors, retailers, licensors), companies that generate at least 10% of their revenues from thermal coal extraction and companies that generate at least 30% of their revenues from coal fired power generation.

The Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

- The Fund invests in companies that have good governance practices, as determined by the Investment Manager's rating criteria.

The Investment Manager ensures that at least:

- 90% of equities issued by large companies domiciled in developed countriesand money market instruments with an investment grade rating; and
- 75% of equities issued by large companies domiciled in emerging countries and equities issued by small and medium companies; fixed or floating rate securities and money market instruments with a high yield credit rating; and sovereign debt issued by emerging countries;

held in the Fund's portfolio are rated against the sustainability criteria.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

This question is not applicable for the Fund.

- ***What is the policy to assess good governance practices of the investee companies?***

In order to assess good governance practices, the Investment Manager utilises a Schroders' proprietary tool to help it develop a complete understanding of a company through a stakeholder lens.

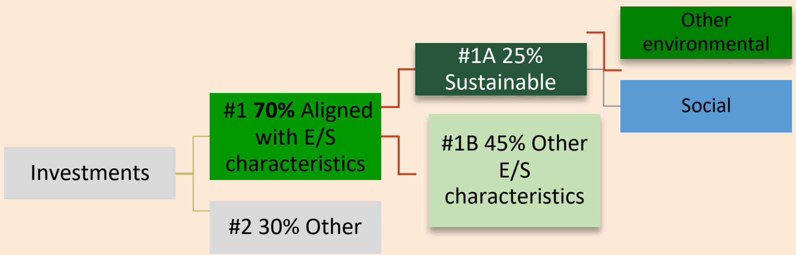
Schroders' proprietary tool is data–driven and provides a systematic framework for analysing a company's relationship with its stakeholders. It identifies key performance drivers and data points to examine company strengths and weakness across different key stakeholder groups and is a central driver of the assessment of a company's stakeholder management.

The proprietary tool includes over 250 data points to assess how well companies are governed and how likely they are to adapt to changing social and environmental pressures. It draws on both conventional and unconventional data sources. Examples of unconventional data are employee review reports, consumer product reviews, revenue from green products, community donations and frequency of lawsuits. By drawing on such unconventional sources that do not rely on company reporting, the Investment Manager is able to build a more complete picture of companies' performance and reduce its reliance on corporate disclosure, which remains incomplete, particularly among smaller companies in emerging regions.

The proprietary tool considers a number of good governance metrics, grouped into the categories of sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The planned composition of the Fund's investments that are used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the minimum proportion of the Fund's assets used to attain the environmental or social characteristics, which is equal to 70%. The Fund commits to maintain a higher overall sustainability score than the MSCI All Country World (Net TR) index, and so the Fund's investments that are scored by Schroders' proprietary sustainability tool are included within the minimum proportion stated in #1 on the basis that they will contribute to the Fund's sustainability score (whether such individual investment has a positive or a negative score). Also included within #1 is the minimum proportion of assets that are invested in sustainable investments, as indicated in #1A. The minimum proportions stated apply in normal market conditions. The actual proportion stated in #1 is expected to be higher.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Fund will invest at least 25% of its assets in sustainable investments. Within this, there is no commitment to invest a minimum proportion of the Fund's assets in sustainable investments with an environmental objective or in sustainable investments with a social objective. This means that the proportion of sustainable investments with an environmental objective and those with a social objective will vary over time.

#2 Other includes investments that are treated as neutral for sustainability purposes, such as cash and Money Market Investments and derivatives used with the aim of reducing risk (hedging) or managing the Fund more efficiently. #2 also includes investments that are not scored by Schroders' proprietary sustainability tool and so do not contribute towards

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

the Fund's sustainability score. As #1 states a minimum proportion that is in practice expected to be higher, the proportion stated in #2 is expected to be lower.

Minimum safeguards are applied where relevant to Money Market Investments and derivatives used with the aim of reducing risk (hedging) or other investments by restricting (as appropriate) investments in counterparties where there are ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties are reviewed by Schroders' credit risk team and approval of a new counterparty is based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring is performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges. Any significant deterioration in the profile of the counterparty in Schroders' proprietary tool would lead to further analysis and potential exclusion by Schroders' credit risk team.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

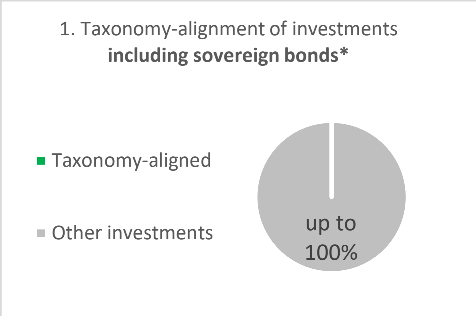
  Not applicable as derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

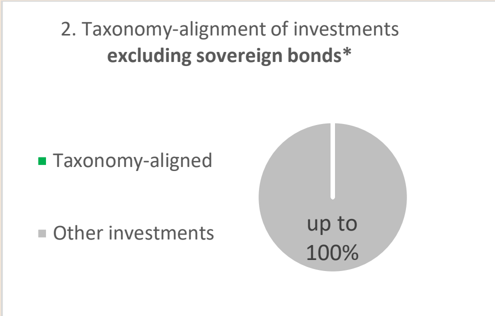
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

There is no minimum extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective are aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

As per the above, at the date of this document the share of investments by the Fund in transitional and enabling activities is currently deemed to constitute 0% of the Fund's portfolio.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund commits to invest at least 25% of its assets in sustainable investments. Within this overall commitment, there is no minimum commitment to invest in sustainable investments with an environmental objective. This means that the proportion of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy will vary.

What is the minimum share of socially sustainable investments?

The Fund commits to invest at least 25% of its assets in sustainable investments. Within this overall commitment, there is no minimum commitment to invest in sustainable investments with a social objective. This means that the proportion of sustainable investments with a social objective will vary.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

#2 Other includes investments that are treated as neutral for sustainability purposes, such as cash and Money Market Investments and derivatives used with the aim of reducing risk (hedging) or managing the Fund more efficiently. #2 also includes investments that are not scored by the Investment Manager's proprietary sustainability tools and so do not contribute towards the Fund's sustainability score.

Minimum safeguards are applied where relevant to Money Market Investments and derivatives used with the aim of reducing risk (hedging) or other investments by restricting (as appropriate) investments in counterparties where there are ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties are reviewed by Schroders' credit risk team and approval of a new counterparty is based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring is performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges. Any significant deterioration in the profile of the counterparty in Schroders' proprietary tool would lead to further analysis and potential exclusion by Schroders' credit risk team

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

This question is not applicable for the Fund.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

This question is not applicable for the Fund.

- ***How does the designated index differ from a relevant broad market index?***

This question is not applicable for the Fund.

- ***Where can the methodology used for the calculation of the designated index be found?***

This question is not applicable for the Fund.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and exclusion policy can be found on the Management Company's website at the following links FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

MORGAN STANLEY US ADVANTAGE FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **MORGAN STANLEY US ADVANTAGE FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective by investing at least 50% (and up to 100%) of the Fund's assets in equity securities (such as common shares, depositary receipts and preference shares) issued by US companies. The Fund may also invest up to 30% of the Fund's assets in securities issued by non-US companies. Under normal market conditions, the Fund shall invest at least 50% of the Fund's assets in equity securities of companies with market capitalizations within the range of companies included (measured at the time of purchase) in the Russell 1000® Growth Index. The Fund does not have a specific industry or sector focus.

An issuer may be considered to be from a particular country (including the US) or geographic region if (i) its principal securities trading market is in that country or geographic region; (ii) alone or on a consolidated basis it derives 50% or more of its annual revenue from goods produced, sales made or services performed in that country or geographic region; or (iii) it is organised under the laws of, or has a principal office in, that country or geographic region. By applying these tests, it is possible that a particular issuer could be deemed to be from more than one country or geographic region.

The Investment Manager emphasizes a bottom-up stock selection process, seeking attractive investments on an individual company basis. In selecting securities for investment, the Investment Manager typically invests in companies it believes have strong name recognition, sustainable competitive advantages with above average business visibility, the ability to deploy capital at high rates of return, strong balance sheets and an attractive risk/reward. The Investment Manager believes that strong name recognition can facilitate repeat business, the acquisition of new customers and pricing power. Further, the Investment Manager believes companies with sustainable competitive advantages, such as scale efficiencies, network effects, brand names, customer switching costs and intellectual property, may possess attributes that may enable their businesses to sustain growth and create value over the long-term.

The Fund may also invest in equities of companies not meeting the above requirements, debt securities convertible into common shares of non U.S. companies (up to a limit of 10% of its net assets), depositary receipts (including American Depositary Receipts and Global Depositary Receipts), preference shares, warrants on securities, and China A-Shares via Stock Connect. The Fund may invest up to 10% of its net assets in China A-Shares via Stock Connect.

Cash and cash equivalents (such as money market funds, time deposits and treasury bills) and other equity linked securities, such as convertible preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus, may be held by the Fund. Convertible preferred stocks are preferred shares that include an option for the holder to convert the shares into a fixed number of common shares after a predetermined date. The Fund may also invest in other Underlying Funds.

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities and exchange traded FDIs that are traded on the markets listed in Schedule I of the Prospectus. No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

The Fund will measure its performance against the S&P 500 Index (the "Benchmark"). The Fund is actively managed and is not designed to track the Benchmark or any other index. Therefore, the management of the Fund is not constrained by the composition of the Benchmark.

ESG Integration

The Investment Manager may, but is not obliged to, integrate sustainability into the investment process by using ESG factors as a lens for additional fundamental research, which can contribute to investment decision making. For example, the Investment Manager's investment process includes an evaluation of governance policies that focuses on compensation alignment with long-term value creation (in particular whether the compensation policies and practices of companies are designed in such a way as to align with their long-term outlook and success). Additionally, where the Investment Manager considers it to be appropriate for a company and without limitation, consideration of environmental factors and externalities (such as carbon emissions, clean/renewable energy, energy intensity etc) may serve as a lens for fundamental research.

For the avoidance of doubt, the Investment Manager does not treat ESG as a deterministic, reductive screen, nor as a portfolio construction tool layered on top of a passive vehicle.

As part of its process, the Investment Manager generally engages with company management teams to discuss their ESG practices, with the aim of identifying how sustainability themes present opportunities and risks that can be material to the value of the company over the long-term. For example, the Investment Manager seeks to understand how environmental and social initiatives within companies can create value by strengthening durable competitive advantages, creating growth opportunities, driving profitability and/or aligning with secular growth trends.

Use of Financial Derivative Instruments ("FDIs") and other Instruments and Techniques

The Fund may engage in transactions in FDI for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use include futures, forwards and options. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Futures and forwards: Futures and forwards may be used to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to individual equities or markets to which the Fund may be exposed.

Options: The Fund may buy or sell options. These put and call options may be used to gain exposure to investments or for the purposes of hedging in an efficient, liquid and effective way. Put options may be used to hedge investments against the downside market risk by permitting the Fund to sell investments at a fixed price. The Fund may buy call options to provide an efficient market exposure in a rising market. The Fund may sell call or put options to provide an extra income to the Fund or to reduce the costs of purchasing call or put options.

Risk Measurement – Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment**

Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

i. Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

ii. The Investment Manager will comply with the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Investor Profile

The Fund is suitable for investors seeking capital growth over long term through investment in equity securities and who are willing to accept a moderate level of volatility.

Investors should understand the risks associated with equity securities and are willing to accept those risks in search of potential higher returns, including the risk of losing all capital invested and must evaluate the Fund objective and risks in terms of whether they are consistent with their own investment goals and risk tolerances. The Fund is not intended as a complete investment plan.

Base Currency: US Dollar.

Investment Manager

The Manager has appointed MSIM Fund Management (Ireland) Limited of The Observatory, 7-11 Sir John Rogerson's Quay, Dublin 2, D02VC42, Ireland, to act as the investment manager pursuant to an investment management agreement dated 28 January 2022. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**	**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent**	**Distribution Type**

					Subscription	
Class A	€100	Closed	EUR / no	n/a	€1,000 / €100	Accumulating
Class AH	€100	Closed	EUR/ yes	n/a	€1,000 / €100	Accumulating
Class L	€100	Closed	EUR / no	Yes/ max 5%	€1,000 / €100	Accumulating
Class LH	€100	Closed	EUR / yes	Yes/ max 5%	€1,000 / €100	Accumulating
Class I	€100	Closed	EUR / no	n/a	€1,000,000 / €100	Accumulating
Class D	€100	2 December 2022 - 1 June 2023	EUR / no	n/a	€500 / €100	Accumulating
Class J	€10,000	Closed	EUR / no	n/a	€ 1,000,000 / 100	Accumulating
Class J	€10,000	2 December 2022 - 1 June 2023	EUR / no	n/a	€ 1,000,000 / 100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

All Share Classes are offered during the initial offer period (as indicated in the above table).

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

“Dealing Deadline” means 11:59am (UK time) on the relevant Dealing Day; and

“Valuation Point” means 15:00pm (UK time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
The Manager shall be entitled to a management fee of up to 3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager’s fees and not out of the assets of the Fund.

Investment Manager’s Fee
The Manager shall pay out of its management fee the fee of the Investment Manager.

Administrator’s Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge: Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations. **If a sales charge fee is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Changes in Interest Rates", and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

Furthermore, for information in relation to the risks associated with investing via Stock Connect, please refer to the "Risks of Directly Investing in China" and "Risks relating to Stock Connects" sections of the Prospectus.

ULTRA SHORT TERM BOND SRI FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **ULTRA SHORT TERM BOND SRI FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest substantially in money market investments. Investors should note the difference between the nature of a deposit and the nature of an investment in the Fund, in particular the risk that the value of the principal invested in the Fund may fluctuate.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Debt Instruments	includes investment grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures, inflation linked bonds) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the World (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Money Market Instruments	includes investments in cash, treasury bills, government treasury notes, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Investment Objective and Policies

The investment objective of the Fund is to provide a total return (income and capital growth) over a minimum six-month investment period in excess of its benchmark (composed of 80% Euro Short-Term Rate (€STR) and 20% ICE BofA 1-3 Year Euro Corporate Index).

In managing the Fund's portfolio, the Investment Manager takes into account environmental, social and corporate governance ("ESG") considerations as described below under the section "Selection of Investments".

The Fund will primarily be exposed to Euro denominated Investment Grade Debt Instruments and Money Market Instruments issued by governments and their agencies and corporations. Under normal market conditions, the Investment Manager will seek to invest up to 100% of the Fund's assets in a diversified portfolio of Euro denominated Debt Instruments of varying maturities. Up to a maximum of 50% of the Fund's Net Asset Value may be invested in Debt Instruments and Money

Market Instruments denominated in non-OECD country currencies. The Fund's exposure to emerging markets will be limited to 10% of the Fund's Net Asset Value.

At any time, at least 20% of the Net Asset Value consists of securities with maturities of over 2 years.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule I of the Prospectus.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected a benchmark composed of 80% Euro Short-Term Rate (€STR) and 20% ICE BofA 1-3 Year Euro Corporate Index that will be used as a comparison for investment performance only. The Investment Manager does not intend to replicate the composition of the benchmark and may at all times exercise total freedom by investing in securities which are not included in the referenced benchmark or which are present in different proportions.

Selection of Investments

The Fund's investment process is based on a three-pronged approach; non-financial analysis on ESG criteria, combined with a bottom-up analysis for selecting securities and a top-down analysis for optimising the portfolio.

The Investment Manager evaluates issuers against a range of ESG factors in order to decide whether an issuer is eligible for the Fund's portfolio. Examples of ESG factors considered by the Investment Manager are:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Climate change and emission intensity	Customer Satisfaction	Board composition and diversity
Air pollution	Workplace safety	Audit committee independence
Noise pollution	Working conditions	Compensation committee independence
Water pollution	Employee health	Political contribution
Resource efficiency / management	Social value creation	Executive compensation
Biodiversity / habitat protection	Human Rights	Stakeholder engagement
Resource efficiency / management	Emergency preparedness	Code of conduct

Then non-financial analysis is used to assign an ESG rating for each issuer on a scale ranging from A (highest rating) to G (lowest rating).

At least 90% of the securities in the portfolio have an ESG rating from A to E. All issuers with an ESG rating of F or G are excluded from the investment universe of the Fund while up to 10% of the remaining securities in the portfolio may have no ESG rating.

The ESG criteria are considered using several approaches:

1. "*rating improvement" approach*: (the portfolio's average ESG score should be higher than the investment universe's ESG score after at least 20% of the lowest-rated stocks have been eliminated); The Fund's portfolio is therefore required to display an ESG score which is higher than that of the investment universe once the 20% issuers with the lowest score have been excluded.
2. *normative through the exclusion of certain issuers*: exclusion of issuers rated F and G on purchase, legal exclusions on controversial weapons, exclusion of companies that seriously and repeatedly contravene one or more of the 10 principles of the United Nations Global Compact, and sectoral exclusions on coal and tobacco.
3. *best-in-class*: which aims to give priority to issuers that are sector-leading in terms of ESG criteria, as identified by the Investment Manager's ESG team of non-financial analysts. Each issuer is assessed with a quantitative score scaled around the average of their sector, enabling best-practices to be distinguished from worst practices at sector level. The Investment Manager's assessment relies on a combination of data from third-party data providers such as MSCI, ISS ESG, Refinitiv, Sustainalytics, Trucost, V.E, RepRisk, ISS-Ethix, EthiFinance, Iceberg Data Lab, CDP, Climate Bonds, FTSE Russell andVerisk Maplecraft and qualitative analysis of associated sector and sustainability themes. The quantitative score is translated into a rating scale ranging from A for best practices to G, for worst practices.

The best-in-class approach does not exclude any business activity, so the Fund may be exposed to some controversial sectors. To limit the potential non-financial risks of these sectors, the Fund applies the above-mentioned exclusions as well as an engagement policy that aims to promote dialogue with issuers and assist them in improving their ESG practices. In order to promote the best sustainable practices, the Investment Manager has put in place a strong engagement policy, articulated around three mains axis: thematic engagement, ongoing engagement and engagement through voting.

This investment process which is a combination of top-down allocation and bottom-up selection is based on the following steps:

1. *Investment process*: consists of first monitoring the investment universe through a detailed analysis of the issuers present on the bond market. The internal process leads to a preliminary outline of the investment universe focusing on two main areas:
   - An internal process, notably defining the list of authorised instruments and limits by issuer or instrument type. The set of limits by issuer are defined after considering the internal credit analysis team ratings and external (Standard & Poors, Moody's and Fitch) ratings; and
   - an eligible investment universe, notably comprising the issuers selected by the Investment Manager on the bond market. This assessment is based on a specific appraisal performed by a credit analysis team working independently from the investment management team, following an internal credit quality assessment procedure.

2. *Integrating constraints*: involves integrating both financial constraints (regulatory ratios, internal credit assessment process) and non-financial constraints (ESG rating and exclusions) within these analyses.

3. *Building the portfolio*: the Fund's portfolio is constructed based on the following:
   - *Managing the portfolio's modified duration in a range of 0% to 2% (modified duration measures the price change in bond given a 1% change in interest rates) (top-down approach*): During the top-down approach credit exposure and yield curve (a yield curve is a curve showing the yields or interest rates across different contract lengths, for example, 2 months, 2 years etc., for similar Debt Instruments) is assessed in the portfolio. The top-down

component of this strategy consists of top down macroeconomic analysis incorporating the following inputs: analysis of primary data (e.g. inflation, growth and employment data) and analysis of economic research from third parties including independent economic research companies and the research departments of investment banks. These inputs help the Investment Manager assess the direction of monetary policies of central banks, potential changes of yield curves, the Fund's sensitivity to interest rate movements and the impact of such movements on the various types of bonds.

- *Selecting securities (bottom-up approach)*: selection of securities (Debt Instruments and Money Market Instruments) from public and private issuers. In its risk and credit assessment of each individual security, the Investment Manager relies on its credit analysis teams and on its own methodology which incorporates a wider range of quantitative and qualitative inputs including to assess the creditworthiness of an issuer. Inputs include the issuer's financial statements, the legal documentation behind the security (for example, bond legal documentation including the prospectus), an assessment of the company's competitive position, the quality of its management and the ratings issued by the major rating agencies.
- *Seeking opportunities with the best risk/return profile*: the investment management team regularly searches for investment opportunities among bonds (and secondarily, money-market instruments) that offer an attractive risk/return ratio. The Investment Manager considers the absolute value (i.e. the potential return that may be obtained by a Fund as a result of investing in a Debt Instrument compared against the costs and risks of such an investment) and the relative value (i.e. how the absolute value of that Debt Instrument compares against the absolute value of other fixed income securities) of the Debt Instrument in the context of the riskiness of the borrower and in the framework of the Investment Manager's overall risk appetite. In addition, before making an investment decision, the Investment Manager considers whether there is value to be obtained, in terms of obtaining a greater return for the Fund, by investing in a Debt Instrument but, in doing so, taking the risk of an uncertain return, compared to investing in cash that has a certain future return but which may not be as high as the return obtained from a Debt Instrument.
- *Steering the average ESG rating*: management of the portfolio's average ESG rating by optimising the issuers' ESG rating/return profile. ESG analysis is embedded into the Investment Manager's portfolio management systems. Therefore, the portfolio manager can access an issuer's ESG score and related ESG analytics and metrics enabling the portfolio manager to apply the Investment Manager's exclusion policy and factor sustainability risks into their investment decision process, by ensuring the ESG rating of the portfolio is higher than the average.

Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

Use of Financial Derivative Instruments ("FDIs") and other Instruments and Techniques

The Fund may engage in transactions in FDI for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use are listed and/or unlisted: currency forwards, futures and forward contracts, exchange traded futures, interest rate futures, options, interest rate swaps, currency swaps and credit default swaps as described below and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective, to protect risk to capital as well as hedge against currency risk. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk

Factors” section of the Prospectus.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund’s Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures and forwards: Futures and forwards may be used to hedge against downward movements in the value of the Fund’s portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to individual equities or markets to which the Fund may be exposed.

Interest Rate Futures: The Fund will use interest rate futures to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates. As determined by the Investment Manager interest rate futures may be used to manage the Fund’s overall sensitivity to interest rate movements (understood as duration positioning) by either increasing or decreasing the portfolio’s duration.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Interest Rate swaps: The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates.

Currency swaps: The Fund may use currency swaps to hedge against foreign exchange risk arising when investments are denominated in a currency other than the Fund’s base currency,

Credit Default Swaps: The Fund may use credit default swaps as a substitute for purchasing fixed income securities or for the purposes of hedging exposure to fixed income securities and reducing the credit risk in respect of investments. The Fund may either buy or sell credit protection under credit default swaps, either in single-name credit default swaps or in credit default swap indices. The Fund expects to use credit default swaps for long exposure to certain fixed income securities and may also take synthetic short positions on fixed income securities or indices, for efficient portfolio management purposes or as a hedge against a long position.

Securities Financing Transactions

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be between 0% and 30% of the Fund’s Net Asset Value, subject to a maximum exposure of 90% of the Fund’s Net Asset Value.

Repurchase/Reverse Repurchase Agreements: The Fund may use repurchase/reverse repurchase agreements for efficient portfolio management purposes only. In repurchase transactions the Fund may temporarily transfer its securities to a purchaser, with agreement to buy-back the securities at a pre-agreed time. Under a reverse repurchase agreement, a Fund may purchase securities from a counterparty, with an agreement by the counterparty to repurchase those securities at a pre-agreed time. In entering into such transactions, the Fund will endeavour to increase the returns on its portfolio of securities by receiving a fee for making its securities available to the borrower. Up to 30%

of the Fund's assets may be subject to repurchase/reverse repurchase agreements on the financial instruments outlined in the Fund's investment objective and policy. It is expected that in general, 0-30% of the Fund's assets may be exposed to Repurchase/Reverse Repurchase Agreements. Counterparties to any Repurchase/Reverse Repurchase activity will comply with Regulation 8 of the Central Bank UCITS Regulations.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Collateral Management

All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR as further described in Annex IIat the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Investment Manager also applies the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and the Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosure" for further information.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Investor Profile

The Fund may be suitable for investors seeking a return over the short-term via exposure to debt securities and money market instruments from issuers located worldwide and who are willing to accept a low level of volatility and the risks of the capital markets in pursuit of the short-term investment goals.

Base Currency: Euro

Investment Manager

The Manager has appointed Amundi Asset Management (SAS) of 90, boulevard Pasteur, 75015, Paris, France to act as the investment manager pursuant to an investment management agreement dated 16 February 2022 as may be amended and updated from time to time. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Offer of Shares

Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Sales Charge	Minimum Initial Subscription and	Distribution Type

						Minimum Subsequent Subscription	
Class A Acc	€100	2 December 2022 – 1 June 2023	Euro	No	No	€1,000 / €100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Acc	€10000	2 December 2022 – 1 June 2023	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Dist	€10000	2 December 2022 – 1 June 2023	Euro	No	No	€1,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Business Day" means every weekday on which retail banks and securities markets in Luxembourg and France are normally open for business;

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 0.75% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge:
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In addition, investors should note the following risks of investing in the Fund.

Interest Rate Risk
During periods of very low or negative market interest rates, the Fund may be unable to maintain positive returns or pay dividends to Shareholders. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, result in heightened market volatility and detract from the Fund's performance to the extent the Fund is exposed to such interest rates. Additionally, under certain market conditions in which interest rates are low and the market prices for securities have increased, the Fund may have a very low or even negative yield. The historically low interest rate environment may heighten the risks associated with rising interest rates such as heightened volatility in fixed-income markets that could adversely affect the liquidity of certain fixed-income investments.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: ULTRA SHORT TERM BOND SRI FAM FUND
Legal entity identifier: 254900YEN8J2I3YZBQ68

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The Investment Manager integrates sustainability factors into its investment process by taking into account the ESG rating of issuers in the portfolio construction.
The ESG analysis of issuers aims to assess their ability to manage the potential negative impact of their activities on sustainability factors. This analysis aims to assess their Environmental, Social and Governance behaviours by assigning them an ESG rating ranging from A (best rating) to G (worst rating), in order to achieve a more global risk assessment.

The analysis is based on a set of generic criteria for all issuers and then specific criteria for each sector, using a "best in class" approach.

The methodology of upstream ESG analysis and the taking into account of the global ESG rating in the construction of the portfolio (by excluding the lowest rated issuers and favouring those with the best ratings) thus makes it possible to promote the 3 dimensions (environmental, social and governance).

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The sustainability indicator is the average ESG rating of the portfolio, which must be higher than the ESG rating of the investment universe (the average rating of the investment universe being calculated after eliminating at least 20% of the lowest rated issuers).

Amundi has developed its own internal ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies evolve.

The Amundi ESG rating used to determine the ESG score is a quantitative ESG score translated into seven grades, ranging from A (the best scores in the universe) to G (the worst). In Amundi's ESG rating scale, securities belonging to the exclusion list correspond to a score of G. For corporate issuers, ESG performance is assessed globally and according to relevant criteria by comparison with the average performance of its sector of activity, through the combination of the three ESG dimensions:

- the environmental dimension: this examines the capacity of issuers to control their direct and indirect impact on the environment, by limiting their energy consumption, reducing their greenhouse gas emissions, combating resource depletion and protecting biodiversity.

- the social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and respect for human rights in general:

- the governance dimension: this assesses the issuer's ability to provide the basis for an effective corporate governance framework and to generate value over the long term.

The methodology applied by Amundi ESG rating is based on 38 criteria, either generic (common to all companies regardless of their activity) or sectoral, weighted by sector and considered according to their impact on the reputation, operational efficiency and regulation of an issuer. Amundi's ESG ratings may be expressed globally on the three dimensions E, S and G or individually on any environmental or social factor.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of sustainable investment are to invest in companies that meet two criteria:

1) monitoring environmental and social best practice; and

2) not to generate products and services that harm the environment and society.

The definition of "best performing" company is based on a proprietary Amundi ESG methodology that aims to measure a company's ESG performance. To be considered "best performer", a company must score in the top three (A, B or C, on a rating scale from A to G) of its sector on at least one important environmental or social factor. Significant environmental and social factors are identified at the sector level. The identification of these factors is based on Amundi's ESG analysis framework, which combines extra-financial data with a qualitative analysis of associated sector and sustainability themes. The factors identified as material have a contribution of more than 10% to the overall ESG score. For the energy sector, for example, the material factors are: emissions and energy, biodiversity and pollution, health and safety, local communities and human rights.

To contribute to the above objectives, the investee company must not have significant exposure to activities (e.g. tobacco, arms, gambling, coal, aviation, meat production, fertiliser and pesticide manufacture, single-use plastic production) that are not compatible with these criteria.

The sustainability of an investment is assessed at the level of the investee company.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

To ensure that sustainable investments do not cause significant harm (the "DNSH" or Do Not Significantly Harm principle), Amundi uses two filters:

- the first "DNSH" filter is based on the monitoring of mandatory indicators of the Main Negative Impacts of Annex 1, Table 1 of the RTS (e.g. greenhouse gas intensity of companies) through a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. carbon intensity does not belong to the last decile of the sector). Amundi already takes into account specific Key Negative Impacts in its exclusion policy as part of its Responsible Investment Policy. These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the UN Global Compact principles, coal and tobacco.

- Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi’s ESG rating.

- In addition to the exclusions of the Investment Manager, the Manager’s exclusion list which is based on the Manager’s exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As detailed above, the negative impact indicators are taken into account in the first DNSH (do not significant harm) filter: this is based on the monitoring of the mandatory Main Negative Impact indicators of Annex 1, Table 1 of the RTS when reliable data are available through the combination of the following indicators and specific thresholds or rules:

- have a CO2 intensity that does not belong to the last decile of companies in the sector (only applies to high intensity sectors), and
- have a diverse board of directors that does not belong to the bottom decile of companies in its sector, and
- be free from controversy over working conditions and human rights
- be free of controversy regarding biodiversity and pollution.

Amundi already takes into account specific Key Negative Impacts in its exclusions policy as part of its Responsible Investment Policy. These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the UN Global Compact principles, coal and tobacco.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into Amundi's ESG rating methodology. The proprietary ESG rating tool assesses issuers using data available from data providers. For example, the model includes a dedicated criterion called "Community Involvement and Human Rights" which is applied to all sectors in addition to other human rights-related criteria, including socially responsible supply chains, working conditions and industrial relations. In addition, controversy monitoring is conducted on a minimum quarterly basis, which includes companies identified for human rights violations. When controversies arise, analysts assess the situation and apply a score to the controversy (using the proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track trends and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes,

Amundi takes into account the mandatory and applicable additional Key Negative Impact Indicators in accordance with Appendix 1, Table 1 of the RTS applicable to the Fund's strategy and relies on a combination of exclusion policies (normative and sectoral), integration of ESG rating in the investment process, engagement and voting approaches:

- Exclusion: Amundi has defined normative exclusion rules, by activity and by sector, covering some of the main sustainability indicators listed in the SFDR.
- ESG integration: Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G-rated issuers and best weighted average ESG score above the applicable benchmark). The 38 criteria used in Amundi's ESG rating approach have also been designed to take into account key impacts on sustainability factors, as well as the quality of mitigation.
- Engagement: Engagement is an ongoing and targeted process to influence the activities or behaviour of companies. The purpose of engagement can be divided into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, and to engage an issuer to improve its impact on environmental, social and human rights issues or other sustainability issues important to society and the global economy.
- Voting: Amundi's voting policy responds to a holistic analysis of all long-term issues that can influence value creation, including significant ESG issues (Amundi's voting policy is available on its website).
- Controversy monitoring: Amundi has developed a controversy monitoring system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched by an in-depth assessment of each severe controversy, conducted by ESG analysts, and the periodic review of its evolution. This approach is applied to all Amundi funds.

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to provide a total return (income and capital growth) over a minimum six-month investment period in excess of its benchmark (composed of 80% Euro Short-Term Rate (€STR) and 20% ICE BofA 1-3 Year Euro Corporate Index).) In managing the Fund's portfolio, the Investment Manager takes into account environmental, social and corporate governance considerations.

- ***What are the binding elements of the investment strategy used to select investments to achieve each of the environmental or social characteristics promoted by this financial product?***

The Fund first applies the Amundi exclusion policy including the following rules:

- legal exclusions on controversial weaponry (anti-personnel mines, cluster bombs, chemical weapons, biological weapons and depleted uranium weapons...);
- Companies that repeatedly and seriously violate one or more of the 10 Global Compact principles without credible corrective action;
- Amundi's sector exclusions on Coal and Tobacco (details of this policy are available in Amundi's Responsible Investment Policy available on www.amundi.fr).
- In addition to the exclusions of the Investment Manager, the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

The Fund also applies the following rules:

- Exclusion of issuers rated F and G for purchase ;
- The "rating enhancement" approach: the weighted average ESG rating of the portfolio must be higher than the weighted average ESG rating of the fund's investment universe after eliminating 20% of the lowest rated issuers;
- the coverage rate is 90%.

The Fund follows 4 indicators on the E, S, G and human rights dimensions:

- Environment (Carbon Footprint): Carbon intensity (tCO_2e) per million euros of turnover (Scope 1, 2 and 3) for a selected company compared to a group of comparable companies.
- Respect for human rights: Decent work and freedom of association: Decent working conditions and freedom of association (percentage of companies with policies that exclude forced or compulsory child labour or that guarantee freedom of association, universally applied regardless of local laws)
- Social: Gender mix of managers, percentage of female managers in companies.

- Governance: Board independence (percentage of directors who meet the board independence criterion).

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

There is no minimum commitment rate to reduce the scope of these investments.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

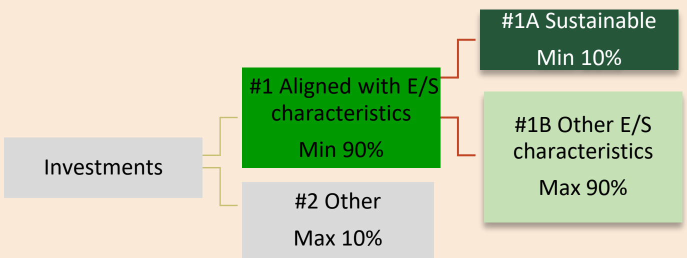
The Investment Manager relies on Amundi's ESG rating methodology. This rating is based on a proprietary ESG analysis framework, which takes into account 38 general and sectoral criteria, including governance criteria. In the Governance dimension, Amundi assesses the capacity of an issuer to ensure an effective corporate governance framework that guarantees the achievement of its long-term objectives (e.g. guaranteeing the value of the issuer over the long term). The governance sub-criteria taken into account are: board structure, audit and control, remuneration, shareholders' rights, ethics, tax practices and ESG strategy.

Amundi's ESG rating scale has seven grades, ranging from A to G, where A is the best and G the worst. Companies rated G are excluded from the investment universe.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

90% of the investments of the Fund will be used to meet the environmental or social characteristics promoted by the Fund in accordance with the binding elements of the investment strategy. The Fund commits to have a minimum of 10% of sustainable investments and the remaining proportion of the investments will be invested in assets with environmental and social characteristics.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

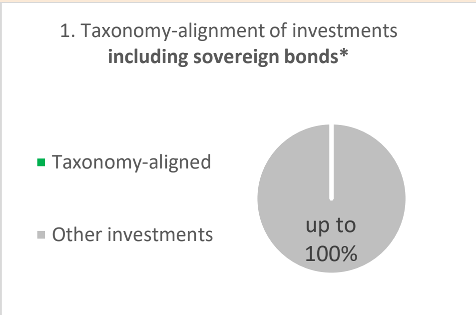
***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

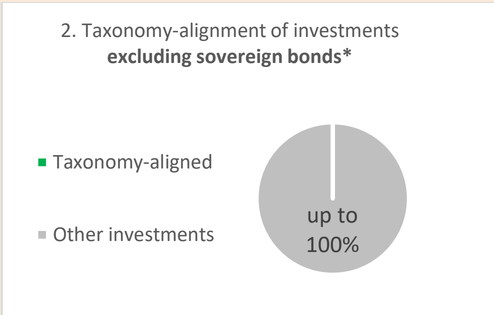
Derivatives are not used to attain the environmental and social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund currently has no minimum commitment to sustainable investments with an environmental objective aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

The Fund is not committed to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund currently has no minimum commitment to sustainable investments with an environmental objective not aligned with the EU taxonomy.

What is the minimum share of socially sustainable investments?

The Fund does not have a minimum share of sustainable investments with a social objective.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

Included in the "#2 Other" category are cash and unrated instruments (which may include securities for which the data needed to measure the achievement of environmental or social characteristics is not available).

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The benchmark does not assess or include its constituents in terms of environmental and/or social characteristics and is therefore not aligned with the ESG characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

Further details on the Responsible Investment Policy, summary investment process and exclusion policy can be found on the Manager's website at the following link; http://finecoassetmanagement.com/sustainability/

ENHANCED ULTRA SHORT TERM BOND SRI FAM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **ENHANCED ULTRA SHORT TERM BOND SRI FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest substantially in money market investments. Investors should note the difference between the nature of a deposit and the nature of an investment in the Fund, in particular the risk that the value of the principal invested in the Fund may fluctuate.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Debt Instruments	includes investment grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures, inflation linked bonds) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the World (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Money Market Instruments	includes investments in cash, treasury bills, government treasury notes, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Investment Objective and Policies

The investment objective of the Fund is to provide a total return (income and capital growth) over a minimum twelve-month investment period in excess of its benchmark (composed of 80% Euro Short-Term Rate (€STR) and 20% ICE BofA 1-3 Year Euro Corporate Index).

In managing the Fund's portfolio, the Investment Manager takes into account environmental, social and corporate governance ("ESG") considerations as described below under the section "Selection of Investments".

The Fund will primarily be exposed to Euro denominated Investment Grade Debt Instruments and Money Market Instruments issued by governments and their agencies and corporations. Under normal market conditions, the Investment Manager will seek to invest up to 110% of the Fund's assets in a diversified portfolio of Euro denominated Debt Instruments of varying maturities. Up to a maximum of 50% of the Fund's Net Asset Value may be invested in Debt Instruments and Money Market Instruments denominated in non-OECD country currencies. The Fund's exposure to emerging markets will be limited to 10% of the Fund's Net Asset Value.

The Investment Manager anticipates that the average interest rate duration of the Fund's portfolio will range from less than 1 year and greater than 2 years under normal market conditions.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule I of the Prospectus.

The word "Enhanced" in the name of the Fund refers to the fact that the Fund is designed with the aim of providing a higher risk adjusted return than similar short term bond sub-funds of the ICAV that are managed by the Investment Manager due to the Fund being managed within a less restrictive modified duration range as described further in the paragraph headed "Building the portfolio" below.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected a benchmark composed of 80% Euro Short-Term Rate (€STR) and 20% ICE BofA 1-3 Year Euro Corporate Index that will be used as a comparison for investment performance only. The Investment Manager does not intend to replicate the composition of the benchmark and may at all times exercise total freedom by investing in securities which are not included in the referenced benchmark or which are present in different proportions.

Selection of Investments

The Fund's investment process is based on a three-pronged approach; non-financial analysis on ESG criteria, combined with a bottom-up analysis for selecting securities and a top-down analysis for optimising the portfolio.

The Investment Manager evaluates issuers against a range of ESG factors in order to decide whether an issuer is eligible for the Fund's portfolio. Examples of ESG factors considered by the Investment Manager are:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Climate change and emission intensity	Customer Satisfaction	Board composition and diversity
Air pollution	Workplace safety	Audit committee independence
Noise pollution	Working conditions	Compensation committee independence
Water pollution	Employee health	Political contribution
Resource efficiency / management	Social value creation	Executive compensation

Biodiversity / habitat protection	Human Rights	Stakeholder engagement
Resource efficiency / management	Emergency preparedness	Code of conduct

Then non-financial analysis is used to assign an ESG rating from A to E. All issuers with an ESG rating of F or G are excluded from the investment universe of the Fund while up to 10% of the remaining securities in the portfolio may have no ESG rating.

The ESG criteria are considered using several approaches:

1. *“rating improvement” approach*: (the portfolio’s average ESG score should be higher than the investment universe’s ESG score after at least 20% of the lowest-rated stocks have been eliminated); The Fund’s portfolio is therefore required to display an ESG score which is higher than that of the investment universe once the 20% issuers with the lowest score have been excluded.
2. *normative through the exclusion of certain issuers*: exclusion of issuers rated F and G on purchase, legal exclusions on controversial weapons, exclusion of companies that seriously and repeatedly contravene one or more of the 10 principles of the United Nations Global Compact, and sectoral exclusions on coal and tobacco.
3. *best-in-class*: which aims to give priority to issuers that are sector-leading in terms of ESG criteria, as identified by the Investment Manager’s ESG team of non-financial analysts. Each issuer is assessed with a quantitative score scaled around the average of their sector, enabling best-practices to be distinguished from worst practices at sector level. The Investment Manager’s assessment relies on a combination of data from third-party data providers such as MSCI, ISS ESG, Refinitiv, Sustainalytics, Trucost, V.E, RepRisk, ISS-Ethix, EthiFinance, Iceberg Data Lab, CDP, Climate Bonds, FTSE Russell andVerisk Maplecraft and qualitative analysis of associated sector and sustainability themes. The quantitative score is translated into a rating scale ranging from A for best practices to G, for worst practices.

The best-in-class approach does not exclude any business activity, so the Fund may be exposed to some controversial sectors. To limit the potential non-financial risks of these sectors, the Fund applies the above-mentioned exclusions as well as an engagement policy that aims to promote dialogue with issuers and assist them in improving their ESG practices. In order to promote the best sustainable practices, the Investment Manager has put in place a strong engagement policy, articulated around three mains axis: thematic engagement, ongoing engagement and engagement through voting.

This investment process which is a combination of top-down allocation and bottom-up selection is based on the following steps:

1. *Investment process*: consists of first monitoring the investment universe through a detailed analysis of the issuers present on the bond market. The internal process leads to a preliminary outline of the investment universe focusing on two main areas:
    - An internal process, notably defining the list of authorised instruments and limits by issuer or instrument type; The set of limits by issuer are defined after considering the internal credit analysis team ratings and external (Standard & Poors, Moody’s and Fitch) ratings; and
    - an eligible investment universe, notably comprising the issuers selected by the Investment Manager on the bond market. This assessment is based on a specific appraisal performed by a credit analysis team working independently from the investment management team, following an internal credit quality assessment procedure.

2. *Integrating constraints*: involves integrating both financial constraints (regulatory ratios, internal credit assessment process) and non-financial constraints (ESG rating and exclusions) within these analyses.

3. *Building the portfolio*: the Fund's portfolio is constructed based on the following:
   - *Managing the portfolio's modified duration in a range from -1% to +2% (modified duration measures the price change in bond given a 1% change in interest rates) (top-down approach)*: During the top-down approach credit exposure and yield curve (a yield curve is a curve showing the yields or interest rates across different contract lengths, for example, 2 months, 2 years etc., for similar Debt Instruments) is assessed in the portfolio. The top-down component of this strategy consists of top down macroeconomic analysis incorporating the following inputs: analysis of primary data (e.g. inflation, growth and employment data) and analysis of economic research from third parties including independent economic research companies and the research departments of investment banks. These inputs help the Investment Manager assess the direction of monetary policies of central banks, potential changes of yield curves, the Fund's sensitivity to interest rate movements and the impact of such movements on the various types of bonds.
   - *Selecting securities (bottom-up approach)*: selection of securities (Debt Instruments and Money Market Instruments) from public and private issuers. In its risk and credit assessment of each individual security, the Investment Manager relies on its credit analysis teams and on its own methodology which incorporates a wider range of quantitative and qualitative inputs including to assess the creditworthiness of an issuer. Inputs include the issuer's financial statements, the legal documentation behind the security (for example, bond legal documentation including the prospectus), an assessment of the company's competitive position, the quality of its management and the ratings issued by the major rating agencies.
   - *Seeking opportunities with the best risk/return profile*: the investment management team regularly searches for investment opportunities among bonds (and secondarily, money-market instruments) that offer an attractive risk/return ratio. The Investment Manager considers the absolute value (i.e. the potential return that may be obtained by a Fund as a result of investing in a Debt Instrument compared against the costs and risks of such an investment) and the relative value (i.e. how the absolute value of that Debt Instrument compares against the absolute value of other fixed income securities) of the Debt Instrument in the context of the riskiness of the borrower and in the framework of the Investment Manager's overall risk appetite. In addition, before making an investment decision, the Investment Manager considers whether there is value to be obtained, in terms of obtaining a greater return for the Fund, by investing in a Debt Instrument but, in doing so, taking the risk of an uncertain return, compared to investing in cash that has a certain future return but which may not be as high as the return obtained from a Debt Instrument.
   - *Steering the average ESG rating*: management of the portfolio's average ESG rating by optimising the issuers' ESG rating/return profile. ESG analysis is embedded into the Investment Manager's portfolio management systems. Therefore, the portfolio manager can access an issuer's ESG score and related ESG analytics and metrics enabling the portfolio manager to apply the Investment Manager's exclusion policy and factor sustainability risks into their investment decision process, by ensuring the ESG rating of the portfolio is higher than the average.

Moreover, the Investment Manager will comply with the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager, unless the Investment Manager's exclusions result in a more stringent rule than that or those provided for by the Manager and, in such case, the Investment Manager's more stringent rule(s) will apply. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

Use of Financial Derivative Instruments ("FDIs") and other Instruments and Techniques

The Fund may engage in transactions in FDI for investment purposes and for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use are listed and/or unlisted: currency forwards, futures and forward contracts, exchange traded futures, interest rate futures, options, interest rate swaps, currency swaps and credit default swaps as described below and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective, to protect risk to capital as well as hedge against currency risk. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures and forwards: Futures and forwards may be used to hedge against downward movements in the value of the Fund's portfolio (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price thereby establishing a floor on the price at which investments may in the future be disposed), either by reference to individual equities or markets to which the Fund may be exposed. Forwards and futures contracts may also be used to take exposure to specific fixed income securities or to increase the Fund's exposure to general global market risk on a temporary basis, in advance of a longer term allocation or reappraisal of the Fund's commitments to specific markets or companies.

Interest Rate Futures: The Fund will use interest rate futures to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates. As determined by the Investment Manager interest rate futures may be used to manage the Fund's overall sensitivity to interest rate movements (understood as duration positioning) by either increasing or decreasing the portfolio's duration.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Interest Rate swaps: The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates.

Currency swaps: The Fund may use currency swaps to hedge against foreign exchange risk arising when investments are denominated in a currency other than the Fund's base currency,

Credit Default Swaps: The Fund may use credit default swaps as a substitute for purchasing fixed income securities or for the purposes of hedging exposure to fixed income securities and reducing the credit risk in respect of investments. The Fund may either buy or sell credit protection under credit default swaps, either in single-name credit default swaps or in credit default swap indices. The Fund expects to use credit default swaps for long exposure to certain fixed income securities and may also take synthetic short positions on fixed income securities or indices, for efficient portfolio management purposes or as a hedge against a long position.

Securities Financing Transactions

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be between 0% and 30% of the Fund's Net Asset Value, subject to a maximum exposure of 90% of the Fund's Net Asset Value.

Repurchase/Reverse Repurchase Agreements: The Fund may use repurchase/reverse repurchase agreements for efficient portfolio management purposes only. In repurchase transactions the Fund may temporarily transfer its securities to a purchaser, with agreement to buy-back the securities at a pre-agreed time. Under a reverse repurchase agreement, a Fund may purchase securities from a counterparty, with an agreement by the counterparty to repurchase those securities at a pre-agreed time. In entering into such transactions, the Fund will endeavour to increase the returns on its portfolio of securities by receiving a fee for making its securities available to the borrower. Up to 30% of the Fund's assets may be subject to repurchase/reverse repurchase agreements on the financial instruments outlined in the Fund's investment objective and policy. It is expected that in general, 0-30% of the Fund's assets may be exposed to Repurchase/Reverse Repurchase Agreements. Counterparties to any Repurchase/Reverse Repurchase activity will comply with Regulation 8 of the Central Bank UCITS Regulations.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Collateral Management

All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment

[1] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Investment Manager also applies the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and the Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Taxonomy Disclosure

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Investor Profile

The Fund may be suitable for investors seeking a return over the short-term via exposure to debt securities and money market instruments from issuers located worldwide and who are willing to accept a low level of volatility and the risks of the capital markets in pursuit of the short-term investment goals.

Base Currency: Euro

Investment Manager

The Manager has appointed Amundi Asset Management (SAS) of 90, boulevard Pasteur, 75015, Paris, France to act as the investment manager pursuant to an investment management agreement dated 16 February 2022 as may be amended and updated from time to time. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

Offer of Shares

Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	2 December 2022 – 1 June 2023	Euro	No	No	€1,000 / €100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Acc	€10000	2 December 2022 – 1 June 2023	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Dist	€10000	2 December 2022 – 1 June 2023	Euro	No	No	€1,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"Business Day" means every weekday on which retail banks and securities markets in Luxembourg and France are normally open for business;

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 0.75% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge:
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In addition, investors should note the following risks of investing in the Fund.

Interest Rate Risk
During periods of very low or negative market interest rates, the Fund may be unable to maintain positive returns or pay dividends to Shareholders. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, result in heightened market volatility and detract from the Fund's performance to the extent the Fund is exposed to such interest rates. Additionally, under certain market conditions in which interest rates are low and the market prices for securities have increased, the Fund may have a very low or even negative yield. The historically low interest rate environment may heighten the risks associated with rising interest rates such as heightened volatility in fixed-income markets that could adversely affect the liquidity of certain fixed-income investments.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: ENHANCED ULTRA SHORT TERM BOND SRI FAM FUND
Legal entity identifier: 2549003V3KM7D5WO9P96

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The Investment Manager integrates sustainability factors into its investment process by taking into account the ESG rating of issuers in the portfolio construction.

The ESG analysis of issuers aims to assess their ability to manage the potential negative impact of their activities on sustainability factors. This analysis aims to assess their Environmental, Social and Governance behaviours by assigning them an ESG rating ranging from A (best rating) to G (worst rating), in order to achieve a more global risk assessment.

The analysis is based on a set of generic criteria for all issuers and then specific criteria for each sector, using a "best in class" approach.
The methodology of upstream ESG analysis and the taking into account of the global ESG rating in the construction of the portfolio (by excluding the lowest rated issuers and favouring those with the best ratings) thus makes it possible to promote the 3 dimensions (environmental, social and governance).

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The sustainability indicator is the average ESG rating of the portfolio, which must be higher than the ESG rating of the investment universe (the average rating of the investment universe being calculated after eliminating at least 20% of the lowest rated issuers).

Amundi has developed its own internal ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies evolve.

The Amundi ESG rating used to determine the ESG score is a quantitative ESG score translated into seven grades, ranging from A (the best scores in the universe) to G (the worst). In Amundi's ESG rating scale, securities belonging to the exclusion list correspond to a score of G. For corporate issuers, ESG performance is assessed globally and according to relevant criteria by comparison with the average performance of its sector of activity, through the combination of the three ESG dimensions:

- the environmental dimension: this examines the capacity of issuers to control their direct and indirect impact on the environment, by limiting their energy consumption, reducing their greenhouse gas emissions, combating resource depletion and protecting biodiversity.

- the social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and respect for human rights in general:

- the governance dimension: this assesses the issuer's ability to provide the basis for an effective corporate governance framework and to generate value over the long term.

The methodology applied by Amundi ESG rating is based on 38 criteria, either generic (common to all companies regardless of their activity) or sectoral, weighted by sector and considered according to their impact on the reputation, operational efficiency and regulation of an issuer. Amundi's ESG ratings may be expressed globally on the three dimensions E, S and G or individually on any environmental or social factor.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The objectives of sustainable investment are to invest in companies that meet two criteria:

1) monitoring environmental and social best practice; and

2) not to generate products and services that harm the environment and society.

The definition of "best performing" company is based on a proprietary Amundi ESG methodology that aims to measure a company's ESG performance. To be considered "best performer", a company must score in the top three (A, B or C, on a rating scale from A to G) of its sector on at least one important environmental or social factor. Significant environmental and social factors are identified at the sector level. The identification of these factors is based on Amundi's ESG analysis framework, which combines extra-financial data with a qualitative analysis of associated sector and sustainability themes. The factors identified as material have a contribution of more than 10% to the overall ESG score. For the energy sector, for example, the material factors are: emissions and energy, biodiversity and pollution, health and safety, local communities and human rights.

To contribute to the above objectives, the investee company must not have significant exposure to activities (e.g. tobacco, arms, gambling, coal, aviation, meat production, fertiliser and pesticide manufacture, single-use plastic production) that are not compatible with these criteria.

The sustainability of an investment is assessed at the level of the investee company.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

To ensure that sustainable investments do not cause significant harm (the "DNSH" or Do Not Significantly Harm principle), Amundi uses two filters:

- the first "DNSH" filter is based on the monitoring of mandatory indicators of the Main Negative Impacts of Annex 1, Table 1 of the RTS (e.g. greenhouse gas intensity of companies) through a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. carbon intensity does not belong to the last decile of the sector). Amundi already takes into account specific Key Negative Impacts in its exclusion policy as part of its Responsible Investment Policy. These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the UN Global Compact principles, coal and tobacco.

- Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi’s ESG rating.

- In addition to the exclusions of the Investment Manager, the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As detailed above, the negative impact indicators are taken into account in the first DNSH (do not significant harm) filter: this is based on the monitoring of the mandatory Main Negative Impact indicators of Annex 1, Table 1 of the RTS when reliable data are available through the combination of the following indicators and specific thresholds or rules:

- have a CO2 intensity that does not belong to the last decile of companies in the sector (only applies to high intensity sectors), and
- have a diverse board of directors that does not belong to the bottom decile of companies in its sector, and
- be free from controversy over working conditions and human rights
- be free of controversy regarding biodiversity and pollution.

Amundi already takes into account specific Key Negative Impacts in its exclusions policy as part of its Responsible Investment Policy. These exclusions, which apply in addition to the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of the UN Global Compact principles, coal and tobacco.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into Amundi's ESG rating methodology. The proprietary ESG rating tool assesses issuers using data available from data providers. For example, the model includes a dedicated criterion called "Community Involvement and Human Rights" which is applied to all sectors in addition to other human rights-related criteria, including socially responsible supply chains, working conditions and industrial relations. In addition, controversy monitoring is conducted on a minimum quarterly basis, which includes companies identified for human rights violations. When controversies arise, analysts assess the situation and apply a score to the controversy (using the proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track trends and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes,

Amundi takes into account the mandatory and applicable additional Key Negative Impact Indicators in accordance with Appendix 1, Table 1 of the RTS applicable to the Fund's strategy and relies on a combination of exclusion policies (normative and sectoral), integration of ESG rating in the investment process, engagement and voting approaches:

- Exclusion: Amundi has defined normative exclusion rules, by activity and by sector, covering some of the main sustainability indicators listed in the SFDR.
- ESG integration: Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G-rated issuers and best weighted average ESG score above the applicable benchmark). The 38 criteria used in Amundi's ESG rating approach have also been designed to take into account key impacts on sustainability factors, as well as the quality of mitigation.
- Engagement: Engagement is an ongoing and targeted process to influence the activities or behaviour of companies. The purpose of engagement can be divided into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, and to engage an issuer to improve its impact on environmental, social and human rights issues or other sustainability issues important to society and the global economy.
- Voting: Amundi's voting policy responds to a holistic analysis of all long-term issues that can influence value creation, including significant ESG issues (Amundi's voting policy is available on its website).
- Controversy monitoring: Amundi has developed a controversy monitoring system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched by an in-depth assessment of each severe controversy, conducted by ESG analysts, and the periodic review of its evolution. This approach is applied to all Amundi funds.

☐ No

What investment strategy does this financial product follow?

The investment strategy is to outperform the composite benchmark index, (composed of 80% Euro Short-Term Rate (€STR) and 20% ICE BofA 1-3 Year Euro Corporate Index) by integrating ESG criteria into the fund's security selection and analysis process.

- ***What are the binding elements of the investment strategy used to select investments to achieve each of the environmental or social characteristics promoted by this financial product?***

The Fund first applies the Amundi exclusion policy including the following rules:

- legal exclusions on controversial weaponry (anti-personnel mines, cluster bombs, chemical weapons, biological weapons and depleted uranium weapons...);
- Companies that repeatedly and seriously violate one or more of the 10 Global Compact principles without credible corrective action;
- Amundi's sector exclusions on Coal and Tobacco (details of this policy are available in Amundi's Responsible Investment Policy available on www.amundi.fr).
- In addition to the exclusions of the Investment Manager, the Manager's exclusion list which is based on the Manager's exclusion policy and compiled by the Manager will apply. Exclusion categories considered in the exclusion policy are United Nations Global Compact Principles, Controversial Weapons, Tobacco, Climate Change and Forced Labour. See link below to the Manager's website for more detail on the application of the exclusion policy.

The Fund also applies the following rules:

- Exclusion of issuers rated F and G for purchase ;
- The "rating enhancement" approach: the weighted average ESG rating of the portfolio must be higher than the weighted average ESG rating of the fund's investment universe after eliminating 20% of the lowest rated issuers;
  the coverage rate is 90%.
- The Fund follows 4 indicators on the E, S, G and human rights dimensions:
  - Environment (Carbon Footprint): Carbon intensity (tCO2e) per million euros of turnover (Scope 1, 2 and 3) for a selected company compared to a group of comparable companies.
  - Respect for human rights: Decent work and freedom of association: Decent working conditions and freedom of association (percentage of companies with policies that exclude forced or compulsory child labour or that guarantee freedom of association, universally applied regardless of local laws)
  - Social: Gender mix of managers, percentage of female managers in companies.
  - Governance: Board independence (percentage of directors who meet the board independence criterion).

.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

There is no minimum commitment rate to reduce the scope of these investments.

- ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

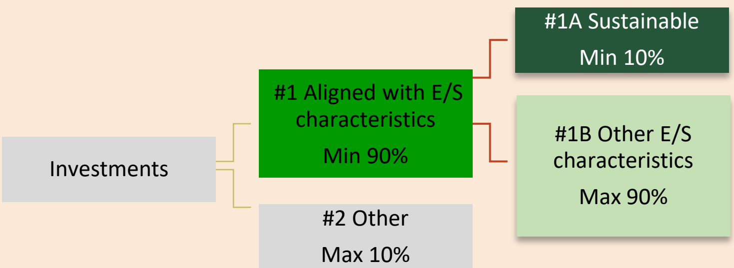
The Investment Manager relies on Amundi's ESG rating methodology. This rating is based on a proprietary ESG analysis framework, which takes into account 38 general and sectoral criteria, including governance criteria. In the Governance dimension, Amundi assesses the capacity of an issuer to ensure an effective corporate governance framework that guarantees the achievement of its long-term objectives (e.g. guaranteeing the value of the issuer over the long term). The governance sub-criteria taken into account are: board structure, audit and control, remuneration, shareholders' rights, ethics, tax practices and ESG strategy.

Amundi's ESG rating scale has seven grades, ranging from A to G, where A is the best and G the worst. Companies rated G are excluded from the investment universe.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

90% of the investments of the Fund will be used to meet the environmental or social characteristics promoted by the Fund in accordance with the binding elements of the investment strategy. The Fund commits to have a minimum of 10% of sustainable investments and the remaining proportion of the investments will be invested in assets with environmental and social characteristics.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

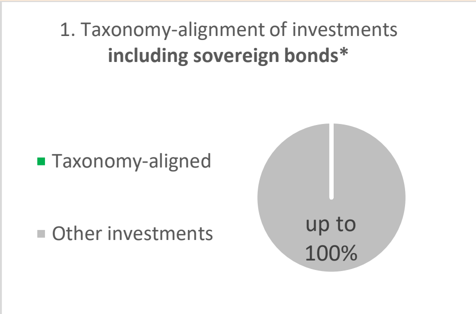
***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

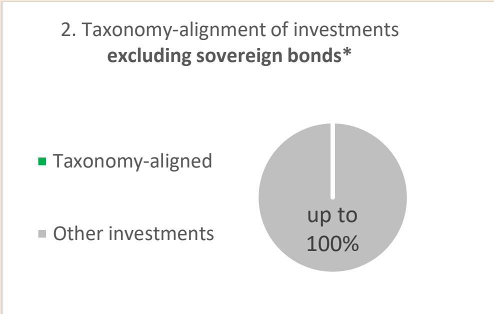
Derivatives are not used to attain the environmental and social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund currently has no minimum commitment to sustainable investments with an environmental objective aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

The Fund is not committed to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Fund currently has no minimum commitment to sustainable investments with an environmental objective not aligned with the EU taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Fund does not have a minimum share of sustainable investments with a social objective.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Included in the "#2 Other" category are cash and unrated instruments (which may include securities for which the data needed to measure the achievement of environmental or social characteristics is not available).

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The benchmark does not assess or include its constituents in terms of environmental and/or social characteristics and is therefore not aligned with the ESG characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

Further details on the Responsible Investment Policy, summary investment process and exclusion policy can be found on the Manager's website at the following link; http://finecoassetmanagement.com/sustainability/

ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND IV

SUPPLEMENT DATED 01 DECEMBER 2022

This Supplement contains specific information in relation to **ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND IV** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe, the United States, Luxembourg and China & Hong Kong are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) two Business Days before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.4% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.

Dividend Payment Dates:	07 June 2023, 05 June 2024, 04 June 2025 and 03 June 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 21 March 2022 and will close at 5:00 PM (Irish time) on 04 April 2022. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	03 June 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 05 April 2022 to 06 June 2022 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled "Investment Policy" below) and to (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *<u>Funding Investments</u>*

Invest up to 100% of its assets in Equity Instruments. Once the Fund purchases the Equity Instruments it will then enter into a total return swap ("TRS") on the Equity Instruments in which it will swap out the performance and the income of the Equity Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Equity Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Equity Instruments directly.

ESG screening

The Equity Instruments will be made up of a minimum of 70% exposure to developed market companies which take account of environmental, social and governance ("ESG") factors. The ESG factors considered include, but are not limited to, the following:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Climate change and emission intensity	Customer Satisfaction	Board composition
Air & Water Pollution	Data Protection and Privacy	Audit Committee Structure
Deforestation	Gender & Diversity	Executive Compensation
Biodiversity	Employee Engagement	Lobbying
Water scarcity	Community Relations	Political Contributions
Waster Management	Human Rights	Whistleblower Schemes
Energy efficiency	Labour Standards	

In selecting the above Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

In determining how a company integrates the above ESG factors, the Manager will use analysis such as a sustainability risk score or ESG ratings provided by a recognised data provider such as Morningstar, MSCI or Bloomberg (or another data source nominated by the Manager). Such ratings and scores will be compared to other peers within the investment universe to select the Equity Instruments with a more favourable ESG rating/score. In addition, the Manager will in particular look to select Equity Instruments of companies that meet the criteria for inclusion in ESG screened indices such as the MSCI Europe ESG Screened Index (EUR). Such ESG screened indices only comprise Equity Instruments of companies which promote, among other characteristics, certain of the ESG factors listed above.

In addition to the ESG factors considered above, the Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum** Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

(i.ii) Gaining an exposure of up to 50% of the Fund's Net Asset Value either directly or indirectly to Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

The breakdown of the Funding Investments between Equity Instruments and Debt Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular Funding Investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular Funding Investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument.

II. *Exposure to the Basket*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to a basket of equity indices (the "Basket"). The Basket will comprise a balance of European, American and Chinese equity indices, such as the CSI 300 Index, the CSI 500 Index, MSCI Europe ESG Screened Index and the S&P 500 ESG Index. The Basket will be substantially weighted in favour of ESG indices that provide the Fund with an indirect exposure to large cap and mid to small-cap global companies which have a focus on ESG factors.

It is expected that the Fund will gradually gain exposure to the Basket, starting with an expected exposure of 25% of the Fund's Net Asset Value during the first year and reaching an expected exposure of between 75%-100% of the Fund's Net Asset Value during the year of the Fund's maturity (i.e. in the year of the Maturity Date). The aim of this gradual exposure is to reduce the overall volatility of the Fund's exposure to the Basket while gaining an exposure through different market cycles thus avoiding the impact of short-term price fluctuations in the global equity market. At any time that the Fund is not fully exposed to the Basket, the remaining percentage of the Fund's portfolio will be made up of the Funding Investments.

The Manager will from time to time modify the gradual exposure to the individual equity indices that make up the Basket and the optimal composition of the Basket depending on their view of the global equity market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. In addition, the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. To give a practical illustration of a scenario which would potentially cause an alteration of the Basket composition based on a hypothetical scenario in which the Basket includes the CSI 300 and CSI 500 indices, the Manager will also consider the fact that the CSI 300 is represented by large-cap companies whereas the CSI 500 is represented by medium/small-cap companies. In favourable macro-economic conditions, medium/small-cap companies tend to out-perform large-cap companies. Hence in such a scenario, the Basket might be weighted accordingly (i.e. greater exposure to the CSI 500) to avail of the market opportunity.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

In addition to what is contained in the Investment Policy section above, the Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the

Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be inline with the exposure that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to a benchmark composed of 35% S&P 500 Net Total Return, 20% MSCI Europe High Dividend Net Total Return, 10% CSI 300 Index Net Total Return, 10% CSI 500 Index Net Total Return and 25% Bloomberg Barclays Euro Aggregate Index, which is considered by the Manager to be a comparable benchmark to the Fund’s portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 4 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Dist	€100	From 21 March 2022 to 04 April 2022	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 21 March 2022 to 04 April	Euro	No	€1,000	N/A	€100	Distributing

		2022						
Class D Dist	€100	From 21 March 2022 to 04 April 2022	Euro	No	€500	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Risks of Directly Investing in China", "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold. In respect of the risks of directly investing in China, although the Fund will not directly invest in China, the Fund may engage a derivative counterparty that will provide the Fund with exposure to Chinese indices. Such derivative counterparties may themselves experience risks due to their direct investment in China which in turn allows them to provide the Fund with the relevant indirect exposure to China. This may lead to some risk for the Fund in respect of the relevant counterparty providing the Fund with a valuation for the derivative transaction that the Fund has entered into and thus investors should generally make themselves aware of the potential risks associated with investing directly in China.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND IV
Legal entity identifier: 254900QWPPBSF9FC1L85

Environmental and/or social characteristics

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics promoted by the Fund include:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors is a key element of portfolio construction. The equity instruments in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and/or social characteristics, such as the MSCI Europe ESG Screened Index. In

addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies by the Manager and/or third party data providers with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive ESG factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control introduces a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

3. **Negative Screening (Norm-based exclusions)**
   For direct holdings, the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which it [or its clients] deems incompatible with minimum responsible investing principles. To align the Fund's investments with this approach, the Manager has adopted a firm wide Exclusion Policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

   Exclusion categories considered in the Exclusion Policy are:

   - United Nations Global Compact Principles
   - Controversial Weapons
   - Tobacco
   - Climate Change
   - Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund invested in ESG screened index constituents which demonstrates the Fund's postive ESG tilt;

iii) The underying direct holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider); and

iv) The percentage of the Fund investment universe subject to the Manager's Exclusion Policy.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

N/A

How have the indicators for adverse impacts on sustainability factors been taken into account?

N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the investments against any applicable mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund follows an investment strategy which seeks to provide Shareholders with a Dividend and which seeks to provide a positive return at the Maturity Date linked to the

Basket exposure. The Funding Investments of the Fund are used to receive a pay out from an OTC counterparty and to facilitate the obtaining of the Basket exposure.

In selecting the Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **The Equity Instruments** will be made up of a minimum of 70% exposure to developed market companies which take account of ESG factors;

b. **Direct equity investments** of the Fund will only be drawn from constituents of ESG screened indices;

c. **Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;

d. **Exclusion Policy**
The Manager's Exclusion Policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

N/A

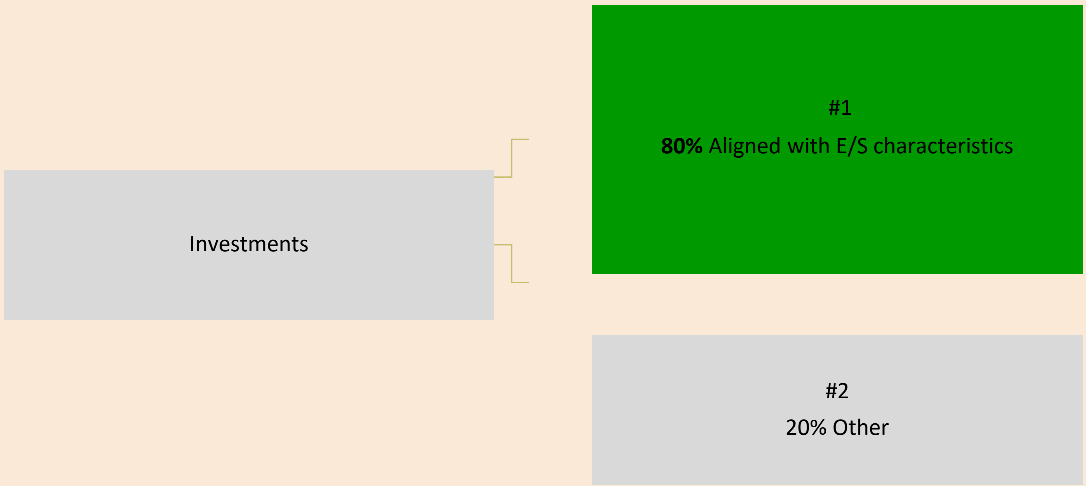
Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund.

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund and not the underying derivative exposure.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Fund gains exposure through the Basket (which is a derivative exposure as described above) to certain ESG screened indices. However, the Manager has determined that it is more appropriate not to look through derivatives employed by its Funds' under management in order to assess the attainment of environmental and/or social characteristics. Thus, the Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

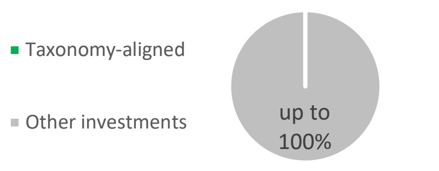
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

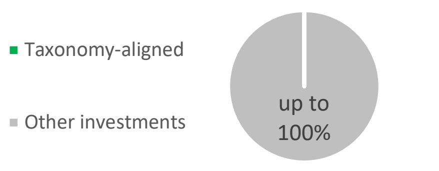
N/A

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



2. Taxonomy-alignment of investments **excluding sovereign bonds***



* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A

What is the minimum share of socially sustainable investments?

N/A

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund **<u>and not the underying derivative exposure</u>**.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 1-3 YEAR INDEX FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 1-3 YEAR INDEX FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve total returns.

The Fund seeks to achieve its investment objective by tracking the performance of the Bloomberg Euro Aggregate Treasury 1-3 Year Index (the "**Index**", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by Bloomberg (the "**Index Sponsor**") and it is described below under the sub-heading "Description of the Index".

The Fund may replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. The Fund may also invest in only a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index in an efficient manner, in a way that balances various risks and costs, such as transaction costs, with the goal of tracking the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure and characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index. The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Description of the Index

General Description: The Index consists of fixed-rate, investment-grade public obligations of the sovereign countries participating in the European Monetary Union. To be eligible for the Index, bonds must have between 1 and up to, but not including, 3 years remaining to maturity. The Index rebalances on a monthly basis. The Bloomberg ticker symbol for the Index is LET1TREU.

Disclaimer: "Bloomberg®" and the Index are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited ("BISL"), the administrator of the Index (collectively, "Bloomberg"), and have been licensed for use for certain purposes by the ICAV.

The Fund is not sponsored, endorsed, sold or promoted by Bloomberg. Bloomberg does not make any representation or warranty, express or implied, to the owners of or counterparties to the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly. The only relationship of Bloomberg to the ICAV is the licensing of certain trademarks, trade names and service marks and of the Index, which is determined, composed and calculated by BISL without regard to the ICAV or the Fund. Bloomberg has no obligation to take the needs of the ICAV or the owners of the Fund into consideration in determining, composing or calculating the Index. Bloomberg is not responsible for and has not participated in the determination of the timing, price, or quantities of the Fund to be issued. Bloomberg shall not have any obligation or liability, including, without limitation, to customers of the Fund, in connection with the administration, marketing or trading of the Fund.

BLOOMBERG DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO AND SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS THEREIN. BLOOMBERG DOES NOT MAKE ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ICAV, OWNERS OF THE FUND OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR ANY DATA RELATED THERETO. BLOOMBERG DOES NOT MAKE ANY EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE INDEX OR ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, TO THE MAXIMUM EXTENT ALLOWED BY LAW, BLOOMBERG, ITS LICENSORS, AND ITS AND THEIR RESPECTIVE EMPLOYEES, CONTRACTORS, AGENTS, SUPPLIERS, AND VENDORS SHALL HAVE NO LIABILITY OR RESPONSIBILITY WHATSOEVER FOR ANY INJURY OR DAMAGES—WHETHER DIRECT, INDIRECT, CONSEQUENTIAL, INCIDENTAL, PUNITIVE OR OTHERWISE—ARISING IN CONNECTION WITH THE FUND OR INDEX OR ANY DATA OR VALUES RELATING THERETO—WHETHER ARISING FROM THEIR NEGLIGENCE OR OTHERWISE, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Benchmark Administrator: BISL was authorised by the United Kingdom's Financial Conduct Authority (**FCA**) as a regulated UK benchmark administrator under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds in 2019 and can be found listed on the FCA Register.

Publication: The Index is calculated and published by Bloomberg.

Further Information and Website: The methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on https://www.bloomberg.com/professional/product/indices/bloomberg-fixed-income-indices/#/ucits.

Types and Use of Financial Derivative Instruments ("FDI")

The Fund may use interest rate and bond futures contracts to reduce duration risk versus the Index.The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective. The expected effect of the use of FDI will be to reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk

Factors" section of the Prospectus.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the short term and who are willing to accept a low level of volatility from time to time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that

Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000/€100	Accumulating
Class L Dist	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000/€100	Distributing
Class A Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000/€100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000/€100	Accumulating
Class J Acc	€10,000	Closed	Euro	No	No	€1,000,000/€100	Accumulating
Class J Dist	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of applications for Shares of the Fund:

"Business Day" means every weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Sponsor publishes the Index, and (ii) retail banks in Luxembourg and the Eurex market are normally open for business;

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day; and

"Valuation Point" means 4:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Sponsor to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund's performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Sponsor will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Sponsor provides descriptions of what the Index is designed to achieve, the Index Sponsor does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund's investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled "Description of the Index"); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Sponsor will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Sponsor or that the Index will not be amended significantly. Such changes may be made by the Index Sponsor at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled "Description of the Index", as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled "Investment Objectives and Policies". Investors' attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the investments of the Fund and re-weightings of the Index may give rise to various transaction costs, operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index. Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund's tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to-time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 3-5 YEAR INDEX FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **FINECO AM BLOOMBERG EURO-AGGREGATE TREASURY 3-5 YEAR INDEX FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve total returns.

The Fund seeks to achieve its investment objective by tracking the performance of the Bloomberg Euro-Aggregate Treasury 3-5 Year Index (the "**Index**", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by Bloomberg (the "**Index Sponsor**") and it is described below under the sub-heading "Description of the Index".

The Fund may replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. The Fund may also invest in only a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index in an efficient manner, in a way that balances various risks and costs, such as transaction costs, with the goal of tracking the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure and characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index. The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1.2% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of

Fund assets and the impact of fees.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Description of the Index

General Description: The Index consists of fixed-rate, investment-grade public obligations of the sovereign countries participating in the European Monetary Union. To be eligible for the Index, bonds must have between 3 and up to, but not including, 5 years remaining to maturity. The Index rebalances on a monthly basis. The Bloomberg ticker symbol for the Index is LET3TREU.

Disclaimer: *"Bloomberg®" and the Index are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited ("BISL"), the administrator of the Index (collectively, "Bloomberg"), and have been licensed for use for certain purposes by the ICAV.*

The Fund is not sponsored, endorsed, sold or promoted by Bloomberg. Bloomberg does not make any representation or warranty, express or implied, to the owners of or counterparties to the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly. The only relationship of Bloomberg to the ICAV is the licensing of certain trademarks, trade names and service marks and of the Index, which is determined, composed and calculated by BISL without regard to the ICAV or the Fund. Bloomberg has no obligation to take the needs of the ICAV or the owners of the Fund into consideration in determining, composing or calculating the Index. Bloomberg is not responsible for and has not participated in the determination of the timing, price, or quantities of the Fund to be issued. Bloomberg shall not have any obligation or liability, including, without limitation, to customers of the Fund, in connection with the administration, marketing or trading of the Fund.

BLOOMBERG DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO AND SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS THEREIN. BLOOMBERG DOES NOT MAKE ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ICAV, OWNERS OF THE FUND OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR ANY DATA RELATED THERETO. BLOOMBERG DOES NOT MAKE ANY EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE INDEX OR ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, TO THE MAXIMUM EXTENT ALLOWED BY LAW, BLOOMBERG, ITS LICENSORS, AND ITS AND THEIR RESPECTIVE EMPLOYEES, CONTRACTORS, AGENTS, SUPPLIERS, AND VENDORS SHALL HAVE NO LIABILITY OR RESPONSIBILITY WHATSOEVER FOR ANY INJURY OR DAMAGES—WHETHER DIRECT, INDIRECT, CONSEQUENTIAL, INCIDENTAL, PUNITIVE OR OTHERWISE—ARISING IN CONNECTION WITH THE FUND OR INDEX OR ANY DATA OR VALUES RELATING THERETO—WHETHER ARISING FROM THEIR NEGLIGENCE OR OTHERWISE, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Benchmark Administrator: BISL was authorised by the United Kingdom's Financial Conduct Authority (**FCA**) as a regulated UK benchmark administrator under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds in 2019 and can be found listed on the FCA Register.

Publication: The Index is calculated and published by Bloomberg.

Further Information and Website: The methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on https://www.bloomberg.com/professional/product/indices/bloomberg-fixed-income-indices/#/ucits.

Types and Use of Financial Derivative Instruments ("FDI")

The Fund may use interest rate and bond futures contracts to reduce duration risk versus the Index.The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective. The expected effect of the use of FDI will be to reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium term and who are willing to accept a low level of volatility from time to time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.
When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Accumulating
Class L Dist	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Distributing
Class A Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000/€100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000/€100	Accumulating
Class J Acc	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Accumulating
Class J Dist	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of applications for Shares of the Fund:

“Business Day” means every weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Sponsor publishes the Index, and (ii) retail banks in Luxembourg and the Eurex market are normally open for business;

“Dealing Deadline” means 11:59am (Irish time) on the relevant Dealing Day; and

“Valuation Point” means 4:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Sales charge

Up to 3% of the value of the gross subscription in the Fund, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double charging,either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Sponsor to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund's performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Sponsor will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Sponsor provides descriptions of what the Index is designed to achieve, the Index Sponsor does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund's investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled "Description of the Index"); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. . The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Sponsor will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Sponsor or that the Index will not be amended significantly. Such changes may be made by the Index Sponsor at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled "Description of the Index", as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled "Investment Objectives and Policies". Investors' attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the investments of the Fund and re-weightings of the Index may give rise to various transaction costs, operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index. Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund's tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to-time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 5-7 YEAR INDEX FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 5-7 YEAR INDEX FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve total returns.

The Fund seeks to achieve its investment objective by tracking the performance of the Bloomberg Euro Aggregate Treasury 5-7 Year Index (the "**Index**", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by Bloomberg (the "**Index Sponsor**") and it is described below under the sub-heading "Description of the Index".

The Fund may replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. The Fund may also invest in only a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index in an efficient manner, in a way that balances various risks and costs, such as transaction costs, with the goal of tracking the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure and characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index. The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1.4% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of

Fund assets and the impact of fees.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Description of the Index

General Description: The Index consists of fixed-rate, investment-grade public obligations of the sovereign countries participating in the European Monetary Union. To be eligible for the Index, bonds must have between 5 and up to, but not including, 7 years remaining to maturity. The Index rebalances on a monthly basis. The Bloomberg ticker symbol for the Index is LET5TREU.

Disclaimer: "Bloomberg®" and the Index are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited ("BISL"), the administrator of the Index (collectively, "Bloomberg"), and have been licensed for use for certain purposes by the ICAV.

The Fund is not sponsored, endorsed, sold or promoted by Bloomberg. Bloomberg does not make any representation or warranty, express or implied, to the owners of or counterparties to the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly. The only relationship of Bloomberg to the ICAV is the licensing of certain trademarks, trade names and service marks and of the Index, which is determined, composed and calculated by BISL without regard to the ICAV or the Fund. Bloomberg has no obligation to take the needs of the ICAV or the owners of the Fund into consideration in determining, composing or calculating the Index. Bloomberg is not responsible for and has not participated in the determination of the timing, price, or quantities of the Fund to be issued. Bloomberg shall not have any obligation or liability, including, without limitation, to customers of the Fund, in connection with the administration, marketing or trading of the Fund.

BLOOMBERG DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO AND SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS THEREIN. BLOOMBERG DOES NOT MAKE ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ICAV, OWNERS OF THE FUND OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR ANY DATA RELATED THERETO. BLOOMBERG DOES NOT MAKE ANY EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE INDEX OR ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, TO THE MAXIMUM EXTENT ALLOWED BY LAW, BLOOMBERG, ITS LICENSORS, AND ITS AND THEIR RESPECTIVE EMPLOYEES, CONTRACTORS, AGENTS, SUPPLIERS, AND VENDORS SHALL HAVE NO LIABILITY OR RESPONSIBILITY WHATSOEVER FOR ANY INJURY OR DAMAGES—WHETHER DIRECT, INDIRECT, CONSEQUENTIAL, INCIDENTAL, PUNITIVE OR OTHERWISE—ARISING IN CONNECTION WITH THE FUND OR INDEX OR ANY DATA OR VALUES RELATING THERETO—WHETHER ARISING FROM THEIR NEGLIGENCE OR OTHERWISE, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Benchmark Administrator: BISL was authorised by the United Kingdom's Financial Conduct Authority (**FCA**) as a regulated UK benchmark administrator under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds in 2019 and can be found listed on the FCA Register.

Publication: The Index is calculated and published by Bloomberg.

Further Information and Website: The methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on https://www.bloomberg.com/professional/product/indices/bloomberg-fixed-income-indices/#/ucits.

Types and Use of Financial Derivative Instruments ("FDI")

The Fund may use interest rate and bond futures contracts to reduce duration risk versus the Index. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective. The expected effect of the use of FDI will be to reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who are willing to accept a medium level of volatility from time to time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that

Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s) . The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Accumulating
Class L Dist	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Distributing
Class A Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000/€100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000/€100	Accumulating
Class J Acc	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Accumulating
Class J Dist	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of applications for Shares of the Fund:

"Business Day" means every weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Sponsor publishes the Index, and (ii) retail banks in Luxembourg and the Eurex market are normally open for business;

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day; and

"Valuation Point" means 4:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales charge

Up to 3% of the value of the gross subscription in the Fund, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double charging,either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Sponsor to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund's performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Sponsor will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Sponsor provides descriptions of what the Index is designed to achieve, the Index Sponsor does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund's investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled "Description of the Index"); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Sponsor will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Sponsor or that the Index will not be amended significantly. Such changes may be made by the Index Sponsor at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled "Description of the Index", as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled "Investment Objectives and Policies". Investors' attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the investments of the Fund and re-weightings of the Index may give rise to various transaction costs, operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index. Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund's tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to-time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 7-10 YEAR INDEX FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 7-10 YEAR INDEX FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve total returns.

The Fund seeks to achieve its investment objective by tracking the performance of the Bloomberg Euro Aggregate Treasury 7-10 Year Index (the "**Index**", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by Bloomberg (the "**Index Sponsor**") and it is described below under the sub-heading "Description of the Index".

The Fund may replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. The Fund may also invest in only a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index in an efficient manner, in a way that balances various risks and costs, such as transaction costs, with the goal of tracking the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure and characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index. The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1.6% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of

Fund assets and the impact of fees.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Description of the Index

General Description: The Index consists of fixed-rate, investment-grade public obligations of the sovereign countries participating in the European Monetary Union. To be eligible for the Index, bonds must have between 7 and up to, but not including, 10 years remaining to maturity. The Index rebalances on a monthly basis. The Bloomberg ticker symbol for the Index is LET7TREU.

Disclaimer: "Bloomberg®" and the Index are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited ("BISL"), the administrator of the Index (collectively, "Bloomberg"), and have been licensed for use for certain purposes by the ICAV.

The Fund is not sponsored, endorsed, sold or promoted by Bloomberg. Bloomberg does not make any representation or warranty, express or implied, to the owners of or counterparties to the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly. The only relationship of Bloomberg to the ICAV is the licensing of certain trademarks, trade names and service marks and of the Index, which is determined, composed and calculated by BISL without regard to the ICAV or the Fund. Bloomberg has no obligation to take the needs of the ICAV or the owners of the Fund into consideration in determining, composing or calculating the Index. Bloomberg is not responsible for and has not participated in the determination of the timing, price, or quantities of the Fund to be issued. Bloomberg shall not have any obligation or liability, including, without limitation, to customers of the Fund, in connection with the administration, marketing or trading of the Fund.

BLOOMBERG DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO AND SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS THEREIN. BLOOMBERG DOES NOT MAKE ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ICAV, OWNERS OF THE FUND OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR ANY DATA RELATED THERETO. BLOOMBERG DOES NOT MAKE ANY EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE INDEX OR ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, TO THE MAXIMUM EXTENT ALLOWED BY LAW, BLOOMBERG, ITS LICENSORS, AND ITS AND THEIR RESPECTIVE EMPLOYEES, CONTRACTORS, AGENTS, SUPPLIERS, AND VENDORS SHALL HAVE NO LIABILITY OR RESPONSIBILITY WHATSOEVER FOR ANY INJURY OR DAMAGES—WHETHER DIRECT, INDIRECT, CONSEQUENTIAL, INCIDENTAL, PUNITIVE OR OTHERWISE—ARISING IN CONNECTION WITH THE FUND OR INDEX OR ANY DATA OR VALUES RELATING THERETO—WHETHER ARISING FROM THEIR NEGLIGENCE OR OTHERWISE, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Benchmark Administrator: BISL was authorised by the United Kingdom's Financial Conduct Authority (**FCA**) as a regulated UK benchmark administrator under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds in 2019 and can be found listed on the FCA Register.

Publication: The Index is calculated and published by Bloomberg.

Further Information and Website: The methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on https://www.bloomberg.com/professional/product/indices/bloomberg-fixed-income-indices/#/ucits.

Types and Use of Financial Derivative Instruments ("FDI")

The Fund may use interest rate and bond futures contracts to reduce duration risk versus the Index. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective. The expected effect of the use of FDI will be to reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who are willing to accept a medium level of volatility from time to time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Accumulating
Class L Dist	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Distributing
Class A Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000/€100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000/€100	Accumulating
Class J Acc	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Accumulating
Class J Dist	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of applications for Shares of the Fund:

"Business Day" means every weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Sponsor publishes the Index, and (ii) retail banks in Luxembourg and the Eurex market are normally open for business;

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day; and

"Valuation Point" means 4:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales charge

Up to 3% of the value of the gross subscription in the Fund, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double charging,either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Sponsor to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund's performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Sponsor will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Sponsor provides descriptions of what the Index is designed to achieve, the Index Sponsor does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund's investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled "Description of the Index"); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Sponsor will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Sponsor or that the Index will not be amended significantly. Such changes may be made by the Index Sponsor at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled "Description of the Index", as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled "Investment Objectives and Policies". Investors' attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the investments of the Fund and re-weightings of the Index may give rise to various transaction costs, operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index. Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund's tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to-time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 10+ YEAR INDEX FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **FINECO AM BLOOMBERG EURO AGGREGATE TREASURY 10+ YEAR INDEX FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve total returns.

The Fund seeks to achieve its investment objective by tracking the performance of the Bloomberg Euro Aggregate Treasury 10+ Year Index (the "**Index**", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by Bloomberg (the "**Index Sponsor**") and it is described below under the sub-heading "Description of the Index".

The Fund may replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. The Fund may also invest in only a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index in an efficient manner, in a way that balances various risks and costs, such as transaction costs, with the goal of tracking the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure and characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index. The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1.75% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Description of the Index

General Description: The Index consists of fixed-rate, investment-grade public obligations of the sovereign countries participating in the European Monetary Union. To be eligible for the Index, bonds must have 10+ years remaining to maturity. The Index rebalances on a monthly basis. The Bloomberg ticker symbol for the Index is LET0TREU.

Disclaimer: "Bloomberg®" and the Index are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited ("BISL"), the administrator of the Index (collectively, "Bloomberg"), and have been licensed for use for certain purposes by the ICAV.

The Fund is not sponsored, endorsed, sold or promoted by Bloomberg. Bloomberg does not make any representation or warranty, express or implied, to the owners of or counterparties to the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly. The only relationship of Bloomberg to the ICAV is the licensing of certain trademarks, trade names and service marks and of the Index, which is determined, composed and calculated by BISL without regard to the ICAV or the Fund. Bloomberg has no obligation to take the needs of the ICAV or the owners of the Fund into consideration in determining, composing or calculating the Index. Bloomberg is not responsible for and has not participated in the determination of the timing, price, or quantities of the Fund to be issued. Bloomberg shall not have any obligation or liability, including, without limitation, to customers of the Fund, in connection with the administration, marketing or trading of the Fund.

BLOOMBERG DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO AND SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS THEREIN. BLOOMBERG DOES NOT MAKE ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ICAV, OWNERS OF THE FUND OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR ANY DATA RELATED THERETO. BLOOMBERG DOES NOT MAKE ANY EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE INDEX OR ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, TO THE MAXIMUM EXTENT ALLOWED BY LAW, BLOOMBERG, ITS LICENSORS, AND ITS AND THEIR RESPECTIVE EMPLOYEES, CONTRACTORS, AGENTS, SUPPLIERS, AND VENDORS SHALL HAVE NO LIABILITY OR RESPONSIBILITY WHATSOEVER FOR ANY INJURY OR DAMAGES—WHETHER DIRECT, INDIRECT, CONSEQUENTIAL, INCIDENTAL, PUNITIVE OR OTHERWISE—ARISING IN CONNECTION WITH THE FUND OR INDEX OR ANY DATA OR VALUES RELATING THERETO—WHETHER ARISING FROM THEIR NEGLIGENCE OR OTHERWISE, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Benchmark Administrator: BISL was authorised by the United Kingdom's Financial Conduct Authority (**FCA**) as a regulated UK benchmark administrator under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds in 2019 and can be found listed on the FCA Register.

Publication: The Index is calculated and published by Bloomberg.

Further Information and Website: The methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on https://www.bloomberg.com/professional/product/indices/bloomberg-fixed-income-indices/#/ucits.

Types and Use of Financial Derivative Instruments ("FDI")

The Fund may use interest rate and bond futures contracts to reduce duration risk versus the Index. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective. The expected effect of the use of FDI will be to reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk

Factors" section of the Prospectus.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who are willing to accept a medium level of volatility from time to time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such areview, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Accumulating
Class L Dist	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Distributing
Class A Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000/€100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000/€100	Accumulating
Class J Acc	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Accumulating
Class J Dist	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of applications for Shares of the Fund:

"Business Day" means every weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Sponsor publishes the Index, and (ii) retail banks in Luxembourg and the Eurex market are normally open for business;

“Dealing Deadline” means 11:59am (Irish time) on the relevant Dealing Day; and

“Valuation Point” means 4:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Sales charge

Up to 3% of the value of the gross subscription in the Fund, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double charging,either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Sponsor to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund's performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Sponsor will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Sponsor provides descriptions of what the Index is designed to achieve, the Index Sponsor does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund's investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled "Description of the Index"); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Sponsor will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Sponsor or that the Index will not be amended significantly. Such changes may be made by the Index Sponsor at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled "Description of the Index", as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled "Investment Objectives and Policies". Investors' attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the investments of the Fund and re-weightings of the Index may give rise to various transaction costs, operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index. Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund's tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to-time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

FINECO AM BLOOMBERG EURO GOVERNMENT INFLATION-LINKED BOND ALL MATURITIES INDEX FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **FINECO AM BLOOMBERG EURO GOVERNMENT INFLATION-LINKED BOND ALL MATURITIES INDEX FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve total returns.

The Fund seeks to achieve its investment objective by tracking the performance of the Bloomberg Euro Government Inflation-Linked Bond Index (the "**Index**", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by Bloomberg (the "**Index Sponsor**") and it is described below under the sub-heading "Description of the Index".

The Fund may replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. The Fund may also invest in only a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index in an efficient manner, in a way that balances various risks and costs, such as transaction costs, with the goal of tracking the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure and characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index. The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Description of the Index

General Description: The Index measures the performance of investment-grade Eurozone government inflation-lined bond markets. The Index rebalances on a monthly basis. The Bloomberg ticker symbol for the Index is BEIG1T.

Disclaimer: *"Bloomberg®" and the Index are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited ("BISL"), the administrator of the Index (collectively, "Bloomberg"), and have been licensed for use for certain purposes by the ICAV.*

The Fund is not sponsored, endorsed, sold or promoted by Bloomberg. Bloomberg does not make any representation or warranty, express or implied, to the owners of or counterparties to the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly. The only relationship of Bloomberg to the ICAV is the licensing of certain trademarks, trade names and service marks and of the Index, which is determined, composed and calculated by BISL without regard to the ICAV or the Fund. Bloomberg has no obligation to take the needs of the ICAV or the owners of the Fund into consideration in determining, composing or calculating the Index. Bloomberg is not responsible for and has not participated in the determination of the timing, price, or quantities of the Fund to be issued. Bloomberg shall not have any obligation or liability, including, without limitation, to customers of the Fund, in connection with the administration, marketing or trading of the Fund.

BLOOMBERG DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO AND SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS THEREIN. BLOOMBERG DOES NOT MAKE ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ICAV, OWNERS OF THE FUND OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR ANY DATA RELATED THERETO. BLOOMBERG DOES NOT MAKE ANY EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE INDEX OR ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, TO THE MAXIMUM EXTENT ALLOWED BY LAW, BLOOMBERG, ITS LICENSORS, AND ITS AND THEIR RESPECTIVE EMPLOYEES, CONTRACTORS, AGENTS, SUPPLIERS, AND VENDORS SHALL HAVE NO LIABILITY OR RESPONSIBILITY WHATSOEVER FOR ANY INJURY OR DAMAGES—WHETHER DIRECT, INDIRECT, CONSEQUENTIAL, INCIDENTAL, PUNITIVE OR OTHERWISE—ARISING IN CONNECTION WITH THE FUND OR INDEX OR ANY DATA OR VALUES RELATING THERETO—WHETHER ARISING FROM THEIR NEGLIGENCE OR OTHERWISE, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Benchmark Administrator: BISL was authorised by the United Kingdom's Financial Conduct Authority (**FCA**) as a regulated UK benchmark administrator under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds in 2019 and can be found listed on the FCA Register.

Publication: The Index is calculated and published by Bloomberg.

Further Information and Website: The methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on https://www.bloomberg.com/professional/product/indices/bloomberg-fixed-income-indices/#/ucits.

Types and Use of Financial Derivative Instruments ("FDI")

The Fund may use interest rate and bond futures contracts to reduce duration risk versus the Index. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective. The expected effect of the use of FDI will be to reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who are willing to accept a medium level of volatility from time to time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Accumulating
Class L Dist	€100	2 December 2022 - 1 June 2023	Euro	No	Yes/3%	€1,000/€100	Distributing
Class A Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€1,000/€100	Accumulating
Class I Acc	€100	Closed	Euro	No	No	€1,000,000/€100	Accumulating
Class J Acc	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Accumulating
Class J Dist	€10,000	2 December 2022 - 1 June 2023	Euro	No	No	€1,000,000/€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of applications for Shares of the Fund:

"Business Day" means every weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Sponsor publishes the Index, and (ii) retail banks in Luxembourg and the Eurex market are normally open for business;

"Dealing Deadline" means 11:59am (Irish time) on the relevant Dealing Day; and

“Valuation Point” means 4:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Sales charge

Up to 3% of the value of the gross subscription in the Fund, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double charging,either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Sponsor to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund's performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Sponsor will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Sponsor provides descriptions of what the Index is designed to achieve, the Index Sponsor does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund's investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled "Description of the Index"); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Sponsor will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Sponsor or that the Index will not be amended significantly. Such changes may be made by the Index Sponsor at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled "Description of the Index", as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled "Investment Objectives and Policies". Investors' attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the investments of the Fund and re-weightings of the Index may give rise to various transaction costs, operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index. Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund's tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to-time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND V

SUPPLEMENT DATED 01 DECEMBER 2022

This Supplement contains specific information in relation to **ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND V** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe, the United States, Luxembourg and China & Hong Kong are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) two Business Days before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;

Dividend:	Means 0.4% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	02 August 2023, 07 August 2024, 06 August 2025 and 05 August 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 19 May 2022 and will close at 5:00 PM (Irish time) on 07 June 2022. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	05 August 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 07 June 2022 to 08 August 2022 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled "Investment Policy" below) and to (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

(i.i) Invest up to 100% of its assets in Equity Instruments. Once the Fund purchases the Equity Instruments it will then enter into a total return swap ("TRS") on the Equity Instruments in which it will swap out the performance and the income of the Equity Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Equity Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Equity Instruments directly.

ESG screening

The Equity Instruments will be made up of a minimum of 70% exposure to developed market companies which take account of environmental, social and governance ("ESG") factors. The ESG factors considered include, but are not limited to, the following:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Air & Water Pollution	Customer Satisfaction	Board composition
Deforestation	Data Protection and Privacy	Audit Committee Structure
Biodiversity	Gender & Diversity	Executive Compensation
Water scarcity	Employee Engagement	Lobbying
Waste Management	Community Relations	Political Contributions
Energy efficiency	Human Rights	Whistleblower Schemes
	Labour Standards	

In selecting the above Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

In determining how a company integrates the above ESG factors, the Manager will use analysis such as a sustainability risk score or ESG ratings provided by a recognised data provider such as Morningstar, MSCI or Bloomberg (or another data source nominated by the Manager). Such ratings and scores will be compared to other peers within the investment universe to select the Equity Instruments with a more favourable ESG rating/score. In addition, the Manager will in particular look to select Equity Instruments of companies that meet the criteria for inclusion in ESG screened indices such as the MSCI Europe ESG Screened Index (EUR). Such ESG screened indices only comprise Equity Instruments of companies which promote, among other characteristics, certain of the ESG factors listed above.

In addition to the ESG factors considered above, the Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

<u>Quantitative analysis</u>

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum** Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

<u>Qualitative analysis</u>

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

(i.ii) Gaining an exposure of up to 50% of the Fund's Net Asset Value either directly or indirectly to Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

The breakdown of the Funding Investments between Equity Instruments and Debt Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular Funding Investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular Funding Investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument.

II. *Exposure to the Basket*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to a basket of equity indices (the "Basket"). The Basket will comprise a balance of European, American and Chinese equity indices, such as the CSI 300 Index, the CSI 500 Index, MSCI Europe ESG Screened Index and the S&P 500 ESG Index. The Basket will be substantially weighted in favour of ESG indices that provide the Fund with an indirect exposure to large cap and mid to small-cap global companies which have a focus on ESG factors.

It is expected that the Fund will gradually gain exposure to the Basket, starting with an expected exposure of 25% of the Fund's Net Asset Value during the first year and reaching an expected exposure of between 75%-100% of the Fund's Net Asset Value during the year of the Fund's maturity (i.e. in the year of the Maturity Date). The aim of this gradual exposure is to reduce the overall volatility of the Fund's exposure to the Basket while gaining an exposure through different market cycles thus avoiding the impact of short-term price fluctuations in the global equity market. At any time that the Fund is not fully exposed to the Basket, the remaining percentage of the Fund's portfolio will be made up of the Funding Investments.

The Manager will from time to time modify the gradual exposure to the individual equity indices that make up the Basket and the optimal composition of the Basket depending on their view of the global equity market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. In addition, the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. To give a practical illustration of a scenario which would potentially cause an alteration of the Basket composition based on a hypothetical scenario in which the Basket includes the CSI 300 and CSI 500 indices, the Manager will also consider the fact that the CSI 300 is represented by large-cap companies whereas the CSI 500 is represented by medium/small-cap companies. In favourable macro-economic conditions, medium/small-cap companies tend to out-perform large-cap companies. Hence in such a scenario, the Basket might be weighted accordingly (i.e. greater exposure to the CSI 500) to avail of the market opportunity.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to either high or low levels of Sustainability Risk.**

In addition to what is contained in the Investment Policy section above, the Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify whether the investment is vulnerable to such risk; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on theNet Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be inline with the exposure that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 35% S&P 500 Net Total Return, 20% MSCI Europe High Dividend Net Total Return, 10% CSI 300 Index Net Total Return, 10% CSI 500 Index Net Total Return and 25% Bloomberg Barclays Euro Aggregate Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 4 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 19 May 2022 to 07 June 2022	Euro	No	€1,000	Up to 2%	€100	Distributing

Class A Dist	€100	From 19 May 2022 to 07 June 2022	Euro	No	€1,000	N/A	€100	Distributing
Class D Dist	€100	From 19 May 2022 to 07 June 2022	Euro	No	€500	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Risks of Directly Investing in China", "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold. In respect of the risks of directly investing in China, although the Fund will not directly invest in China, the Fund may engage a derivative counterparty that will provide the Fund with exposure to Chinese indices. Such derivative counterparties may themselves experience risks due to their direct investment in China which in turn allows them to provide the Fund with the relevant indirect exposure to China. This may lead to some risk for the Fund in respect of the relevant counterparty providing the Fund with a valuation for the derivative transaction that the Fund has entered into and thus investors should generally make themselves aware of the potential risks associated with investing directly in China.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: ESG TARGET GLOBAL COUPON 2026 FINECO AM FUND V
Legal entity identifier: 2549001IL74IUJPFHF86

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics promoted by the Fund include:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors is a key element of portfolio construction. The equity instruments in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and/or social characteristics, such as the MSCI Europe ESG Screened Index. In

addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies by the Manager and/or third party data providers with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive ESG factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control introduces a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

3. **Negative Screening (Norm-based exclusions)**
For direct holdings, the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which it [or its clients] deems incompatible with minimum responsible investing principles. To align the Fund's investments with this approach, the Manager has adopted a firm wide Exclusion Policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund invested in ESG screened index constituents which demonstrates the Fund's postive ESG tilt;

iii) The underying direct holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider); and

iv) The percentage of the Fund investment universe subject to the Manager's Exclusion Policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

N/A

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

N/A

How have the indicators for adverse impacts on sustainability factors been taken into account?

N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the investments against any applicable mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund follows an investment strategy which seeks to provide Shareholders with a Dividend and which seeks to provide a positive return at the Maturity Date linked to the

Basket exposure. The Funding Investments of the Fund are used to receive a pay out from an OTC counterparty and to facilitate the obtaining of the Basket exposure.

In selecting the Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **The Equity Instruments** will be made up of a minimum of 70% exposure to developed market companies which take account of ESG factors;
  b. **Direct equity investments** of the Fund will only be drawn from constituents of ESG screened indices;
  c. **Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;
  d. **Exclusion Policy**
     The Manager's Exclusion Policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  N/A

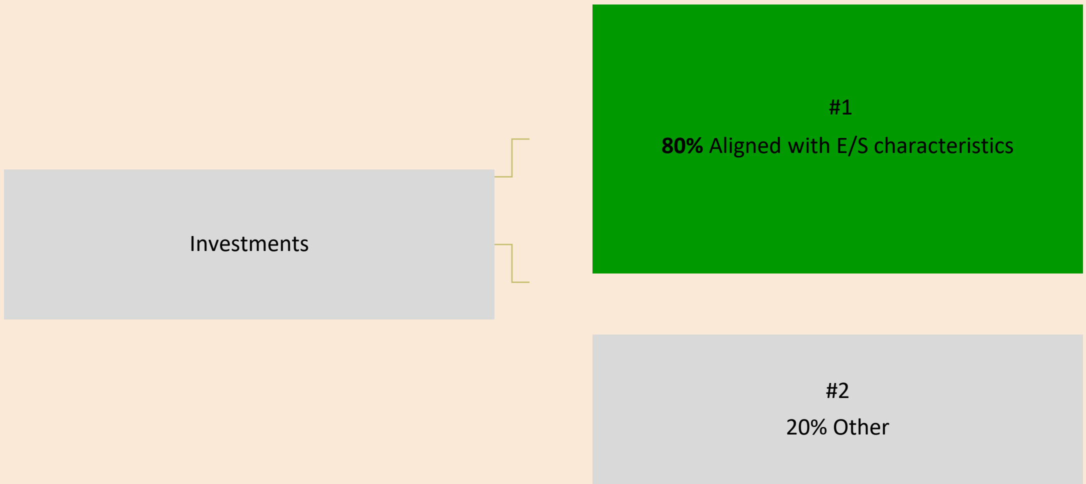
Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund.

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund and not the underying derivative exposure.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Fund gains exposure through the Basket (which is a derivative exposure as described above) to certain ESG screened indices. However, the Manager has determined that it is more appropriate not to look through derivatives employed by its Funds' under management in order to assess the attainment of environmental and/or social characteristics. Thus, the Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

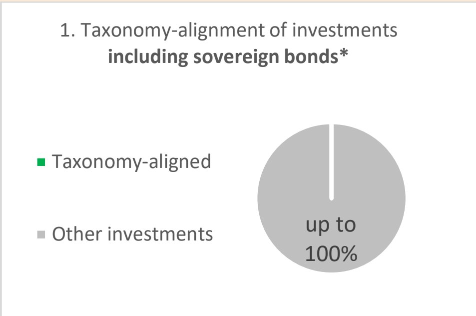
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

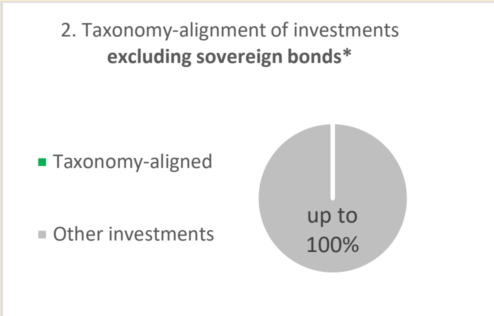
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A

What is the minimum share of socially sustainable investments?

N/A

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund **and not the underying derivative exposure**.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

ESG TARGET GLOBAL INFRASTRUCTURE COUPON 2026 FINECO AM FUND

SUPPLEMENT DATED 01 DECEMBER 2022

This Supplement contains specific information in relation to **ESG TARGET GLOBAL INFRASTRUCTURE COUPON 2026 FINECO AM FUND** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe, the United States, Luxembourg and China & Hong Kong are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) two Business Days before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;

Dividend:	Means 0.4% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	11 October 2023, 09 October 2024, 08 October 2025 and 07 October 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 01 August 2022 and will close at 5:00 PM (Irish time) on 09 August 2022. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	07 October 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 09 August 2022 to 10 October 2022 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a positive return at the Maturity Date linked to the performance of the Basket (as defined in the section entitled “Investment Policy” below) and to (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its assets in Equity Instruments. Once the Fund purchases the Equity Instruments it will then enter into a total return swap (“TRS”) on the Equity Instruments in which it will swap out the performance and the income of the Equity Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Equity Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Equity Instruments directly.

ESG screening

The Equity Instruments will be made up of a minimum of 70% exposure to developed market companies which take account of environmental, social and governance (“ESG”) factors. The ESG factors considered include, but are not limited to, the following:

Environmental Issues	**Social Issues**	**Corporate Governance Issues**
Air & Water Pollution	Customer Satisfaction	Board composition
Deforestation	Data Protection and Privacy	Audit Committee Structure
Biodiversity	Gender & Diversity	Executive Compensation
Water scarcity	Employee Engagement	Lobbying
Waste Management	Community Relations	Political Contributions
Energy efficiency	Human Rights	Whistleblower Schemes
	Labour Standards	

In selecting the above Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

In determining how a company integrates the above ESG factors, the Manager will use analysis such as a sustainability risk score or ESG ratings provided by a recognised data provider such as Morningstar, MSCI or Bloomberg (or another data source nominated by the Manager). Such ratings and scores will be compared to other peers within the investment universe to select the Equity Instruments with a more favourable ESG rating/score. In addition, the Manager will in particular look to select Equity Instruments of companies that meet the criteria for inclusion in ESG screened indices such as the MSCI Europe ESG Screened Index (EUR). Such ESG screened indices only comprise Equity Instruments of companies which promote, among other characteristics, certain of the ESG factors listed above.

In addition to the ESG factors considered above, the Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum** Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

(i.ii) Gaining an exposure of up to 50% of the Fund's Net Asset Value either directly or indirectly to Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

The breakdown of the Funding Investments between Equity Instruments and Debt Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular Funding Investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular Funding Investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument.

II. *Exposure to the Basket*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to a basket of equities (the "Basket"). The Basket will comprise a balance of constituents selected from the CSI 300 Index, the CSI 500 Index, and the S&P Global Infrastructure Index, whose business is linked to involvement in global infrastructure projects. The Basket will be substantially weighted in favour of the most liquid constituents (i.e. constituents that can easily be converted into cash in a short amount of time) from the S&P Global Infrastructure Index.

It is expected that the Fund will gradually gain exposure to the Basket, starting with an expected exposure of 25% of the Fund's Net Asset Value during the first year and reaching an expected exposure of between 75%-100% of the Fund's Net Asset Value during the year of the Fund's maturity (i.e. in the year of the Maturity Date). The aim of this gradual exposure is to reduce the overall volatility of the Fund's exposure to the Basket while gaining an exposure through different market cycles thus avoiding the impact of short-term price fluctuations in the global equity market. At any time that the

Fund is not fully exposed to the Basket, the remaining percentage of the Fund's portfolio will be made up of the Funding Investments.

The Manager will from time to time modify the gradual exposure to the individual equities that make up the Basket and the optimal composition of the Basket depending on their view of the global equity market which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements. In addition, the Manager will also analyse quantitative criterion such as historical volatility of financial indices and the correlation of such indices in respect of its assessment of the composition of the Basket. To give a practical illustration of a scenario which would potentially cause an alteration of the Basket composition based on a hypothetical scenario in which the Basket includes constituents of the CSI 300 and CSI 500 indices, the Manager will also consider the fact that the CSI 300 is represented by large-cap companies whereas the CSI 500 is represented by medium/small-cap companies. In favourable macro-economic conditions, medium/small-cap companies tend to out-perform large-cap companies. Hence in such a scenario, the Basket might be weighted accordingly (i.e. greater exposure to the CSI 500) to avail of the market opportunity.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to either high or low levels of Sustainability Risk.**

In addition to what is contained in the Investment Policy section above, the Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify whether the investment is vulnerable to such risk; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the

Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 35% S&P 500 Net Total Return, 20% MSCI Europe High Dividend Net Total Return, 10% CSI 300 Index Net Total Return, 10% CSI 500 Index Net Total Return and 25% Bloomberg Barclays Euro Aggregate Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 4 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L	€100	From 01	Euro	No	€1,000	Up to	€100	Distributing

Dist		August 2022 to 09 August 2022				2%		
Class A Dist	€100	From 01 August2022 to 09 August 2022	Euro	No	€1,000	N/A	€100	Distributing
Class D Dist	€100	From 01 August 2022 to 09 August 2022	Euro	No	€500	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Risks of Directly Investing in China", "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold. In respect of the risks of directly investing in China, although the Fund will not directly invest in China, the Fund may engage a derivative counterparty that will provide the Fund with exposure to Chinese indices. Such derivative counterparties may themselves experience risks due to their direct investment in China which in turn allows them to provide the Fund with the relevant indirect exposure to China. This may lead to some risk for the Fund in respect of the relevant counterparty providing the Fund with a valuation for the derivative transaction that the Fund has entered into and thus investors should generally make themselves aware of the potential risks associated with investing directly in China.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: ESG TARGET GLOBAL INFRASTRUCTURE COUPON 2026 FINECO AM FUND
Legal entity identifier: 254900XJTDLKCK038V52

Environmental and/or social characteristics

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics promoted by the Fund include:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors is a key element of portfolio construction. The equity instruments in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and/or social characteristics, such as the MSCI Europe ESG Screened Index. In

addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies by the Manager and/or third party data providers with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive ESG factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control introduces a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

3. **Negative Screening (Norm-based exclusions)**
For direct holdings, the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which it [or its clients] deems incompatible with minimum responsible investing principles. To align the Fund's investments with this approach, the Manager has adopted a firm wide Exclusion Policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund invested in ESG screened index constituents which demonstrates the Fund's postive ESG tilt;

iii) The underying direct holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider); and

iv) The percentage of the Fund investment universe subject to the Manager's Exclusion Policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

N/A

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

N/A

How have the indicators for adverse impacts on sustainability factors been taken into account?

N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the investments against any applicable mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

☐ No

What investment strategy does this financial product follow?

The Fund follows an investment strategy which seeks to provide Shareholders with a Dividend and which seeks to provide a positive return at the Maturity Date linked to the

Basket exposure. The Funding Investments of the Fund are used to receive a pay out from an OTC counterparty and to facilitate the obtaining of the Basket exposure.

In selecting the Equity Instruments, an emphasis will be placed on how the relevant company integrates ESG risks and opportunities into its corporate strategy (e.g., a realistic assessment of long-term ESG risks and opportunities, increased transparency into the company's ESG practices, management teams with aligned incentives, better governance practices, and thoughtful resource allocation).

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **The Equity Instruments** will be made up of a minimum of 70% exposure to developed market companies which take account of ESG factors;

b. **Direct equity investments** of the Fund will only be drawn from constituents of ESG screened indices;

c. **Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;

d. **Exclusion Policy**

The Manager's Exclusion Policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

N/A

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

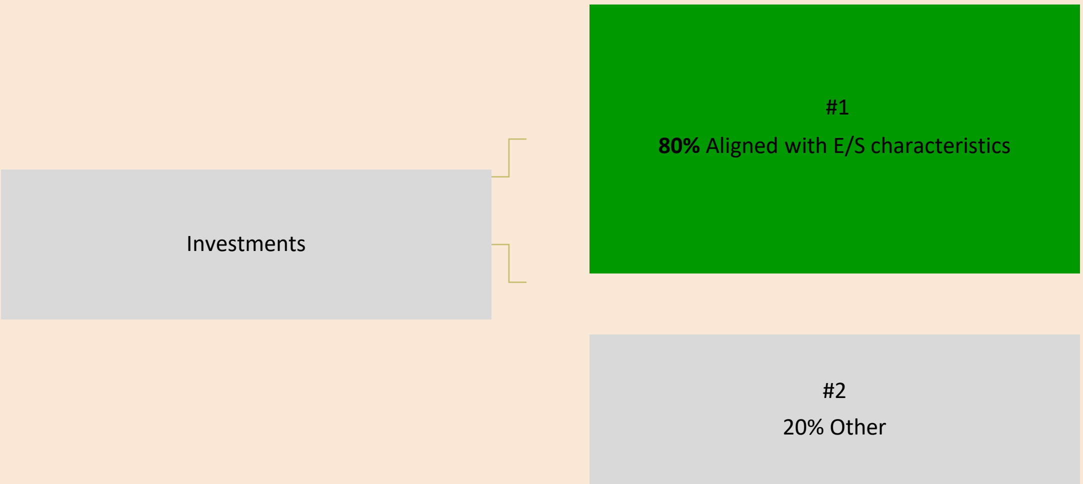
What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund.

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund and not the underying derivative exposure.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

  The Fund gains exposure through the Basket (which is a derivative exposure as described above) to certain ESG screened indices. However, the Manager has determined that it is more appropriate not to look through derivatives employed by its Funds' under management in order to assess the attainment of environmental and/or social characteristics. Thus, the Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

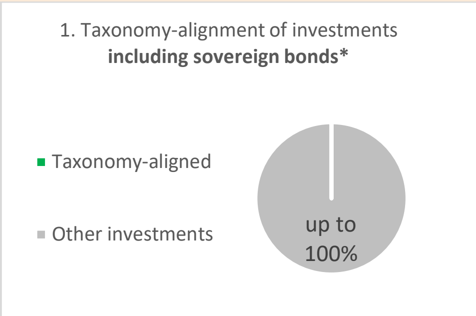
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

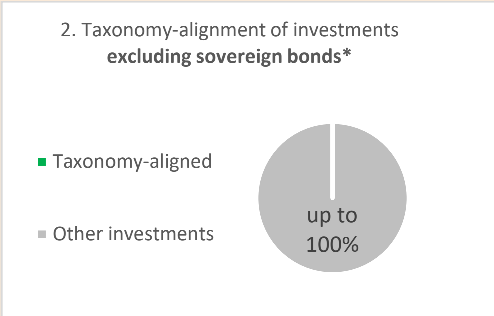
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A

What is the minimum share of socially sustainable investments?

N/A

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. The Fund principally uses derivatives to attain its investment objective. However, it is only the direct holdings of the Fund that are measured for the purpose of determining alignment with environmental and/or social characteristics promoted by the Fund **and not the underying derivative exposure**.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

SMART DEFENCE EQUITY 2028 FINECO AM FUND

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **SMART DEFENCE EQUITY 2028 FINECO AM FUND** (the "**Fund**"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every weekday on which retail banks and securities markets in Europe and Luxembourg are normally open for business.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	11 October 2023, 9 October 2024, 8 October 2025, 7 October 2026, 6 October 2027 and 11 October 2028, or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or

government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period: The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 4 August 2022 and will close at 5:00 PM (Irish time) on 9 August 2022.The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").

Maturity Date: 11 October 2028

Money Market/Short Term Instruments includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Subscription Period: means from 9 August 2022 to 10 October 2022 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Valuation Day: means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.

Valuation Point Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date, (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date and (iii) seek to provide a positive return at the Maturity Date linked to the performance of the Index, as defined below.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or

sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or credit/financial institutions and/or insurance companies authorised to operate in a Member State of the European Union or the European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to the STOXX® Europe Sustainability Select 30 EUR Index (the "Index"). The symbol for the Index is SUTSEP and the Bloomberg ID is BBG00K7RVSS2.

The Index captures the performance of stocks with low volatility and high dividends from the STOXX® Europe Sustainability Select 30 EUR Index. The component selection process first excludes all stocks whose 3- or 12-month historical volatilities are the highest. Among the remaining stocks, the 30 stocks with the highest 12-month historical dividend yields are selected to be included in the Index. Stocks may be selected from a variety of sectors such as but not limited to insurance, banks, utilities, telecommunications, energy, and healthcare. The Index applies standardized ESG exclusion screens for global standard screening, controversial weapons, thermal coal and tobacco producers, with the aim of taking responsible investment criteria into account.

For additional information on the Index, including its methodology and components as well as its ESG approach, investors can visit the Index provider's website at the following link: https://www.stoxx.com/index-details?symbol=SUTSEP

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 6) inorder to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and
- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps (“TRS”), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps (“TRS”): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund’s portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. "

A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund’s assets may be subject to total return swaps on the financial instruments outlined in the Fund’s investment objective and policy and it is expected that, in general, 0%-100% of the Fund’s assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the STOXX® Europe Sustainability Select 30 EUR Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days), unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250%of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

While the Manager integrates Sustainability Risk into the Fund's investment decision making process, the output of such Sustainability Risk integration is not the determining factor, nor even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risks may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type

Class L Dist	€100	From 4 August 2022 to 9 August 2022	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 4 August 2022 to 9 August 2022	Euro	No	€1,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 0% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

Fineco AM MSCI ACWI IMI Cyber Security UCITS ETF

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **Fineco AM MSCI ACWI IMI Cyber Security UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI ACWI IMI Cyber Security Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may invest up to 100% of its Net Asset Value in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights and warrants of companies located worldwide (the "**Invested Assets**"). The Fund may then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub-heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor

may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Reference Index

General Description: The Reference Index is based on the MSCI ACWI IMI Index, its parent index, and includes large, mid and small-cap securities across 23 developed markets and 24 emerging markets countries. The Reference Index aims to represent the performance of companies that potentially stand to benefit from increased investment in systems, products and services which provide protection against cyber-attacks.

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com/index-methodology. The Index Sponsor’s disclaimer is included as an appendix to this Supplement. *Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund may enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund may take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a high level of volatility from time-to-time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of the SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of the SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)).

The Manager has determined that the Fund may have a higher prospect of being impacted by a Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Sustainability Risk Integration when tracking the Reference Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

When looking to replicate the Reference Index via a Total Return Swap as described in the investment policies section, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great). The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

Sustainability Risk Integration when replicating the Reference Index directly (i.e. by holding some or all of the securities of the Reference Index)

When directly replicating the holdings of some or all of the Reference Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating

Class AH Acc	100	2 December 2022 - 1 June 2023	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	2 December 2022 - 1 June 2023	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	2 December 2022 - 1 June 2023	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the "MSCI Parties"). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Fineco AM MSCI EUR HY SRI Sustainable Corporate Bond UCITS ETF

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **Fineco AM MSCI EUR HY SRI Sustainable Corporate Bond UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI EUR HY SRI Sustainable Corporate Bond Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index and promote similar environmental and/or social characteristics as those of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Investment Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over

time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1.5% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Reference Index

General Description: The Reference Index is a fixed-rate, high-yield corporate bond benchmark that includes issuers with MSCI ESG Ratings of BBB or higher, and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms. The Reference Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index.

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com/index-methodology. The Index Sponsor’s disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for the purposes of hedging and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards and interest rate futures. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk.

Interest Rate Futures: The Fund may use interest rate futures to gain exposure to changes in relevant rates or to hedge against changes in relevant rates.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund’s Net Asset Value.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate level of volatility from time-to-time.

Investment Manager

The Manager has appointed BNP Paribas Asset Management France of 1 Boulevard Haussmann, 75009, Paris, France to act as investment manager pursuant to an investment management agreement dated 26 August 2022. The Investment Manager will provide discretionary asset management services to the Fund subject to the overall supervision of the Manager. The Investment Manager’s principal business is to manage collective investment schemes (UCITS and AIFs) and to provide investment management services to clients.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the back of this Supplement.[1]

SFDR Disclosure

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Investment Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable

[11] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund’s approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Taxonomy Regulation

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund’s portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class I Acc	100	From 2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**"	means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Paris are normally open for business;
"**Dealing Day**"	means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;
"**Dealing Deadline**"	means 1:30pm (Irish time) on the relevant Dealing Day;
"**Valuation Day**"	means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine;
"**Valuation Point**"	means 11.59pm (Irish time) on the relevant Business Day;

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

The fees of the Investment Manager shall be paid out of the Manager's fee and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.
A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Investment in High Yield Securities

It should be noted that funds, such as the Fund, that may invest in high yield securities and unrated securities of similar credit quality (commonly known as “junk bonds”) may be subject to greater levels of interest rate, credit and liquidity risk than funds that do not invest in such securities. These securities are considered predominately speculative with respect to the issuer’s continuing ability to make principal and interest payments. An economic downturn or period of rising interest rates could adversely affect the market for high yield securities and reduce the Fund’s ability to sell its high yield securities. If the issuer of a security is in default with respect to interest or principal payments, the Fund may lose its entire investment in such a security.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the "MSCI Parties"). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FINECO AM MSCI EUR HY SRI SUSTAINABLE CORPORATE BOND UCITS ETF **Legal entity identifier:** 2549007BLK93E2ZFCZ30

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The financial product (the "Fund") promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the Fund is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within

The Fund aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

The MSCI EUR HY SRI Sustainable Corporate Bond Index, administrated by MSCI Limited, has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the Fund, and are based on the reference benchmark ESG methodology:

- The percentage of the Fund's portfolio compliant with the reference benchmark minimum ESG ratings standards and controversial business involvement exclusion criteria;
- The percentage of the Fund's assets covered by the ESG analysis based on the index provider ESG methodology;
- The percentage of the Fund's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, the Investment Manager's internal methodology to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Investment Manager's ESG research and analysis department, i.e. the "Sustainability Centre", following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow

good governance practices. The Investment Manager uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the Investment Manager: [Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)](https://www.bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the Investment Manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How indicators for adverse impacts on sustainability factors are taken into account depends on the ESG methodology of the reference benchmark tracked by the Fund and used for the purpose of attaining the environmental or social characteristics promoted by the Fund.

The Investment Manager ensures that throughout its investment process, the Fund takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the Investment Manager Global Sustainability Strategy (GSS) and as further detailed below in this document and/or by relying on the ESG methodology and disclosures of the reference benchmark administrator.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the Fund exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the Investment Manager's Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, the Fund considers principal adverse impacts on sustainability factors. In order for the Investment Manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the Fund mainly relies on both of the following pillars:

1- Analysis of the embedded exclusion process of the reference benchmark, leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

More detailed information on the manner in which the Investment Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the Fund.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI EUR HY SRI Sustainable Corporate Bond Index while minimising as far as possible the tracking error between the Sub-Fund's performance and that of this index.

The index is a fixed-rate, high-yield corporate bond benchmark that includes issuers with MSCI ESG Ratings of BBB or higher, and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this Fund as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The Fund shall comply with the reference benchmark minimum ESG rating standards and controversial business involvement exclusion criteria.
- The Fund shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.
- The Fund should invest a proportion of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Fund does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The reference benchmark ESG scoring framework assesses corporate governance such as sound management structures, employee relations, remuneration of staff and tax compliance through a core set of standard key performance indicators that look especially at board, pay, ownership and control, and accounting practices.

Further information on the reference benchmark, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the MSCI indices can be found on www.msci.com.

Good governance practices include sound management structures, employee relations, remuneration of staff

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the Fund in accordance with the binding elements of its investment strategy represent the proportion of assets with either

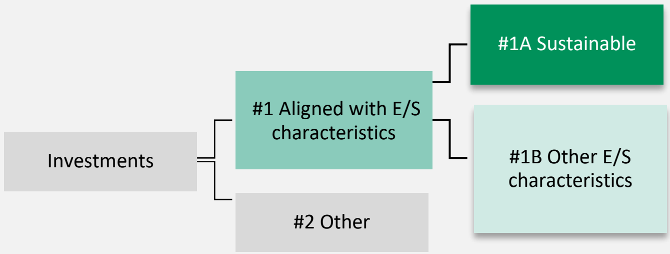
1) a positive ESG score and either a positive E score or a positive S score or

2) being Sustainable Investments according to the Investment Manager's ESG proprietary methodology.

However, the minimum proportion of investments used to meet the environmental or social characteristics promoted by the Fund has been set at the level of the minimum proportion of Sustainable Investments and is equal to 25%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the Fund that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the Fund is 25%.

The remaining proportion of the investments is mainly used as described below.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

Financial derivative instruments may be used for efficient portfolio management and hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the Fund.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

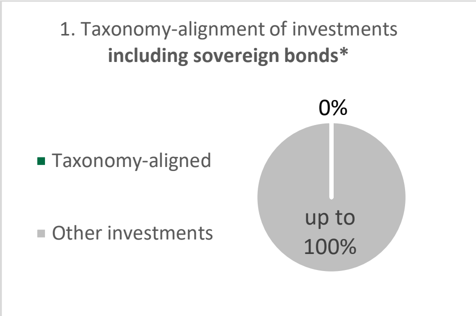
The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below. Even if the investment objective of the Fund falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter.

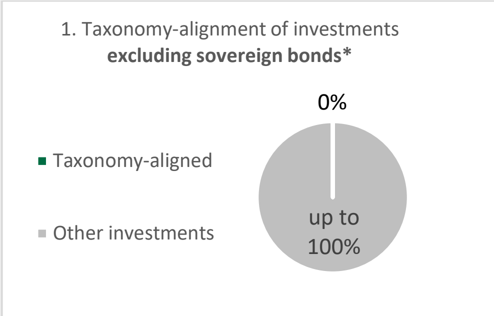
In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Investment Manager is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The investment strategy of the Fund is not to prevent investments in taxonomy-aligned activities. As such, the commitment within the Fund to invest in activities not aligned with the EU Taxonomy is minimal.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the Fund is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include the proportion of assets that do not attain the following standards established by the Investment Manager: 1) a positive ESG score and either a positive E score or a positive S score or 2) being Sustainable Investment according to the Investment Manager's ESG proprietary methodology or instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes.

Those investments are made in compliance with the Investment Manager internal processes, including the risk management policy and the Investment Manager's Responsible Business Conduct policy when applicable as minimum environmental or social safeguards. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The MSCI EUR HY SRI Sustainable Corporate Bond Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  The environmental or social characteristics promoted by the Fund are directly linked to the ones of the reference benchmark as the investment objective of the Fund is to replicate the performance of the reference benchmark, including fluctuations, and to maintain the tracking-error between the Fund and the reference benchmark below 1.5%.

  The reference benchmark is rule-based and therefore continuously apply its methodology, including environmental or social characteristics.

  However, there is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  The alignment of the investment strategy with the methodology of the index is intrinsic to the investment objective of the Fund which is to replicate the performance of the index, including fluctuations, and to maintain the tracking-error between the Fund and the index below 1.5%.

- ***How does the designated index differ from a relevant broad market index?***

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- ***Where can the methodology used for the calculation of the designated index be found?***

  The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy and summary investment process can be found on the Manager’s website at the following link https://finecoassetmanagement.com/sustainability/

Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond UCITS ETF

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve total returns.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index and promote similar environmental and/or social characteristics as those of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Investment Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over

time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1.5% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Reference Index

General Description: The Reference Index is a fixed-rate, investment-grade corporate bond benchmark that includes issuers with MSCI ESG Ratings of BBB or higher and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms. To be eligible, bonds must have up to, but not including, 3 years remaining to maturity. The Reference Index excludes issuers with any Fossil Fuel ties. The Reference Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index.

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com/index-methodology. The Index Sponsor's disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for the purposes of hedging and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards and interest rate futures. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk.

Interest Rate Futures: The Fund may use interest rate futures to gain exposure to changes in relevant rates or to hedge against changes in relevant rates.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the short term who are willing to accept a low level of volatility from time-to-time.

Investment Manager

The Manager has appointed BNP Paribas Asset Management France of 1 Boulevard Haussmann, 75009, Paris, France to act as investment manager pursuant to an investment management agreement dated 26 August 2022. The Investment Manager will provide discretionary asset management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business is to manage collective investment schemes (UCITS and AIFs) and to provide investment management services to clients.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Investment Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable

[11] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund’s approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Taxonomy Regulation

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund’s portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class I Acc	100	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**"	means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Paris are normally open for business;
"**Dealing Day**"	means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;
"**Dealing Deadline**"	means 1:30pm (Irish time) on the relevant Dealing Day;
"**Valuation Day**"	means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and
"**Valuation Point**"	means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

The fees of the Investment Manager shall be paid out of the Manager's fee and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the "MSCI Parties"). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FINECO AM MSCI EUR IG SRI SUSTAINABLE EX FOSSIL FUEL (1-3Y) CORPORATE BOND UCITS ETF **Legal entity identifier:** 25490063PUNFFIDJ8F87

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The financial product (the “Fund”) promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the Fund is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within

The Fund aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

The MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond Index, administrated by MSCI Limited, has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the Fund, and are based on the reference benchmark ESG methodology:

- The percentage of the Fund's portfolio compliant with the reference benchmark minimum ESG ratings standards and controversial business involvement exclusion criteria;
- The percentage of the Fund's assets covered by the ESG analysis based on the index provider ESG methodology;
- The percentage of the Fund's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, the Investment Manager's internal methodology to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Investment Manager's ESG research and analysis department, i.e. the "Sustainability Centre", following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow

good governance practices. The Investment Manager uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the Investment Manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the Investment Manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How indicators for adverse impacts on sustainability factors are taken into account depends on the ESG methodology of the reference benchmark tracked by the Fund and used for the purpose of attaining the environmental or social characteristics promoted by the Fund.

The Investment Manager ensures that throughout its investment process, the Fund takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the Investment Manager Global Sustainability Strategy (GSS) and as further detailed below in this document and/or by relying on the ESG methodology and disclosures of the reference benchmark administrator.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the Fund exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the Investment Manager's Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, the Fund considers principal adverse impacts on sustainability factors. In order for the Investment Manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the Fund mainly relies on both of the following pillars:

1- Analysis of the embedded exclusion process of the reference benchmark, leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

More detailed information on the manner in which the Investment Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the Fund.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The investment objective of the Fund is to achieve total returns.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond Index while minimising as far as possible the tracking error between the Fund's performance and that of this ndex.

The index is a fixed-rate, investment-grade corporate bond benchmark that includes issuers with MSCI ESG Ratings of BBB or higher and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms. To be eligible, bonds must have up to, but not including, 3 years remaining to maturity. The index excludes issuers with any Fossil Fuel ties.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this Fund as described below are systematically integrated throughout the investment process.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  - The Fund shall comply with the reference benchmark minimum ESG rating standards and controversial business involvement exclusion criteria.
  - The Fund shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.
  - The Fund should invest a proportion of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Fund does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

- ***What is the policy to assess good governance practices of the investee companies?***

The reference benchmark ESG scoring framework assesses corporate governance such as sound management structures, employee relations, remuneration of staff and tax compliance through a core set of standard key performance indicators that look especially at board, pay, ownership and control, and accounting practices.

Further information on the reference benchmark, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the MSCI indices can be found on www.msci.com.

Good governance practices include sound management structures, employee relations, remuneration of staff

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the Fund in accordance with the binding elements of its investment strategy represent the proportion of assets with either

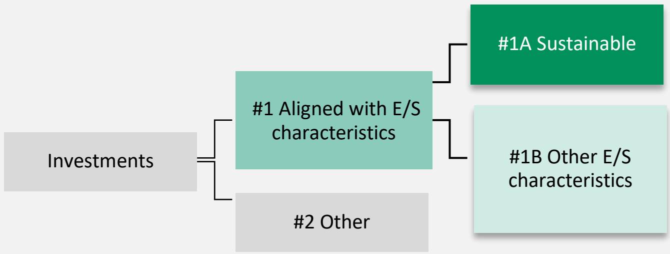
1) a positive ESG score and either a positive E score or a positive S score or

2) being Sustainable Investments according to the Investment Manager’s ESG proprietary methodology.

However, the minimum proportion of investments used to meet the environmental or social characteristics promoted by the Fund has been set at the level of the minimum proportion of Sustainable Investments and is equal to 30%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the Fund that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the Fund is 30%.

The remaining proportion of the investments is mainly used as described below.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

Financial derivative instruments may be used for efficient portfolio management and hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

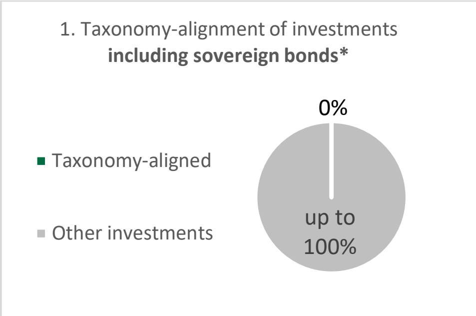
The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below. Even if the investment objective of the Fund falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter.

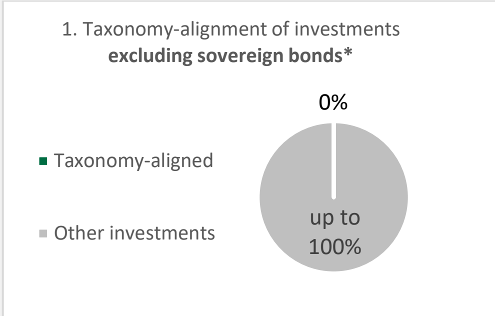
In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Investment Manager is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 0%.

The investment strategy of the Fund is not to prevent investments in taxonomy-aligned activities. As such, the commitment within the Fund to invest in activities not aligned with the EU Taxonomy is minimal.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the Fund is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include the proportion of assets that do not attain the following standards established by the Investment Manager: 1) a positive ESG score and either a positive E score or a positive S score or 2) being Sustainable Investment according to the Investment Manager's ESG proprietary methodology or instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes.

Those investments are made in compliance with the Investment Manager's internal processes, including the risk management policy and the Investment Manager's Responsible Business Conduct policy when applicable as minimum environmental or social safeguards. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  The environmental or social characteristics promoted by the Fund are directly linked to the ones of the reference benchmark as the investment objective of the Fund is to replicate the performance of the reference benchmark, including fluctuations, and to maintain the tracking-error between the Fund and the reference benchmark below 1.5%.

  The reference benchmark is rule-based and therefore continuously apply its methodology, including environmental or social characteristics.

  However, there is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  The alignment of the investment strategy with the methodology of the index is intrinsic to the investment objective of the Fund which is to replicate the performance of the index, including fluctuations, and to maintain the tracking-error between the Fund and the index below 1.5%.

- ***How does the designated index differ from a relevant broad market index?***

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- ***Where can the methodology used for the calculation of the designated index be found?***

  The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy and summary investment process can be found on the Manager's website at the following link https://finecoassetmanagement.com/sustainability/

Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel Corporate Bond UCITS ETF

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel Corporate Bond UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI EUR IG SRI Sustainable ex Fossil Fuel Corporate Bond Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index and promote similar environmental and/or social characteristics as those of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Investment Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over

time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error. For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1.5% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Reference Index

General Description: The Reference Index is a fixed-rate, investment-grade corporate bond benchmark that includes issuers with MSCI ESG Ratings of BBB or higher and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms. The Reference Index excludes issuers with any Fossil Fuel ties. The Reference Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index.

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com/index-methodology. The Index Sponsor’s disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for the purposes of hedging and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards and interest rate futures. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk.

Interest Rate Futures: The Fund may use interest rate futures to gain exposure to changes in relevant rates or to hedge against changes in relevant rates.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund’s Net Asset Value.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate level of volatility from time-to-time.

Investment Manager

The Manager has appointed BNP Paribas Asset Management France of 1 Boulevard Haussmann, 75009, Paris, France to act as investment manager pursuant to an investment management agreement dated 26 August 2022. The Investment Manager will provide discretionary asset management services to the Fund subject to the overall supervision of the Manager. The Investment Manager’s principal business is to manage collective investment schemes (UCITS and AIFs) and to provide investment management services to clients.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Investment Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund’s approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

[11] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

Taxonomy Regulation

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class I Acc	100	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

“**Business Day**” means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Paris are normally open for business;

“**Dealing Day**” means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 1:30pm (Irish time) on the relevant Dealing Day;

“**Valuation Day**” means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

“**Valuation Point**” means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

The fees of the Investment Manager shall be paid out of the Manager’s fee and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund’s operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed “**Fees and Expenses**”.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the "MSCI Parties"). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FINECO AM MSCI EUR IG SRI SUSTAINABLE EX FOSSIL FUEL CORPORATE BOND UCITS ETF **Legal entity identifier:** 254900GLVO3BT65M5Z79

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?	
☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The financial product (the "Fund") promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the Fund is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within

The Fund aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

The MSCI EUR IG SRI Sustainable ex Fossil Fuel Corporate Bond Index, administrated by MSCI Limited, has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the Fund, and are based on the reference benchmark ESG methodology:

- The percentage of the Fund's portfolio compliant with the reference benchmark minimum ESG ratings standards and controversial business involvement exclusion criteria;
- The percentage of the Fund's assets covered by the ESG analysis based on the index provider ESG methodology;
- The percentage of the Fund's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, the Investment Manager's internal methodology to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Investment Manager's ESG research and analysis department, i.e. the "Sustainability Centre", following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow

good governance practices. The Investment Manager uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the Investment Manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the Investment Manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How indicators for adverse impacts on sustainability factors are taken into account depends on the ESG methodology of the reference benchmark tracked by the Fund and used for the purpose of attaining the environmental or social characteristics promoted by the Fund.

The Investment Manager ensures that throughout its investment process, the Fund takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the Investment Manager Global Sustainability Strategy (GSS) and as further detailed below in this document and/or by relying on the ESG methodology and disclosures of the reference benchmark administrator.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the Fund exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the Investment Manager's Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, the Fund considers principal adverse impacts on sustainability factors. In order for the Investment Manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the Fund mainly relies on both of the following pillars:

1- Analysis of the embedded exclusion process of the reference benchmark, leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

More detailed information on the manner in which the Investment Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the Fund.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI EUR IG SRI Sustainable ex Fossil Fuel Corporate Bond Index while minimising as far as possible the tracking error between the Fund's performance and that of this index.

The index is a fixed-rate, investment grade corporate bond benchmark that includes issuers with MSCI ESG Ratings of BBB or higher and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms. The index excludes issuers with any Fossil Fuel ties.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this Fund as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The Fund shall comply with the reference benchmark minimum ESG rating standards and controversial business involvement exclusion criteria.
- The Fund shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.
- The Fund should invest a proportion of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Fund does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The reference benchmark ESG scoring framework assesses corporate governance such as sound management structures, employee relations, remuneration of staff and tax compliance through a core set of standard key performance indicators that look especially at board, pay, ownership and control, and accounting practices.

Further information on the reference benchmark, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the MSCI indices can be found on www.msci.com.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

The investments used to meet the environmental or social characteristics promoted by the Fund in accordance with the binding elements of its investment strategy represent the proportion of assets with either

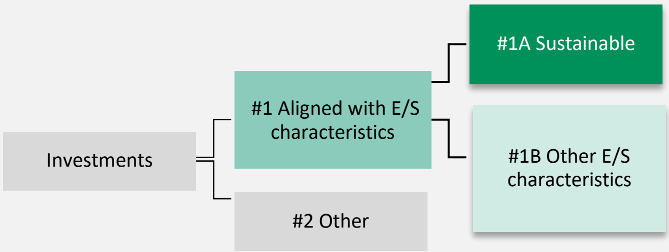
1) a positive ESG score and either a positive E score or a positive S score or

2) being Sustainable Investments according to the Investment Manager's ESG proprietary methodology.

However, the minimum proportion of investments used to meet the environmental or social characteristics promoted by the Fund has been set at the level of the minimum proportion of Sustainable Investments and is equal to 40%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the Fund that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the Fund is 40%.

The remaining proportion of the investments is mainly used as described below.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the Fund.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

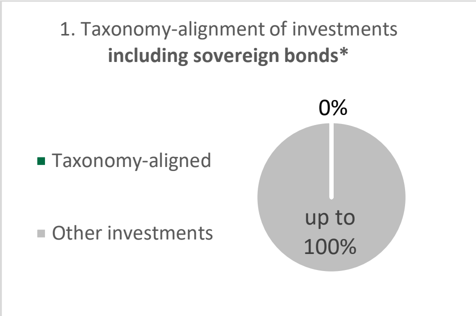
The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below. Even if the investment objective of the Fund falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter.

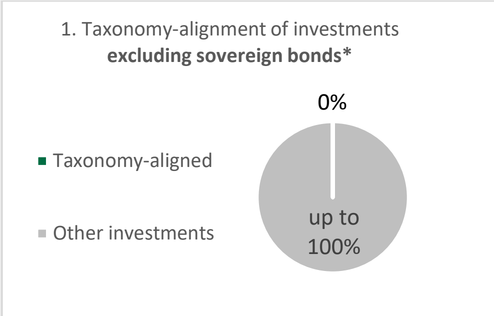
In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Investment Manager is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The investment strategy of the Fund is not to prevent investments in taxonomy-aligned activities. As such, the commitment within the Fund to invest in activities not aligned with the EU Taxonomy is minimal.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the Fund is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include the proportion of assets that do not attain the following standards established by the Investment Manager: 1) a positive ESG score and either a positive E score or a positive S score or 2) being Sustainable Investment according to the Investment Manager's ESG proprietary methodology or instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes.

Those investments are made in compliance with the Investment Manager's internal processes, including the risk management policy and the Investment Manager's Responsible Business Conduct policy when applicable as minimum environmental or social safeguards. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The MSCI EUR IG SRI Sustainable ex Fossil Fuel Corporate Bond Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  The environmental or social characteristics promoted by the Fund are directly linked to the ones of the reference benchmark as the investment objective of the Fund is to replicate the performance of the reference benchmark, including fluctuations, and to maintain the tracking-error between the Fund and the reference benchmark below 1.5%.

  The reference benchmark is rule-based and therefore continuously apply its methodology, including environmental or social characteristics.

  However, there is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  The alignment of the investment strategy with the methodology of the index is intrinsic to the investment objective of the Fund which is to replicate the performance of the index, including fluctuations, and to maintain the tracking-error between the Fund and the index below 1.5%.

- ***How does the designated index differ from a relevant broad market index?***

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- ***Where can the methodology used for the calculation of the designated index be found?***

  The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy and summary investment process can be found on the Manager's website at the following link https://finecoassetmanagement.com/sustainability/

Fineco AM MSCI USD HY SRI Sustainable Corporate Bond UCITS ETF

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **Fineco AM MSCI USD HY SRI Sustainable Corporate Bond UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI USD HY SRI Sustainable Corporate Bond Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index and promote similar environmental and/or social characteristics as those of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Investment Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over

time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1.5% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Reference Index

General Description: The Reference Index is a fixed-rate, high-yield corporate bond benchmark that includes issuers with MSCI ESG Ratings of BBB or higher, and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms. The Reference Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index.

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com/index-methodology. The Index Sponsor’s disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for the purposes of hedging and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards and interest rate futures. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk.

Interest Rate Futures: The Fund may use interest rate futures to gain exposure to changes in relevant rates or to hedge against changes in relevant rates.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the

Fund. The expected maximum level of short derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate level of volatility from time-to-time.

Investment Manager

The Manager has appointed BNP Paribas Asset Management France of 1 Boulevard Haussmann, 75009, Paris, France to act as investment manager pursuant to an investment management agreement dated 26 August 2022. The Investment Manager will provide discretionary asset management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business is to manage collective investment schemes (UCITS and AIFs) and to provide investment management services to clients.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Investment Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the

[11] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Taxonomy Regulation

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the= investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund’s portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	2 December 2022 – 1 June 2023	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**"	means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Paris are normally open for business;
"**Dealing Day**"	means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;
"**Dealing Deadline**"	means 1:30pm (Irish time) on the relevant Dealing Day;
"**Valuation Day**"	means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and
"**Valuation Point**"	means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

The fees of the Investment Manager shall be paid out of the Manager's fee and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Investment in High Yield Securities

It should be noted that funds, such as the Fund, that may invest in high yield securities and unrated securities of similar credit quality (commonly known as “junk bonds”) may be subject to greater levels of interest rate, credit and liquidity risk than funds that do not invest in such securities. These securities are considered predominately speculative with respect to the issuer’s continuing ability to make principal and interest payments. An economic downturn or period of rising interest rates could adversely affect the market for high yield securities and reduce the Fund’s ability to sell its high yield securities. If the issuer of a security is in default with respect to interest or principal payments, the Fund may lose its entire investment in such a security.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc (“MSCI”), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the “MSCI Parties”). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FINECO AM MSCI USD HY SRI SUSTAINABLE CORPORATE BOND UCITS ETF **Legal entity identifier: 2549001UELK8FPXCN712**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?

☐ Yes

☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The financial product (the "Fund") promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the Fund is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within

The Fund aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

The MSCI USD HY SRI Sustainable Corporate Bond Index, administrated by MSCI Limited, has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the Fund, and are based on the reference benchmark ESG methodology:

- The percentage of the Fund's portfolio compliant with the reference benchmark minimum ESG ratings standards and controversial business involvement exclusion criteria;
- The percentage of the Fund's assets covered by the ESG analysis based on the index provider ESG methodology;
- The percentage of the Fund's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, the Investment Manager's internal methodology to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Investment Manager's ESG research and analysis department, i.e. the "Sustainability Centre", following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow

good governance practices. The Investment Manager uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the Investment Manager: [Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)](https://www.bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the Investment Manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How indicators for adverse impacts on sustainability factors are taken into account depends on the ESG methodology of the reference benchmark tracked by the Fund and used for the purpose of attaining the environmental or social characteristics promoted by the Fund.

The Investment Manager ensures that throughout its investment process, the Fund takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the Investment Manager Global Sustainability Strategy (GSS) and as further detailed below in this document and/or by relying on the ESG methodology and disclosures of the reference benchmark administrator.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the Fund exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the Investment Manager's Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, the Fund considers principal adverse impacts on sustainability factors. In order for the Investment Manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the Fund mainly relies on both of the following pillars:

1- Analysis of the embedded exclusion process of the reference benchmark, leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

More detailed information on the manner in which the Investment Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the Fund.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI USD HY SRI Sustainable Corporate Bond Index while minimising as far as possible the tracking error between the Fund's performance and that of this index.

The index is a fixed-rate, high-yield corporate bond benchmark that includes issuers with MSCI ESG Ratings of BBB or higher, and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this Fund as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The Fund shall comply with the reference benchmark minimum ESG rating standards and controversial business involvement exclusion criteria.
- The Fund shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.
- The Fund should invest a proportion of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Fund does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

- ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The reference benchmark ESG scoring framework assesses corporate governance such as sound management structures, employee relations, remuneration of staff and tax compliance through a core set of standard key performance indicators that look especially at board, pay, ownership and control, and accounting practices.

Further information on the reference benchmark, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the MSCI indices can be found on www.msci.com.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

The investments used to meet the environmental or social characteristics promoted by the Fund in accordance with the binding elements of its investment strategy represent the proportion of assets with either

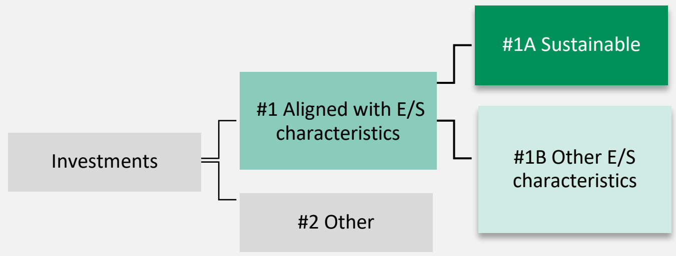
1) a positive ESG score and either a positive E score or a positive S score or

2) being Sustainable Investments according to the Investment Manager's ESG proprietary methodology.

However, the minimum proportion of investments used to meet the environmental or social characteristics promoted by the Fund has been set at the level of the minimum proportion of Sustainable Investments and is equal to 15%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the Fund that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the Fund is 15%.

The remaining proportion of the investments is mainly used as described below.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

Financial derivative instruments may be used for efficient portfolio management and hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the Fund.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

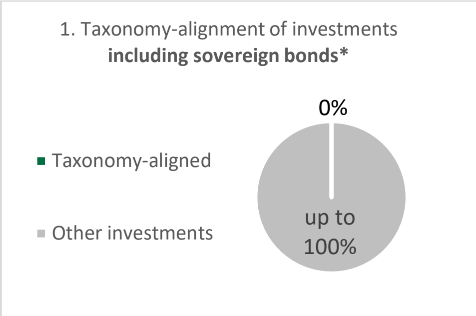
The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below. Even if the investment objective of the Fund falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter.

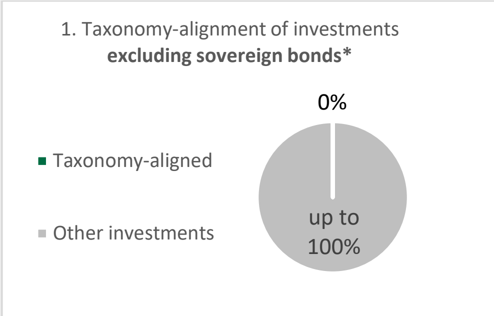
In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Investment Manager is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 0%.

The investment strategy of the Fund is not to prevent investments in taxonomy-aligned activities. As such, the commitment within the Fund to invest in activities not aligned with the EU Taxonomy is minimal.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the Fund is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include the proportion of assets that do not attain the following standards established by the Investment Manager: 1) a positive ESG score and either a positive E score or a positive S score or 2) being Sustainable Investment according to the Investment Manager's ESG proprietary methodology or instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes.

Those investments are made in compliance with the Investment Manager's internal processes, including the risk management policy and the Investment Manager's Responsible Business Conduct policy when applicable as minimum environmental or social safeguards. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The MSCI USD HY SRI Sustainable Corporate Bond Indexhas been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

The environmental or social characteristics promoted by the Fund are directly linked to the ones of the reference benchmark as the investment objective of the Fund is to replicate the performance of the reference benchmark, including fluctuations, and to maintain the tracking-error between the Fund and the reference benchmark below 1.5%.

The reference benchmark is rule-based and therefore continuously apply its methodology, including environmental or social characteristics.

However, there is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The alignment of the investment strategy with the methodology of the index is intrinsic to the investment objective of the Fund which is to replicate the performance of the index, including fluctuations, and to maintain the tracking-error between the Fund and the index below 1.5%.

- ***How does the designated index differ from a relevant broad market index?***

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- ***Where can the methodology used for the calculation of the designated index be found?***

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy and summary investment process can be found on the Manager's website at the following link https://finecoassetmanagement.com/sustainability/

Fineco AM MSCI USD IG Liquid SRI Sustainable Corporate Bond UCITS ETF

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **Fineco AM MSCI USD IG Liquid SRI Sustainable Corporate Bond UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI USD IG Liquid SRI Sustainable Corporate Bond Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index and promote similar environmental and/or social characteristics as those of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Investment Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over

time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1.5% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Reference Index

General Description: The Reference Index is an investment-grade, US dollar-denominated benchmark that includes issuers with MSCI ESG Ratings of BBB or higher and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms. The Reference Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index.

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com/index-methodology. The Index Sponsor’s disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for the purposes of hedging and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards and interest rate futures. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk.

Interest Rate Futures: The Fund may use interest rate futures to gain exposure to changes in relevant rates or to hedge against changes in relevant rates.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the

Fund. The expected maximum level of short derivative positions which the Fund may hold is 10% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund’s Net Asset Value.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate level of volatility from time-to-time.

Investment Manager

The Manager has appointed BNP Paribas Asset Management France of 1 Boulevard Haussmann, 75009, Paris, France to act as investment manager pursuant to an investment management agreement dated 26 August 2022. The Investment Manager will provide discretionary asset management services to the Fund subject to the overall supervision of the Manager. The Investment Manager’s principal business is to manage collective investment schemes (UCITS and AIFs) and to provide investment management services to clients.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II to this Supplement.[1]

SFDR Disclosure

The Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

It has been determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Investment Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund’s approach to the

[11] The information contained in Annex II has been completed using information provided by the Investment Manager of the Fund.

management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Taxonomy Regulation

While the Fund promotes environmental and/or social characteristics within the meaning of Article 8 of the SFDR, it should be noted that as the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	2 December 2022 – 1 June 2023	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	2 December 2022 – 1 June 2023	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**"	means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Paris are normally open for business;
"**Dealing Day**"	means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;
"**Dealing Deadline**"	means 1:30pm (Irish time) on the relevant Dealing Day;
"**Valuation Day**"	means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and
"**Valuation Point**"	means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

The fees of the Investment Manager shall be paid out of the Manager's fee and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc (“MSCI”), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the “MSCI Parties”). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FINECO AM MSCI USD IG LIQUID SRI SUSTAINABLE CORPORATE BOND UCITS ETF **Legal entity identifier:** 254900ZYS0PG3V8ECA96

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?

☐ **Yes** ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The financial product (the "Fund") promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the Fund is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within

The Fund aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

The MSCI USD IG Liquid SRI Sustainable Corporate Bond Index, administrated by MSCI Limited, has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the Fund, and are based on the reference benchmark ESG methodology:

- The percentage of the Fund's portfolio compliant with the reference benchmark minimum ESG ratings standards and controversial business involvement exclusion criteria;
- The percentage of the Fund's assets covered by the ESG analysis based on the index provider ESG methodology;
- The percentage of the Fund's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, the Investment Manager's internal methodology to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Investment Manager's ESG research and analysis department, i.e. the "Sustainability Centre", following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow

good governance practices. The Investment Manager uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the Investment Manager: [Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)](https://www.bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the Investment Manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How indicators for adverse impacts on sustainability factors are taken into account depends on the ESG methodology of the reference benchmark tracked by the Fund and used for the purpose of attaining the environmental or social characteristics promoted by the Fund.

The Investment Manager ensures that throughout its investment process, the Fund takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the Investment Manager Global Sustainability Strategy (GSS) and as further detailed below in this document and/or by relying on the ESG methodology and disclosures of the reference benchmark administrator.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the Fund exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the Investment Manager’s Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, the Fund considers principal adverse impacts on sustainability factors. In order for the Investment Manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the Fund mainly relies on both of the following pillars:

1- Analysis of the embedded exclusion process of the reference benchmark, leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

More detailed information on the manner in which the Investment Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the Fund.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI USD IG Liquid SRI Sustainable Corporate Bond Index while minimising as far as possible the tracking error between the Fund's performance and that of this index.

The index is an investment-grade, US dollar denominated benchmark that includes issuers with MSCI ESG Ratings of BBB or higher and excludes issuers that are involved in business activities that are restricted according to pre-defined Business Involvement Screens. Issuers are screened for levels of involvement expressed in terms of % of associated revenue and may relate to activities pertaining to adult entertainment, alcohol, gambling, tobacco, conventional weapons, civilian firearms, nuclear weapons, controversial weapons, nuclear power, thermal coal, fossil fuels and genetically modified organisms.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this Fund as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

- The Fund shall comply with the reference benchmark minimum ESG rating standards and controversial business involvement exclusion criteria.
- The Fund shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.
- The Fund should invest a proportion of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Fund does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The reference benchmark ESG scoring framework assesses corporate governance such as sound management structures, employee relations, remuneration of staff and tax compliance through a core set of standard key performance indicators that look especially at board, pay, ownership and control, and accounting practices.

Further information on the reference benchmark, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the MSCI indices can be found on www.msci.com.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the Fund in accordance with the binding elements of its investment strategy represent the proportion of assets with either

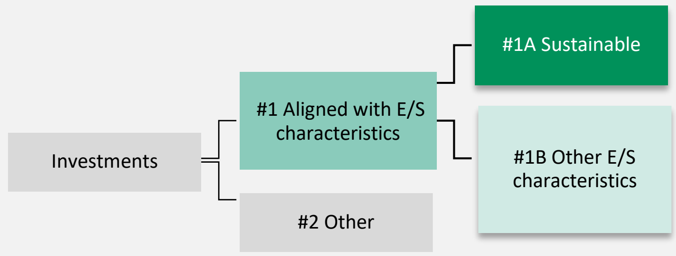
1) a positive ESG score and either a positive E score or a positive S score or

2) being Sustainable Investments according to the Investment Manager’s ESG proprietary methodology.

However, the minimum proportion of investments used to meet the environmental or social characteristics promoted by the Fund has been set at the level of the minimum proportion of Sustainable Investments and is equal to 35%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the Fund that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the Fund is 35%.

The remaining proportion of the investments is mainly used as described below.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

Financial derivative instruments may be used for efficient portfolio management and hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the Fund.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?
