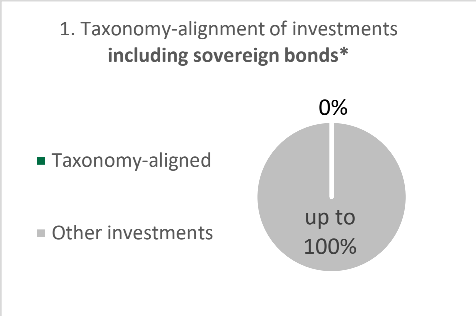
The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below. Even if the investment objective of the Fund falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter.

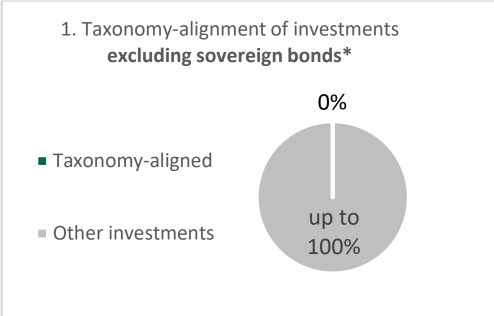
In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Investment Manager is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 0%.

The investment strategy of the Fund is not to prevent investments in taxonomy-aligned activities. As such, the commitment within the Fund to invest in activities not aligned with the EU Taxonomy is minimal.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the Fund is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include the proportion of assets that do not attain the following standards established by the Investment Manager: 1) a positive ESG score and either a positive E score or a positive S score or 2) being Sustainable Investment according to the Investment Manager's ESG proprietary methodology or instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes.

Those investments are made in compliance with the Investment Manager's internal processes, including the risk management policy and the Investment Manager's Responsible Business Conduct policy when applicable as minimum environmental or social safeguards. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The MSCI USD IG Liquid SRI Sustainable Corporate Bond Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  The environmental or social characteristics promoted by the Fund are directly linked to the ones of the reference benchmark as the investment objective of the Fund is to replicate the performance of the reference benchmark, including fluctuations, and to maintain the tracking-error between the Fund and the reference benchmark below 1.5%.

  The reference benchmark is rule-based and therefore continuously apply its methodology, including environmental or social characteristics.

  However, there is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  The alignment of the investment strategy with the methodology of the index is intrinsic to the investment objective of the Fund which is to replicate the performance of the index, including fluctuations, and to maintain the tracking-error between the Fund and the index below 1.5%.

- ***How does the designated index differ from a relevant broad market index?***

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- ***Where can the methodology used for the calculation of the designated index be found?***

  The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy and summary investment process can be found on the Manager's website at the following link https://finecoassetmanagement.com/sustainability/

Fineco AM MSCI World Consumer Staples ESG Leaders UCITS ETF

SUPPLEMENT DATED 23 AUGUST 2024

This Supplement contains specific information in relation to **Fineco AM MSCI World Consumer Staples ESG Leaders UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI World Consumer Staples Region ESG Leaders Custom Index (the "**Reference Index**", as described below under the sub- heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may invest up to 100% of its Net Asset Value in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights and warrants of companies located worldwide (the "**Invested Assets**"). The Fund may then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub-heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor

may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index and promote similar environmental and/or social characteristics as those of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

ESG Screening

Where the Reference Index is synthetically replicated, the Manager applies its exclusion policy to the Invested Assets. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. In addition, the Invested Assets are selected using only the constituents of ESG screened indices.

All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

Description of the Reference Index

General Description: The MSCI World Consumer Staples Index is the parent index of the Reference Index and it includes large and mid-cap securities across 23 developed markets countries. The methodology aims to include securities of companies with the highest ESG ratings representing 50% of the market capitalization in each sector and region of the parent index. Constituents of the Reference Index must have an MSCI ESG Rating of 'BB' or above and an MSCI ESG Controversies Score of 3 or above. In addition, companies showing qualifying involvement in alcohol, gambling, tobacco, nuclear power, civilian firearms, fossil fuels extraction, thermal coal power and weapons as well as companies that contravene the UN Global Compact principles, the United Nations Guiding Principles for Business and Human Rights and the International Labour Organisation's set of labour standards are excluded from the Reference Index. All securities in the Reference Index are classified in the Consumer Staples sector as per the Global Industry Classification Standard (GICS®).

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com. The Index Sponsor's disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund may enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund may take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest

in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

The Manager manages the Fund in accordance with its Responsible Investment Policy (the "ESG Policy") on a continuous basis. The Manager has fully integrated the ESG Policy into the overall investment process for the Fund (the "Sustainable Investment Process"). The Manager's ESG Policy as well as the Sustainable Investment Process are available on the Manager's website at the following link: https://finecoassetmanagement.com/sustainability/.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Sustainability Risk Integration when tracking the Reference Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the Fund's selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policies section above relating to tracking the Reference Index via a Total Return Swap, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Sustainability Risk Integration when replicating the Reference Index directly (i.e. by holding some or all of the securities of the Reference Index)

When directly replicating the holdings of some or all of the Reference Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	Closed	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	From 26 August 2024 – 24 February 2025	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	From 26 August 2024 – 24 February 2025	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the "MSCI Parties"). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: Fineco AM MSCI World Consumer Staples ESG Leaders UCITS ETF
Legal entity identifier: 2549001FCUZW31EBKR77

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics of this product include the following:

1. **Sustainable Investments**: The Fund partially invests in sustainable investments as defined as investment in companies and issuers that contribute to an environmental or social objective, while doing no significant harm.
2. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors are a key element of the construction of the Invested Assets. The Invested Assets in which

the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and social characteristics such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

3. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better environmental and/or social characteristics.

4. **Negative Screening (Norm-based exclusions)**
For the Invested Assets the Manager (see link to exclusion policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Invested Assets with this approach, the Manager, for the Invested Assets only, considers the following categories which are outlined in more detail in the exclusion policy:

    - United Nations Global Compact Principles
    - Controversial Weapons
    - Tobacco
    - Climate Change
    - Forced Labour

The Fund pursues the environmental and/or social characteristics promoted by it through replicating the Reference Index synthetically, via investment in the Invested Assets.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i. The minimum Fund level ESG score;

ii. The percentage of the Invested Assets selected from ESG screened indices;

iii. The percentage of the Fund invested in sustainable investments;

iv. The holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider) and

v. The percentage of the Fund investment universe subject to the Manager's exclusion policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, its internal methodology to determine sustainable investments, which partially relies (for the good governance and positive contribution criteria, as per 1 and 3 below) on its ESG third party data provider's methodology, as also clearly explained in the publicly available document on the Manager's website at the below link. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. A company must meet the criteria described below in order to be considered as contributing to an environmental or social objective:

1. Demonstrate good governance. A company must pass MSCI ESG Research's criteria for the SFDR Article 2 (17) "good governance" (strong overall management and governance structures). Pass indicates that the ESG Rating score is BB or above.

2. Do no significant harm to other environmental or social objectives. The Manager applies its own norms-based Exclusion Policy as the criteria to assess if the company passes or fails the SFDR article 2 (17) "do no significant harm".

3. Make a positive contribution towards an environmental or social objective. A company must derive at least 20% of revenue from economic activities that positively contribute to a social or environmental theme and / or have a carbon emissions reduction target approved by the science-based targets initiative (SBTi). From the perspective of targeting an environmental objective, revenue alignment includes activities focused on climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources. Activities focused on social objectives include access to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services, and bridging the digital divide in least developed countries.

More information on the internal methodology can be found on the website of the Manager: https://finecoassetmanagement.com/responsible-investing

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

How have the indicators for adverse impacts on sustainability factors been taken into account?

When replicating the Reference Index via a Total Return Swap through the Invested Assets, principal adverse impact ("PAI") indicators are calculated at Invested Assets level. The results will be compared with that of a chosen proxy benchmark representative of the Invested Asset's investment universe. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social determine what the Manager can improve relative to the Invested Assets, and where the Manager can engage with relevant issuers to improve on such indicators.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.

2. Through ensuring that the sustainable investments that the Manager makes are:

   a. Made in investee companies that demonstrate good governance:

   b. Made in investee companies that demonstrates that they do no significant harm to other environmental objectives; and

   c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against the mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by either directly or indirectly tracking the performance of the Reference Index, while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

Where the Reference Index is synthetically replicated, the Manager applies its exclusion policy to the Invested Assets. All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process, depending on the manner in which the Reference Index is being replicated,
i.e. either directly or indirectly.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **The Invested Assets** will only be drawn from constituents of ESG screened indices;
b. **Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;
c. **Exclusion Policy**
The Manager's exclusion policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

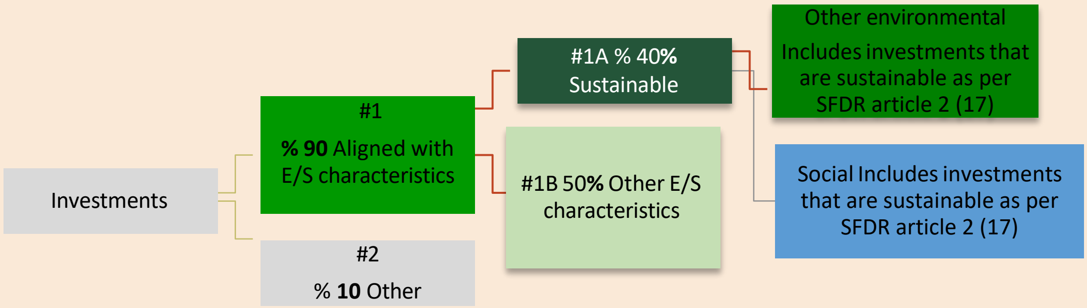
Not applicable

What is the policy to assess good governance practices of the investee companies?

For the Invested Assets, good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 40% in sustainable investments.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

  The Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

- **Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy[1]?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

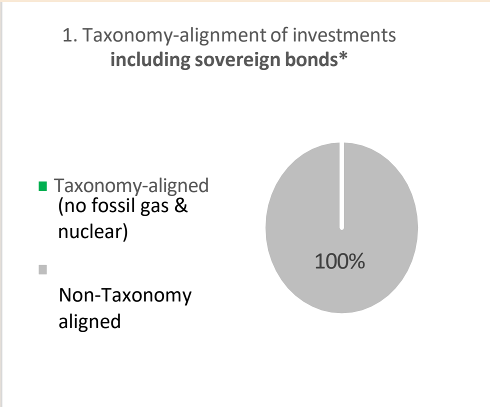
☒ No

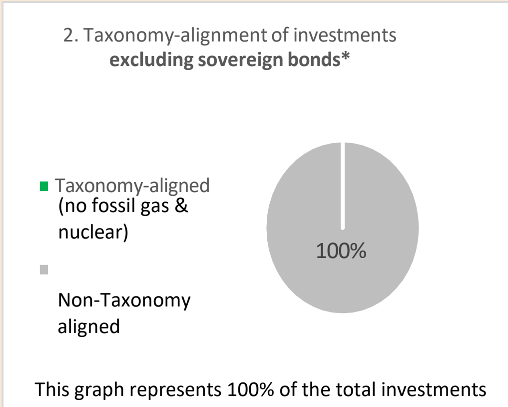
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%*

What is the minimum share of socially sustainable investments?

40%*

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction, efficient portfolio management and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manger's website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)]

Fineco AM MSCI World Financials ESG Leaders UCITS ETF

SUPPLEMENT DATED 23 AUGUST 2024

This Supplement contains specific information in relation to **Fineco AM MSCI World Financials ESG Leaders UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI World Financials Region ESG Leaders Custom Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may invest up to 100% of its Net Asset Value in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights and warrants of companies located worldwide (the "**Invested Assets**"). The Fund may then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub-heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor

may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index and promote similar environmental and/or social characteristics as those of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security’s price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to " Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

ESG Screening

Where the Reference Index is synthetically replicated, the Manager applies its exclusion policy to the Invested Assets. The Manager’s exclusion policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/. In addition, the Invested Assets are selected using only the constituents of ESG screened indices.

All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

Description of the Reference Index

General Description: The MSCI World Financials Index is the parent index of the Reference Index and it captures large and mid cap representation across 23 developed markets countries. The methodology aims to include securities of companies with the highest ESG ratings representing 50% of the market capitalization in each sector and region of the parent index. Constituents of the Reference Index must have an MSCI ESG Rating of 'BB' or above and an MSCI ESG Controversies Score of 3 or above. In addition, companies showing qualifying involvement in alcohol, gambling, tobacco, nuclear power, civilian firearms, fossil fuels extraction, thermal coal power and weapons as well as companies that contravene the UN Global Compact principles, the United Nations Guiding Principles for Business and Human Rights and the International Labour Organisation's set of labour standards are excluded from the Reference Index. All securities in the Reference Index are classified in the Financials sector as per the Global Industry Classification Standard (GICS®).

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com. The Index Sponsor's disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund may enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. The Funds maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its

Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund may take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a high level of volatility from time-to-time.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest

in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

The Manager manages the Fund in accordance with its Responsible Investment Policy (the "**ESG Policy**") on a continuous basis. The Manager has fully integrated the ESG Policy into the overall investment process for the Fund (the "**Sustainable Investment Process**"). The Manager's ESG Policy as well as the Sustainable Investment Process are available on the Manager's website at the following link: https://finecoassetmanagement.com/sustainability/.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)).

The Manager has determined that the Fund may have a lower prospect of being impacted by a Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Sustainability Risk Integration when tracking the Reference Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policies section above relating to tracking the Reference Index via a Total Return Swap, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Sustainability Risk Integration when replicating the Reference Index directly (i.e. by holding some or all of the securities of the Reference Index)

When directly replicating the holdings of some or all of the Reference Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	Closed	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	26 August 2024 - 24 February 2025	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	26 August 2024 - 24 February 2025	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

“**Business Day**” means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

“**Dealing Day**” means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

“**Valuation Day**” means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

“**Valuation Point**” means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund’s operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed “**Fees and Expenses**”.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc (“MSCI”), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the “MSCI Parties”). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: Fineco AM MSCI World Financials ESG Leaders UCITS ETF
Legal entity identifier: 254900O6VYE7JXYA7J49

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics of this product include the following:

1. **Sustainable Investments**: The Fund partially invests in sustainable investments as defined as investment in companies and issuers that contribute to an environmental or social objective, while doing no significant harm.
2. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors are a key element of the construction of the Invested Assets. The Invested Assets in which

the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and social characteristics such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies with the exclusion of ESG “laggards” from the Fund’s direct investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

3. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better environmental and/or social characteristics.

4. **Negative Screening (Norm-based exclusions)**
For the Invested Assets the Manager (see link to exclusion policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Invested Assets with this approach, the Manager, for the Invested Assets only, considers the following categories which are outlined in more detail in the exclusion policy:

    - United Nations Global Compact Principles
    - Controversial Weapons
    - Tobacco
    - Climate Change
    - Forced Labour

The Fund pursues the environmental and/or social characteristics promoted by it through replicating the Reference Index synthetically, via investment in the Invested Assets.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Invested Assets selected from ESG screened indices ;

iii) The percentage of the Fund invested in sustainable investments;

iv) The holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider) and

v) The percentage of the Fund investment universe subject to the Manager’s exclusion policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, its internal methodology to determine sustainable investments, which partially relies (for the good governance and positive contribution criteria, as per 1 and 3 below) on its ESG third party data provider's methodology, as also clearly explained in the publicly available document on the Manager's website at the below link. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. A company must meet the criteria described below in order to be considered as contributing to an environmental or social objective:

1. Demonstrate good governance. A company must pass MSCI ESG Research's criteria for the SFDR Article 2 (17) "good governance" (strong overall management and governance structures). Pass indicates that the ESG Rating score is BB or above.

2. Do no significant harm to other environmental or social objectives. The Manager applies its own norms-based Exclusion Policy as the criteria to assess if the company passes or fails the SFDR article 2 (17) "do no significant harm".

3. Make a positive contribution towards an environmental or social objective. A company must derive at least 20% of revenue from economic activities that positively contribute to a social or environmental theme and / or have a carbon emissions reduction target approved by the science-based targets initiative (SBTi). From the perspective of targeting an environmental objective, revenue alignment includes activities focused on climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources. Activities focused on social objectives include access to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services, and bridging the digital divide in least developed countries.

More information on the internal methodology can be found on the website of the Manager: https://finecoassetmanagement.com/responsible-investing

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

How have the indicators for adverse impacts on sustainability factors been taken into account?

When replicating the Reference Index via a Total Return Swap through the Invested Assets, principal adverse impact ("PAI") indicators are calculated at Invested Assets level. The results will be compared with that of a chosen proxy benchmark representative of the Invested Asset's investment universe. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine what the Manager can improve relative to the Invested Assets, and where the Manager can engage with relevant issuers to improve on such indicators.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.

2. Through ensuring that the sustainable investments that the Manager makes are:

   a. Made in investee companies that demonstrate good governance:

   b. Made in investee companies that demonstrates that they do no significant harm to other environmental objectives; and

   c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against the mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by either directly or indirectly tracking the performance of the Reference Index, while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

Where the Reference Index is synthetically replicated, the Manager applies its exclusion policy to the Invested Assets. All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund’s investment process, depending on the manner in which the Reference Index is being replicated, i.e. either directly or indirectly.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **The Invested Assets** will only be drawn from constituents of ESG screened indices;
b. **Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;
c. **Exclusion Policy**
The Manager's exclusion policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

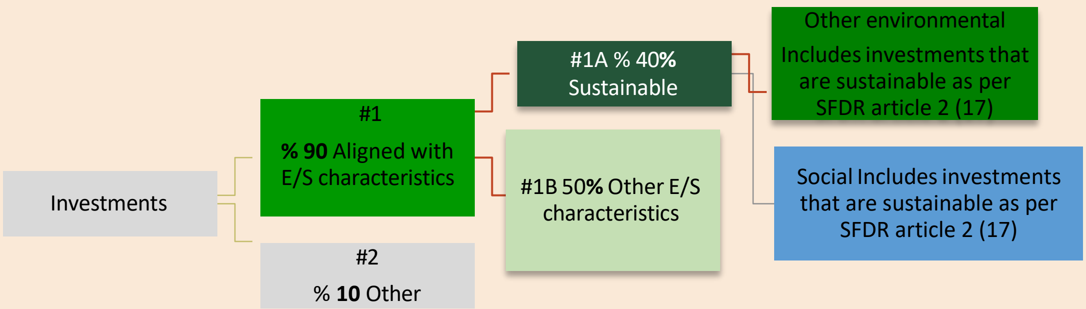
Not applicable

What is the policy to assess good governance practices of the investee companies?

For the Invested Assets, good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee

Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 40% in sustainable investments.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

The Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

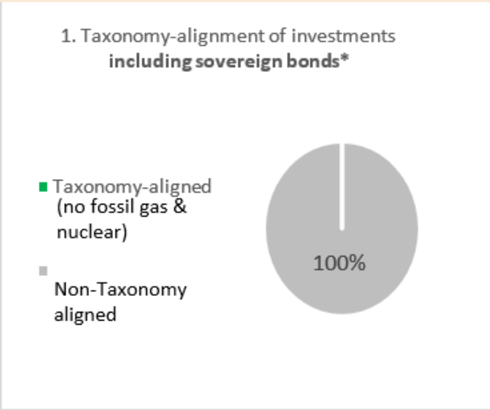
☒ No

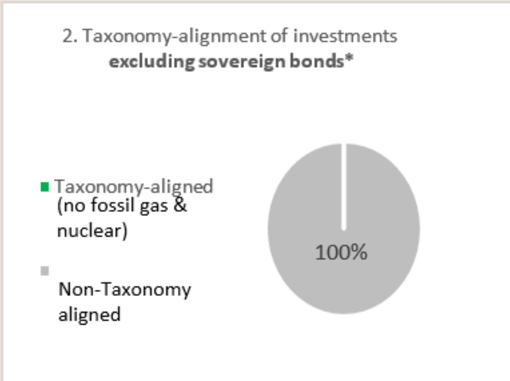
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





This graph represents 100% of the total investments

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%*

What is the minimum share of socially sustainable investments?

40%*

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction, efficient portfolio management and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manger's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index and promote similar environmental and/or social characteristics as those of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security’s price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

ESG Screening

Where the Reference Index is synthetically replicated, the Manager applies its exclusion policy to the Invested Assets. The Manager’s exclusion policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/. In addition, the Invested Assets are selected using only the constituents of ESG screened indices.

All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

Description of the Reference Index

General Description: The Reference Index is based on the MSCI World Information Technology Index, its parent index, and includes large and mid cap securities across 23 developed markets countries. The methodology aims to include securities of companies with the highest ESG ratings representing 50% of the market capitalization in each sector and region of the parent Index. Constituents of the Reference Index must have an MSCI ESG Rating of 'BB' or above and an MSCI ESG Controversies Score of 3 or above. In addition, companies showing qualifying involvement in alcohol, gambling, tobacco, nuclear power, civilian firearms, fossil fuels extraction, thermal coal power and weapons as well as companies that contravene the UN Global Compact principles, the United Nations Guiding Principles for Business and Human Rights and the International Labour Organisation’s set of labour standards are excluded from the Reference Index. In addition, the Reference Index constrains the weight of any single group entity at 20%. All securities in the Reference Index are classified in the Information Technology sector as per the Global Industry Classification Standard (GICS®).

As at the date of this Prospectus, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com. The Index Sponsor’s disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund may enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. The Funds maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund may take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a high level of volatility from time-to-time.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

The Manager manages the Fund in accordance with its Responsible Investment Policy (the "ESG Policy") on a continuous basis. The Manager has fully integrated the ESG Policy into the overall investment process for the Fund (the "Sustainable Investment Process"). The Manager's ESG Policy as well as the Sustainable Investment Process are available on the Manager's website at the following link: https://finecoassetmanagement.com/sustainability/.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

Sustainability Risk Integration when tracking the Reference Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policies section above relating to tracking the Reference Index via a Total Return Swap, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Sustainability Risk Integration when replicating the Reference Index directly (i.e. by holding some or all of the securities of the Reference Index)

When directly replicating the holdings of some or all of the Reference Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	2 December 2022 - 1 June 2023	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	2 December 2022 - 1 June 2023	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	2 December 2022 - 1 June 2023	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day;

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc (“MSCI”), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the “MSCI Parties”). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Fineco AM MSCI World Information Technology ESG Leaders 20% Capped UCITS ETF
Legal entity identifier: 2549006XCIKJ1TDGX308

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics of this product include the following:

1. **Sustainable Investments**: The Fund partially invests in sustainable investments as defined as investment in companies and issuers that contribute to an environmental or social objective, while doing no significant harm.

2. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors are a key element of the construction of the Invested Assets. The Invested Assets in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and social characteristics such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

3. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better environmental and/or social characteristics.

4. **Negative Screening (Norm-based exclusions)**
   For the Invested Assets the Manager (see link to exclusion policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Invested Assets with this approach, the Manager, for the Invested Assets only, considers the following categories which are outlined in more detail in the exclusion policy:

   - United Nations Global Compact Principles
   - Controversial Weapons
   - Tobacco
   - Climate Change
   - Forced Labour

The Fund pursues the environmental and/or social characteristics promoted by it through replicating the Reference Index synthetically, via investment in the Invested Assets.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Invested Assets selected from ESG screened indices ;

iii) The percentage of the Fund invested in sustainable investments;

iv) The holdings of the Fund being rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider) and

v) The percentage of the Fund investment universe subject to the Manager's exclusion policy.

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. The Fund will assess the issuer of the underlying security and will only classify investment in issuers that meet the below criteria as sustainable investments inline with Article 2 (17) of SFDR:

a. Made in investee companies that demonstrate good governance;

b. Operate in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. The investee companies makes a positive contribution towards an environmental or social objective..

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

How have the indicators for adverse impacts on sustainability factors been taken into account?

When replicating the Reference Index via a Total Return Swap through the Invested Assets, principal adverse impact ("PAI") indicators are calculated at Invested Assets level. The results will be compared with that of a chosen proxy benchmark representative of the Invested Asset's investment universe. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine what the Manager can improve relative to the Invested Assets, and where the Manager can engage with relevant issuers to improve on such indicators.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.

2. Through ensuring that the sustainable investments that the Manager makes are:

   a. Made in investee companies that demonstrate good governance:

   b. Made in investee companies that demonstrates that they do no signifcant harm to other environmental objectives; and

   c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against the mandatory and additional PAI indicators.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The specific PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by either directly or indirectly tracking the performance of the Reference Index, while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

Where the Reference Index is synthetically replicated, the Manager applies its exclusion policy to the Invested Assets. All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund’s investment process, depending on the manner in which the Reference Index is being replicated, i.e. either directly or indirectly.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **The Invested Assets** will only be drawn from constituents of ESG screened indices;
  b. **Minimum underlying security score of BB** by MSCI ESG manager (or an other corresponding rating from a similar rating provider) for each Fund security;
  c. **Exclusion Policy**
     The Manager’s exclusion policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

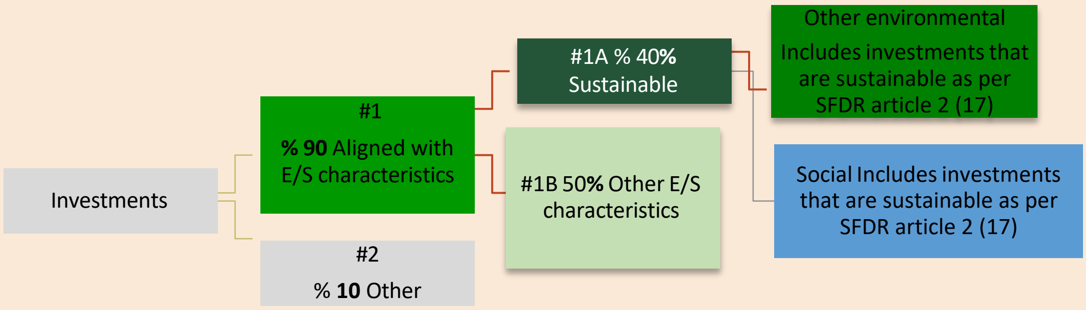
- ***What is the policy to assess good governance practices of the investee companies?***

  For the Invested Assets, good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or an other corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What is the asset allocation planned for this financial product?



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 40% in sustainable investments.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

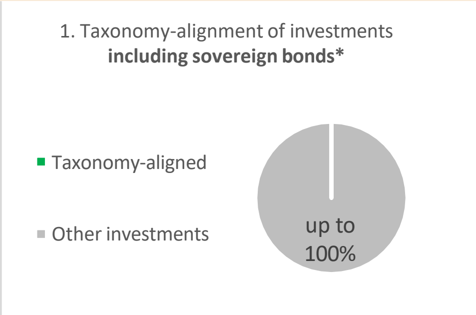
As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation

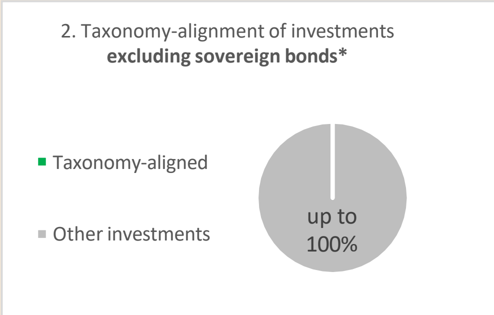
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%*

What is the minimum share of socially sustainable investments?

40%*

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction, efficient portfolio management and hedging purposes.

Any “#2 Other” potential investments, other than cash or cash equivalents will be screened according to the Manager’s Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manger’s website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)]

Fineco AM MSCI World Metals and Mining UCITS ETF

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **Fineco AM MSCI World Metals and Mining UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI World Metals and Mining Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may invest up to 100% of its Net Asset Value in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights and warrants of companies located worldwide (the "**Invested Assets**"). The Fund may then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub-heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor

may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Reference Index

General Description: The Reference Index is composed of large and mid cap stocks across 23 developed markets countries. All securities in the Reference Index are classified in the Metals & Mining industry (within the Materials sector) according to the Global Industry Classification Standard (GICS®).

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com/index-methodology. The Index Sponsor’s disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund may enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund may take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS

Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a high level of volatility from time-to-time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of the SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of the SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund’s approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Sustainability Risk Integration when tracking the Reference Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

When looking to replicate the Reference Index via a Total Return Swap as described in the investment policies section, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great). The Manager’s exclusion policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/.

Sustainability Risk Integration when replicating the Reference Index directly (i.e. by holding some or all of the securities of the Reference Index)

When directly replicating the holdings of some or all of the Reference Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	2 December 2022 - 1 June 2023	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	2 December 2022 - 1 June 2023	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	2 December 2022 - 1 June 2023	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day;

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the "MSCI Parties"). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Fineco AM MSCI World Semiconductors and Semiconductor Equipment 20% Capped UCITS ETF

SUPPLEMENT DATED 31 OCTOBER 2024

This Supplement contains specific information in relation to **Fineco AM MSCI World Semiconductors and Semiconductor Equipment 20% Capped UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI World Semiconductors and Semiconductor Equipment 20% Capped Index (the "**Reference Index**", as described below under the sub-heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MSCI Limited, acting as the index sponsor (the "**Index Sponsor**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund may invest up to 100% of its Net Asset Value in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights and warrants of companies located worldwide (the "**Invested Assets**"). The Fund may then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub-heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the

Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Reference Index by holding all of the securities of the Reference Index in a similar proportion to their weighting in the Reference Index. However, the Fund may also invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Reference Index, or which contains securities that are not constituents of the Reference Index (as further outlined below), in order to build a representative portfolio that provides a return that is comparable to that of the Reference Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Reference Index securities or may hold securities that are not constituents of the Reference Index. Where the Fund holds securities that are not constituents of the Reference Index, such securities provide similar exposure (with similar risk profiles) to certain securities of the Reference Index. Securities which are not constituents of the Reference Index are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Reference Index.

In selecting the representative sample of the component securities of the Reference Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a security's price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors), and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Reference Index

General Description: The Reference Index is composed of large and mid-cap stocks across 23 developed markets countries. In addition, the Reference Index constrains the weight of any single group entity at 20%. All securities in the Reference Index are classified in the Semiconductors and Semiconductor Equipment Industry Group (within the Information Technology sector) according to the Global Industry Classification Standard (GICS®).

As at the date of this Supplement, the administrator of the Reference Index, namely MSCI Limited, is availing of the transitional arrangements afforded under the Benchmarks Regulation. Accordingly it does not appear on the register of administrators and benchmarks maintained by ESMA pursuant to Article 36 of the Benchmarks Regulation.

Publication: The Reference Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://www.msci.com/index-methodology. The Index Sponsor's disclaimer is included as an appendix to this Supplement.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund may enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund may take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a high level of volatility from time-to-time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of the SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of the SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability

Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Sustainability Risk Integration when tracking the Reference Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

When looking to replicate the Reference Index via a Total Return Swap as described in the investment policies section, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great). The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

Sustainability Risk Integration when replicating the Reference Index directly (i.e. by holding some or all of the securities of the Reference Index)

When directly replicating the holdings of some or all of the Reference Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Reference Index and such output is accordingly deemed not relevant.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	1 November 2024 - 30 April 2025	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	1 November 2024 – 30 April 2025	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	1 November 2024 - 30 April 2025	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"Dealing Deadline" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund’s operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed “**Fees and Expenses**”.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

APPENDIX

Disclaimer of the Index Sponsor

The Fund is not sponsored, endorsed, sold or promoted by MSCI Inc ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the "MSCI Parties"). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licenced for use for certain purposes by the ICAV. None of the MSCI Parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in this Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participate in the determination of the timing or, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein.

None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties or any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties has any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

SMART DEFENCE EQUITY 2028 FINECO AM FUND II
SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **SMART DEFENCE EQUITY 2028 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	20 December 2023, 18 December 2024, 17 December 2025, 16 December 2026, 15 December 2027 and 20 December 2028 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 7 October 2022 and will close at 5:00 PM (Irish time) on 14 October 2022. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	20 December 2028.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 14 October 2022 to 20 December 2022 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide income linked to the positive performance of the Index (as defined in the section entitled "Investment Policy" below); (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (iii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual

obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*
The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*
The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to

enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a return linked to the STOXX® Europe Sustainability Select 30 EUR Index (the "Index"). The symbol for the Index is SUTSEP and the Bloomberg ID is BBG00K7RVSS2.

The Index captures the performance of stocks with low volatility and high dividends from the STOXX® Europe Sustainability Index. The component selection process first excludes all stocks whose 3- or 12-month historical volatilities are the highest. Among the remaining stocks, the 30 stocks with the highest 12-month historical dividend yields are selected to be included in the index. Stocks may be selected from a variety of sectors such as but not limited to insurance, banks, utilities, telecommunications, energy and healthcare. The Index applies standardized ESG exclusion screens for global standard screening, controversial weapons, thermal coal and tobacco producers, with the aim of taking responsible investment criteria into account.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.stoxx.com/index-details?symbol=SUTSEP.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confirming the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or

efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.
Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund’s portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 6 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 7 October 2022 to 14 October 2022	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 7 October 2022 to 14 October 2022	Euro	No	€1,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2028 FINECO AM FUND
SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2028 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	17 January 2024, 15 January 2025, 14 January 2026, 13 January 2027 and 19 January 2028 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 11 November 2022 and will close at 5:00 PM (Irish time) on 11 November 2022.The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	19 January 2028
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 14 November 2022 to 17 January 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and
- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 11 November 2022 to 11 November 2022	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 11 November 2022 to 11 November 2022	Euro	No	€1,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2028 FINECO AM FUND II

SUPPLEMENT DATED 1 DECEMBER 2022

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2028 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	28 June 2023, 26 June 2024, 25 June 2025, 24 June 2026, 30 June 2027 and 28 June 2028 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period: The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 1 December 2022 and will close at 5:00 PM (Irish time) on 1 December 2022. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").

Maturity Date: 30 June 2028

Money Market/Short Term Instruments includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Subscription Period: means from 2 December 2022 to 17 January 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Valuation Day: means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.

Valuation Point Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>*Funding Investments*</u>

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above.

As described in detail in sub-section (i) above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and
- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 1 December 2022 to 1 December 2022	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 1 December 2022 to 1 December 2022	Euro	No	€1,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2029 FINECO AM FUND
SUPPLEMENT DATED 9 DECEMBER 2022

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2029 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	28 June 2023, 26 June 2024, 25 June 2025, 24 June 2026, 30 June 2027, 28 June 2028 and 27 June 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 30 December 2022 and will close at 5:00 PM (Irish time) on 30 December 2022. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 June 2029
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 2 January 2023 to 28 February 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 30 December 2022 to 30 December 2022	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 30 December 2022 to 30 December 2022	Euro	No	€1,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE EQUITY 2029 FINECO AM FUND SUPPLEMENT

DATED 9 DECEMBER 2022

This Supplement contains specific information in relation to **SMART DEFENCE EQUITY 2029 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	28 June 2023, 26 June 2024, 25 June 2025, 24 June 2026, 30 June 2027, 28 June 2028 and 27 June 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 30 December 2022 and will close at 5:00 PM (Irish time) on 30 December 2022. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 June 2029.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 2 January 2023 to 28 February 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a return linked to the positive performance of the Index (as defined in the section entitled "Investment Policy" below); (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*
The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*
The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund a

return linked to the STOXX® Europe Sustainability Select 30 EUR Index (the "Index"). The symbol for the Index is SUTSEP and the Bloomberg ID is BBG00K7RVSS2.

The Index captures the performance of stocks with low volatility and high dividends from the STOXX® Europe Sustainability Index. The component selection process first excludes all stocks whose 3- or 12-month historical volatilities are the highest. Among the remaining stocks, the 30 stocks with the highest 12-month historical dividend yields are selected to be included in the index. Stocks may be selected from a variety of sectors such as but not limited to insurance, banks, utilities, telecommunications, energy and healthcare. The Index applies standardized ESG exclusion screens for global standard screening, controversial weapons, thermal coal and tobacco producers, with the aim of taking responsible investment criteria into account.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.stoxx.com/index-details?symbol=SUTSEP.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 7) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 7) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.
Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 6 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Dist	€100	From 30 December 2022 to 30 December 2022	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 30 December 2022 to 30 December 2022	Euro	No	€1,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2029 FINECO AM FUND II
SUPPLEMENT DATED 30 JANUARY 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2029 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	28 June 2023, 26 June 2024, 25 June 2025, 24 June 2026, 30 June 2027, 28 June 2028 and 27 June 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 13 February 2023 and will close at 5:00 PM (Irish time) on 13 February 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 June 2029
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 14 February 2023 to 28 March 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 13 February 2023 to 13 February 2023	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 13 February 2023 to 13 February 2023	Euro	No	€1,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2026 FINECO AM FUND

SUPPLEMENT DATED 28 FEBRUARY 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2026 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	28 June 2023, 26 June 2024, 25 June 2025 and 24 June 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 13 March 2023 and will close at 5:00 PM (Irish time) on 13 March 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 June 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 14 March 2023 to 18 April 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>*Funding Investments*</u>

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 13 March 2023 to 13 March 2023	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 13 March 2023 to 13 March 2023	Euro	No	€1,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2029 FINECO AM FUND III
SUPPLEMENT DATED 6 MARCH 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2029 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	20 December 2023, 18 December 2024, 17 December 2025, 23 December 2026, 22 December 2027, 20 December 2028 and 19 December 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 20 March 2023 and will close at 5:00 PM (Irish time) on 20 March 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	28 December 2029
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 21 March 2023 to 2 May 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>*Funding Investments*</u>

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 20 March 2023 to 20 March 2023	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 20 March 2023 to 20 March 2023	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 20 March 2023 to 20 March 2023	Euro	No	€5,000, 000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with

regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

FINECO AM US DOLLAR BOND FUND
SUPPLEMENT DATED 31 MAY 2023

This Supplement contains specific information in relation to **FINECO AM US DOLLAR BOND FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the Addendum thereto (together the "Prospectus").

Investment Objective and Policies

The investment objective of the Fund is to maximise total returns.

The Fund seeks to achieve its investment objective by investing at least 80% of its Net Asset Value in Investment Grade fixed income securities (for example, treasury bonds and corporate bonds). At least 70% of the Fund's Net Asset Value will be invested in fixed income securities denominated in USD. The Fund may invest substantially or fully in fixed income securities issued by the United States government. The Fund may invest up to 20% of its Net Asset Value in asset-backed securities (ABS), which may embed leverage and which may include, but not be limited to, residential mortgage-backed securities (RMBS), commercial mortgage- backed securities (CMBS), corporate asset-backed securities (CABS), collateralised debt obligations and asset-backed commercial paper (ABCP).

The Fund seeks to achieve its investment objective while promoting environmental, social and governance (ESG) characteristics under Article 8 of SFDR as described in Annex II at the end of this Supplement. The Fund does not pursue a sustainable objective and thus it is not classified under Article 9 of SFDR.

The fixed income securities which the Fund may acquire may be fixed or floating and may be issued by governments, government-related bodies, corporates worldwide or special purpose vehicles (for example, a vehicle, usually a private limited company, that is established for the specific purpose of holding investments such as commercial mortgages, residential mortgages, loans, corporate debt or other receivables that constitute the underlying assets for asset-backed securities such as CMBS, RMBS, or CABS referred to above and providing investment returns to its shareholders). The Fund's exposure to non-Investment Grade securities is limited to a maximum of 20% of the Fund's Net Asset Value.

The Fund may invest in convertible securities, such as convertible bonds. The Fund's exposure to convertible bonds is limited to 20% of the Fund's Net Asset Value.

The Manager will select the fixed income securities to be acquired by focusing on fundamental credit analysis of issuers on both an absolute and a relative basis. Quantitative and qualitative methods are used to analyse the credit standing of issuers and the Manager will use the output of this analysis to identify investment opportunities, taking into consideration factors such as the level of credit spreads, market supply and demand imbalances of credits, and liquidity. When an investment is made it will be closely monitored by the Manager, taking into account the quantitative and qualitative analysis outlined above, and the investment rationale for retaining the investment will be kept under review by the Manager.

No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Other than permitted investment in unlisted securities and FDIs, the Fund's investments will be limited to securities and exchange traded FDIs that are traded on the markets listed in Schedule I of the Prospectus.

Benchmark Information

The Fund is actively managed. The Manager has selected the Bloomberg US Treasury Index (the “Index”), which is used for performance comparison purposes only. The Index ticker is LUATTRUU. The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index, or which are present in different proportions.

“Bloomberg®” and the above Index are service marks of Bloomberg Finance L. P. and its affiliates, including Bloomberg Index Services Limited (“BISL”), the administrator of the Index (collectively, “Bloomberg”), and have been licensed for use for certain purposes by the ICAV. Bloomberg is not affiliated with the ICAV, and Bloomberg does not approve, endorse, review, or recommend the Fund. Bloomberg does not guarantee the timeliness, accurateness, or completeness of any data or information relating to the Fund.

Use of Financial Derivative Instruments (FDI) and other Instruments and Techniques

The Fund may use FDI for investment purposes. The Fund may also engage in transactions with FDI for the purposes of efficient portfolio management and hedging.

The types of FDIs that the Fund may use are: options, credit default swaps, interest rate swaps, total return swaps, inflation swaps, futures, forwards, currency forwards and money market derivatives and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Options: The Fund may use options to gain or hedge exposure to fixed income securities that the Fund may acquire in accordance with its investment policy and can provide an efficient, liquid and effective mechanism for taking a position in securities. Currency options may also be used by the Fund to actively manage currency risks.

Credit Default Swaps: The Fund may use credit default swaps as a substitute for purchasing fixed income securities or for the purposes of hedging exposure to fixed income securities and reducing the credit risk in respect of investments. The Fund may either buy or sell credit protection under credit default swaps, either in single-name credit default swaps or in credit default swap indices. The Fund expects to use credit default swaps for long exposure to fixed income securities and may also take synthetic short positions on fixed income securities, either as a hedge against a long position or for investment purposes.

Interest Rate Swaps: The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates.

Total Return Swaps: The Fund may enter into total return swaps to gain or reduce exposure to fixed income securities as listed in the Investment Objective and Policies section. The Fund's maximum exposure to total return swaps, based on the notional value of such instruments, is 10% of its Net Asset Value and is anticipated that the Fund will have exposure in the range of 0% to 10% of its Net Asset Value through total return swaps.

Exposure to Indices: The Fund may take exposure to indices through the use of credit default swaps and total return swaps as outlined above. The exposure to indices, if any, will comply with the conditions and limits set down in the Central Bank's guidance entitled "UCITS Financial Indices". When an index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the Index by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. It is not possible to identify the specific indices that the Fund will take exposure to (which may change from time to time), however, the underlying assets of such indices will be fixed income securities that the Fund may acquire in accordance with its investment policy. Such indices will be rebalanced on a periodic basis, usually at least annually. Such rebalancing is not expected to have a material effect on the costs incurred within the index. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available to Shareholders upon request from the Manager.

Long/Short Exposure

The Fund will not directly short securities but instead may as part of its investment strategy hold short positions through derivatives including futures, total return swaps and credit default swaps on fixed income securities. Short positions will be selected based on the Manager's assessment of the valuation of the credit standing of the underlying securities and will be used to hedge against or take advantage of price movements of bonds or bond markets generally. Currency swaps may be used to hedge against foreign exchange risk arising when investments are denominated in a currency other than the Fund's Base Currency. The expected maximum level of long derivative positions which the Fund may hold is 1500% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 1500% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Inflation swaps: An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Futures and Forwards: Futures and forwards may be used to hedge or gain exposure to fixed income securities.

Currency forwards: Currency forwards may be used for the purpose of hedging and/or managing currency exposure, arising, for instance, from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant. Currency forwards can also be used for taking active currency risk where the Manager takes long or short exposure to currencies that it expects to rise or fall as the case may be as determined based on an assessment of the relevant factors that determine the value of currency markets such as global economic conditions, interest rates, capital flows and credit spreads (i.e. difference in yield between bonds of similar maturities).

Money Market Derivatives: A short-term interest rate derivative that is used in money market trading and hedging. The types of money market derivatives are limited to interest rate futures and forward rate agreements (FRAs), short-dated interest rate swaps and overnight interest rate swaps.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of a Fund’s net asset value. All assets received by the Fund as collateral in the context of the use of FDI, Securities Financing Transactions and/or efficient portfolio management techniques will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed “Collateral Policy”.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is measured relative to the VaR of the Index, a benchmark which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is a broad-based benchmark that measures the investment grade, USD-denominated, fixed-rate treasuries. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the VaR of the Index, as determined daily using a one-tailed confidence interval of 99%, a holding period of one month and a historical observation period of at least 1 year.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 1000% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors who are willing to accept a moderate level of volatility.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager’s exclusion policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/.

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund’s approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: USD

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc EUR	€100	Closed	Euro	No	Yes/3%	€ 1,000 / €100	Accumulating
Class L Acc USD	€100	From 31 March 2023 to 30 September 2023	USD	No	Yes/3%	$ 1,000 / $100	Accumulating
Class L Dist	€100	From 31 March 2023 to 30 September 2023	Euro	No	Yes/3%	€ 1,000 / €100	Distributing
Class LH Acc	€100	Closed	Euro	Yes	Yes/3%	€ 1,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€ 1,000 / €100	Accumulating
Class I Acc EUR	€100	From 31 March 2023 to 30 September 2023	Euro	No	No	€ 1,000,000 / €100	Accumulating
Class I Acc USD	€100	From 31 March 2023 to 30 September 2023	USD	No	No	$ 1,000,000 / $100	Accumulating
Class IH Acc	€100	Closed	Euro	Yes	No	€ 1,000,000 / €100	Accumulating
Class IH Dist	€100	From 31 March 2023 to 30 September 2023	Euro	Yes	No	€ 1,000,000 / €100	Distributing
Class I Dist	€100	From 31 March 2023 to 30 September 2023	Euro	No	No	€ 1,000,000 / €100	Distributing
Class D Acc*	€100	From 31 March 2023 to 30 September 2023	Euro	No	No	€500 /€100	Accumulating
Class J Acc	€10,000	From 31 March 2023 to 30 September 2023	Euro	No	No	€1,000,000 / €100	Accumulating
Class JH Acc	€10,000	Closed	Euro	Yes	No	€1,000,000 / €100	Accumulating

Class JH Dist	€10,000	Closed	Euro	Yes	No	€1,000,000 / €100	Distributing
Class J Dist	€10,000	From 31 March 2023 to 30 September 2023	Euro	No	No	€1,000,000 / €100	Distributing

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in Luxembourg are normally open for business and that is not a US bond market holiday;

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge: Up to 3% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factor:

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: Fineco AM US Dollar Bond Fund

Legal entity identifier: 254900UZWPETPXU18051

Environmental and/or social characteristic

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** _%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics promoted by the Fund include:

1. **Positive Screening**: Consideration of ESG factors are a key element of portfolio construction. The Manager will determine how such companies integrate E&S characteristics by analysing Environmental and/or Social ratings attributed to such companies with the exclusion of Environmental and/or Social “laggards” (being any company lagging its industry based on its failure to manage significant ESG risks and rated as such by MSCI ESG Manager or a similar rating provider) from the Fund’s investment portfolio. By incorporating positive Environmental and/or Social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This threshold is currently A using MSCI ESG Manager or another corresponding rating from a similar rating provider with a lower score at Fund level permitted only where it is demonstrated to the satisfaction of the Manager that the approach to sustainability risk management and the sustainability elements of the investment strategy are compatible with the Article 8 classification of the Fund. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better Environmental and/or Social Characteristics.

3. **Negative Screening (Norm-based exclusions)**
   For direct holdings the Manager (see link to Exclusion Policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund’s investments with this approach, the Manager has adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

   The Exclusion Policy provides that:

   a) The Manager refrains from investing in securities issued by entities with severe controversies contravening the principles of the UNGC
   b) The Manager refrains from investing in securities issued by entities involved in the production or product life cycle of controversial

weapons.

c) The Manager refrains from investing in:
   - Securities issued by entities deriving 5% or more revenue from the production of tobacco related products.
   - Securities issued by entities deriving 15% or more aggregate revenue from the production, distribution, retail, supply and licensing of tobacco-related products.

d) The Manager refrains from investing in:
   - Securities issued by entities that derive more than 10% of their revenue from thermal coal extraction.
   - Securities issued by entities that derive more than 10% of their revenue from arctic drilling.

e) The Manager restricts investments in entities that contravene the UN Global Compact labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

***What sustainability indicators are used to measure the attainment of each of the* environmental or social characteristics promoted by this financial product?**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i) The minimum Fund level ESG score;

ii) The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) and;

iii) The percentage of the Fund investment universe subject to the Manager's exclusion policy.

***What are the objectives of the sustainable investments that the financial product* partially intends to make and how does the sustainable investment contribute to such objectives?**

- N/A

***How do the sustainable investments that the financial product partially intends* to make, not cause significant harm to any environmental or social sustainable investment objective?**

- N/A

How have the indicators for adverse impacts on sustainability factors been taken into account?

- N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

- N/A

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to maximise total returns.

The Fund seeks to achieve its investment objective by investing at least 80% of its Net Asset Value in Investment Grade fixed income securities (for example, treasury bonds and corporate bonds). At least 70% of the Fund's Net Asset Value will be invested in fixed income securities denominated in USD. The Fund may invest up to 20% of its Net Asset Value in asset-backed securities (ABS), which may embed leverage and which may include, but not be limited to, residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS), corporate asset-backed securities (CABS), collateralised debt obligations and asset-backed commercial paper (ABCP).

The Manager systematically includes ESG analysis in its investment decision making process by relying on certain ESG screenings, practices and factors, which are summarised as follows and that can also be found in more detail on the

Manager's website at the following link: https://finecoassetmanagement.com/sustainability/;

ESG Screenings

1. **Exclusion screenings**: in the process of selection of the permitted instruments, the Manager - in accordance with its exclusion policy (the "Exclusion Policy"), may identify issuers that are allegedly involved in breaches of international norms on, for example, environmental protection, human rights, labour standards and anti-corruption. If an issuer is identified in this screening process, action is taken by the Manager that may lead to the exclusion of such entity from the investment universe of the Fund.

   The exclusions specifically covered by the Manager's Exclusion Policy currently include:

   a. Issuers that breach the principles of the United Nations Global Compact (UNGC);
   b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
   c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
   d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
   e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

2. **ESG Assessment**: The Manager selects those securities for the Fund that show sound fundamentals and higher ESG scores, while being valued at a discount to the Manager's assessment of intrinsic value.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

***What are the binding elements of the investment strategy used to select the* investments to attain each of the environmental or social characteristics promoted by this financial product?**

a. **Minimum underlying security score of BB** by MSCI ESG manager (or another corresponding rating from a similar rating provider) for each Fund security;
b. **Exclusion Policy**
The Manager's exclusion policy applies and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

***What is the committed minimum rate to reduce the scope of the investments* considered prior to the application of that investment strategy?**

Not applicable

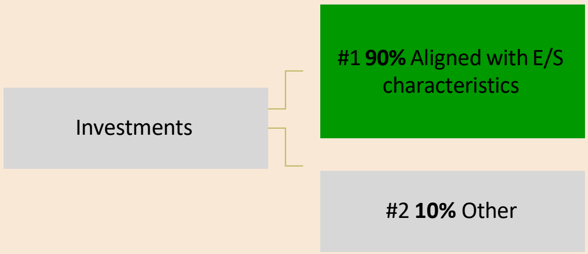
What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or another corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. In respect of sovereign issuers, the assessment of good governance practices is based on signatory status to Paris Alignment and Freedom House Status.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 90% of the Fund's investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

How does the use of derivatives attain the environmental or social characteristics **promoted by the financial product?**

Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A

Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy[1]?

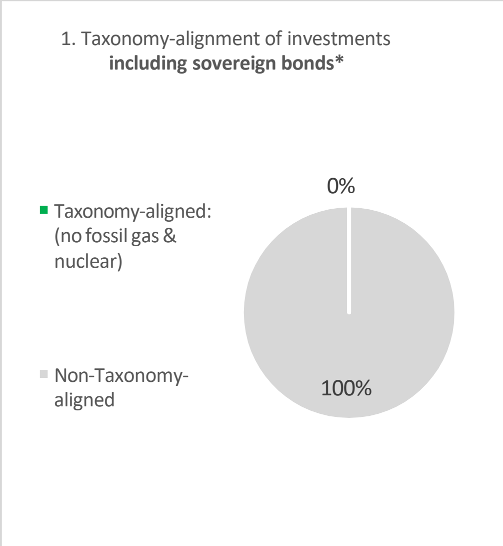
☐ **Yes:**

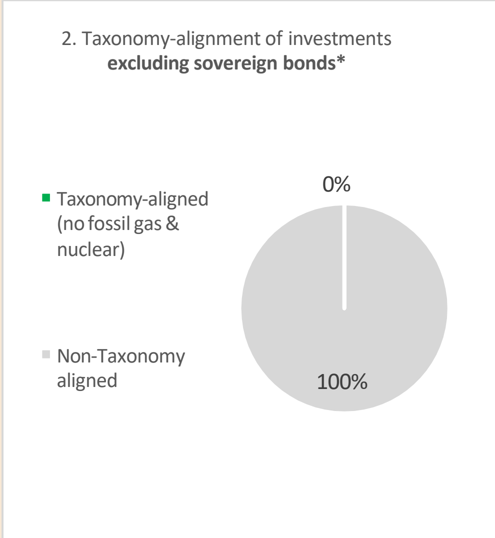
☐ In fossil gas ☐ In nuclear energy

☒ **No**

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A

What is the minimum share of socially sustainable investments?

N/A

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the* environmental or social characteristics promoted by the financial product?**

N/A

- ***How is the alignment of the investment strategy with the methodology of the* index ensured on a continuous basis?**

N/A

SMART GLOBAL DEFENCE 2030 FINECO AM FUND
SUPPLEMENT DATED 20 APRIL 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2030 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	A Business Day in the twelfth month annually following close of the Subscription Period and ending by the Maturity Date
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 3 May 2023 and will close at 5:00 PM (Irish time) on 3 May 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	25 January 2030
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 4 May 2023 to 4 July 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, those which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use currency forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use cross-currency swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

TRS: The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 3 May 2023 to 3 May 2023	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 3 May 2023 to 3 May 2023	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 3 May 2023 to 3 May 2023	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY 2029 FINECO AM FUND

SUPPLEMENT DATED 24 APRIL 2023

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2029 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	A Business Day in the fifth month annually following close of the Subscription Period and ending by the Maturity Date.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 8 May 2023 and will close at 5:00 PM (Irish time) on 8 May 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Limited Index Return:	means a range of between 20%-30% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 65%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	28 December 2029.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 9 May 2023 to 11 July 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Index (the "Index"). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com/World.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 6 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 8 May 2023 to 8 May 2023	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 8 May 2023 to 8 May 2023	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 8 May 2023 to 8 May 2023	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we

draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2026 FINECO AM FUND II
SUPPLEMENT DATED 10 MAY 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2026 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	27 September 2024, 26 September 2025 and 25 September 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 22 May 2023 and will close at 5:00 PM (Irish time) on 22 May 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 September 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 23 May 2023 to 24 July 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the Securities and Exchange Commission to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, those which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use currency forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use cross-currency swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

TRS: The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 22 May 2023 to 22 May 2023	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 22 May 2023 to 22 May 2023	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 22 May 2023 to 22 May 2023	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

FINECO AM MSCI AC ASIA PACIFIC EX JAPAN WITH CHINA A SHARE INCLUSION SELECT FUND

SUPPLEMENT DATED 15 MAY 2023

This Supplement contains specific information in relation to **Fineco AM MSCI AC Asia Pacific ex Japan with China A share Inclusion Select Fund** (the "Fund"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

An investment in this Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital growth.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI AC Asia Pacific ex Japan with China A share Inclusion Select Index (the "Index", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by MSCI, acting as the index sponsor (the "Index Sponsor") and it is described below in the sub-heading "Description of the Index".

The Fund may invest:

- up to 100% of its Net Asset Value in fixed or floating rate government or corporate bonds of Investment Grade or above;
- up to 100% of its Net Asset Value in money market instruments, such as certificates of deposit, commercial paper, treasury bills and banker's acceptances;
- up to 100% in of its Net Asset Value in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights and warrants of companies located worldwide;

each of which are traded on the Recognised Markets listed in Schedule I of the Prospectus (the "Invested Assets"). The Fund will then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub-heading "Securities Financing Transactions", for being such a counterparty (the "TRS Counterparty"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("FDI")". The value of the Fund's Shares is linked to the Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Index and the Invested Assets or the performance of the Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that a Shareholder may receive will be dependent on the performance of the Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. However, where full replication of the Index is not reasonably possible (for example, as a result of the number of securities or the illiquidity of certain securities within the Index), the Fund will invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Index:

General Description: The Index captures large and mid-cap representation across 4 of 5 developed markets countries (excluding Japan) and 9 emerging markets countries in the Asia Pacific region. With 1,027 constituents, the Index covers approximately 85% of the free float-adjusted market capitalization in each country. The Index is a net total return index, i.e. dividends net of tax paid by the index constituents are included in the Index return. The Index is built using MSCI's Global Investable Market Index (GIMI) methodology, which is designed to take into account variations reflecting conditions across regions, market- cap segments, sectors and styles. The Bloomberg ticker symbol for the Index is NU751032.

The above Index is provided by an administrator, MSCI Limited, which was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "Benchmark Regulation").

Index Provider's Disclaimer:

The Fund is not sponsored, endorsed, sold or promoted by MSCI inc. (MSCI), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the MSCI parties). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licensed for use for certain purposes by the Manager. None of the MSCI parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in the Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI parties is responsible for or has participated in the determination of the timing of, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein. None of the MSCI parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI parties makes any express or implied warranties of any kind, and the MSCI parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI parties have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Publication: The Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's Index methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on www.msci.com.

Use of Financial Derivative Instruments ("FDI")

The Fund may engage in FDI transactions for investment purposes to generate returns and for the purposes of hedging. The types of FDI that the Fund may use are currency forwards, interest rate swaps, cross- currency swaps and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from Investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's Investments.

Interest Rate Swaps: The Fund may use interest rate swaps to gain exposure to changes in relevant rates or to hedge against changes in relevant rates.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond.

Total Return Swaps: The Fund may enter into Total Return Swaps to gain exposure to the Index, as mentioned in the Investment Objective and Policies section above. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Exposure to the Index: The Fund may take exposure to the Index through the use of Total Return Swaps as outlined above. Exposure to the Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the Index by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The Index that that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Index, including details of the website where the exact composition of the Index is published, is set out above in the section titled "Description of the Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hencethere may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosure" for further information.

Sustainability Risk Integration when tracking the Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

When looking to replicate the Index via a Total Return Swap as described in the investment policies section, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

Sustainability Risk Integration when replicating the Index directly (i.e. by holding some or all of the securities of the Index)

When directly replicating the holdings of some or all of the Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class A ACC	€100	16 May 2023 to 13 November 2023	Euro	No	No	€1,000/€100	Accumulating
Class I ACC	€100	16 May 2023 to 13 November 2023	Euro	No	No	€1,000,000/ €1,000	Accumulating
Class K Acc	€100	16 May 2023 to 13 November 2023	Euro	No	No	€100/€100	Accumulating
Class KH Acc GBP	£100	16 May 2023 to 13 November 2023	GBP	Yes	No	£100/£100	Accumulating
Class K Acc GBP	£100	16 May 2023 to 13 November 2023	GBP	No	No	£100/£100	Accumulating

Class J Acc	€10,000	16 May 2023 to 13 November 2023	Euro	No	No	€1,000,000 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of the Fund:

"**Business Day**" means every weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Sponsor publishes the Index, and (ii) retail banks and securities markets in Luxembourg, Hong Kong, China, South Korea, Taiwan and Australia are normally open for business;

"**Dealing Deadline**" means 11.59am (Irish time) on the immediately preceding Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point; and

"**Valuation Point**" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Sponsor to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund's performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Sponsor will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Sponsor provides descriptions of what the Index is designed to achieve, the Index Sponsor does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund's investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled "Description of the Index"); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Sponsor will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Sponsor or that the Index will not be amended significantly. Such changes may be made by the Index Sponsor at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled "Description of the Index", as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking Error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled "Investment Objectives and Policies". Investors' attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the Investments of the Fund and re-weightings of the Index may give rise to various transaction costs (including in relation to the settlement of foreign currency transactions), operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index. Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund's tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to-time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

FINECO AM MSCI EM WITH CHINA A SHARE INCLUSION SELECT FUND

SUPPLEMENT DATED 15 MAY 2023

This Supplement contains specific information in relation to **Fineco AM MSCI EM with China A share Inclusion Select Fund** (the "Fund"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital growth.

The Fund seeks to achieve its investment objective by tracking the performance of the MSCI EM with China A share Inclusion Select Index (the "Index", as described below under the sub-heading "Description of the Index") while minimising as far as possible the tracking error between the Fund's performance and that of the Index.

The Index is published by MSCI, acting as the index sponsor (the "Index Sponsor") and it is described below in the sub-heading "Description of the Index".

The Fund may invest:

- up to 100% of its Net Asset Value in fixed or floating rate government or corporate bonds of Investment Grade or above;
- up to 100% of its Net Asset Value in money market instruments, such as certificates of deposit, commercial paper, treasury bills and banker's acceptances;
- up to 100% in of its Net Asset Value in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights and warrants of companies located worldwide;

each of which are traded on the Recognised Markets listed in Schedule I of the Prospectus (the "Invested Assets"). The Fund will then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub-heading "Securities Financing Transactions", for being such a counterparty (the "TRS Counterparty"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("FDI")". The value of the Fund's Shares is linked to the Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Index and the Invested Assets or the performance of the Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that a Shareholder may receive will be dependent on the performance of the Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The Fund may also replicate the Index by holding all of the securities of the Index in a similar proportion to their weighting in the Index. However, where full replication of the Index is not reasonably possible (for example, as a result of the number of securities or the illiquidity of certain securities within the Index), the Fund will invest in a portfolio of equity securities that, insofar as possible and practicable, consists of a representative sample of the component securities of the Index, in order to build a representative portfolio that provides a return that is comparable to that of the Index.

Consequently, the Fund may over certain periods only hold a certain sub-set of the Index securities. Where such securities provide similar exposure (with similar risk profiles) to certain securities of the Index, the Fund may hold the securities types which are not constituents of the Index. Securities which are not constituents of the Index, are selected by virtue of the fact that they provide substantively the same exposure by industry and by company characteristics in the case of liquidity considerations or corporate actions to certain securities of the Index. The securities in which the Fund invests will be primarily listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations.

In selecting the representative sample of the component securities of the Index as described above, the Manager will use techniques such as optimisation. Optimisation seeks to minimise tracking error through proprietary quantitative portfolio analysis. This analysis may include consideration of matters such as how a securities' price changes in relation to another over time, scenario analysis (which involves estimating the change in an investment portfolio's value given a change in key risk factors) and stress testing. The optimisation process analyses portfolio holdings, benchmark weights, transaction costs and risk model data and then computes an optimal portfolio, which minimises tracking error.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Index Tracking Risk" in the "Risk Factors" section below. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

Description of the Index:

General Description: The Index is an equity index representative of the large and mid-cap markets across emerging countries (as defined in the index methodology). The Index is a net total return index, i.e. dividends net of tax paid by the Index constituents are included in the Index return. The Index is built using MSCI's Global Investable Market Index (GIMI) methodology, which is designed to take into account variations reflecting conditions across regions, market-cap segments, sectors and styles. The Bloomberg ticker symbol for the Index is NU751033.

The above Index is provided by an administrator, MSCI Limited, which was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "Benchmark Regulation").

Index Provider's Disclaimer:

The Fund is not sponsored, endorsed, sold or promoted by MSCI inc. (MSCI), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the MSCI parties). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licensed for use for certain purposes by the Manager. None of the MSCI parties makes any representation or warranty, express or implied, to the issuer or owners of the Fund or any other person or entity regarding the advisability of investing in funds generally or in the Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the Fund or the issuer or owners of the Fund or any other person or entity. None of the MSCI parties has any obligation to take the needs of the issuer or owners of the Fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI parties is responsible for or has participated in the determination of the timing of, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by or the consideration into which the Fund is redeemable. Further, none of the MSCI parties has any obligation or liability to the issuer or owners of the Fund or any other person or entity in connection with the administration, marketing or offering of the Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI parties makes any warranty, express or implied, as to results to be obtained by the issuer of the Fund, owners of the Fund, or any other person or entity, from the use of any MSCI index or any data included therein. None of the MSCI parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI parties makes any express or implied warranties of any kind, and the MSCI parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI parties have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Publication: The Index is calculated and published by the Index Sponsor.

Further Information and Website: The Index Sponsor's Index methodology, composition, revision rules and additional information concerning the underlying components of the Index are available on www.msci.com.

Use of Financial Derivative Instruments ("FDI")

The Fund may engage in FDI transactions for investment purposes to generate returns and for the purposes of hedging. The types of FDI that the Fund may use are currency forwards, interest rate swaps, cross- currency swaps and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from Investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's Investments.

Interest Rate Swaps: The Fund may use interest rate swaps to gain exposure to changes in relevant rates or to hedge against changes in relevant rates.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond.

Total Return Swaps: The Fund may enter into Total Return Swaps to gain exposure to the Index, as mentioned in the Investment Objective and Policies section above. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Exposure to the Index: The Fund may take exposure to the Index through the use of Total Return Swaps as outlined above. Exposure to the Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the Index by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Index does not rebalance more frequently than monthly and such rebalancing is not expected to have a material effect on the costs incurred within the Index. The Index that that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Index, including details of the website where the exact composition of the Index is published, is set out above in the section titled "Description of the Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund is not an Article 8 Fund and does not promote environmental or social characteristics nor is it an Article 9 Fund which has Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosure" for further information.

Sustainability Risk Integration when tracking the Index via Total Return Swaps

While the Manager integrates Sustainability Risk into the selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

When looking to replicate the Index via a Total Return Swap as described in the investment policies section, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

Sustainability Risk Integration when replicating the Index directly (i.e. by holding some or all of the securities of the Index)

When directly replicating the holdings of some or all of the Index, the Manager integrates Sustainability Risk into its due diligence assessment of the investments of the Fund. However, such due diligence is not a determining factor with regard to investment decisions on the basis that the Fund is an index tracking sub-fund which physically replicates the Index and such output is accordingly deemed not relevant.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A ACC	€100	16 May 2023 to 13 November 2023	Euro	No	No	€1,000/€100	Accumulating
Class I ACC	€100	16 May 2023 to 13 November 2023	Euro	No	No	€1,000,000/€1000	Accumulating
Class K Acc	€100	16 May 2023 to 13 November 2023	Euro	No	No	€100/€100	Accumulating
Class KH Acc GBP	£100	16 May 2023 to 13 November 2023	GBP	Yes	No	£100/£100	Accumulating
Class K Acc GBP	£100	16 May 2023 to 13 November 2023	GBP	No	No	£100/£100	Accumulating
Class J Acc	€10,000	16 May 2023 to 13 November 2023	Euro	No	No	€1,000,000 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Business Day, Dealing Deadline and Valuation Point definitions that shall apply in respect of the Fund:

"**Business Day**" means every weekday apart from 1 January, Good Friday, Easter Monday, 25 December and 26 December on which (i) the Index Sponsor publishes the Index, and (ii) retail banks and securities markets in Luxembourg, China, South Korea and Taiwan are normally open for business;

"**Dealing Deadline**" means 11.59am (Irish time) on the immediately preceding Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point; and

"**Valuation Point**" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 1% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Index Licence Risk

If in respect of the Index tracked by the Fund, the licence granted (if required) by the Index Sponsor to the ICAV or the Manager (or its affiliates) to replicate or otherwise use the Index for the purposes of the Fund, terminates, or such a licence is otherwise disputed, impaired or ceases (for any reason), the Manager may be forced to replace the Index with another index, which the Manager chooses, to track substantially the same market as the Index in question and which the Manager considers to be an appropriate index for the Fund to track and such a substitution, or any delay in such a substitution, may have an adverse impact on the Fund. If the Manager is unable to identify a suitable replacement for the relevant index, the Directors may be forced to terminate the Fund.

Index Risk

The ability of the Fund to achieve significant correlation between the performance of the Fund and the Index it tracks may be affected by changes in securities markets, changes in the composition of the Index, cash flows into and out of the Fund, pricing conditions on FDI and the fees and expenses of the Fund. The Fund will seek to track Index returns regardless of the current or projected performance of the Index or of the actual securities comprising the Index. The Fund's performance may be less favourable than that of a portfolio managed using an active investment strategy. The structure and composition of the Index will affect the performance, volatility and risk of the Index (in absolute terms and by comparison with other indices) and consequently, the performance, volatility and risk of the Fund.

There can be no assurance that the Index Sponsor will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. Whilst the Index Sponsor provides descriptions of what the Index is designed to achieve, the Index Sponsor does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in respect of the Index and does not guarantee that the Index will be in line with the described index methodology. The Fund's investment policies as described in this Supplement will be to track the performance of the Index and consequently, none of the ICAV, the Directors or the Manager provides any warranty or guarantee for Index provider errors.

Rebalancing Frequency and Costs

Each investor should consider the rebalancing frequency of the Index with reference to their investment strategy. Investors should note that rebalancing allows the Index to adjust its constituent weightings to ensure it is accurately reflecting the market(s) it is aiming to represent. Such rebalancing can either occur: (i) on a scheduled basis (please see the section titled "Description of the Index"); or (ii) on an ad-hoc basis to reflect, for example, corporate activity such as mergers and acquisitions. The costs of rebalancing may be reflected in the level of the Index, which will thus be reflected in the Net Asset Value of the Fund. Where applicable, such costs of rebalancing will be disclosed in this Supplement. In this respect, it should be noted that such costs may be referred to by different terms, such as amongst others: replication costs, reconstitution costs, roll(ing) costs, trading costs or transaction costs.

Changes to the Index

As the Index Sponsor will retain discretion in relation to the methodology for the Index, accordingly, there can be no assurance that the Index will continue to be calculated and published on the basis described in the rules or methodology published by the Index Sponsor or that the Index will not be amended significantly. Such changes may be made by the Index Sponsor at short notice and therefore the ICAV may not always be able to inform investors and Shareholders in advance of such a change becoming effective. Notwithstanding that, such changes will be notified to investors on the website mentioned in the section titled "Description of the Index", as soon as is practicable. Any changes to the Index, such as the composition and/or weighting of its constituent securities, may require the Fund to make corresponding adjustments or rebalancings to its investment portfolio to conform to the Index. The Manager and/or any of its delegates will monitor such changes and arrange for adjustments to such portfolio as necessary over several days, if necessary.

No Investigation or Review of the Index

None of the ICAV, the Manager and/or any of their delegates or affiliates have performed or will perform any investigation or review of the Index on behalf of any prospective investor in the Shares, except to the extent that may be required from time-to-time pursuant to applicable laws. Any further investigation or review made by or on behalf of the ICAV, the Manager and/or any of their delegates or affiliates shall be for each of their own purposes only.

Index Tracking Risk

As an index-tracking UCITS, the Fund will be subject to tracking error risks that may result in the value and performance of Shares not exactly tracking the value and performance of the Index. In particular, no financial instrument enables any index-tracking UCITS to reproduce or track the returns of an index exactly. Tracking Error is measured as the volatility of the difference between the return of the Fund and the return of the Index, over a given period of time. The anticipated level of tracking error, in normal market conditions, is disclosed for the Fund in the section titled "Investment Objectives and Policies". Investors' attention is drawn to the fact that the figure mentioned is only an estimate of the tracking error level in normal market conditions and should not be understood as a strict limit. In circumstances which could be considered as not normal market conditions, the tracking error may be temporarily higher than the level indicated above.

Changes in the Investments of the Fund and re-weightings of the Index may give rise to various transaction costs (including in relation to the settlement of foreign currency transactions), operating expenses or inefficiencies which may adversely impact the returns of the Fund. Furthermore, the total return on investment in the Shares of the Fund will be reduced by certain costs and expenses which are not taken into account in the calculation of the applicable Index. Moreover, the temporary suspension or interruption of trading in Index securities, or of market disruptions, may result in deviations from the return of the Index.

Deviations may also occur due to many other reasons including, higher cash held by the Fund for expenses and due to quotas/limits on investments in a local market, costs of quotas/limits, if any, local trading and settlement constraints and local regulatory issues. The exposure of the Fund to any capital gains tax, due to reasons such as redemptions or Index rebalancing, could result in an increase in the Fund's tracking error. Such tracking error could further vary if the taxation charges applicable to the Fund change from time-to- time. Further, in the event that an Index provider ceases to calculate or publish an Index, the publication of an Index is delayed or disrupted, or there are errors in the calculation of the Index, the Fund may experience difficulties, including an increase in tracking error.

Index Concentration Risk

Due to the composition of the Index, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios and may, consequently, be subject to greater volatility than such investment funds.

SMART DEFENCE PROGRESSION 2026 FINECO AM FUND ROLL

SUPPLEMENT DATED 5 FEBRUARY 2025

This Supplement contains specific information in relation to **SMART DEFENCE PROGRESSION 2026 FINECO AM FUND ROLL** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Coupon:	means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum coupon which will be paid by the Fund at the Maturity Date.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period closed in 2023. During the Initial Offer Period, Shares were available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	12 August 2026.
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	The Subscription Period for the Fund closed in 2023.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with the Coupon at the Maturity Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the

investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest up to 100% of its assets in Equity and/or Debt Instruments ("Funding Instruments").

Once the Fund purchases the Funding Instruments it will then enter into a total return swap ("TRS") on the Funding Instruments in which it will swap out the performance and the income of the Funding Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Funding Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Funding Instruments directly. The TRS will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders during the life of the Fund, up to the Maturity Date.

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection

The Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum Volatility**: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 150%% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and obtain income at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	Closed	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A Acc	€100	Closed	Euro	No	€1,000	N/A	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares
As the Subscription Period has closed, the Fund is not accepting any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.30% per annum (plus VAT, if any) of the Net Asset Value of each Share Class.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

DYNAMIC PROFILE FINECO AM FUND I

SUPPLEMENT DATED 18 JULY 2024

This Supplement contains specific information in relation to **DYNAMIC PROFILE FINECO AM FUND I** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Business Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) on the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for a Share Class will start at 9:00 AM (Irish time) on the first date disclosed in the table under "Offer of Shares" and will close at 5:00 PM (Irish time) on the second date disclosed. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	means 4 July 2030
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 22 July 2024 to 2 September 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Point:	Means 3:00pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to seek to (i) achieve capital growth and (ii) protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price, at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual

obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest principally in Equity and/or Debt Instruments ("Funding Instruments").

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection

The Manager will use a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative analysis:

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt

Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques*" for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into a swap which involves an OTC counterparty paying the Fund a return linked to a standard market interest rate. The swap will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders at the Maturity Date.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable

Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek capital growth. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type

Class L Acc	€100	From 19 July 2024 to 19 July 2024	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A Acc	€100	From 19 July 2024 to 19 July 2024	Euro	No	€1,000	N/A	€100	Accumulating
Class G Acc	€100	From 19 July 2024 to 19 July 2024	Euro	No	€5,000	N/A	€100	Accumulating
Class H Acc	€100	From 19 July 2024 to 19 July 2024	Euro	No	€10,000	N/A	€100	Accumulating
Class I Acc	€100	From 19 July 2024 to 19 July 2024	Euro	No	€10,000	Up to 2%	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares

After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE SINGLE STRATEGY FINECO AM FUND

SUPPLEMENT DATED 28 JUNE 2023

This Supplement contains specific information in relation to **SMART DEFENCE SINGLE STRATEGY FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every weekday on which retail banks and securities markets in Europe and Luxembourg are normally open for business.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, guaranteed or owned by sovereign or

government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Equity Instruments: means equity and/or equity related securities such as convertible stocks or preferred stock of issuers located anywhere in the world but principally securities of issuers incorporated or exercising a predominant part of their economic activities in the United States, mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period: The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 10 July 2023 and will close at 5:00 PM (Irish time) on 10 July 2023.The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").

Limited Basket Return: means a 50% cap on the positive return of the Basket (as defined further below in the Investment Policy) available to the Fund at the Maturity Date.

Maturity Date: 28 December 2029

Money Market/Short Term Instruments: includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Subscription Period: means from 11 July 2023 to 8 September 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Valuation Day: means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.

Valuation Point: Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date and (ii) seek to provide the Limited Basket Return , as defined above and described in further detail below, at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or credit/financial institutions and/or insurance companies authorised to operate in a Member State of the European Union or the European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*
The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Basket*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into a swap which involves an OTC counterparty paying the Fund a return linked to a basket providing exposure to Equity Instruments and/or equity indices and/or Money Market/Short Term Instruments and/or Debt Instruments (the "Basket") which will seek to provide a positive performance (as described further below) at the Maturity Date of either one or more selected UCITS funds as described in further detail below.

Through the Basket exposure, the Manager is looking at opportunities in terms of capturing a positive return at the Maturity Date of one or more of the best known US equity focused UCITS funds of the top investment managers around the world and available on the market, such as US Forty Fund which is managed by Janus Henderson. The Basket securities will look to mimic the portfolio of the selected UCITS fund/funds thus allowing the Manager deliver the Limited Basket Return at the Maturity Date. The Manager will carry out investment due diligence to narrow down the universe of UCITS funds for the Basket exposure. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the potential sub-fund(/s), as well as the team structure and risk management processes employed by the investment managers of that or those sub-fund(/s). Both quantitative and qualitative analysis will be considered in the evaluation and selection of a sub-fund or sub-funds.

For further information on the indices that may make up the Basket see below the sub-section entitled "Exposure to Indices".

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use cross-currency swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date.

A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, guaranteed or owned by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the S&P 500 Growth Index (the **Index**), which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index , as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days), unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek capital appreciation at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

While the Manager integrates Sustainability Risk into the Fund's investment decision making process, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager will comply with the Manager's basic exclusion list, whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risks may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 10 July 2023 to 10 July 2023	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A Acc	€100	From 10 July 2023 to 10 July 2023	Euro	No	€1,000	N/A	€100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2.5% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.5% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.5% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE SINGLE STRATEGY FINECO AM FUND I

SUPPLEMENT DATED 28 JUNE 2023

This Supplement contains specific information in relation to **SMART DEFENCE SINGLE STRATEGY FINECO AM FUND I** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every weekday on which retail banks and securities markets in Europe and Luxembourg are normally open for business.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point;
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, guaranteed or owned by sovereign or

government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Equity Instruments: means equity and/or equity related securities such as convertible stocks or preferred stock of issuers located anywhere in the world, mainly listed or traded on a Recognised Market listed in Schedule I of the Prospectus.

Initial Offer Period: The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 10 July 2023 and will close at 5:00 PM (Irish time) on 10 July 2023.The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").

Limited Basket Return: means a 50% cap on the positive return of the Basket (as defined further below in the Investment Policy) available to the Fund at the Maturity Date.

Maturity Date: 28 December 2029

Money Market/Short Term Instruments: includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Subscription Period: means from 11 July 2023 to 8 September 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Valuation Day: means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.

Valuation Point: Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date and (ii) seek to provide the Limited Basket Return as defined above and described in further detail below, at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or credit/financial institutions and/or insurance companies authorised to operate in a Member State of the European Union or the European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Basket*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into a swap which involves an OTC counterparty paying the Fund a return linked to a basket providing exposure to Equity Instruments and/or equity indices and/or Money Market/Short Term Instruments and/or Debt Instruments (the "Basket") which will seek to provide a positive performance (as described further below) at the Maturity Date of either one or more selected UCITS funds as described in further detail below.

Through the Basket exposure, the Manager is looking at global opportunities in terms of capturing a positive return at the Maturity Date of one or more of the best known global equity focused UCITS funds of the top investment managers around the world and available on the market, such as Global Focus Fund which is managed by JP Morgan. The Basket securities will look to mimic the portfolio of the selected UCITS fund/funds thus allowing the Manager deliver the Limited Basket Return at the Maturity Date. The Manager will carry out investment due diligence to narrow down the universe of UCITS funds for the Basket exposure. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the potential sub-fund(/s), as well as the team structure and risk management processes employed by the investment managers of that or those sub-fund(/s). Both quantitative and qualitative analysis will be considered in the evaluation and selection of a sub-fund or sub-funds.

For further information on the indices that may make up the Basket see below the sub-section entitled "Exposure to Indices".

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section (i) above

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use cross-currency swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date.

A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, guaranteed or owned by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Index (the **Index**), which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index , as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days), unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek capital appreciation at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

While the Manager integrates Sustainability Risk into the Fund's investment decision making process, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager will comply with the Manager's basic exclusion list, whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risks may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 10 July 2023 to 10 July 2023	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A Acc	€100	From 10 July 2023 to 10 July 2023	Euro	No	€1,000	N/A	€100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2.5% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.5% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.5% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

EMERGING MARKETS EQUITY FAM FUND

SUPPLEMENT DATED 10 August 2023

This Supplement contains specific information in relation to **EMERGING MARKETS EQUITY FAM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub- funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and each addendum thereto (together the "Prospectus").

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital growth.

The Fund seeks to achieve its objective by investing primarily in equity or equity related securities (to include American depositary receipts, global depositary receipts of (i) companies with their registered office in an emerging market country, (ii) companies with their registered office in a non-emerging market country but carrying out their business activities predominantly in emerging market countries or (iii) holding companies, the interests of which are predominantly invested in companies with their registered office in emerging market countries. The Fund may invest up to 10% of its net assets in aggregate in units of Underlying Funds (including ETFs) as permitted by the UCITS Regulations.

Emerging market countries are those (other than Luxembourg) which are not, as at the date of this Supplement, part of the MSCI World Index. For the purposes of the Fund, emerging market countries is also intended to include Israel.

In addition, investments may be made by the Investment Manager in Hong Kong.

Up to 30% of the Net Asset Value of the Fund may be invested in, money market instruments (including money market funds and time deposits), equity and equity related securities issued by companies and other companies which are not in scope of (i), (ii) or (iii) above, but which stand to benefit from their operations in emerging market countries or debt securities of issuers in emerging market countries.

Investment Strategy

Fundamental principles drive an unconstrained active investment approach, which aims to deliver on the Fund's investment objective. The following principles underpin the Investment Manager's philosophy and approach to investing:

▪ Valuation is paramount: the Investment Manager seeks to buy companies trading at a significant discount to its estimate of fair value.

▪ Contrarianism: the Investment Manager looks for new ideas in unloved areas of the market.

▪ Long term focus: the Investment Manager believes that share prices reflect fundamentals over time.

▪ Fundamental approach: the Investment Manager understands the businesses it invests in.

The Investment Manager focuses on identifying companies whose present value of future cashflows are undervalued by the market and on understanding the risks to those future cashflows. In actively constructing the portfolio, the Investment Manager aims to invest in a range of undervalued securities with different risk profiles in order to optimise the risk-return profile of the portfolio as a whole.

The Investment Manager believes that investors' behavioural biases repeatedly give rise to market inefficiencies, deriving from three interlinked sources:

- Markets often overreact by placing undue focus on near-term issues.
- Market expectations are often overly influenced by the extrapolation of current trends.
- Markets respond to momentum and other technical drivers as well as to fundamentals.

The Investment Manager's investment approach is to take advantage of such inefficiencies in the market and to buy stocks below their intrinsic value. This is achieved through fundamental research, drawing on internal proprietary research, selective use of external research and extensive company contact to better understand a company. This approach places a strong emphasis on valuation, a key determinant of future returns. Typically, the Investment Manager's long-term approach to investing covers an investment horizon of between three and five years. The flexibility of the Investment Manager's investment approach allows it to also take advantage of short-term valuation anomalies, where deemed appropriate.

The Investment Manager has created an investable universe of around 500 to 1,000 stocks, most of which has been analysed in detail for a considerable period of time. The investable universe has been narrowed down by the Investment Manager by eliminating companies on the basis of size (i.e. companies with a market capitalisation under USD500 million); liquidity (i.e. companies which trade less than USD5 million a day) and application of an ESG related exclusion list which excludes companies according to the Investment Manager's policy towards controversial weapons and cannabis and such other exclusions as determined by the Investment Manager. The investment team seeks to narrow the investable universe further into a company shortlist; this is effectively a dynamic buy-list of around 100 stocks some of which are held in the portfolio (approximately 50 stocks) and others which are candidates for inclusion (approximately 50 stocks). The company shortlist is dynamic in that the attractiveness of a stock is continuously reassessed and ranked as share prices and fundamentals change. The Investment Manager will look to drop and replace stocks in the company shortlist from time to time however, changes tend to be incremental.

Benchmark Information

The Fund is actively managed in reference to the MSCI Emerging Markets Index (Net Total Return) (the "Benchmark") and is not constrained by the Benchmark, which is used for comparison purposes.

However, the majority of the Fund's holdings are likely to be components of the Benchmark. The Investment Manager has discretion over portfolio construction and therefore securities, weightings and risk characteristics will differ. As a result, it is expected that over time the risk return characteristics of the Fund may diverge materially to the Benchmark.

Use of financial derivative instruments and other instruments and Techniques

The Fund may use FDI for efficient portfolio management purposes and/or hedging purposes.

The types of FDIs that the Fund may use are: futures (including currency futures, stock index futures, interest rate futures), forwards, non-deliverable forwards, swaps such as interest rate swaps and credit default swaps. In addition, FDIs may incorporate derivatives on derivatives (i.e. forward dated swaps, swap options). The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Futures: A futures contract is an agreement to buy or sell a stated amount of a security, currency or other asset at a specific future date and at a pre-agreed price. Futures can be used to gain exposure to positions in a more efficient manner. For example a single stock future could be used to provide a Fund with exposure to a single security. Index futures could also be used to manage risk, for example to hedge the risk of a security or group of securities held within the underlying index or with a high correlation with the underlying index.

Options: An option is an agreement that gives the buyer, who pays a fee (premium), the right — but not the obligation — to buy or sell a specified amount of an underlying asset at an agreed price (strike or exercise price) on or until the expiration of the contract (expiry). A call option is an option to buy, and a put option an option to sell. The bounds of the exposure of the Fund will be on the one side a potential unlimited exposure and on the other side an exposure that is limited to the higher of the premium paid or the market value of that option. The Fund may use such instruments to hedge against market risk or to gain exposure to relevant underlying equity or equity related security. Swap options may be used to give the Fund the option to enter into a swap agreement (typically an interest rate swap agreement) on a specified future date in exchange for an option premium. Swap options are typically used in order to protect against exposure to specific interest rates as the buyer has the right to enter into a swap where they would receive the fixed swap rate and pay the specified floating rate or visa versa over the life of the swap. Credit default swap options may also be used and provide the buyer with the right to enter into a credit default swap on a specific reference entity with a specific maturity.

Forwards: A forward agreement is a customised, bilateral agreement to exchange an asset or cash flows at a specified future settlement date at a forward price agreed on the trade date. One party to the forward is the buyer (long), who agrees to pay the forward price on the settlement date; the other is the seller (short), who agrees to receive the forward price. Forward currency contracts could be used to hedge against currency risk that has resulted from assets held by the Fund that are not in the Base Currency. The Fund, may, for example, use forward currency contracts by selling forward a foreign currency against the Base Currency to protect the Fund from foreign exchange rate risk that has risen from holding assets in that currency. A non-deliverable forward is a forward agreement which has no physical settlement of the two currencies at maturity and a net cash settlement is instead made by one party to the other based on the movement of the two currencies. Non-deliverable forwards are used in a variety of circumstances including where there is low liquidity, such as to hedge local currency risks in emerging markets where local currencies are not freely convertible, or when there are restrictions on capital flows.

Credit Derivatives: A credit derivative is a financial instrument that transfers credit risk related to an underlying entity or a portfolio of underlying entities from one party to another without transferring the underlying. The underlying may or may not be owned by either party in the transaction. The Fund may use credit default swaps and credit default index swaps for hedging purposes. Credit default swaps are swap agreements two parties, a protection buyer who makes fixed periodic payments, and a protection seller, who collects the premium in exchange for making the protection buyer whole in case of default. Credit default swaps being used to buy protection will be traded directly with counterparties with respect to individual credits. Buying protection is an alternative method of hedging portfolio risk if there is a concern about a temporary correction in the market or to express a negative view on an individual company, security or the markets in general. Credit default index swaps are swap agreements in respect of an index portfolio of single-entity credit default swaps. Generally these are standardised contracts and the reference entities each have the same notional and recovery rate.

Interest Rate swaps: The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 20% of the Fund's Net Asset Value, subject to a maximum exposure of 29% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for investors who are seeking a return over the long term via exposure to emerging market equities and are willing to accept high volatility. There should also be an understanding that emerging market equities can experience higher volatility than the market average (as represented by a diversified portfolio of large cap global equities) due to among other things political and economic instability.

Investment Manager

The Manager has appointed Invesco Asset Management Limited of Perpetual Park, Perpetual Park Drive, Henley-on-Thames, Oxfordshire RG9 1HH, United Kingdom to act as the investment manager pursuant to an investment management agreement dated 17 October 2018, as amended. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager's principal business and occupation is to provide investment management services to clients.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of “Sustainability Risks” in the main body of the Prospectus).

While the Investment Manager integrates Sustainability Risk into the Fund’s investment decision making process as described above, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors;

(ii) The Investment Manager will comply with its own exclusion policy and the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager), whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk. The Investment Manager's exclusion policy can be found on the Investment Manager's website at the following link: https://www.invescomanagementcompany.lu/lux-manco/literature, and is subject to change from time to time. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risks given that the Fund does not promote environmental and/or social characteristics, nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager and the Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and/or the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Investment Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain, when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: USD.

Offer of Shares

The following Classes of Shares, are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
I Acc	100	11 August 2023 - 9 February 2024	EUR	No	No	1,000,000/100 EUR	Accumulating
J Acc	10,000	11 August 2023 - 9 February 2024	EUR	No	No	1,000,000/100 EUR	Accumulating

J Dist	10,000	11 August 2023 - 9 February 2024	EUR	No	No	1,000,000/100 EUR	Distributing
L Acc	100	11 August 2023 - 9 February 2024	EUR	No	Yes/5%	100 /100 EUR	Accumulating
L Dist	100	11 August 2023 - 9 February 2024	EUR	No	Yes/5%	100 /100 EUR	Distributing
LH Acc	100	11 August 2023 - 9 February 2024	EUR	Yes	Yes/5%	100 / 100 EUR	Accumulating
A Acc	100	11 August 2023 - 9 February 2024	EUR	No	No	100 / 100 EUR	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following definitions that shall apply in respect of applications for Shares of the Fund:

"Business Day" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in Dublin, Luxembourg and Milan are open for business.

"**Dealing Deadline**" means 11:59 am (Irish time) on the relevant Dealing Day.

"**Valuation Point**" means 11:59 pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales charge:
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double- charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

SMART DEFENCE PROGRESSION 2025 FINECO AM FUND III

SUPPLEMENT DATED 08 DECEMBER 2023

This Supplement contains specific information in relation to **SMART DEFENCE PROGRESSION 2025 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Coupon:	means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum coupon which will be paid by the Fund at the Maturity Date.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments: includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Equity Instruments: means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.

Initial Offer Period: The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 11 December 2023 and will close at 5:00 PM (Irish time) on 11 December 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").

Maturity Date: 9 July 2025.

Money Market/Short Term Instruments: includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Subscription Period: means from 12 December 2023 to 02 January 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Valuation Day: means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.

Valuation Point: Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with the Coupon at the Maturity Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest up to 100% of its assets in Equity and/or Debt Instruments ("Funding Instruments").

Once the Fund purchases the Funding Instruments it will then enter into a total return swap ("TRS") on the Funding Instruments in which it will swap out the performance and the income of the Funding Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Funding Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Funding Instruments directly. The TRS will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders during the life of the Fund, up to the Maturity Date.

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection
The Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum Volatility**: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable

economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency.

The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and obtain income at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class C Acc*	€100	From 11 December 2023 to 11 December 2023	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A Acc	€100	From 11 December 2023 to 11 December 2023	Euro	No	€100	N/A	€100	Accumulating

*Class C Shares in the Fund shall only be made available for subscription to current investors in such Solutions Funds as the Manager may determine from time to time in its discretion.

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2030 FINECO AM FUND II
SUPPLEMENT DATED 11 SEPTEMBER 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2030 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	18 December 2024, 17 December 2025, 16 December 2026, 15 December 2027, 20 December 2028, 19 December 2029 and 18 December 2030 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 26 September 2023 and will close at 5:00 PM (Irish time) on 26 September 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 December 2030
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 27 September 2023 to 28 November 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 26 September 2023 to 26 September 2023	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 26 September 2023 to 26 September 2023	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 26 September 2023 to 26 September 2023	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY 2030 FINECO AM FUND

SUPPLEMENT DATED 27 SEPTEMBER 2023

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2030 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 18 December 2024, 17 December 2025, 16 December 2026, 15 December 2027, 20 December 2028, 19 December 2029 and 26 June 2030 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 28 September 2023 and will close at 5:00 PM (Irish time) on 28 September 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Limited Index Return:	means a range of between 20%-30% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 65%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	26 June 2030.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 29 September 2023 to 8 December 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps (“CDS”) on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled “*Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques”* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Index (the "Index"). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com/World.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under “Funding Investments” further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund’s approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 6 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a [medium-to-high] investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 28 September 2023 to 28 September 2023	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 28 September 2023 to 28 September 2023	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 28 September 2023 2023 to 28 September 2023	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we

draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2026 FINECO AM FUND III
SUPPLEMENT DATED 13 OCTOBER 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2026 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 4 December 2024, 3 December 2025 and 2 December 2026 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 16 October 2023 and will close at 5:00 PM (Irish time) on 16 October 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	9 December 2026
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 17 October 2023 to 28 November 2023 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 16 October 2023 to 16 October 2023	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 16 October 2023 to 16 October 2023	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 16 October 2023 to 16 October 2023	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

Fineco AM MarketVector Artificial Intelligence ESG UCITS ETF

SUPPLEMENT DATED 23 AUGUST 2024

This Supplement contains specific information in relation to **Fineco AM MarketVector Artificial Intelligence ESG UCITS ETF** (the "**Fund**"), a sub- fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. The Fund may, at any one time, be principally invested in FDI. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MarketVector™ Artificial Intelligence ESG Index (the "**Reference Index**", as described below under the sub- heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MarketVector Indexes GmbH, acting as the index administrator provider (the "**Index Provider**") and it is described below in the sub- heading "Description of the Reference Index".

The Fund will invest principally in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights of companies located worldwide (the "**Invested Assets**"). The Fund will then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub- heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty,

this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/ size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

ESG Screening

The Manager applies its exclusion policy (the "Exclusion Policy") to the Invested Assets. Exclusion categories considered in the Exclusion Policy are (1) United Nations Global Compact Principles (2) Controversial Weapons (3) Tobacco (4) Climate Change and (5) Forced Labour. The Exclusion Policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. In addition, the Invested Assets are selected using only the constituents of ESG screened indices.

All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

Description of the Reference Index

General Description: The Reference Index tracks the performance of the largest and most liquid companies in the global artificial intelligence industry. It includes companies with a focus on productivity software, big data analytics related to machine learning, and embedded machine learning semiconductors.

Size and Liquidity: Full market capitalisation of at least 1 billion USD. Three month average-daily-trading volume of at least 5 million USD at a review and also at the previous two reviews. At least 250,000 shares traded per month over the last six months at a review and also at the previous two reviews. Review is semi-annual.

ESG: The Reference Index considers ESG factors. The ESG factor data are based on the ISS Norm-Based (NBS) Research framework which consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. The Reference Index does not consider companies that violate certain ESG criteria included in the following four categories and as disclosed below:

1. Norm-based research: Norm-Based Research identifies and evaluates allegations that

companies fail to respect established norms for Responsible Business Conduct covering union rights, work discrimination, bribery, child labour, environmental protection, human rights, forced labour, labour standards, money laundering, labour discrimination and boycott list.
a. Any security that has an overall score >8 (scores of 9 and 10 indicate a company has verified failure or imminent failure to established norms) is removed.
b. Individual norms as outlined under the Index Guide are reviewed for severity (score RED = 10, or T=True (vs False))
2. Controversial weapons: This category covers anti-personnel mines, biological weapons programme, chemical weapons programme, cluster munitions programme, depleted uranium programme, incendiary weapons programme, any nuclear weapons programme outside of the Non-Proliferation Treaty and white phosphorus weapons programme. Corporate involvement in controversial weapons using standardized methodologies, such as criteria set out in the relevant international norms, such as the Mine Ban Treaty (MBT) and the Convention on Cluster Munitions (CCM), the key international arms control instruments concerning anti-personnel mines and cluster munitions is assessesd.
a. Any companies marked as Red (= Verified involvement in controversial weapons) or where data is not collected as outlined in the Index Guide is removed.
3. Sector exposure screening: This category covers ammunition for civilian firearms, assault weapons, automatic firearms, high-capacity magazines and repeated firearms and involvement in tobacco, gambling and military equipment and services.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.
4. Energy extractives: This category covers fossil fuel, oil sands, thermal coal mining and uranium mining.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide is removed.

Additional information on the ESG factors that apply are set out under "ESG Factors" in the Index Guide that is available on the website disclosed under "Further Information and Website".

Index Provider: The above Index is provided by the Index Provider, as identified above, who was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the "**Benchmark Regulation**"). The Index is calculated by Solactive AG as a vendor for calculation services. An outsourcing agreement according to Article. 10 of the Benchmark Regulation was entered into between the Index Provider and Solactive AG for the calculation service.

Index Provider's Disclaimer: The Fund is not sponsored, endorsed, sold or promoted by the Index Provider and/or its affiliates. The Index Provider and/or its affiliates makes no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Fund to track the Reference Index's performance.

The Reference Index is the exclusive property of the Index Provider, which has contracted with Solactive AG to maintain and calculate the Reference Index. Solactive AG uses its best efforts to ensure that the Reference Index is calculated correctly. Irrespective of its obligations towards the Index Provider, Solactive AG has no obligation to point out errors in the Reference Index to third parties including but not limited to investors and/or financial intermediaries of the Fund.

The Fund is not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Reference Index and/or Reference Index trade mark or the Reference Index price at any time or in any other respect. Neither publication of the Reference Index by Solactive AG nor the licensing of the Reference Index or Reference Index trade mark for the purpose of use in connection with the Fund constitutes a recommendation by Solactive AG to invest capital in the Fund nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in this Fund. Solactive AG is not responsible for fulfilling the legal requirements concerning the accuracy and completeness of this Supplement.

THE INDEX PROVIDER AND ITS AFFILIATES DO NOT GUARANTEE THE ACCURACY AND/OR COMPLETENESS OF THE REFERENCE INDEX OF ANY DATA INCLUDED THEREIN AND SHALL NOT HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS, AND MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE FUND. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE INDEX PROVIDER OR ANY OF ITS AFFILIATES HAVE ANY LIABILITY FOR ANY LOST PROFITS OR INDIRECT, PUNITIVE, SPECIAL OR CONSEQUENTIAL DAMAGES OR LOSSES, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Further Information and Website: The Index Provider's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://marketvector.com/indices/sector.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund will enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. These Total Return Swaps contain a short leg, referencing the assets held in the Fund, and a long leg, referencing the Reference Index, and have the aim to provide investors with the return on the index in the most efficient manner. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated

that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.
Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. Further detail on the potential short exposure where the Reference Index is synthetically replicated is explained further above under "Total Return Swaps".

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund will take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest

in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

The Manager manages the Fund in accordance with its Responsible Investment Policy (the "ESG Policy") on a continuous basis. Further details on how ESG has been integrated into the investment process that applies in respect of the Fund are available on the Manager's website at the following link: https://finecoassetmanagement.com/responsibleinvesting..

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

While the Manager integrates Sustainability Risk into the Fund's selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policies section above relating to tracking the Reference Index via a Total Return Swap, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic Exclusion Policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial- related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	Closed	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	From 26 August 2024 – 24 February 2025	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	Closed	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 0.5% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund’s operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed “**Fees and Expenses**”.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fineco AM MarketVector Artificial Intelligence ESG UCITS ETF
Legal entity identifier: 254900P608PAKI94X886

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _40% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The characteristics promoted through investment in the Invested Assets currently fall under a range of categories comprising climate change, natural capital, pollution & waste, environmental opportunities (environmental) and human capital, product liability, stakeholder opposition and social opportunities (social).

The environmental and/or social characteristics will be considered in the following manner:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors

are a key element of the construction of the Invested Assets. The Invested Assets in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and social characteristics such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This threshold is currently A+ using MSCI ESG Manager or another corresponding rating from a similar rating provider with a lower score at Fund level permitted only where it is demonstrated to the satisfaction of the Manager that the approach to sustainability risk management and the sustainability elements of the investment strategy are compatible with the Article 8 classification of the Fund. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better environmental and/or social characteristics.

3. **Negative Screening (Norm-based exclusions)**
For the Invested Assets the Manager (see link to Exclusion Policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Invested Assets with this approach, the Manager, for the Invested Assets only, considers the following categories which are outlined in more detail in the Exclusion Policy:

    - United Nations Global Compact Principles
    - Controversial Weapons
    - Tobacco
    - Climate Change
    - Forced Labour

The Fund pursues the environmental and/or social characteristics promoted by it through replicating the Reference Index synthetically, via investment in the Invested Assets.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Depending on whether the Fund is physically or synthetically replicated, the Fund uses the following applicable sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i. The minimum Fund level ESG score; and

ii. The holdings of the Fund being rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, its internal methodology to determine sustainable investments, which partially relies (for the good governance and positive contribution criteria, as per 1 and 3 below) on its ESG third party data provider's methodology, as also clearly explained in the publicly available document on the Manager's website at the below link. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. A company must meet the criteria described below in order to be considered as contributing to an environmental or social objective:

1. Demonstrate good governance. A company must pass MSCI ESG Research's criteria for the SFDR Article 2 (17) "good governance" (strong overall management and governance structures). Pass indicates that the ESG Rating score is BB or above.

2. Do no significant harm to other environmental or social objectives. The Manager applies its own norms-based Exclusion Policy as the criteria to assess if the company passes or fails the SFDR article 2 (17) "do no significant harm".

3. Make a positive contribution towards an environmental or social objective. A company must derive at least 20% of revenue from economic activities that positively contribute to a social or environmental theme and / or have a carbon emissions reduction target approved by the science-based targets initiative (SBTi). From the perspective of targeting an environmental objective, revenue alignment includes activities focused on climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources. Activities focused on social objectives include access to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services, and bridging the digital divide in least developed countries.

More information on the internal methodology can be found on the website of the Manager: https://finecoassetmanagement.com/responsible-investing

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

How have the indicators for adverse impacts on sustainability factors been taken into account?

When replicating the Reference Index via a Total Return Swap through the Invested Assets, principal adverse impact ("PAI") indicators are calculated at Invested Assets level. The results will be compared with that of a chosen proxy benchmark representative of the Invested Asset's investment universe. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine what the Manager can improve relative to the Invested Assets, and where the Manager can engage with relevant issuers to improve on such indicators.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.

2. Through ensuring that the sustainable investments that the Manager makes are:

   a. Made in investee companies that demonstrate good governance:

   b. Made in investee companies that demonstrates that they do no significant harm to other environmental objectives; and

   c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against the mandatory and additional PAI indicators. The indicators that will be reported on are (1) greenhouse gas (GHG) emissions, (2) carbon footprint, (3) GHG intensity of investee companies, (4) exposure of companies active in the fossil fuel sector, (5) share of non-renewable energy consumption and production, (6) energy consumption intensity per high impact climate sector, (7) activities negatively affecting biodiversity-sensitive areas, (8) emissions to water, (9) hazardous waste ratio, (10) violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises, (11) Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises, (12) unadjusted gender pay gap, (13) board gender diversity and (14) exposure to controversial weapons (15) investments in companies without carbon emission reduction initiatives and (16) lack of a human rights policy.

Information on how the principal adverse impacts were taken into account will be provided in the Fund’s annual report. Further information is also available in the PAI Statement of the Manager (see link below for further information).

No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the Reference Index, while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index. The Reference Index tracks the performance of the largest and most liquid companies in the global artificial intelligence industry and considers ESG factors.

The Manager applies the Exclusion Policy to the Invested Assets. All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **The Invested Assets** will only be drawn from constituents of ESG screened indices;

b. **Minimum underlying security score of BB** by MSCI ESG manager (or another corresponding rating from a similar rating provider) for each Fund security;

c. **Exclusion Policy**

The Exclusion Policy described under the sub-heading ESG Screening further above in this Supplement applies to the Invested Assets and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein. The exclusions specifically covered by the Manager's Exclusion Policy currently include:

a. Issuers that breach the principles of the United Nations Global Compact;

b. Issuers involved in the manufacture or product life cycle of controversial weapons (biological and chemical weapons, cluster munitions, depleted uranium, landmines and nuclear weapons);

c. Issuers deriving 5% or more revenue from the production of tobacco related products or 15% or more aggregate revenue from the production, distribution, retail, supply and licensing of tobacco-related products.

d. Issuers that derive more than 10% of their revenue from thermal coal extraction and/or arctic drilling;

e. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable

What is the policy to assess good governance practices of the investee companies?

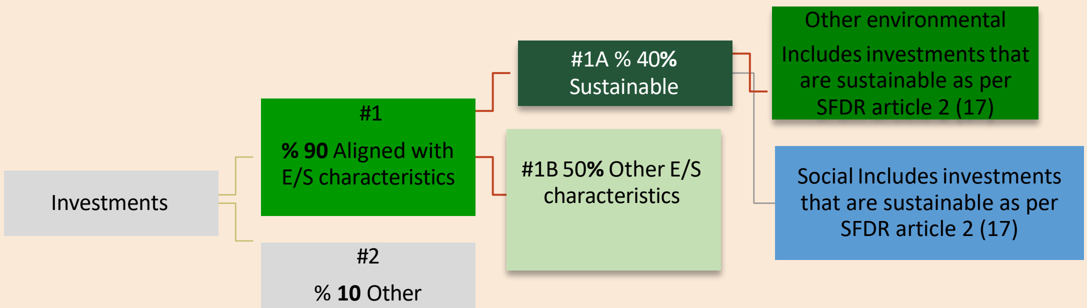
Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Good governance practices of investee companies is addressed in various layers of the investment selection process. To be able to assess the Manager's full investment universe, a data driven quantitative good governance assessment has been adopted. The assessment is performed by data driven analysis based on external ESG data vendors and is integrated and maintained in front office and compliance systems. Portfolio managers are responsible for the ongoing assessment and monitoring of the governance practices of the companies in which they invest in.

For the Invested Assets, as a minimum requirement good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or another corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. Once a potential investment passes the minimum requirements test, other due diligence and governance practices are applied by the Manager as additional safeguards. This includes applying the Exclusion Policy to ensure that an investment company is compliant with the principles on labor relations of the United Nations Global Compact. Further detail on the approach of the Manager is available in the Good Governance Policy available on the Manager's website.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also commits to a minimum proportion of 40% in sustainable investments.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

  The Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

- **Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy?**

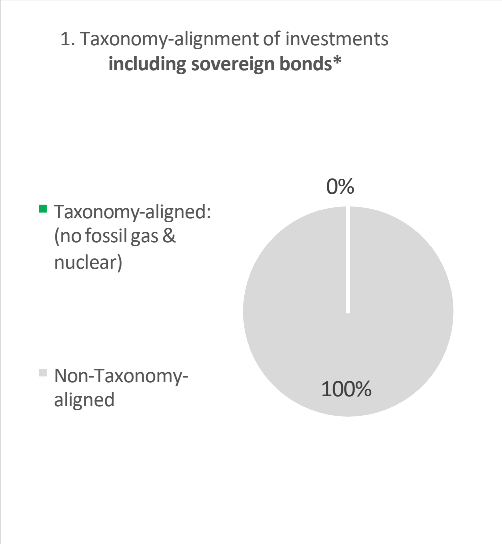
☐ **Yes:**

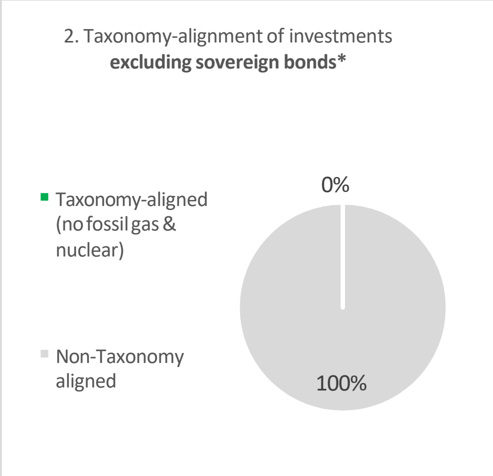
☐ **In fossil gas** ☐ **In nuclear energy**

☒ **No**

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





This graph represents 100% of the total investments

**   For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities? 0%.
There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%

What is the minimum share of socially sustainable investments?

40%

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction, efficient portfolio management and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Good Governance Policy, Responsible Investment Policy, Exclusion Policy and PAI Statement can be found on the Manager's website at the following links:

Fineco AM MarketVector Bioproduction Tech and Tools ESG UCITS

ETF SUPPLEMENT DATED 23 AUGUST 2024

This Supplement contains specific information in relation to **Fineco AM MarketVector Bioproduction Tech and Tools ESG UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. The Fund may, at any one time, be principally invested in FDI. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MarketVector™ Bioproduction Tech and Tools ESG Index (the "**Reference Index**", as described below under the sub- heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MarketVector Indexes GmbH, acting as the index administrator provider (the "**Index Provider**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund will invest principally in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights of companies located worldwide (the "**Invested Assets**"). The Fund will then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub- heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty, this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

ESG Screening

The Manager applies its exclusion policy (the “Exclusion Policy”) to the Invested Assets. Exclusion categories considered in the Exclusion Policy are (1) United Nations Global Compact Principles (2) Controversial Weapons (3) Tobacco (4) Climate Change and (5) Forced Labour. The Exclusion Policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/. In addition, the Invested Assets are selected using only the constituents of ESG screened indices.

All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

Description of the Reference Index

General Description: The Reference Index tracks the performance of the largest and most liquid global companies involved in the development of technologies, tools, materials, and processes related to the development or manufacture of biopharmaceuticals. It includes companies that generate at least 50% of their revenue from bioproduction and the following products and services related to the bioproduction industry: laboratory technologies, contract research, contract manufacturing, and clinical diagnostics.

Size and Liquidity: Full market capitalisation of at least 150 million USD. Three month average-daily-trading volume of at least 1 million USD at a review and also at the previous two reviews. At least 250,000 shares traded per month over the last six months at a review and also at the previous two reviews. Review is quarterly.

ESG: The Reference Index considers ESG factors. The ESG factor data are based on the ISS Norm-Based (NBS) Research framework which consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. The Reference Index does not consider companies that violate certain ESG criteria included in the following four categories and as disclosed below:

1. Norm-based research: Norm-Based Research identifies and evaluates allegations that companies fail to respect established norms for Responsible Business Conduct covering union rights, work discrimination, bribery, child labour, environmental protection, human rights, forced labour, labour standards, money laundering, labour discrimination and boycott list.
a. Any security that has an overall score >8 (scores of 9 and 10 indicate a company has verified failure or imminent failure to established norms) is removed.
b. Individual norms as outlined under the Index Guide are reviewed for severity (score RED = 10, or T=True (vs False))
2. Controversial weapons: This category covers anti-personnel mines, biological weapons programme, chemical weapons programme, cluster munitions programme, depleted uranium programme, incendiary weapons programme, any nuclear weapons programme outside of the Non- Proliferation Treaty and white phosphorus weapons programme. Corporate involvement in controversial weapons using standardized methodologies, such as criteria set out in the relevant international norms, such as the Mine Ban Treaty (MBT) and the Convention on Cluster Munitions (CCM), the key international arms control instruments concerning anti-personnel mines and cluster munitions is assessed.
a. Any companies marked as Red (= Verified involvement in controversial weapons) or where data is not collected as outlined in the Index Guide is removed.
3. Sector exposure screening: This category covers ammunition for civilian firearms, assault weapons, automatic firearms, high-capacity magazines and repeated firearms and involvement in tobacco, gambling and military equipment and services.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.
4. Energy extractives: This category covers fossil fuel, oil sands, thermal coal mining and uranium mining.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.

Additional information on the ESG factors that apply are set out under “ESG Factors” in the Index Guide that is available on the website disclosed under “Further Information and Website”.

Index Provider: The above Index is provided by the Index Provider, as identified above, who was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the “**Benchmark Regulation**”). The Index is calculated by Solactive AG as a vendor for calculation services. An outsourcing agreement according to Article 10 of the Benchmark Regulation was entered into between the Index Provider and Solactive AG for the calculation service.

Index Provider’s Disclaimer: The Fund is not sponsored, endorsed, sold or promoted by the Index Provider and/or its affiliates. The Index Provider and/or its affiliates makes no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Fund to track the Reference Index’s performance.

The Reference Index is the exclusive property of the Index Provider, which has contracted with Solactive AG to maintain and calculate the Reference Index. Solactive AG uses its best efforts to ensure that the Reference Index is calculated correctly. Irrespective of its obligations towards the Index Provider, Solactive AG has no obligation to point out errors in the Reference Index to third parties including but not limited to investors and/or financial intermediaries of the Fund.

The Fund is not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Reference Index and/or Reference Index trade mark or the Reference Index price at any time or in any other respect.

Neither publication of the Reference Index by Solactive AG nor the licensing of the Reference Index or Reference Index trade mark for the purpose of use in connection with the Fund constitutes a recommendation by Solactive AG to invest capital in the Fund nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in this Fund. Solactive AG is not responsible for fulfilling the legal requirements concerning the accuracy and completeness of this Supplement.

THE INDEX PROVIDER AND ITS AFFILIATES DO NOT GUARANTEE THE ACCURACY AND/OR COMPLETENESS OF THE REFERENCE INDEX OF ANY DATA INCLUDED THEREIN AND SHALL NOT HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS, AND MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE FUND. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE INDEX PROVIDER OR ANY OF ITS AFFILIATES HAVE ANY LIABILITY FOR ANY LOST PROFITS OR INDIRECT, PUNITIVE, SPECIAL OR CONSEQUENTIAL DAMAGES OR LOSSES, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Further Information and Website: The Index Provider's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://marketvector.com/indices/sector.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund will enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. These Total Return Swaps contain a short leg, referencing the assets held in the Fund, and a long leg, referencing the Reference Index, and have the aim to provide investors with the return on the index in the most efficient manner. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Further detail on the potential short exposure where the Reference Index is synthetically replicated is explained further above under “Total Return Swaps”.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund will take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest

in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

The Manager manages the Fund in accordance with its Responsible Investment Policy (the "ESG Policy") on a continuous basis. Further details on how ESG has been integrated into the investment process that applies in respect of the Fund are available on the Manager's website at the following link: https://finecoassetmanagement.com/responsibleinvesting..

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

While the Manager integrates Sustainability Risk into the Fund's selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policies section above relating to tracking the Reference Index via a Total Return Swap, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic Exclusion Policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial- related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	Closed	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	From 26 August 2024 – 24 February 2024	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	Closed	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

“**Business Day**” means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

“**Dealing Day**” means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

“**Valuation Day**” means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

“**Valuation Point**” means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 0.5% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: Fineco AM MarketVector Bioproduction Tech and Tools ESG UCITS ETF
Legal entity identifier: 2549007KCFFGJ9DKEC77

Environmental and/or social characteristics

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?	
☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The characteristics promoted through investment in the Invested Assets currently fall under a range of categories comprising climate change, natural capital, pollution & waste, environmental opportunities (environmental) and human capital, product liability, stakeholder opposition and social opportunities (social).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics will be considered in the following manner:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors

are a key element of the construction of the Invested Assets. The Invested Assets in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and social characteristics such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This threshold is currently A+ using MSCI ESG Manager or another corresponding rating from a similar rating provider with a lower score at Fund level permitted only where it is demonstrated to the satisfaction of the Manager that the approach to sustainability risk management and the sustainability elements of the investment strategy are compatible with the Article 8 classification of the Fund. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better environmental and/or social characteristics.

3. **Negative Screening (Norm-based exclusions)**
For the Invested Assets the Manager (see link to Exclusion Policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Invested Assets with this approach, the Manager, for the Invested Assets only, considers the following categories which are outlined in more detail in the Exclusion Policy:

    - United Nations Global Compact Principles
    - Controversial Weapons
    - Tobacco
    - Climate Change
    - Forced Labour

The Fund pursues the environmental and/or social characteristics promoted by it through replicating the Reference Index synthetically, via investment in the Invested Assets.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Depending on whether the Fund is physically or synthetically replicated, the Fund uses the following applicable sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i. The minimum Fund level ESG score; and

ii. The holdings of the Fund being rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, its internal methodology to determine sustainable investments, which partially relies (for the good governance and positive contribution criteria, as per 1 and 3 below) on its ESG third party data provider's methodology, as also clearly explained in the publicly available document on the Manager's website at the below link. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. A company must meet the criteria described below in order to be considered as contributing to an environmental or social objective:

1. Demonstrate good governance. A company must pass MSCI ESG Research's criteria for the SFDR Article 2 (17) "good governance" (strong overall management and governance structures). Pass indicates that the ESG Rating score is BB or above.

2. Do no significant harm to other environmental or social objectives. The Manager applies its own norms-based Exclusion Policy as the criteria to assess if the company passes or fails the SFDR article 2 (17) "do no significant harm".

3. Make a positive contribution towards an environmental or social objective. A company must derive at least 20% of revenue from economic activities that positively contribute to a social or environmental theme and / or have a carbon emissions reduction target approved by the science-based targets initiative (SBTi). From the perspective of targeting an environmental objective, revenue alignment includes activities focused on climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources. Activities focused on social objectives include access to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services, and bridging the digital divide in least developed countries.

More information on the internal methodology can be found on the website of the Manager:
https://finecoassetmanagement.com/responsible-investing

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

How have the indicators for adverse impacts on sustainability factors been taken into account?

When replicating the Reference Index via a Total Return Swap through the Invested Assets, principal adverse impact ("PAI") indicators are calculated at Invested Assets level. The results will be compared with that of a chosen proxy benchmark representative of the Invested Asset's investment universe. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine what the Manager can improve relative to the Invested Assets, and where the Manager can engage with relevant issuers to improve on such indicators.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.

2. Through ensuring that the sustainable investments that the Manager makes are:

   a. Made in investee companies that demonstrate good governance:

   b. Made in investee companies that demonstrates that they do no significant harm to other environmental objectives; and

   c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against the mandatory and additional PAI indicators. The indicators that will be reported on are (1) greenhouse gas (GHG) emissions, (2) carbon footprint, (3) GHG intensity of investee companies, (4) exposure of companies active in the fossil fuel sector, (5) share of non-renewable energy consumption and production, (6) energy consumption intensity per high impact climate sector, (7) activities negatively affecting biodiversity-sensitive areas, (8) emissions to water, (9) hazardous waste ratio, (10) violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises, (11) Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises, (12) unadjusted gender pay gap, (13) board gender diversity and (14) exposure to controversial weapons (15) investments in companies without carbon emission reduction initiatives and (16) lack of a human rights policy.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. Further information is also available in the PAI Statement of the Manager (see link below for further information).

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the Reference Index, while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.
The Reference Index tracks the performance of the largest and most liquid global companies involved in the development of technologies, tools, materials, and processes related to the development or manufacture of biopharmaceuticals and considers ESG factors.

The Manager applies the Exclusion Policy to the Invested Assets. All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

a. **The Invested Assets** will only be drawn from constituents of ESG screened indices;

b. **Minimum underlying security score of BB** by MSCI ESG manager (or another corresponding rating from a similar rating provider) for each Fund security;

c. **Exclusion Policy**

The Exclusion Policy described under the sub-heading ESG Screening further above in this Supplement applies to the Invested Assets and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein. The exclusions specifically covered by the Manager's Exclusion Policy currently include:

a. Issuers that breach the principles of the United Nations Global Compact;

b. Issuers involved in the manufacture or product life cycle of controversial weapons (biological and chemical weapons, cluster munitions, depleted uranium, landmines and nuclear weapons);

c. Issuers deriving 5% or more revenue from the production of tobacco related products or 15% or more aggregate revenue from the production, distribution, retail, supply and licensing of tobacco-related products.

d. Issuers that derive more than 10% of their revenue from thermal coal extraction and/or arctic drilling;

e. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

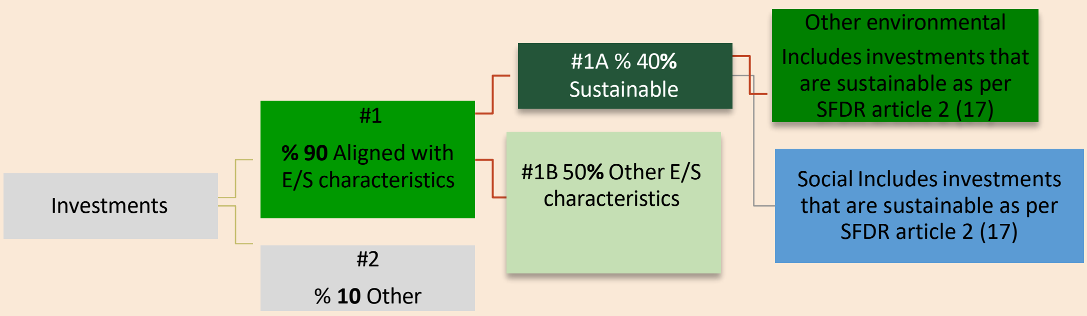
Good governance practices of investee companies is addressed in various layers of the investment selection process. To be able to assess the Manager's full investment universe, a data driven quantitative good governance assessment has been adopted. The assessment is performed by data driven analysis based on external ESG data vendors and is integrated and maintained in front office and compliance systems. Portfolio managers are responsible for the ongoing assessment and monitoring of the governance practices of the companies in which they invest in.

For the Invested Assets, as a minimum requirement good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or another corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. Once a potential investment passes the minimum requirements test, other due diligence and governance practices are applied by the Manager as additional safeguards. This includes applying the Exclusion Policy to ensure that an investment company is compliant with the principles on labor relations of the United Nations Global Compact. Further detail on the approach of the Manager is available in the Good Governance Policy available on the Manager's website.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also commits to a minimum proportion of 40% in sustainable investments.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

  The Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

- **Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy[1]?**

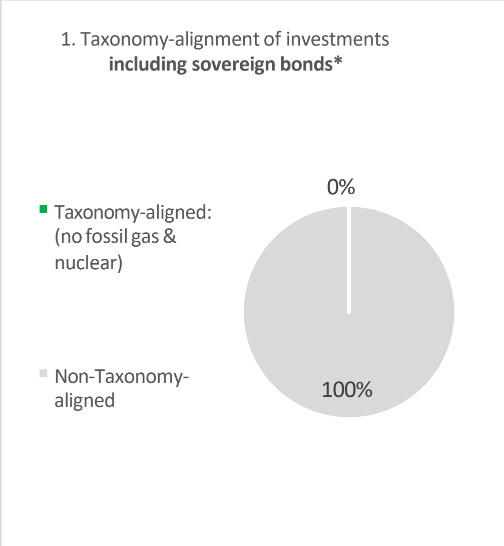
☐ **Yes:**

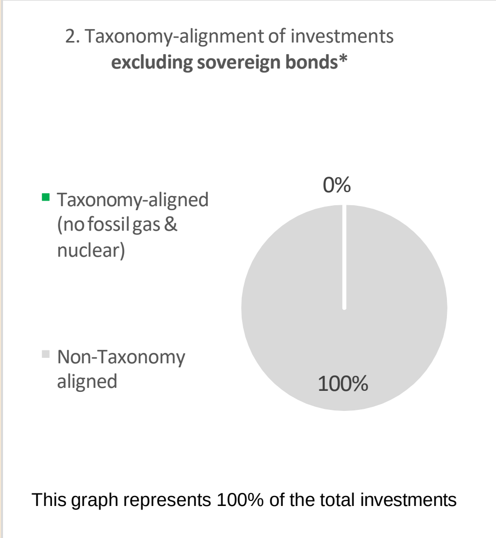
☐ **In fossil gas** ☐ **In nuclear energy**

☒ **No**

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.
There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%

What is the minimum share of socially sustainable investments?

40%

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction, efficient portfolio management and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social

characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Good Governance Policy, Responsible Investment Policy, Exclusion Policy and PAI Statement can be found on the Manager's website at the following links:

Fineco AM MarketVector Global Clean Energy Transition ESG UCITS ETF

SUPPLEMENT DATED 23 AUGUST 2024

This Supplement contains specific information in relation to **Fineco AM MarketVector Global Clean Energy Transition ESG UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. The Fund may, at any one time, be principally invested in FDI. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MarketVector™ Global Clean Energy Transition ESG Index (the "**Reference Index**", as described below under the sub- heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MarketVector Indexes GmbH, acting as the index administrator provider (the "**Index Provider**") and it is described below in the sub-heading "Description of the Reference Index".

The Fund will invest principally in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights of companies located worldwide (the "**Invested Assets**"). The Fund will then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub- heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty,

this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

ESG Screening

The Manager applies its exclusion policy (the “Exclusion Policy”) to the Invested Assets. Exclusion categories considered in the Exclusion Policy are (1) United Nations Global Compact Principles (2) Controversial Weapons (3) Tobacco (4) Climate Change and (5) Forced Labour. The Exclusion Policy may be obtained on the Manager’s website at: http://finecoassetmanagement.com/sustainability/. In addition, the Invested Assets are selected using only the constituents of ESG screened indices.

All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

Description of the Reference Index

General Description: The Reference Index tracks the performance of global companies involved in providing technologies and materials contributing to the global transition to clean energy.

Size and Liquidity: Full market capitalisation of at least 150 million USD. Three month average-daily-trading volume of at least 1 million USD at a review and also at the previous two reviews. At least 250,000 shares traded per month over the last six months at a review and also at the previous two reviews. Review is quarterly.

ESG: The Reference Index considers ESG factors. The ESG factor data are based on the ISS Norm-Based (NBS) Research framework which consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. The Reference Index does not consider companies that violate certain ESG criteria included in the following four categories and as disclosed below:

1. Norm-based research: Norm-Based Research identifies and evaluates allegations that companies fail to respect established norms for Responsible Business Conduct covering union rights, work discrimination, bribery, child labour, environmental protection, human rights, forced labour, labour standards, money laundering, labour discrimination and boycott list.
a. Any security that has an overall score >8 (scores of 9 and 10 indicate a company has verified failure or imminent failure to established norms) is removed.
b. Individual norms as outlined under the Index Guide are reviewed for severity (score RED = 10, or T=True (vs False))
2. Controversial weapons: This category covers anti-personnel mines, biological weapons programme, chemical weapons programme, cluster munitions programme, depleted uranium programme, incendiary weapons programme, any nuclear weapons programme outside of the Non-Proliferation Treaty and white phosphorus weapons programme. Corporate involvement in controversial weapons using standardized methodologies, such as criteria set out in the relevant international norms, such as the Mine Ban Treaty (MBT) and the Convention on Cluster Munitions (CCM), the key international arms control instruments concerning anti-personnel mines and cluster munitions is assessed.
a. Any companies marked as Red (= Verified involvement in controversial weapons) or where data is not collected as outlined in the Index Guide is removed.
3. Sector exposure screening: This category covers ammunition for civilian firearms, assault weapons, automatic firearms, high-capacity magazines and repeated firearms and involvement in tobacco, gambling and military equipment and services.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.
4. Energy extractives: This category covers fossil fuel, oil sands, thermal coal mining and uranium mining.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.

Additional information on the ESG factors that apply are set out under “ESG Factors” in the Index Guide that is available on the website disclosed under “Further Information and Website”.

Index Provider: The above Index is provided by the Index Provider, as identified above, who was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the “**Benchmark Regulation**”). The Index is calculated by Solactive AG as a vendor for calculation services. An outsourcing agreement according to Article 10 of the Benchmark Regulation was entered into between the Index Provider and Solactive AG for the calculation service.

Index Provider’s Disclaimer: The Fund is not sponsored, endorsed, sold or promoted by the Index Provider and/or its affiliates. The Index Provider and/or its affiliates makes no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Fund to track the Reference Index’s performance.

The Reference Index is the exclusive property of the Index Provider, which has contracted with Solactive AG to maintain and calculate the Reference Index. Solactive AG uses its best efforts to ensure that the Reference Index is calculated correctly. Irrespective of its obligations towards the Index Provider, Solactive AG has no obligation to point out errors in the Reference Index to third parties including but not limited to investors and/or financial intermediaries of the Fund.

The Fund is not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Reference Index and/or Reference Index trade mark or the Reference Index price at any time or in any other respect. Neither publication of the Reference Index by Solactive AG nor the licensing of the Reference Index or Reference Index trade mark for the purpose of use in connection with the Fund constitutes a recommendation by Solactive AG to invest capital in the Fund nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in this Fund. Solactive AG is not responsible for fulfilling the legal requirements concerning the accuracy and completeness of this Supplement.

THE INDEX PROVIDER AND ITS AFFILIATES DO NOT GUARANTEE THE ACCURACY AND/OR COMPLETENESS OF THE REFERENCE INDEX OF ANY DATA INCLUDED THEREIN AND SHALL NOT HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS, AND MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE FUND. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE INDEX PROVIDER OR ANY OF ITS AFFILIATES HAVE ANY LIABILITY FOR ANY LOST PROFITS OR INDIRECT, PUNITIVE, SPECIAL OR CONSEQUENTIAL DAMAGES OR LOSSES, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Further Information and Website: The Index Provider's Index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://marketvector.com/indices/sector.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund will enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. These Total Return Swaps contain a short leg, referencing the assets held in the Fund, and a long leg, referencing the Reference Index, and have the aim to provide investors with the return on the index in the most efficient manner. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. Further detail on the potential short exposure where the Reference Index is synthetically replicated is explained further above under “Total Return Swaps”.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund will take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

The Manager manages the Fund in accordance with its Responsible Investment Policy (the "ESG Policy") on a continuous basis. Further details on how ESG has been integrated into the investment process that applies in respect of the Fund are available on the Manager's website at the following link: https://finecoassetmanagement.com/responsibleinvesting..

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

While the Manager integrates Sustainability Risk into the Fund's selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policies section above relating to tracking the Reference Index via a Total Return Swap, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic Exclusion Policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial- related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100		Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	From 26 August 2024 – 24 February 2025	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	Closed	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 0.5% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund’s operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed “**Fees and Expenses**”.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fineco AM MarketVector Global Clean Energy Transition ESG UCITS ETF
Legal entity identifier: 254900OQIYUYECLT4F41

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The characteristics promoted through investment in the Invested Assets currently fall under a range of categories comprising climate change, natural capital, pollution & waste, environmental opportunities (environmental) and human capital, product liability, stakeholder opposition and social opportunities (social).

The environmental and/or social characteristics will be considered in the following manner:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors

are a key element of the construction of the Invested Assets. The Invested Assets in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and social characteristics such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This threshold is currently A+ using MSCI ESG Manager or another corresponding rating from a similar rating provider with a lower score at Fund level permitted only where it is demonstrated to the satisfaction of the Manager that the approach to sustainability risk management and the sustainability elements of the investment strategy are compatible with the Article 8 classification of the Fund. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better environmental and/or social characteristics.

3. **Negative Screening (Norm-based exclusions)**
For the Invested Assets the Manager (see link to Exclusion Policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Invested Assets with this approach, the Manager, for the Invested Assets only, considers the following categories which are outlined in more detail in the Exclusion Policy:

   - United Nations Global Compact Principles
   - Controversial Weapons
   - Tobacco
   - Climate Change
   - Forced Labour

The Fund pursues the environmental and/or social characteristics promoted by it through replicating the Reference Index synthetically, via investment in the Invested Assets.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Depending on whether the Fund is physically or synthetically replicated, the Fund uses the following applicable sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i. The minimum Fund level ESG score; and

ii. The holdings of the Fund being rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

a.

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, its internal methodology to determine sustainable investments, which partially relies (for the good governance and positive contribution criteria, as per 1 and 3 below) on its ESG third party data provider's methodology, as also clearly explained in the publicly available document on the Manager's website at the below link. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. A company must meet the criteria described below in order to be considered as contributing to an environmental or social objective:

1. Demonstrate good governance. A company must pass MSCI ESG Research's criteria for the SFDR Article 2 (17) "good governance" (strong overall management and governance structures). Pass indicates that the ESG Rating score is BB or above.

2. Do no significant harm to other environmental or social objectives. The Manager applies its own norms-based Exclusion Policy as the criteria to assess if the company passes or fails the SFDR article 2 (17) "do no significant harm".

3. Make a positive contribution towards an environmental or social objective. A company must derive at least 20% of revenue from economic activities that positively contribute to a social or environmental theme and / or have a carbon emissions reduction target approved by the science-based targets initiative (SBTi). From the perspective of targeting an environmental objective, revenue alignment includes activities focused on climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources. Activities focused on social objectives include access to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services, and bridging the digital divide in least developed countries.

More information on the internal methodology can be found on the website of the Manager: https://finecoassetmanagement.com/responsible-investing

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

How have the indicators for adverse impacts on sustainability factors been taken into account?

When replicating the Reference Index via a Total Return Swap through the Invested Assets, principal adverse impact ("PAI") indicators are calculated at Invested Assets level. The results will be compared with that of a chosen proxy benchmark representative of the Invested Asset's investment universe. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine what the

Manager can improve relative to the Invested Assets, and where the Manager can engage with relevant issuers to improve on such indicators.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.

2. Through ensuring that the sustainable investments that the Manager makes are:

   a. Made in investee companies that demonstrate good governance:

   b. Made in investee companies that demonstrates that they do no significant harm to other environmental objectives; and

   c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against the mandatory and additional PAI indicators. The indicators that will be reported on are (1) greenhouse gas (GHG) emissions, (2) carbon footprint, (3) GHG intensity of investee companies, (4) exposure of companies active in the fossil fuel sector, (5) share of non-renewable energy consumption and production, (6) energy consumption intensity per high impact climate sector, (7) activities negatively affecting biodiversity-sensitive areas, (8) emissions to water, (9) hazardous waste ratio, (10) violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises, (11) Lack

of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises,
(12) unadjusted gender pay gap, (13) board gender diversity and (14) exposure to controversial weapons (15) investments in companies without carbon emission reduction initiatives and (16) lack of a human rights policy.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. Further information is also available in the PAI Statement of the Manager (see link below for further information).

No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the Reference Index, while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index tracks the performance of global companies involved in providing technologies and materials contributing to the global transition to clean energy and considers ESG factors.

The Manager applies the Exclusion Policy to the Invested Assets. All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **The Invested Assets** will only be drawn from constituents of ESG screened indices;

b. **Minimum underlying security score of BB** by MSCI ESG manager (or another corresponding rating from a similar rating provider) for each Fund security;

c. **Exclusion Policy**

The Exclusion Policy described under the sub-heading ESG Screening further above in this Supplement applies to the Invested Assets and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein. The exclusions specifically covered by the Manager's Exclusion Policy currently include:

a. Issuers that breach the principles of the United Nations Global Compact;

b. Issuers involved in the manufacture or product life cycle of controversial weapons (biological and chemical weapons, cluster munitions, depleted uranium, landmines and nuclear weapons);

c. Issuers deriving 5% or more revenue from the production of tobacco related products or 15% or more aggregate revenue from the production, distribution, retail, supply and licensing of tobacco-related products.

d. Issuers that derive more than 10% of their revenue from thermal coal extraction and/or arctic drilling;

e. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies is addressed in various layers of the investment selection process. To be able to assess the Manager's full investment universe, a data driven quantitative good governance assessment has been adopted. The assessment is performed by data driven analysis based on external ESG data vendors and is integrated and maintained in front office and compliance systems. Portfolio managers are responsible for the ongoing assessment and monitoring of the governance practices of the companies in which they invest in.

For the Invested Assets, as a minimum requirement good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or another corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. Once a potential investment passes the minimum requirements test, other due diligence and governance practices are applied by the Manager as additional safeguards. This includes applying the Exclusion Policy to ensure that an investment company is compliant with the principles on labor relations of the United Nations Global Compact. Further detail on the approach of the Manager is available in the Good Governance Policy available on the Manager's website.

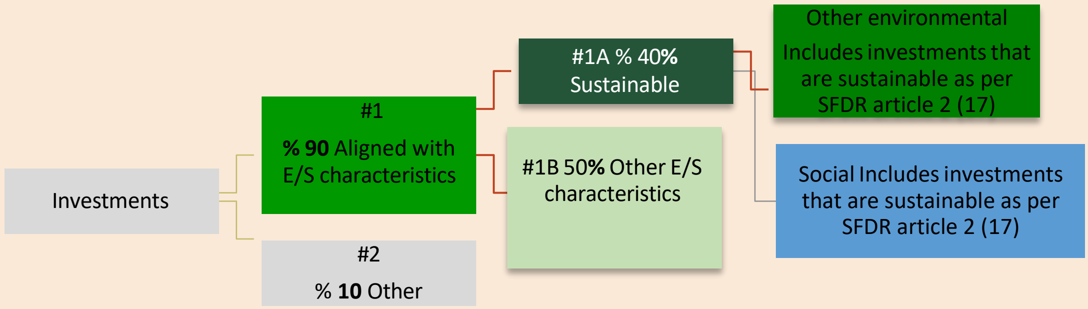
Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the asset allocation planned for this financial product?



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also commits to a minimum proportion of 40% in sustainable investments.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

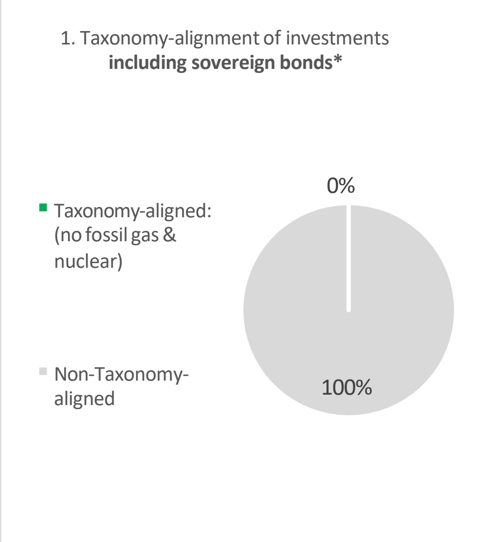
Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy[1]?

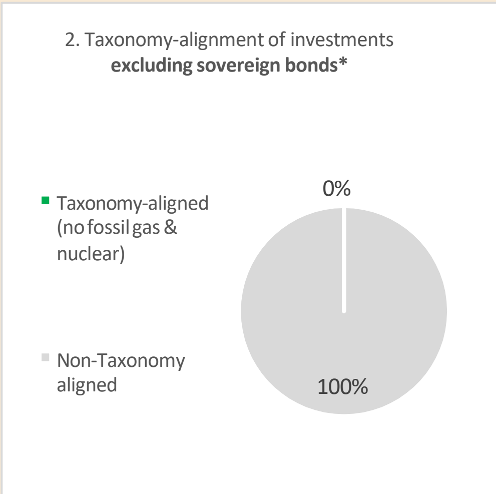
☐ **Yes:**

☐ **In fossil gas** ☐ **In nuclear energy**

☒ **No**

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





This graph represents 100% of the total investments

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.
There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%

What is the minimum share of socially sustainable investments?

40%

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

and attractiveness of investment opportunities.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction, efficient portfolio management and hedging purposes.

Any “#2 Other” potential investments, other than cash or cash equivalents will be screened according to the Manager’s Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

An index has not been designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Good Governance Policy, Responsible Investment Policy, Exclusion Policy and PAI Statement can be found on the Manager’s website at the following links:

Fineco AM MarketVector Global Metaverse and e-Games ESG UCITS ETF

SUPPLEMENT DATED 23 AUGUST 2024

This Supplement contains specific information in relation to **Fineco AM MarketVector Global Metaverse and e-Games ESG UCITS ETF** (the "**Fund**"), a sub-fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. The Fund may, at any one time, be principally invested in FDI. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MarketVector™ Global Metaverse and e-Games ESG Index (the "**Reference Index**", as described below under the sub- heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MarketVector Indexes GmbH, acting as the index administrator provider (the "**Index Provider**") and it is described below in the sub- heading "Description of the Reference Index".

The Fund will invest principally in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights of companies located worldwide (the "**Invested Assets**"). The Fund will then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub- heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund is required to make a payment to the TRS Counterparty,

this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

ESG Screening

The Manager applies its exclusion policy (the "Exclusion Policy") to the Invested Assets. Exclusion categories considered in the Exclusion Policy are (1) United Nations Global Compact Principles (2) Controversial Weapons (3) Tobacco (4) Climate Change and (5) Forced Labour. The Exclusion Policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. In addition, the Invested Assets are selected using only the constituents of ESG screened indices.

All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

Description of the Reference Index

General Description: The Reference Index tracks the performance of global companies involved in technologies and services related to the metaverse, e-gaming and eSports. The metaverse is a virtual world where users can interact with each other and digital objects in a virtual environment. It includes companies that generate at least 50% of their revenue from video gaming, eSports, smart phone manufacturing or metaverse-related products and service.

Size and Liquidity: Full market capitalisation of at least 150 million USD. Three month average-daily-trading volume of at least 1 million USD at a review and also at the previous two reviews. At least 250,000 shares traded per month over the last six months at a review and also at the previous two reviews. Review is quarterly.

ESG: The Reference Index considers ESG factors. The ESG factor data are based on the ISS Norm-Based (NBS) Research framework which consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. The Reference Index does not consider companies that violate certain ESG criteria included in the following four categories and as disclosed below:

1. Norm-based research: Norm-Based Research identifies and evaluates allegations that companies fail to respect established norms for Responsible Business Conduct covering union rights, work discrimination, bribery, child labour, environmental protection, human rights, forced labour, labour standards, money laundering, labour discrimination and boycott list.
a. Any security that has an overall score >8 (scores of 9 and 10 indicate a company has verified failure or imminent failure to established norms) is removed.
b. Individual norms as outlined under the Index Guide are reviewed for severity (score RED = 10, or T=True (vs False))
2. Controversial weapons: This category covers anti-personnel mines, biological weapons programme, chemical weapons programme, cluster munitions programme, depleted uranium programme, incendiary weapons programme, any nuclear weapons programme outside of the Non- Proliferation Treaty and white phosphorus weapons programme. Corporate involvement in controversial weapons using standardized methodologies, such as criteria set out in the relevant international norms, such as the Mine Ban Treaty (MBT) and the Convention on Cluster Munitions (CCM), the key international arms control instruments concerning anti-personnel mines and cluster munitions is assessed.
a. Any companies marked as Red (= Verified involvement in controversial weapons) or where data is not collected as outlined in the Index Guide is removed.
3. Sector exposure screening: This category covers ammunition for civilian firearms, assault weapons, automatic firearms, high-capacity magazines and repeated firearms and involvement in tobacco, gambling and military equipment and services.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.
4. Energy extractives: This category covers fossil fuel, oil sands, thermal coal mining and uranium mining.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.

Additional information on the ESG factors that apply are set out under “ESG Factors” in the Index Guide that is available on the website disclosed under “Further Information and Website”.

Index Provider: The above Index is provided by the Index Provider, as identified above, who was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the “**Benchmark Regulation**”). The Index is calculated by Solactive AG as a vendor for calculation services. An outsourcing agreement according to Article 10 of the Benchmark Regulation was entered into between the Index Provider and Solactive AG for the calculation service.

Index Provider’s Disclaimer: The Fund is not sponsored, endorsed, sold or promoted by the Index Provider and/or its affiliates. The Index Provider and/or its affiliates makes no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Fund to track the Reference Index’s performance.

The Reference Index is the exclusive property of the Index Provider, which has contracted withSolactive AG to maintain and calculate the Reference Index. Solactive AG uses its best efforts to ensure that the Reference Index is calculated correctly. Irrespective of its obligations towards the Index Provider, Solactive AG has no obligation to point out errors in the Reference Index to third parties including but not limited to investors and/or financial intermediaries of the Fund.

The Fund is not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Reference Index and/or Reference Index trade mark or the Reference Index price at any time or in any other respect. Neither publication of the Reference Index by Solactive AG nor the licensing of the Reference Index or Reference Index trade mark for the purpose of use in connection with the Fund constitutes a recommendation by Solactive AG to invest capital in the Fund nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in this Fund. Solactive AG is not responsible for fulfilling the legal requirements concerning the accuracy and completeness of this Supplement.

THE INDEX PROVIDER AND ITS AFFILIATES DO NOT GUARANTEE THE ACCURACY AND/OR COMPLETENESS OF THE REFERENCE INDEX OF ANY DATA INCLUDED THEREIN AND SHALL NOT HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS, AND MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE FUND. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE INDEX PROVIDER OR ANY OF ITS AFFILIATES HAVE ANY LIABILITY FOR ANY LOST PROFITS OR INDIRECT, PUNITIVE, SPECIAL OR CONSEQUENTIAL DAMAGES OR LOSSES, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Further Information and Website: The Index Provider's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://marketvector.com/indices/sector.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund will enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. These Total Return Swaps contain a short leg, referencing the assets held in the Fund, and a long leg, referencing the Reference Index, and have the aim to provide investors with the return on the index in the most efficient manner. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. Further detail on the potential short exposure where the Reference Index is synthetically replicated is explained further above under “Total Return Swaps”.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund will take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest

in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

The Manager manages the Fund in accordance with its Responsible Investment Policy (the "ESG Policy") on a continuous basis. Further details on how ESG has been integrated into the investment process that applies in respect of the Fund are available on the Manager's website at the following link: https://finecoassetmanagement.com/responsibleinvesting.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

While the Manager integrates Sustainability Risk into the Fund's selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policies section above relating to tracking the Reference Index via a Total Return Swap, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic Exclusion Policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial- related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	Closed	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	Closed	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	Closed	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 0.5% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fineco AM MarketVector Global Metaverse and e-Games ESG UCITS ETF
Legal entity identifier: 254900I12F8491N4LM86

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Does this financial product have a sustainable investment objective?	
☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The characteristics promoted through investment in the Invested Assets currently fall under a range of categories comprising climate change, natural capital, pollution & waste, environmental opportunities (environmental) and human capital, product liability, stakeholder opposition and social opportunities (social).
The environmental and/or social characteristics will be considered in the following manner:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors

are a key element of the construction of the Invested Assets. The Invested Assets in which the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and social characteristics such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies with the exclusion of ESG “laggards” from the Fund’s direct investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This threshold is currently A+ using MSCI ESG Manager or another corresponding rating from a similar rating provider with a lower score at Fund level permitted only where it is demonstrated to the satisfaction of the Manager that the approach to sustainability risk management and the sustainability elements of the investment strategy are compatible with the Article 8 classification of the Fund. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better environmental and/or social characteristics.

3. **Negative Screening (Norm-based exclusions)**
For the Invested Assets the Manager (see link to Exclusion Policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Invested Assets with this approach, the Manager, for the Invested Assets only, considers the following categories which are outlined in more detail in the Exclusion Policy:

    - United Nations Global Compact Principles
    - Controversial Weapons
    - Tobacco
    - Climate Change
    - Forced Labour

The Fund pursues the environmental and/or social characteristics promoted by it through replicating the Reference Index synthetically, via investment in the Invested Assets.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following applicable sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i. The minimum Fund level ESG score; and

ii. The holdings of the Fund being rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. The Fund will assess the issuer of the underlying security and will only classify investment in issuers that meet the below criteria as sustainable investments in line with Article 2 (17) of SFDR:

a. Made in investee companies that demonstrate good governance;

b. Operate in a manner that demonstrates that they do no significant harm to other environmental objectives; and

c. The investee companies make a positive contribution towards an environmental or social objective.

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, its internal methodology to determine sustainable investments, which partially relies (for the good governance and positive contribution criteria, as per 1 and 3 below) on its ESG third party data provider's methodology, as also clearly explained in the publicly available document on the Manager's website at the below link. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. A company must meet the criteria described below in order to be considered as contributing to an environmental or social objective:

1. Demonstrate good governance. A company must pass MSCI ESG Research's criteria for the SFDR Article 2 (17) "good governance" (strong overall management and governance structures). Pass indicates that the ESG Rating score is BB or above.

2. Do no significant harm to other environmental or social objectives. The Manager applies its own norms-based Exclusion Policy as the criteria to assess if the company passes or fails the SFDR article 2 (17) "do no significant harm".

3. Make a positive contribution towards an environmental or social objective. A company must derive at least 20% of revenue from economic activities that positively contribute to a social or environmental theme and / or have a carbon emissions reduction target approved by the science-based targets initiative (SBTi). From the perspective of targeting an environmental objective, revenue alignment includes activities focused on climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources. Activities focused on social objectives include access to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services, and bridging the digital divide in least developed countries.

More information on the internal methodology can be found on the website of the Manager: https://finecoassetmanagement.com/responsible-investing

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

When replicating the Reference Index via a Total Return Swap through the Invested Assets, principal adverse impact ("PAI") indicators are calculated at Invested Assets level. The results will be compared with that of a chosen proxy benchmark representative of the Invested Asset's investment universe. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine what the Manager can improve relative to the Invested Assets, and where the Manager can engage with relevant issuers to improve on such indicators.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.

2. Through ensuring that the sustainable investments that the Manager makes are:

   a. Made in investee companies that demonstrate good governance:

   b. Made in investee companies that demonstrates that they do no significant harm to other environmental objectives; and

   c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against the mandatory and additional PAI indicators. The indicators that will be reported on are (1) greenhouse gas (GHG) emissions, (2) carbon footprint, (3) GHG intensity of investee companies, (4) exposure of companies active in the fossil fuel sector, (5) share of non-renewable energy consumption and production, (6) energy consumption intensity per high impact climate sector, (7) activities negatively affecting biodiversity-sensitive areas, (8) emissions to water, (9) hazardous waste ratio, (10) violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises, (11) Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises,
(12) unadjusted gender pay gap, (13) board gender diversity and (14) exposure to controversial weapons (15) investments in companies without carbon emission reduction initiatives and (16) lack of a human rights policy.

Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. Further information is also available in the PAI Statement of the Manager (see link below for further information).

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the Reference Index, while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index tracks the performance of global companies involved in technologies and services related to the metaverse, e-gaming and eSports and considers ESG factors.

The Manager applies the Exclusion Policy to the Invested Assets. All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **The Invested Assets** will only be drawn from constituents of ESG screened indices;
b. **Minimum underlying security score of BB** by MSCI ESG manager (or another corresponding rating from a similar rating provider) for each Fund security;

c. Exclusion Policy

The Exclusion Policy described under the sub-heading ESG Screening further above in this Supplement applies to the Invested Assets and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein. The exclusions specifically covered by the Manager's Exclusion Policy currently include:

a. Issuers that breach the principles of the United Nations Global Compact;

b. Issuers involved in the manufacture or product life cycle of controversial weapons (biological and chemical weapons, cluster munitions, depleted uranium, landmines and nuclear weapons);

c. Issuers deriving 5% or more revenue from the production of tobacco related products or 15% or more aggregate revenue from the production, distribution, retail, supply and licensing of tobacco-related products.

d. Issuers that derive more than 10% of their revenue from thermal coal extraction and/or arctic drilling;

e. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

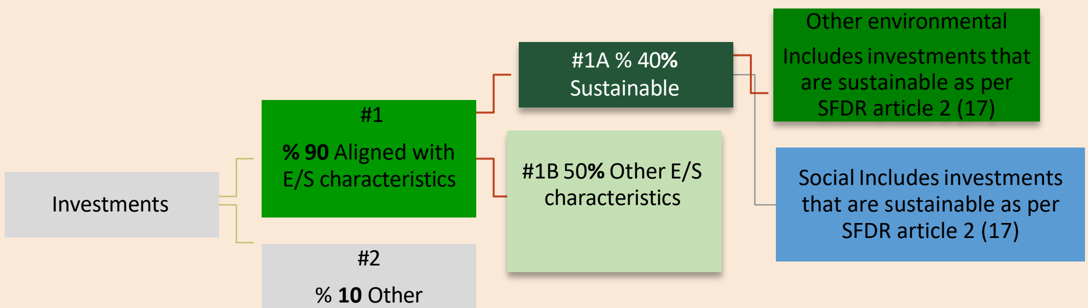
What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies is addressed in various layers of the investment selection process. To be able to assess the Manager's full investment universe, a data driven quantitative good governance assessment has been adopted. The assessment is performed by data driven analysis based on external ESG data vendors and is integrated and maintained in front office and compliance systems. Portfolio managers are responsible for the ongoing assessment and monitoring of the governance practices of the companies in which they invest in.

For the Invested Assets, as a minimum requirement good governance practices of investee companies are addressed by reference to having an MSCI-score of BB or above (or another corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. Once a potential investment passes the minimum requirements test, other due diligence and governance practices are applied by the Manager as additional safeguards. This includes applying the Exclusion Policy to ensure that an investment company is compliant with the principles on labor relations of the United Nations Global Compact. Further detail on the approach of the Manager is available in the Good Governance Policy available on the Manager's website.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Investments means the Fund's Net Asset Value which is the total market value of the product.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the Fund’s Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also commits to a minimum proportion of 40% in sustainable investments.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

  The Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund’s portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

- **Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy[1]?**

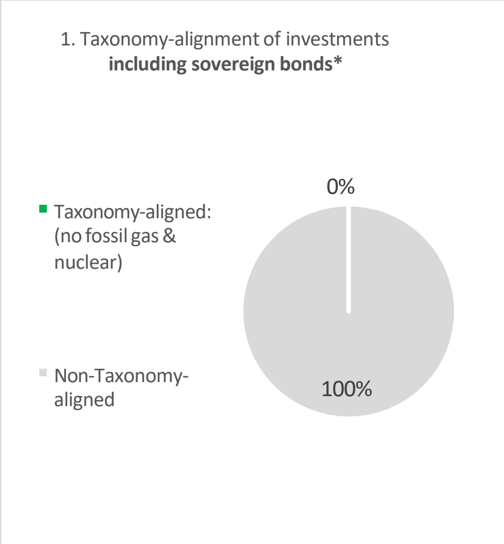
☐ **Yes:**

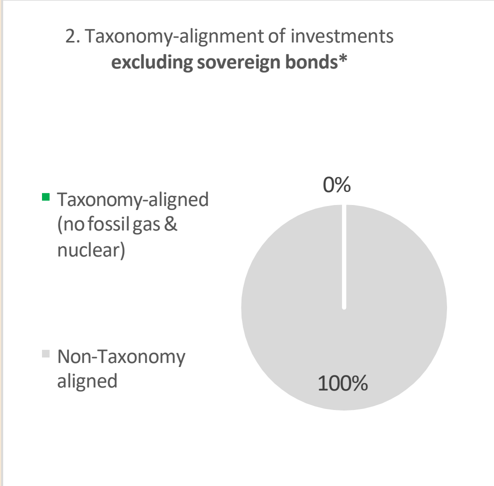
☐ **In fossil gas** ☐ **In nuclear energy**

☒ **No**

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





This graph represents 100% of the total investments

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%

What is the minimum share of socially sustainable investments?

40%

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction, efficient portfolio management and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this

financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Good Governance Policy, Responsible Investment Policy, Exclusion Policy and PAI Statement can be found on the Manager's website at the following links:

Fineco AM MarketVector Japan Quality Tilt ESG UCITS ETF

SUPPLEMENT DATED 23 AUGUST 2024

This Supplement contains specific information in relation to **Fineco AM MarketVector Japan Quality Tilt ESG UCITS ETF** (the "**Fund**"), a sub- fund of **FAM Series UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset- management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. The Fund may, at any one time, be principally invested in FDI. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Investment Objective and Policies

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the MarketVector™ Japan Quality Tilt ESG Index (the "**Reference Index**", as described below under the sub- heading "**Description of the Reference Index**") while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is published by MarketVector Indexes GmbH, acting as the index administrator provider (the "**Index Provider**") and it is described below in the sub- heading "Description of the Reference Index".

The Fund will invest principally in equities and equity-related securities, including preferred stocks and equity-linked instruments such as American depositary receipts and global depositary receipts; and rights of companies located worldwide (the "**Invested Assets**"). The Fund will then enter into Total Return Swaps negotiated at arm's length with one or more Total Return Swap counterparties who satisfy the criteria, set out in the Prospectus under the sub- heading "Securities Financing Transactions", for being such a counterparty (the "**TRS Counterparty**"). The TRS Counterparty will have no discretion in respect of such Total Return Swaps and such Total Return Swaps are unfunded, i.e. no upfront payment is made. The purpose of the Total Return Swaps is to exchange the performance and/or income of the Invested Assets in return for the performance of the Reference Index. Further information on the use by the Fund of Total Return Swaps is set out below in the section titled "Use of Financial Derivative Instruments ("**FDI**")". The value of the Fund's Shares is linked to the Reference Index, the performance(s) of which may rise or fall. Hence, investors should note that the value of their investment could fall as well as rise and they should accept that there is no guarantee that they will recover their initial investment. The valuation of Total Return Swaps will reflect either the relative movements in the performance of the Reference Index and the Invested Assets or the performance of the Reference Index. Depending on the value of the Total Return Swap, the Fund may have to make a payment to the TRS Counterparty or may receive such a payment. If the Fund

is required to make a payment to the TRS Counterparty,

this payment may be made via a combination of income received from the Invested Assets and/or the partial or total disposal of the Invested Assets. The return that an investor may receive will be dependent on the performance of the Reference Index, the performance of the Invested Assets and the performance of the Total Return Swaps. The portfolio of Invested Assets will be selected by the Manager based on the Manager's view of market conditions and quantitative parameters such as historical price volatility.

The securities in which the Fund invests will primarily be listed or traded on Recognised Markets and in unlisted securities in accordance with the limits set out in the Prospectus and the UCITS Regulations. There is no geographic restriction on the securities (or issuers thereof) in which the Fund may invest.

Pursuant to the Management Agreement, the Manager has full discretionary authority to provide discretionary investment management services in respect of this Fund subject to the investment objective, policies and restrictions of this Fund.

For information in relation to the difficulties associated with tracking indices, please refer to "Reference Index Tracking Risk" in the "Risk Factors" section of the Prospectus. It is currently anticipated that the tracking error of the Fund will be up to 1% under normal market conditions. The causes of tracking error can include but are not limited to the following: holdings/size of the Fund, cash flows, transaction costs, dividend reinvestment, differences in timings between the receipt/payment of subscription and redemption monies into the Fund, investment/divestment of Fund assets and the impact of fees.

ESG Screening

The Manager applies its exclusion policy (the "Exclusion Policy") to the Invested Assets. Exclusion categories considered in the Exclusion Policy are (1) United Nations Global Compact Principles (2) Controversial Weapons (3) Tobacco (4) Climate Change and (5) Forced Labour. The Exclusion Policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/. In addition, the Invested Assets are selected using only the constituents of ESG screened indices.

All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

Description of the Reference Index

General Description: The Reference Index is constructed to track the performance of 500 of the largest companies incorporated and listed in Japan. It is weighted by a combination of float- adjusted market capitalization and quality-related factors.

Size and Liquidity: Full market capitalisation of at least 150 million USD. Three month average- daily-trading volume of at least 1 million USD at a review and also at the previous two reviews. Semi-annual review with quarterly rebalances.

ESG: The Reference Index considers ESG factors. The ESG factor data are based on the ISS Norm- Based (NBS) Research framework which consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. The Reference Index does not consider companies that violate certain ESG criteria included in the following four categories and as disclosed below:

1. Norm-based research: Norm-Based Research identifies and evaluates allegations that companies fail to respect established norms for Responsible Business Conduct covering union rights, work discrimination, bribery, environmental protection, human rights, labour standards, money laundering, labour discrimination and boycott list.
a. Any security that has an overall score >8 (scores of 9 and 10 indicate a company has verified failure or imminent failure to established norms) is removed.
b. Individual norms as outlined under the Index Guide are reviewed for severity (score RED = 10, or T=True (vs False))
2. Controversial weapons: This category covers anti-personnel mines, biological weapons programme, chemical weapons programme, cluster munitions programme, depleted uranium programme, incendiary weapons programme, any nuclear weapons programme outside of the Non-Proliferation Treaty and white phosphorus weapons programme. Corporate involvement in controversial weapons using standardized methodologies, such as criteria set out in the relevant international norms, such as the Mine Ban Treaty (MBT) and the Convention on Cluster Munitions (CCM), the key international arms control instruments concerning anti-personnel mines and cluster munitions is assessed.
a. Any companies marked as Red (= Verified involvement in controversial weapons) or where data is not collected as outlined in the Index Guide is removed.
3. Sector exposure screening: This category covers ammunition for civilian firearms, assault weapons, automatic firearms, high-capacity magazines and repeated firearms and involvement in tobacco, gambling and military equipment and services.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.
4. Energy extractives: This category covers fossil fuel, oil sands, thermal coal mining and uranium mining.
a. Any companies with involvement/revenue greater than a percentage threshold of 5% or where data is not collected as outlined in the Index Guide are removed.

Additional information on the ESG factors that apply are set out under “ESG Factors” in the Index Guide that is available on the website disclosed under “Further Information and Website”.

Index Provider: The above Index is provided by the Index Provider, as identified above, who was recognised under Article 34 of the Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds (the “**Benchmark Regulation**”). The Index is calculated by Solactive AG as a vendor for calculation services. An outsourcing agreement according to Article 10 of the Benchmark Regulation was entered into between the Index Provider and Solactive AG for the calculation service.

Index Provider’s Disclaimer: The Fund is not sponsored, endorsed, sold or promoted by the Index Provider and/or its affiliates. The Index Provider and/or its affiliates makes no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Fund to track the Reference Index’s performance.

The Reference Index is the exclusive property of the Index Provider, which has contracted with Solactive AG to maintain and calculate the Reference Index. Solactive AG uses its best efforts to ensure that the Reference Index is calculated correctly. Irrespective of its obligations towards the Index Provider, Solactive AG has no obligation to point out errors in the Reference Index to third parties including but not limited to investors and/or financial intermediaries of the Fund.

The Fund is not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Reference Index and/or Reference Index trade mark or the Reference Index price at any time or in any other respect. Neither publication of the Reference Index by Solactive AG nor the licensing of the Reference Index or Reference Index trade mark for the purpose of use in connection with the Fund constitutes a recommendation by Solactive AG to invest capital in the Fund nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in this Fund. Solactive AG is not responsible for fulfilling the legal requirements concerning the accuracy and completeness of this Supplement.

THE INDEX PROVIDER AND ITS AFFILIATES DO NOT GUARANTEE THE ACCURACY AND/OR COMPLETENESS OF THE REFERENCE INDEX OF ANY DATA INCLUDED THEREIN AND SHALL NOT HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS, AND MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE FUND. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE INDEX PROVIDER OR ANY OF ITS AFFILIATES HAVE ANY LIABILITY FOR ANY LOST PROFITS OR INDIRECT, PUNITIVE, SPECIAL OR CONSEQUENTIAL DAMAGES OR LOSSES, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

Further Information and Website: The Index Provider's index methodology, composition, revision rules and additional information concerning the underlying components of the Reference Index are available on https://marketvector.com/indices/country.

*Use of Financial Derivative Instruments ("**FDI**")*

The Fund may engage in FDI transactions for investment purposes to generate returns, for the purposes of hedging, and/or for efficient portfolio management. The types of FDI that the Fund may use are currency forwards, currency swaps, index futures and total return swaps. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's Investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Total Return Swaps: The Fund will enter into Total Return Swaps for investment purposes to gain exposure to the Reference Index, as mentioned in the Investment Objective and Policies section above. These Total Return Swaps contain a short leg, referencing the assets held in the Fund, and a long leg, referencing the Reference Index, and have the aim to provide investors with the return on the index in the most efficient manner. The Fund's maximum exposure to Total Return Swaps, based on the notional value of such instruments, is 120% of its Net Asset Value and it is anticipated that any potential exposure that the Fund may have to Total Return Swaps will be in the range of 95% to 105% of its Net Asset Value through Total Return Swaps.

Index Futures: The Fund may use index futures (being a futures contract on a financial index), for investment purposes, optimal portfolio management purposes and hedging purposes.

Currency Forwards and Currency Swaps: The Fund may use currency forwards and/or currency swaps for the purpose of hedging currency exchange risk.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the

derivatives held by the Fund. Further detail on the potential short exposure where the Reference Index is synthetically replicated is explained further above under "Total Return Swaps".

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Exposure to the Reference Index: The Fund will take exposure to the Reference Index through the use of Total Return Swaps as outlined above. Exposure to the Reference Index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". When the Reference Index does not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach, which allows the Manager to analyse the Fund's exposure to the Reference Index by looking through the derivative position, which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing said exposure. The Reference Index does not rebalance more frequently than quarterly and such rebalancing is not expected to have a material effect on the costs incurred within the Reference Index. The Reference Index that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the Reference Index, including details of the website where the exact composition of the Reference Index is published, is set out above in the section titled "Description of the Reference Index".

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Reference Index. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Reference Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 200% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility from time-to-time.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest

in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosure

The Manager manages the Fund in accordance with its Responsible Investment Policy (the "ESG Policy") on a continuous basis. Further details on how ESG has been integrated into the investment process that applies in respect of the Fund are available on the Manager's website at the following link: https://finecoassetmanagement.com/responsibleinvesting.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

While the Manager integrates Sustainability Risk into the Fund's selection of the Invested Assets as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the selection of the Invested Assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold Invested Assets which may expose the Fund to high or low levels of Sustainability Risk.

In addition to what is contained in the Investment Policies section above relating to tracking the Reference Index via a Total Return Swap, the Fund integrates Sustainability Risk into its selection of the Invested Assets using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring the Invested Assets, the Manager uses Sustainability Risk metrics of a third party data service provider or providers in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic Exclusion Policy (whereby potential investments are removed from the investment universe on the basis that they pose a Sustainability Risk that is too great).

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial- related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination	Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	100	Closed	Euro	No	No	1,000/100	Accumulating
Class AH Acc	100	Closed	Euro	Yes	No	1,000/100	Accumulating
Class I Acc	100	From 26 August 2024 – 24 February 2025	Euro	No	No	1,000,000/100	Accumulating
Class J Acc	10,000	Closed	Euro	No	No	1,000,000/100	Accumulating

During the initial offer period Shares are available for subscription on the primary market at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available on the primary market at the prevailing Net Asset Value of each Class of Shares.

Definitions applicable to the Fund

Investors should note the following definitions that shall apply in respect of the Fund:

"**Business Day**" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London are normally open for business;

"**Dealing Day**" means each Business Day on which the relevant securities markets in which the Reference Index has an exposure to are normally open for business;

"**Dealing Deadline**" means 3:00pm (Irish time) on the day prior to the relevant Dealing Day;

"**Valuation Day**" means each Business Day on which the Net Asset Value will be calculated by the Administrator for each Dealing Day and such other Business Day or Days as the Directors may determine; and

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Business Day.

Applications for Shares on the primary market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund. Details of how the fees and expenses are accrued and paid as well as details of other general management and fund charges are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
Up to 0.5% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The cost of establishing the Fund and the preparation and printing of the relevant Supplement is expected not to exceed EUR 25,000 and will be charged to the Fund and amortised over the first five years of the Fund's operation or such other period as the Directors may determine.

A detailed summary of each of the fees and expenses of the Fund and the ICAV is set out in the section of the Prospectus headed "**Fees and Expenses**".

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fineco AM MarketVector Japan Quality Tilt ESG UCITS ETF
Legal entity identifier: 25490016MT0JGIKCV379

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The characteristics promoted through investment in the Invested Assets currently fall under a range of categories comprising climate change, natural capital, pollution & waste, environmental opportunities (environmental) and human capital, product liability, stakeholder opposition and social opportunities (social).
The environmental and/or social characteristics will be considered in the following manner:

1. **Positive Screening**: Consideration of environmental, social and governance ("ESG") factors are a key element of the construction of the Invested Assets. The Invested Assets in which

the Fund invests must be issued by companies that are only listed in ESG screened indices which promote environmental and social characteristics such as the MSCI Europe ESG Screened Index. In addition, the Manager will also determine how such companies integrate environmental and/or social characteristics by analysing ESG ratings attributed to such companies with the exclusion of ESG "laggards" from the Fund's direct investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

2. **Fund Level ESG Scoring:** A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund portfolio does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and social characteristics. This threshold is currently A+ using MSCI ESG Manager or another corresponding rating from a similar rating provider with a lower score at Fund level permitted only where it is demonstrated to the satisfaction of the Manager that the approach to sustainability risk management and the sustainability elements of the investment strategy are compatible with the Article 8 classification of the Fund. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on selecting more positive issuers demonstrating better environmental and/or social characteristics.

3. **Negative Screening (Norm-based exclusions)**
For the Invested Assets the Manager (see link to Exclusion Policy for more information) applies norms-based exclusions. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Invested Assets with this approach, the Manager, for the Invested Assets only, considers the following categories which are outlined in more detail in the Exclusion Policy:

    - United Nations Global Compact Principles
    - Controversial Weapons
    - Tobacco
    - Climate Change
    - Forced Labour

The Fund pursues the environmental and/or social characteristics promoted by it through replicating the Reference Index synthetically, via investment in the Invested Assets.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

Depending on whether the Fund is physically or synthetically replicated, the Fund uses the following applicable sustainability indicators in order to measure the attainment of the environmental or social characteristics that it promotes (please note that reference to ESG scores means ESG score data received from third party data provider/s):

i. The minimum Fund level ESG score; and

ii. The holdings of the Fund being rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. The Fund will assess the issuer of the underlying security and will only classify investment in issuers that meet the below criteria as sustainable investments in line with Article 2 (17) of SFDR:

a. Made in investee companies that demonstrate good governance;

b. Operate in a manner that demonstrates that they do no significant harm to other environmental objectives; and

c. The investee companies make a positive contribution towards an environmental or social objective.

The objectives of the sustainable investments made by the Fund are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Manager is using, as of the date of this document, its internal methodology to determine sustainable investments, which partially relies (for the good governance and positive contribution criteria, as per 1 and 3 below) on its ESG third party data provider's methodology, as also clearly explained in the publicly available document on the Manager's website at the below link. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. A company must meet the criteria described below in order to be considered as contributing to an environmental or social objective:

1. Demonstrate good governance. A company must pass MSCI ESG Research's criteria for the SFDR Article 2 (17) "good governance" (strong overall management and governance structures). Pass indicates that the ESG Rating score is BB or above.

2. Do no significant harm to other environmental or social objectives. The Manager applies its own norms-based Exclusion Policy as the criteria to assess if the company passes or fails the SFDR article 2 (17) "do no significant harm".

3. Make a positive contribution towards an environmental or social objective. A company must derive at least 20% of revenue from economic activities that positively contribute to a social or environmental theme and / or have a carbon emissions reduction target approved by the science-based targets initiative (SBTi). From the perspective of targeting an environmental objective, revenue alignment includes activities focused on climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources. Activities focused on social objectives include access to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services, and bridging the digital divide in least developed countries.

More information on the internal methodology can be found on the website of the Manager: https://finecoassetmanagement.com/responsible-investing

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its exclusion policy (see link below for further information).

How have the indicators for adverse impacts on sustainability factors been taken into account?

When replicating the Reference Index via a Total Return Swap through the Invested Assets, principal adverse impact ("PAI") indicators are calculated at Invested Assets level. The results will be compared with that of a chosen proxy benchmark representative of the Invested Asset's investment universe. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine what the Manager can improve relative to the Invested Assets, and where the Manager can engage with relevant issuers to improve on such indicators.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.

2. Through ensuring that the sustainable investments that the Manager makes are:

   a. Made in investee companies that demonstrate good governance:

   b. Made in investee companies that demonstrates that they do no significant harm to other environmental objectives; and

   c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against the mandatory and additional PAI indicators. The indicators that will be reported on are (1) greenhouse gas (GHG) emissions, (2) carbon footprint, (3) GHG intensity of investee companies, (4) exposure of companies active in the fossil fuel sector, (5) share of non-renewable energy consumption and production, (6) energy consumption intensity per high impact climate sector, (7) activities negatively affecting biodiversity-sensitive areas, (8) emissions to water, (9) hazardous waste ratio, (10) violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises, (11) Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises,
(12) unadjusted gender pay gap, (13) board gender diversity and (14) exposure to controversial weapons (15) investments in companies without carbon emission reduction initiatives and (16) lack of a human rights policy.

Information on how the principal adverse impacts were taken into account will be provided in the Fund’s annual report. Further information is also available in the PAI Statement of the Manager (see link below for further information).

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long term capital appreciation.

The Fund seeks to achieve its investment objective by tracking the performance of the Reference Index, while minimising as far as possible the tracking error between the Fund's performance and that of the Reference Index.

The Reference Index is constructed to track the performance of 500 of the largest companies incorporated and listed in Japan and considers ESG factors. It is weighted by a combination of float-adjusted market capitalization and quality-related factors.

The Manager applies the Exclusion Policy to the Invested Assets. All securities are screened using data sourced from third-party data providers that provides scores for each holding and at portfolio level in aggregation. In selecting securities, an emphasis is placed on how companies integrate ESG risks and opportunities into their corporate strategy.

The elements of the investment strategy to attain the environmental or social characteristics of the Fund as described in this Annex are systematically integrated throughout the Fund's investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **The Invested Assets** will only be drawn from constituents of ESG screened indices;

b. **Minimum underlying security score of BB** by MSCI ESG manager (or another corresponding rating from a similar rating provider) for each Fund security;

c. **Exclusion Policy**

The Exclusion Policy described under the sub-heading ESG Screening further above in this Supplement applies to the Invested Assets and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein. The exclusions specifically covered by the Manager's Exclusion Policy currently include:

a. Issuers that breach the principles of the United Nations Global Compact;

b. Issuers involved in the manufacture or product life cycle of controversial weapons (biological and chemical weapons, cluster munitions, depleted uranium, landmines and nuclear weapons);

c. Issuers deriving 5% or more revenue from the production of tobacco related products or 15% or more aggregate revenue from the production, distribution, retail, supply and licensing of tobacco-related products.

d. Issuers that derive more than 10% of their revenue from thermal coal extraction and/or arctic drilling;

e. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable

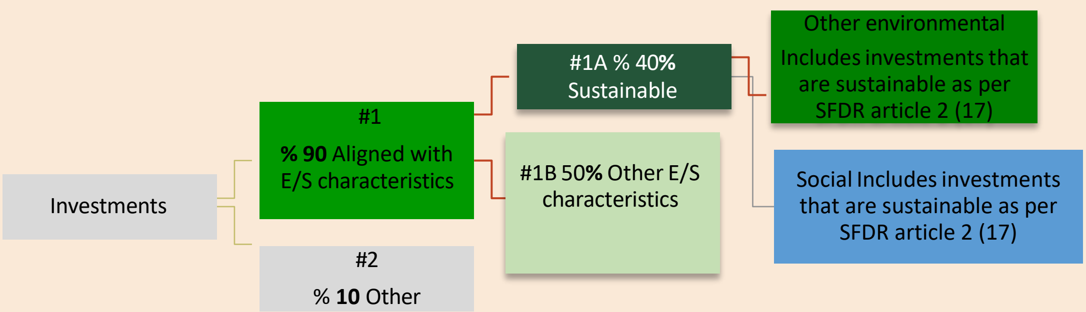
What is the policy to assess good governance practices of the investee companies?

Good governance practices of investee companies is addressed in various layers of the investment selection process. To be able to assess the Manager's full investment universe, a data driven quantitative good governance assessment has been adopted. The assessment is performed by data driven analysis based on external ESG data vendors and is integrated and maintained in front office and compliance systems. Portfolio managers are responsible for the ongoing assessment and monitoring of the governance practices of the companies in which they invest in.

For the Invested Assets, as a minimum requirement good governance practices of investee companies are addressed by reference to having an MSCI score of BB or above (or another corresponding rating from a similar rating provider). Companies are screened for good governance by assessing their employee relations, pay practices, management structures and tax compliance. Once a potential investment passes the minimum requirements test, other due diligence and governance practices are applied by the Manager as additional safeguards. This includes applying the Exclusion Policy to ensure that an investment company is compliant with the principles on labor relations of the United Nations Global Compact. Further detail on the approach of the Manager is available in the Good Governance Policy available on the Manager's website.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Investments means the Fund's Net Asset Value which is the total market value of the product.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also commits to a minimum proportion of 40% in sustainable investments.

The asset allocation may change over time and percentages may be updated in the prospectus from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate company or third party data.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

The Fund does not use derivatives to attain the environmental or social characteristics promoted by the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

- **Does the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy[1]?**

☐ **Yes:**

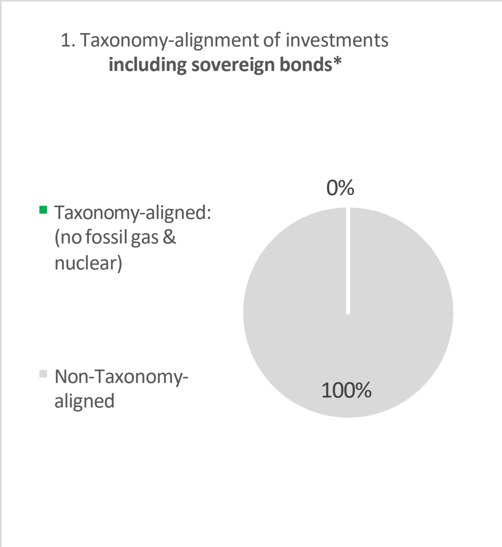
☐ **In fossil gas** ☐ **In nuclear energy**

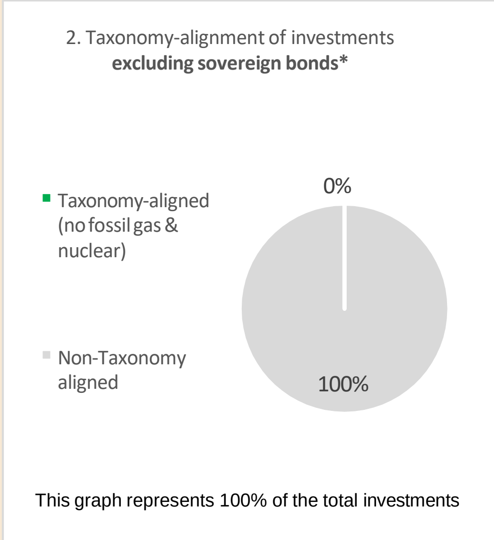
☒ **No**

.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

40%

What is the minimum share of socially sustainable investments?

40%

*The Fund commits to invest at least 40% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction, efficient portfolio management and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Manager's Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether

this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Good Governance Policy, Responsible Investment Policy, Exclusion Policy and PAI Statement can be found on the Manager's website at the following links:

SMART GLOBAL DEFENCE 2029 FINECO AM FUND IV

SUPPLEMENT DATED 12 JANUARY 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2029 FINECO AM FUND IV** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 12 March 2025, 11 March 2026, 10 March 2027, 8 March 2028, 7 March 2029 and 29 June 2029 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 15 January 2024 and will close at 5:00 PM (Irish time) on 15 January 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	29 June 2029
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 16 January 2024 to 27 February 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 0% of its Net Asset Value, measured on a net basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of net leverage from derivatives, calculated based on the Commitment Approach in accordance with the requirements of the Central Bank, is expected to be 150% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage of the derivatives used, calculated as the global exposure under the Commitment Approach, does not take into account all netting and hedging arrangements and therefore is not a fully risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager’s exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation’s (“ILO”) broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 15 January 2024 to 15 January 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 15 January 2024 to 15 January 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 15 January 2024 to 15 January 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2030 FINECO AM FUND III

SUPPLEMENT DATED 22 NOVEMBER 2023

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2030 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	2 January 2025, 17 December 2025, 16 December 2026, 15 December 2027, 20 December 2028, 19 December 2029 and 18 December 2030 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 23 November 2023 and will close at 5:00 PM (Irish time) on 6 December 2023. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 December 2030
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 7 December 2023 to 30 January 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *<u>Funding Investments</u>*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 23 November 2023 to 6 December 2023	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 23 November 2023 to 6 December 2023	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 23 November 2023 to 6 December 2023	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

BANOR CLUB FINECO AM FUND

SUPPLEMENT DATED 16 MAY 2024

This Supplement contains specific information in relation to **BANOR CLUB FINECO AM FUND** (the "Fund"), a sub-fund of **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Due to the Fund's ability to invest in financial derivative instruments the Fund may have a higher than average degree of risk. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Please see the section of this Supplement entitled "Risk Factors", together with the section of the Prospectus entitled "Risk Factors" for detailed disclosures of the risks associated with an investment in the Fund.

Investment Objective and Policies

The investment objective of the Fund is to achieve capital appreciation over the long term through investment in a diversified portfolio of assets.

The Fund seeks to achieve its investment objective by primarily investing in equity and debt securities denominated in Euro or US Dollar issued by companies considered undervalued by the Investment Manager and which are domiciled or conduct most of their business in mature economies (developed markets). To identify undervalued stocks, the Investment Manager assesses factors such as the company's cash flow or dividends, as well as examining how each stock is valued relative to the market and its peers. In terms of corporate bonds, valuation will be determined based on an assessment of the credit spreads (i.e. difference in yield between bonds of similar maturities) or relative value when compared to other bonds that could be invested in, taking into account relative price, liquidity and risk premium. The Fund may invest up to 10% of its Net Asset Value in securities issued by companies considered undervalued by the Investment Manager and which are domiciled or conduct most of their business in emerging markets. The Fund will invest in such equity stocks directly or through a strategy in options (as further described below), as well as in bonds. The Fund is not restricted in the extent to which it may invest in any economic sector nor is the potential investment universe constrained by the size of a company (i.e. market capitalisation).

The reference to "Club" in the name of the Fund refers to the opportunity open to investors, should they choose to invest or join, to benefit from the Investment Manager's expertise and reputation for experience and excellence in providing asset management services.

The Investment Manager will actively manage the allocation between equity and debt securities, with the targeted allocation being 40% in bonds and 60% in equities and equity-related securities (to include American depositary receipts, global depositary receipts). The Investment Manager may, at its own discretion, overweight or underweight this allocation between equities and bonds plus or minus 20% whenever the attractiveness (measured with respect to the historical standard based on dividend yield for equities and yield for bonds) of one asset class increases with respect to the other.

The focus of equity securities investment will be on European mid-capitalisation companies and large capitialisation companies in the United States.

The debt securities that the Fund may hold will primarily be government or corporate bonds (which may be fixed or floating rate and of Investment Grade). The Fund may hold up to 20% of its net assets in high yield bonds that are rated BB+ or below by Standard & Poor's or are considered by the Investment Manager to be of comparable credit quality. The Fund may also invest up to 10% in subordinated debt securities.

While the Fund will invest primarily in equity, equity-related and debt securities, as referred to above, the Fund may, in circumstances of extreme volatility or if market factors require and if considered appropriate to the investment objective, invest on a short term basis in cash, cash equivalents, money market instruments (including, but not limited to, cash deposits, commercial paper and certificates of deposit).
No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Investment Strategy

In the selection of the securities, the Investment Manager will apply a bottom-up value-based approach which aims to identify undervalued securities following an in-depth analysis of companies' financial statements and future projections , together with close monitoring of their management and overall corporate policies. Quantitative indicators that are available for each stock in the investment universe are analysed and used by the Investment Manager to evaluate the relative attractiveness of each stock.

In respect of its equity investments, the Fund is managed using both principals of value and growth investing, with the objective of capital preservation and appreciation over time. In order to enhance the underlying dividend yield and generate additional income, the Investment Manager will implement a so called “covered call strategy” on the shares held in the portfolio. This strategy consists in selling out-of-the-money call options on the securities held. The yield generated by the dividends will be “boosted” through the writing of covered calls on the underlying equities. The options premium received from selling the call options will increase the overall income for investors. The call options will be generally listed on regulated exchanges, thus reducing the counterparty risk in the derivatives contract. The covered call strategy has the effect of capping the upside potential of each stock during the three months cycle. The Fund will never sell call options without owning the underlying securities and the downside risk of the derivative position is therefore capped by a countervailing long position. The Investment Manager will also deploy a financial index put strategy as a measure of protection against a significant drawdown in the market. In doing so, the Investment Manager may occasionally reduce the market risk of the portfolio by buying out of the money put options on indices (European or US). The purchases will not increase the leverage in the portfolio but will only work as a hedge.

Benchmark Information

The Fund is actively managed. The Investment Manager has selected a composite index made up of the following indices, in the below proportions, to be used for performance comparison purposes only:
- 30% of the MSCI World Euro Net Total Return Index (Index ticker: MSDEWIN);
- 30% of the MSCI Europe Net Total Return EUR Index (Index ticker: MSDEE15N); and
- 40% Bloomberg Global Aggregate Total Return EUR Unhedged

Index (Index ticker: LEGATREU) (the “Indices”).

The Investment Manager does not intend to replicate the composition of such Indices and may at all times exercise total freedom by investing in securities which are not included in the referenced Indices, or which are present in different proportions.

Use of Financial Derivative Instruments ("FDIs") and other Instruments and Techniques

The Fund may use FDI for investment purposes. The Fund may also engage in transactions in FDI for the purposes of efficient portfolio management and hedging. The types of FDIs that the Fund may use are: futures, forwards and options and the underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective, to protect risk to capital as well as hedge against currency risk and duration and the expected effect of the use of these instruments will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency forwards: Currency forwards may be used for the purpose of hedging currency exchange risk arising from the redenomination of an asset into a currency other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of a particular share classes where relevant.

Futures and forwards: Futures and forwards may be used to hedge against downward movements in the value of the Fund's portfolio, either by reference to specific securities or markets to which the Fund may be exposed. In addition, futures may be used to manage the Fund's overall portfolio duration, including as may be determined by the Investment Manager increasing the portfolio's duration.

Options: The Fund may acquire options and in particular call options may be used to gain exposure to individual debt securities that the Fund may acquire in accordance with its investment policy and can provide an efficient, liquid and effective mechanism for taking a position in securities. Put options may be used to reduce exposure to bond markets or hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions. The Fund's exposure to securities lending transactions is expected to be between 0% and 30% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement – Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully 3ollateralized in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for investors seeking capital growth over the long term (i.e. 5+ years) through investment in a diversified global portfolio and who are willing to accept a medium level of volatility.

SFDR Classification: Article 6 Fund.

Sustainability Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Investment Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)).

While the Investment Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, considered in the investment decisions of the Investment Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Investment Manager may buy and/or hold assets which may expose the Fund to either high or low levels of Sustainability Risk.

The Investment Manager integrates Sustainability Risk into its investment decision making process as summarised below:.

I. Prior to acquiring investments on behalf of the Fund, the Investment Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

II. The Investment Manager will comply with the Manager's exclusion list (which is based on the Manager's exclusion policy and compiled by the Manager) whereby potential investments are removed from the investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund falls does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s) and may have an equivalent negative impact on the Net Asset Value of the Fund. The Manager and the Investment Manager acknowledge that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager and the Investment Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that such an assessment may influence a decision by the Investment Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confirming the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled “Sustainable Finance Disclosures” for further information.

Base Currency: Euro

Investment Manager

The Manager has appointed Banor Capital Limited of 108-110 Jermyn Street, London SW1Y 6EE, United Kingdom to act as the investment manager pursuant to an investment management agreement dated 22 November 2023. The Investment Manager will provide discretionary investment management services to the Fund subject to the overall supervision of the Manager. The Investment Manager’s principal business and occupation is to provide investment management services to clients.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class A Acc	€100	23 November 2023 – 22 May 2024	Euro	No	No	€1,000 / €100	Accumulating
Class I Acc	€100	23 November 2023 – 22 May 2024	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Acc	€10,000	23 November 2023 – 22 May 2024	Euro	No	No	€1,000,000 / €100	Accumulating
Class A1 Acc	€100	23 November 2023 – 22 May 2024	Euro	No	No	€500, 000/€100	Accumulating
Class L Acc	€100	17 May 2024 to 15 November 2024	Euro	No	Yes, up to 2%	€1,000 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 12:00pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares. The fees of the Investment Manager shall be paid out of the Manager's fees and not out of the assets of the Fund.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors: The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above, the Fund may invest in subordinated debt securities which are often more attractive investments than senior debt securities in respect of the yield these investments may

provide. Subordinated debt securities may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY 2030 FINECO AM FUND II

SUPPLEMENT DATED 20 DECEMBER 2023

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2030 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 12 March 2025, 17 December 2025, 16 December 2026, 15 December 2027, 20 December 2028, 19 December 2029 and 18 December 2030 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 21 December2023 and will close at 5:00 PM (Irish time) on 8 January 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Limited Index Return:	means a range of between 20%-30% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 50%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	20 December 2030.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 9 January 2024 to 27 February 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Index (the "Index"). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com/World.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 6 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 21 December 2023 to 8 January 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 21 December 2023 to 8 January 2024	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 21 December 2023 to 8 January 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE ZERO COUPON FINECO AM FUND

SUPPLEMENT DATED 8 MARCH 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE ZERO COUPON FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Deadline:	means 11.59am (Irish time) on the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 12 February 2024 and will close at 5:00 PM (Irish time) on 19 February 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100 per Share ("Initial Offer Price").
Maturity Date:	30 June 2028
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 20 February 2024 to 20 March 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. The Directors may determine to re-open the Subscription Period following its initial close and Shareholders will be notified in advance of any such re-opening. After the close of the Subscription Period (initial and subsequent (if applicable)), the Fund will not accept any new subscriptions.
Valuation Point	Means 3:00 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to seek to (i) protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date and (ii) provide capital appreciation at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek capital appreciation at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class I Acc	€100	From 12 February 2024 to 19 February 2024	Euro	No	€10,000	Up to 5%	€100	Accumulating
Class A Acc	€100	From 12 February 2024 to 19 February 2024	Euro	No	€1,000	N/A	€100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period (initial and subsequent (if applicable)), the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 5% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

EUROPEAN LEADERS FINECO AM FUND

SUPPLEMENT DATED 8 APRIL 2024

This Supplement contains specific information in relation to **EUROPEAN LEADERS FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	9 April 2025, 8 April 2026, 7 April 2027, 5 April 2028, 11 April 2029, 10 April 2030 and 9 April 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 15 February 2024 and will close at 5:00 PM (Irish time) on 21 February 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	9 April 2031
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 22 February 2024 to 2 April 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to and the underlyings of its financial derivative transactions, default by any of which on its contractual and/or any (other) financial obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by European governments and/or Investment Grade/non- Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and

also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to seek income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 15 February 2024 to 21 February 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 15 February 2024 to 21 February 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 15 February 2024 to 21 February 2024	Euro	No	€5,000 ,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2027 FINECO AM FUND

SUPPLEMENT DATED 14 MARCH 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2027 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 25 June 2025, 24 June 2026 and 30 June 2027 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 15 March 2024 and will close at 5:00 PM (Irish time) on 15 March 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	02 July 2027
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 18 March 2024 to 28 May 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The

Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 15 March 2024 to 15 March 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 15 March 2024 to 15 March 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 15 March 2024 to 15 March 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

GLOBAL CREDIT FINECO AM FUND

SUPPLEMENT DATED 20 MARCH 2024

This Supplement contains specific information in relation to **GLOBAL CREDIT FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	means 25 June 2025, 24 June 2026 and 30 June 2027 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities including corporate debt securities, bonds and notes, zero-coupon and discount bonds, callable bonds, debentures, inflation linked bonds, subordinated debt securities, denominated in any currency and issued, owned or guaranteed by any governments or government agencies located anywhere in the world (including emerging markets)and/or global large cap and mid-cap corporate issuers, mainly listed or traded on Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 21 March 2024 and will close at 5:00 PM (Irish time) on 21 March 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share (“Initial Offer Price”).
Maturity Date:	02 July 2027
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 22 March 2024 to 28 May 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund’s investments, the Fund’s portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing principally in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade/non-Investment Grade Debt Instruments issued by governments globally and/or (i) mid-cap and (ii) large-cap global companies (i.e. companies with a market capitalization generally over (i) 1 billion euro and (ii) 10 billion euro or the equivalent in US Dollar or any other relevant currency) that the Manager believes are leaders within the industry in which they operate as evidenced for example by their ability to achieve high relative return on invested capital (ROIC) over time. This commonly may be attributable to, among other things, an enduring competitive position (e.g., issuers with a strong business model geared towards sustaining a solid competitive position) and a strong barrier to entry. The Manager will also seek to identify industry sectors with sound prospects for expansion and select global issuers that have a strong leading role in those sectors.

The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date) and yield curve slopes (i.e. different levels of return for different maturity dates).

The issuers of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, global financial institutions will be deemed as systemically important if regarded as such by the respective national and/or supranational regulatory agency. In addition, global sovereign debt is deemed by the Manager to be systemically important.

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 50% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially in government bonds issued by any Member State.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

The Fund's exposure to emerging markets will be limited to 20% of the Fund's Net Asset Value. Emerging markets include China and India; however the Fund will only have an indirect exposure to China and India; which will be achieved through investment in Debt Instruments that the Fund may acquire in accordance with its investment policy and which are listed or traded on the Recognised Markets listed in Schedule I of the Prospectus.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

The Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, inflation-linked swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Interest Rate Swaps
The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates and/or to hedge against changes in relevant interest rates.

Inflation-linked Swaps
The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Inflation-linked swaps may also be used to express views on the future level of inflation.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/ShortExposure: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the

Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, guaranteed or owned by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to receive income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Investment Advisor

The Manager has appointed M&G Investment Management Limited with registered office at 10 Fenchurch Avenue, London, EC3M 5AG, United Kingdom to act as its investment advisor (the "Investment Advisor") in respect of the Fund pursuant to a non-discretionary investment advisory agreement, as amended and restated on 20 March 2024. The Investment Advisor will provide strategic asset allocation advice to the Manager in respect of the selection and weighting of assets of the Fund, on a non-discretionary basis. For the avoidance of doubt, the Manager will retain full discretion in respect of the selection and weighting of assets of the Fund.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 21 March 2024 to 21 March 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class LH Dist	€100	From 21 March 2024 to 21 March 2024	Euro	Yes	€1,000	Up to 2%	€100	Distributing

Class A Dist	€100	From 21 March 2024 to 21 March 2024	Euro	No	€1,000	N/A	€100	Distributing
Class AH Dist	€100	From 21 March 2024 to 21 March 2024	Euro	Yes	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 21 March 2024 to 21 March 2024	Euro	No	€5,000,000	N/A	€100	Distributing

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Investment Advisor's Fees

The Manager shall pay out of its own fee the fees of the Investment Advisor.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY 2031 FINECO AM FUND

SUPPLEMENT DATED 2 APRIL 2024

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2031 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 25 June 2025, 24 June 2026, 23 June 2027, 28 June 2028, 27 June 2029, 26 June 2030 and 25 June 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 3 April 2024 and will close at 5:00 PM (Irish time) on 3 April 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Limited Index Return:	means a range of between 20%-30% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 50%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	27 June 2031.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 16 April 2024 to 18 June 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*
The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Index (the "Index"). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com/World.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 7 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Dist	€100	From 3 April 2024 to 3 April 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 3 April 2024 to 3 April 2024	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 3 April 2024 to 3 April 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator’s Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary’s Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

EUROPEAN LEADERS FINECO AM FUND II

SUPPLEMENT DATED 9 APRIL 2024

This Supplement contains specific information in relation to **EUROPEAN LEADERS FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	25 June 2025, 24 June 2026, 23 June 2027, 28 June 2028, 27 June 2029, 26 June 2030, 25 June 2031 and 24 September 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 10 April 2024 and will close at 5:00 PM (Irish time) on 10 April 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	26 September 2031
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 11 April 2024 to 18 June 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to and the underlyings of its financial derivative transactions, default by any of which on its contractual and/or any (other) financial obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by European governments and/or Investment Grade/non- Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *E<u>ntering Coupon Swaps</u>*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and

also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to seek income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 10 April 2024 to 10 April 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 10 April 2024 to 10 April 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 10 April 2024 to 10 April 2024	Euro	No	€5,000 ,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE US TREASURY 2027 FINECO AM FUND

SUPPLEMENT DATED 10 JULY 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE US TREASURY 2027 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	means 01 October 2025, 30 September 2026 and 29 September 2027 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	Includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 11 July 2024 and will close at 5:00 PM (Irish time) on 15 July 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	22 October 2027
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 16 July 2024 to 24 September 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>*Funding Investments*</u>
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK, the United States of America and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by the United States government

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK, the United States of America and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State and the US sovereign debt issued by the United States government are deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs. Currency options may also be used by the Fund to hedge currency risks and for investment purposes to gain exposure to foreign exchange markets and to capitalize on opportunities arising from currency fluctuations. When currency options are used for investment purposes, some or all of the fixed amount payable to the Fund, which may be used by the Fund to pay dividends at each Dividend Payment Date, may be at risk due to adverse movements in exchange rates, particularly if the underlying currency exposure does not perform as expected.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 11 July 2024 to 15 July 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 11 July 2024 to 15 July 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 11 July 2024 to 15 July 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with

regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE CALLABLE AFTER 3 YEARS FINECO AM FUND I

SUPPLEMENT DATED 22 MAY 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE CALLABLE AFTER 3 YEARS FINECO AM FUND I** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	24 September 2025, 23 September 2026, 22 September 2027, 27 September 2028, 26 September 2029, 25 September 2030 and 24 September 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day unless otherwise notified to Shareholders in advance.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, callable bonds, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 23 May 2024 and will close at 5:00 PM (Irish time) on 23 May 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	26 September 2031 or such earlier Business Day as may be determined by the Directors and notified in advance to Shareholders.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 24 May 2024 to 30 July 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Investors should be aware that the Fund's ability to achieve its investment objective is contingent upon the terms and conditions of the contractual arrangements entered into by the Manager with OTC counterparties. In addition to the ability to sell, liquidate or close OTC derivatives by an offsetting transaction at any time at their fair value at the Manager's initiative under the UCITS Regulations, the Manager or the OTC counterparties may at their discretion, under certain predefined market conditions, terminate their contractual arrangements and the Manager may consider that it is in the best interests of the Shareholders to redeem all outstanding Shares of the Fund. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty. The swap transactions will include a specific provision allowing the counterparty, depending on market conditions, to apply for an early termination ("Call Provision") of the swap transactions at the third-year anniversary following close of the Subscription Period and annually thereafter to the Maturity Date by written notice addressed to the Manager and the Fund. Inclusion of such specific provision is expected to enable the Manager to be able to provide a better risk adjusted return. Following the exercise of any Call Provision, the Fund will continue in existence in line with its investment policy to the Maturity Date unless the Manager considers that it in the best interests of the Shareholders to redeem all outstanding Shares of the Fund and notifies Shareholders accordingly.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding

Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base

Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps (“TRS”): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund’s portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund’s assets may be subject to total return swaps on the financial instruments outlined in the Fund’s investment objective and policy and it is expected that, in general, 0%-100% of the Fund’s assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund’s credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset’s market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 23 May 2024 to 23 May 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 23 May 2024 to 23 May 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 23 May 2024 to 23 May 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE ZERO COUPON FINECO AM FUND II
SUPPLEMENT DATED 2 MAY 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE ZERO COUPON FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Deadline:	means 11.59am (Irish time) on the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 3 May 2024 and will close at 5:00 PM (Irish time) on 17 May 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100 per Share ("Initial Offer Price").
Maturity Date:	4 July 2030
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 20 May 2024 to 5 July 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. The Directors may determine to re-open the Subscription Period following its initial close and Shareholders will be notified in advance of any such re-opening. After the close of the Subscription Period (initial and subsequent (if applicable)), the Fund will not accept any new subscriptions.
Valuation Point	Means 3:00 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to seek to (i) protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date and (ii) provide capital appreciation at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. Funding Investments

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek capital appreciation at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class I Acc	€100	From 3 May 2024 to 17 May 2024	Euro	No	€10,000	Up to 5%	€100	Accumulating
Class A Acc	€100	From 3 May 2024 to 17 May 2024	Euro	No	€1,000	N/A	€100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period (initial and subsequent (if applicable)), the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 5% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

GLOBAL CREDIT FINECO AM FUND I

SUPPLEMENT DATED 11 JULY 2024

This Supplement contains specific information in relation to **GLOBAL CREDIT FINECO AM FUND I** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	17 September 2025, 16 September 2026 and 15 September 2027, or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities including corporate debt securities, bonds and notes, zero-coupon and discount bonds, callable bonds, debentures, inflation linked bonds, subordinated debt securities denominated in any currency and issued, owned or guaranteed by any governments or government agencies located anywhere in the world (including emerging markets), and/or global large cap and mid-cap corporate issuers, mainly listed

or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 12 July 2024 and will close at 5:00 PM (Irish time) on 12 July 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	17 September 2027
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 15 July 2024 to 10 September 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing principally in Debt Instruments.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade/non-Investment Grade Debt Instruments issued by governments globally and/or (i) mid-cap and (ii) large-cap global companies (i.e. companies with a market capitalization generally over (i) 1 billion euro and (ii) 10 billion euro or the equivalent in US Dollar or any other relevant currency) that the Manager believes are leaders within the industry in which they operate as evidenced for example by their ability to achieve high relative return on invested capital (ROIC) over time. This commonly may be attributable to, among other things, an enduring competitive position (e.g., issuers with a strong business model geared towards sustaining a solid competitive position) and a strong barrier to entry. The Manager will also seek to identify industry sectors with sound prospects for expansion and select global issuers that have a strong leading role in those sectors. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date) and yield curve slopes (i.e. different levels of return for different maturity dates).

The issuers of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, global financial institutions will be deemed as systemically important if regarded as such by the respective national and/or supranational regulatory agency. In addition, global sovereign debt is deemed by the Manager to be systemically important.

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 50% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially in government bonds issued by any Member State.

II. *<u>Generation of additional income</u>*

In order to seek to obtain some additional income the Fund may engage in the practice of selling or buying Credit Default Swaps ("CDS") on an index, while simultaneously entering into CDS to either buy or sell all of the individual constituents of the aforementioned index. By doing this form of arbitrage trading (arbitrage meaning the simultaneous buying and selling of securities in different markets or in derivative form in order to take advantage of differing prices for the same asset), the Fund can profit from exploiting price differences between the index, and the individual constituents that make up that index, without being exposed to any default risk in respect of the underlying of the various CDS.

The CDS transactions referred to above allow the Fund to potentially gain some additional income in an economically appropriate manner, with an acceptably low level of risk relative to the expected return.

The price differences in the market which the Fund is looking to exploit are often driven by hedging needs in the market. For example, market participants looking to hedge their overall credit exposure by using an Index CDS can, in some cases, make the price of an Index CDS more expensive than a CDS on the individual index constituents.

Please see below in the section entitled "Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques", a description of how the buying and selling of CDS work and the potential benefits that derive to the Fund therefrom.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

The Fund's exposure to emerging markets will be limited to 20% of the Fund's Net Asset Value. Emerging markets include China and India; however the Fund will only have an indirect exposure to China and India; which will be achieved through investment in Debt Instruments that the Fund may acquire in accordance with its investment policy and which are listed or traded on the Recognised Markets listed in Schedule I of the Prospectus.

Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, inflation-linked swaps, cross-currency swaps, total return swaps (“TRS”), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Interest Rate Swaps: The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates and/or to hedge against changes in relevant interest rates.
Inflation-linked Swaps: The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund’s portfolio. Inflation-linked swaps may also be

used to express views on the future level of inflation.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk..

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure: The expected maximum level of long derivative positions which the Fund may hold is 550% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 550% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 850% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to receive income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Investment Advisor

The Manager has appointed M&G Investment Management Limited with registered office at 10 Fenchurch Avenue, London, EC3M 5AG, United Kingdom to act as its investment advisor (the "Investment Advisor") in respect of the Fund pursuant to a non-discretionary investment advisory agreement, as amended on 10

July 2024. The Investment Advisor will provide strategic asset allocation advice to the Manager in respect of the selection and weighting of assets of the Fund, on a non-discretionary basis. For the avoidance of doubt, the Manager will retain full discretion in respect of the selection and weighting of assets of the Fund.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 12 July 2024 to 12 July 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class LH Dist	€100	From 12 July 2024 to 12 July 2024	Euro	Yes	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 12 July 2024 to 12 July 2024	Euro	No	€100	N/A	€100	Distributing
Class AH Dist	€100	From 12 July 2024 to 12 July 2024	Euro	Yes	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 12 July 2024 to 12 July 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Investment Advisor's Fees

The Manager shall pay out of its own fee the fees of the Investment Advisor.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

ENHANCED EURO GOVERNMENT BOND FINECO AM FUND

SUPPLEMENT DATED 06 JUNE 2024

This Supplement contains specific information in relation to the **Enhanced Euro Government Bond Fineco AM Fund** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Fund's Net Asset Value may be subject to increased volatility as a consequence of its investment in equities.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Debt Instruments	include fixed or floating rate bonds issued by governments in the European Union whose long-term credit rating is at least Investment Grade;
Dealing Deadline	means 11.59am (Irish time) on the relevant Dealing Day;
Valuation Point	means 4:00pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to provide medium to long-term capital growth.

There can be no guarantee that the investment objective will actually be attained.

Investment Policy

The Fund will seek to achieve its investment objective by (i) investing directly in Debt Instruments as described in the section headed "Direct Investment" below; and/or (ii) investing indirectly through the use of Total Return Swaps ("TRS"). The allocation of the Fund's portfolio to direct investment in Debt Instruments or indirect investments through the use of FDI will depend on the Manager's assessment of prevailing market conditions and the most efficient and cost effective way of achieving the Fund's investment objective.

In addition to the options outlined above, the Fund will also gain exposure via FDI in order to seek to reduce some downside risks and improve the long-term returns of the portfolio (via the “Systematic Strategies”) as further described below.

The proportion of the Fund’s portfolio that is allocated to the Debt Instruments and the Systematic Strategies will be determined by the Manager, using a quantitative, rules-based strategy, with the objective of optimising the Fund’s long-term risk-return profile. This strategy is based on pre-determined quantitative rules that ensure, via periodic rebalancing, that exposure to Systematic Strategies and Debt Instruments are in line with the Investment Policy of the Fund, allowing that the Fund to avoid, for example, over-exposures and/or keep open positions for longer than needed. On a periodic basis i.e. monthly and/or quarterly, the Manager will rebalance the Systematic Strategies back to the pre-determined weights, as determined by the quantitative rules described above, to ensure the appropriate Fund’s allocation.

Direct Investment

To implement its investment objective via direct investment, the Fund may invest up to 100% of its assets in Debt Instruments.

The Manager will use a top-down and bottom-up investment strategy to select and manage investments. The top-down component of this strategy consists of allocating investments based on the global investment outlook and considering the macroeconomic environment, including the likely path of growth, inflation and interest rates. The result of this analysis helps to inform the Manager's view regarding the Fund's sensitivity to interest rate movements and the impact of such movements on the underlying debt securities. The bottom-up component of this investment strategy involves the Manager's credit analysts assessing each individual bond and the bond markets to assess the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager, taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager.

Indirect Investment

To implement its investment objective via indirect investment, the Fund may enter into TRS negotiated at arm’s length with one or more TRS counterparties, that provide the Fund with exposure to an European debt index/basket of European debt indices/basket of European Debt Instruments and the Systematic Strategies outlined below, in exchange for cash and/or the performance and/or income of a basket of a globally diversified portfolio of debt securities and/or global equity securities, as further detailed below:

(i) Where the Fund invests in a basket of debt securities and enters into a TRS to “swap out” the performance of such basket with one or more TRS counterparties, the Manager will give preference to debt securities of global governments/corporates when selecting investments (e.g. fixed or floating rate investment grade bonds and notes including promissory notes, inflation linked notes and convertible notes issued by sovereign, government agencies, supranational entities and/or corporate issuers, treasury bonds, municipal bonds, commercial paper, zero-coupon, discount bonds, debentures and inflation linked bonds denominated in any currency). The Manager will select the debt securities based on an analysis which includes assessment of their particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date). The Manager will also select the debt securities which are identified as being sufficiently stable and liquid to allow the Fund to meet its investment objective.

(ii) Where the Fund invests in a basket of global equities and enters into a TRS to “swap out” the performance of such basket with one or more TRS counterparties, the Manager will select the global diversified portfolio of equities according to an evaluation of risk i.e. country risk, sector risk, maximum drawdown risk (meaning the maximum drop in value of an equity holding) and liquidity risk (i.e. how easy it is to realize these equities).

The return that a Shareholder receives from the TRS will be dependent on the performance of the European debt index/basket of European debt indices/basket of European Debt Instruments mentioned above.

The Manager may from time to time modify and/or change the European debt index/basket of European debt indices/basket of European Debt Instruments depending on the Manager’s view of the global investment outlook and its consideration of the macroeconomic environment, including the likely path of growth, inflation, interest rates and other macroeconomic factors which can impact on price movements.

The counterparties to the TRS will comply with Regulation 8 of the Central Bank UCITS Regulations. The counterparties will have no discretion in respect of the TRS. The value of the Fund’s Shares will be linked to the performance of the underlying assets of the TRS it enters.

The Fund will be exposed to the credit risk of the counterparties to the TRS. If a counterparty defaults on its obligations, the Fund may experience a decline in the value of its portfolio. In the case of the termination and close-out of a TRS, the Fund will be exposed to the direct holdings of the underlying assets of the TRS.

In addition to the direct investments and indirect investments described above, the Fund may also invest:

(i) up to 10% of its Net Asset Value in cash or up to 20% of its Net Asset Value in cash where the cash is booked in an account with the Depositary;
(ii) up to 10% of its Net Asset Value in units or shares of Underlying Funds (including exchange traded funds) within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein;
(iii) up to 10% of its Net Asset Value in ancillary liquid assets such as money market instruments, including certificates of deposit, commercial paper or bankers’ acceptances, government bonds; and
(iv) up to 10% of its Net Asset Value in exchange traded commodities (“ETCs”), being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies).

Other than permitted investment in unlisted securities and OTC FDIs, the Fund’s investments will be limited to securities that are traded on the markets listed in Schedule 1 of the Prospectus.

Benchmark Information

The Fund is actively managed. The Manager has selected the Bloomberg Euro-Aggregate Treasury Index (the “Index”) which is used for performance comparison purposes only. The Index consists of fixed-rate, investment grade public obligations of the soverign countries in the Eurozone. The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Systematic Strategies

The Systematic Strategies will provide the Fund with indirect exposure, via the use of FDI, to different asset classes including Debt Instruments, debt securities (as further detailed in the section above titled “Indirect Investment”), currencies and money market instruments with the aim of reducing some of the downside risk and/or enhancing the long-term returns of the Fund’s portfolio. The investment techniques that make up the Systematic Strategies, which may or may not also include taking exposure to indices, can be broken down under the following headings:

Hedging
The Manager may use hedging techniques to provide downside protection (i.e. protection against falls in the values of assets), while adapting to different market environments.

Carry
Carry strategies seek returns from the net benefit of holding an investment, in excess of price appreciation/depreciation. Carry techniques seek to generate returns by taking long positions in higher-yielding, relatively cheaper assets and synthetic short positions in less-yielding, relatively more expensive assets.

Value
Value strategies seek to capture a return by taking long positions in assets that are priced below their fair value (i.e. undervalued assets), and synthetic short positions in assets that are priced above their fair value (i.e. overvalued assets).

Momentum
Momentum strategies are based on the tendency of asset prices to follow the same pattern as their recent movements. Increases in asset prices tend to follow recent price appreciation and falls in prices tend to follow recent price declines. Momentum techniques try to benefit from such tendencies, through either taking long positions in assets that have appreciated in value and short positions in assets that have depreciated or through exposure to just the long or short side of such positions.

Volatility
Volatility strategies seek to exploit differences between the volatility of the price of an asset which is actually observed and the expected future volatility which is implied by options based on that asset.

Global Macro
Global macro strategies seek to profit from movement in the prices of securities that are highly sensitive to macroeconomic conditions, across a broad spectrum of assets. These strategies provide long and/or short exposure to currencies, bonds, interest rates markets.

Further details on the types of FDI that the Fund may use to implement the above strategies can be found in the below section titled “Use of FDI”.

Use of FDI

The Fund may engage in FDI transactions for investment purposes, for the purposes of risk reduction and hedging. The types of FDI that the Fund may use are fixed income derivatives, futures and forwards, currency forwards, currency options and TRS.

The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions”.

Fixed Income Derivatives
Fixed income derivatives include interest rate swaps, interest rate futures, bond futures, options and

swaptions. The Fund may use interest rate futures (i.e. future contracts that allows the buyer and seller to lock in the price of an interest-bearing asset for a future date) and interest rate swaps (i.e. forward contracts in which one stream of future interest payment is exchanged for another based on a specified principal amount) in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. Interest rate futures and interest rate swaps can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, offsetting the exposure of the future or the bond contract to interest rate movements, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Futures and Forwards
The Fund may use future and forward contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price, thereby establishing a floor on the price at which investments may in the future be disposed). Futures and forward contracts may also be used for investment purposes or to allocate investments within the Fund by taking exposure to specific markets, such as currency or commodity markets, or to specific issuers. When the Fund takes an investment exposure to a commodity index, such index will be compliant under the UCITS Regulations.

The Fund may sell futures on bonds in order to seek to protect the Fund against interest rate increases.Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures on bonds has the effect of reducing the duration of a bond's portfolio.

The Fund may buy futures on bonds in order to gain additional exposure to interest rates. Taking such action, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures on bonds has the effect of increasing the overall duration of a bond's portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

Options and Swaptions
The Fund may use options to gain or hedge exposure to bonds that the Fund may acquire in accordance with its investment policy and can provide an efficient, liquid and effective mechanism for taking a position in securities. Put options may be used to reduce or gain exposure to bond markets or hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a selloff and decline in market values. A "swaption" is an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into a swap at a given rate on a specified future date in exchange for paying a market-based premium. Swaptions also include options that allow one of the counterparties to terminate or extend an existing swap.

Currency Forwards and Currency Options
Currency forwards and currency options may be used for the purpose of hedging currency exposure, arising, for instance, from the redenomination of an investment designated in a currency other than the Fund's Base Currency, and for investment purposes. Currency forwards and currency options can be used for taking active currency risk where the Manager takes long or short exposure to currencies that it expects to rise or fall in value

TRS
The Manager may swap some or all of the Fund's portfolio under a TRS to exchange the performance and income of some or all of the Fund's portfolio in return for the performance and income of the underlying assets in the TRS. A TRS is a derivative contract between two parties

where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 105% of the Fund's assets may be subject to TRS as described in this paragraph and in the "Investment Objective and Policies" section above. It is expected that, in general, 0%-100 % of the Fund's assets may be subject to TRS. The underlying instruments for which the TRS provide exposures will include derivatives mentioned above.

Exposure to Indices
The Fund may take exposure to one or more indices through the use of TRS, or through futures and forwards on indices or options on indices, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look-through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure
The expected maximum level of long derivative positions which the Fund may hold is 1150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 950% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall be calculated daily and shall not exceed 20% per cent of the Net Asset Value of the Fund, based on a one-month holding period and a "one-tailed" 99 per cent confidence interval using a historical observation period of at least one year.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 1400% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Collateral Management

All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank and as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for investors who seek capital appreciation over the medium to long-term, and are prepared to accept a high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

i. Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

ii. The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 07 June 2024 to 07 June 2024	Euro	No	Yes/up to 3%	€1,000 / €100	Accumulating
Class A Acc	€100	From 07 June 2024 to 07 June 2024	Euro	No	Yes/up to 3%	€1,000 / €100	Accumulating
Class I Acc	€100	From 07 June 2024 to 07 June 2024	Euro	No	No	1,000,000/ €100	Accumulating
Class J Acc	€10,000	From 07 June 2024 to 07 June 2024	Euro	No	No	1,000,000/ €100	Accumulating

During the initial offer period, Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how fees are accrued and paid, and details of other general management and Fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
Up to 1.5% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 3% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

ENHANCED US EQUITY FINECO AM FUND

SUPPLEMENT DATED 06 JUNE 2024

This Supplement contains specific information in relation to the **Enhanced US Equity Fineco AM Fund** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Fund's Net Asset Value may be subject to increased volatility as a consequence of its investment in equities.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Debt Instruments	include fixed or floating rate government bonds, corporate bonds, treasury bonds, municipal bonds and commercial paper, of Investment Grade and issued by governments, quasi-sovereign entities, institutions, public listed companies (or companies established other than as public listed companies);
Dealing Deadline	means 11.59am (Irish time) on the relevant Dealing Day;
Equity Instruments	means equity and/or equity-related securities such as warrants, convertible preferred stocks (which may or may not embed leverage) or preferred stocks of companies that are domiciled in or carrying out the main part of their economic activity in the US and that are listed on Recognised Markets.
Valuation Point	means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to provide medium to long-term capital growth.

There can be no guarantee that the investment objective will actually be attained.

Investment Policy

The Fund will seek to achieve its investment objective by (i) investing directly in Equity Instruments as described in the section headed “Direct Investment” below; and/or (ii) investing indirectly through the use of Total Return Swaps (“TRS”). The allocation of the Fund’s portfolio to direct investment in Equity Instruments or indirect investments through the use of FDI will depend on the Manager’s assessment of prevailing market conditions and the most efficient and cost-effective way of achieving the Fund’s investment objective.

In addition to the options outlined above, the Fund will also gain exposure via FDI in order to seek to reduce some downside risks and improve the long-term returns of the portfolio (via the “Systematic Strategies”) as further described below.

The proportion of the Fund’s portfolio that is allocated to the Equity Instruments and the Systematic Strategies will be determined by the Manager, using a quantitative, rules-based strategy, with the objective of optimising the Fund’s long-term risk-return profile. This strategy is based on pre-determined quantitative rules that ensure, via periodic rebalancing, that exposure to Systematic Strategies and Equity Instruments are in line with the Investment Policy of the Fund, allowing that the Fund to avoid, for example, over-exposures and/or keep open positions for longer than needed. On a periodic basis i.e. monthly and/or quarterly, the Manager will rebalance the Systematic Strategies back to the pre-determined weights, as determined by the quantitative rules described above, to ensure the appropriate Fund’s allocation.

Direct Investment

To implement its investment objective via direct investment, the Fund may invest up to 100% of its assets in Equity Instruments of companies that are domiciled, or carrying out the main part of their economic activity, in the US and that are listed on Recognised Markets.

The portfolio of Equity Instruments will be selected by the Manager, who will give preference to investment in the most liquid equity securities issued by the leading publicly traded companies in the United States with a large market capitalization.

Indirect Investment

To implement its investment objective via indirect investment, the Fund may enter into TRS negotiated at arm’s length with one or more TRS counterparties, that provide the Fund with exposure to a US equity index/basket of US equity indices/basket of US equities or US equity-related securities and the Systematic Strategies outlined below, in exchange for cash and/or the performance and/or income of a basket of a globally diversified portfolio of Debt Instrumentsand/or global equity securities, as further detailed below:

i. Where the Fund invests in a basket of global equities and enters into a TRS to “swap out” the performance of such basket with one or more TRS counterparties, these will global equity securities which are listed on securities markets and exchanges around the world and equity-related instruments such as preferred stocks and warrants. The Manager will select the global diversified portfolio of equities according to an evaluation of risk i.e. country risk, sector risk, maximum drawdown risk (meaning the maximum drop in value of an equity holding) and liquidity risk (i.e., how easy it is to realize these equities).

ii. Where the Fund invests in a basket of Debt Instruments and enters into a TRS to “swap out” the performance of such basket with one or more TRS counterparties, the Manager will give preference to Debt Instruments when selecting their investments. The Manager will select the Debt Instruments based on an analysis which includes assessment of their particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date). The Manager will also select the Debt Instruments which are identified as being sufficiently stable and liquid to allow the Fund to meet its investment objective.

The return that a Shareholder receives from the TRS will be dependent on the performance of the US equity index/basket of US equity indices/basket of US equities or US equity-related securities mentioned above.

The Manager may from time to time modify and/or change the US equity index/basket of US equity indices/basket of US equities or US equity-related securities depending on the Manager's view of the global equity market, which includes reviewing macroeconomic measures such as interest rates, dividend expectations and other macroeconomic factors which can impact on price movements.

The counterparties to the TRS will comply with Regulation 8 of the Central Bank UCITS Regulations. The counterparties will have no discretion in respect of the TRS. The value of the Fund's Shares will be linked to the performance of the underlying assets of the TRS it enters.

The Fund will be exposed to the credit risk of the counterparties to the TRS. If a counterparty defaults on its obligations, the Fund may experience a decline in the value of its portfolio. In the case of the termination and close-out of a TRS, the Fund will be exposed to the direct holdings of the underlying assets of the TRS.

In addition to the direct investments and indirect investments described above, the Fund may also invest:

(i) up to 10% of its Net Asset Value in cash or up to 20% of its Net Asset Value in cash where the cash is booked in an account with the Depositary;
(ii) up to 10% of its Net Asset Value in units or shares of Underlying Funds (including exchange traded funds) within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein;
(iii) up to 10% of its Net Asset Value in ancillary liquid assets such as money market instruments, including to certificates of deposit, commercial paper or bankers' acceptances, government bonds; and
(iv) up to 10% of its Net Asset Value in exchange traded commodities ("ETCs"), being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies).

Other than permitted investment in unlisted securities and OTC FDIs, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule 1 of the Prospectus.

Benchmark Information

The Fund is actively managed. The Manager has selected the S&P 500 Index (the "Index") which is used for performance comparison purposes only. The Index is designed to represent the performance of 500 large-cap companies listed on regulated exchanges in the United States. The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Systematic Strategies

The Systematic Strategies will provide the Fund with indirect exposure, via the use of FDI, to different asset classes including equities and Debt Instruments (as further detailed in the section above titled "Indirect Investment") as well as Equity Instruments, currencies, commodities, and money market instruments, with the aim of reducing some of the downside risk and/or enhancing the long-term returns of the Fund's portfolio. The investment techniques that make up the Systematic Strategies, which may or may not also include taking exposure to indices, can be broken down under the following headings:

Hedging
The Manager may use hedging techniques to provide downside protection (i.e. protection against falls in the values of assets), while adapting to different market environments.

Carry
Carry strategies seek returns from the net benefit of holding an investment, in excess of price appreciation/depreciation. Carry techniques seek to generate returns by taking long positions in higher-yielding, relatively cheaper assets and synthetic short positions in less-yielding, relatively more expensive assets.

Value
Value strategies seek to capture a return by taking long positions in assets that are priced below their fair value (i.e. undervalued assets), and synthetic short positions in assets that are priced above their fair value (i.e. overvalued assets).

Momentum
Momentum strategies are based on the tendency of asset prices to follow the same pattern as their recent movements. Increases in asset prices tend to follow recent price appreciation and falls in prices tend to follow recent price declines. Momentum techniques try to benefit from such tendencies, through either taking long positions in assets that have appreciated in value and short positions in assets that have depreciated or through exposure to just the long or short side of such positions.

Volatility
Volatility strategies seek to exploit differences between the volatility of the price of an asset which is actually observed and the expected future volatility which is implied by options based on that asset.

Quality
Quality strategies are relevant for equities and try to capture the potential for better returns associated with investment in higher quality equities against lower quality equities under different market scenarios, such as relatively flat market conditions or highly volatile market conditions.

Global Macro
Global macro strategies seek to profit from movement in the prices of securities that are highly sensitive to macroeconomic conditions, across a broad spectrum of assets. These strategies provide long and/or short exposure to equities, currencies, bonds, interest rates and commodities markets.

Calendar
Calendar strategies seek to benefit from market behaviour of investors during specific periods of the month such as start of the month, month-end and options' or futures' expiration dates.

Positioning
Positioning-based strategies take into account market activity from market participants, either through observing point-in-time market positioning in different assets or through observing structural patterns in order to take long or short positions in the underlying instruments to take advantage of such positioning observations. Such positioning measures could reflect flow-based buying or selling pressures in the underlying market which could influence the price of the market independently of changes in fundamental drivers.

Further details on the types of FDI that the Fund may use to implement the above strategies can be found in the below section titled "Use of FDI".

Use of FDI

The Fund may engage in FDI transactions for investment purposes, for the purposes of risk reduction and for the purposes of hedging. The types of FDI that the Fund may use are equity derivatives, fixed income derivatives, futures and forwards, currency forwards, currency options and TRS.

The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Equity Derivatives
Equity derivatives include equity swaps, exchange-listed futures, options on equities and on equity indices, futures and options on volatility indices (such as VIX index), as described below.

Fixed Income Derivatives
Fixed income derivatives include interest rate swaps, interest rate futures, bond futures, options and swaptions. The Fund may use interest rate futures (i.e. future contracts that allows the buyer and seller to lock in the price of an interest-bearing asset for a future date) and interest rate swaps (i.e. forward contracts in which one stream of future interest payment is exchanged for another based on a specified principal amount) in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. Interest rate futures and interest rate swaps can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, offsetting the exposure of the future or the bond contract to interest rate movements, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Equity Swaps
The Fund may use swaps on equities/equity-related securities, baskets of equities/equity-related securities, equity indices, or baskets of equity indices to gain or reduce exposure to an asset, which the Fund is permitted to have exposure to under the investment policy, without owning it or taking physical custody of it. For example, if the Fund invests in a swap on an underlying asset, it will receive the price appreciation of the underlying asset in exchange for payment of an agreed-upon fee.

Futures and Forwards
The Fund may use future and forward contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into futures/forwards to sell investments at a fixed price, thereby establishing a floor on the price at which investments may in the future be disposed). Futures and forward contracts may also be used for investment purposes or to allocate investments within the Fund by taking exposure to specific markets, such as currency or commodity markets, or to specific issuers. When the Fund takes an investment exposure to a commodity index, such index will be compliant under the UCITS Regulations.

The Fund may sell futures on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures on bonds has the effect of reducing the duration of a bond's portfolio.

The Fund may buy futures on bonds in order to gain additional exposure to interest rates. Taking such action, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures on bonds has the effect of increasing the overall duration of a bond's portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

Options and Swaptions
The Fund may acquire options and, in particular, call options may be used to gain exposure to equities and can provide an efficient, liquid and effective mechanism for taking a position in equities. Put options may be used to hedge against downside risk by permitting the Fund to sell investments at a fixed price and thereby protect the value of its portfolio in circumstances of a sell-off and decline in market values. The Fund may sell call or put options to provide an extra income to the Fund or to reduce the costs of purchasing call or put options. A "swaption" is an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into a swap at a given rate on a specified future date in exchange for paying a market-based premium. Swaptions also include options that allow one of the counterparties to terminate or extend an existing swap.

Currency Forwards and Currency Options
Currency forwards and currency options may be used for the purpose of hedging currency exposure arising, for instance, from the redenomination of an investment designated in a currency other than the Fund's Base Currency, and for investment purposes. A currency forward is a contract in the foreign exchange market that locks in the exchange rate for the purchase or sale of a currency on a future date, whereas a currency option is a contract that gives the buyer the right, but not the obligation, to buy or sell a certain currency at a specified exchange rate on or before a specified date. Currency forwards and currency options can be used for taking active currency risk where the Manager takes long or short exposure to currencies that it expects to rise or fall in value.

TRS
The Manager may swap some or all of the Fund's portfolio under a TRS to exchange the performance and income of some or all of the Fund's portfolio in return for the performance and income of the underlying assets in the TRS. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 105% of the Fund's assets may be subject to TRS as described in this paragraph and in the "Investment Objective and Policies" section above. It is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. The underlying instruments for which the TRS provide exposure will include derivatives mentioned above.

Exposure to Indices
The Fund may take exposure to one or more indices through the use of TRS, equity swaps or through futures and forwards on indices or options on indices, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". The Fund may use futures on volatility indices as a means of gaining long or short exposure to movements in volatilities and/or for the purpose of hedging the volatility exposure of the Fund. The Fund may also take exposure through the use of options on volatility indices

It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look-through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure
The expected maximum level of long derivative positions which the Fund may hold is 1000% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 600% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the Index, a benchmark which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 1100% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Collateral Management

All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank and as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for investors who seek capital appreciation over the medium to long-term, and are prepared to accept a high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

i. Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider, and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

ii. The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.The Manager's exclusion list may be obtained upon request from the Manager by reaching out to the contact details available on its website at: http://finecoassetmanagement.com/contact/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum	Distribution Type

						Subsequent Subscription	
Class L Acc	€100	From 07 June 2024 to 07 June 2024	Euro	No	Yes/up to 5%	€1,000 / €100	Accumulating
Class A Acc	€100	From 07 June 2024 to 07 June 2024	Euro	No	Yes/up to 5%	€1,000 / €100	Accumulating
Class I Acc	€100	From 07 June 2024 to 07 June 2024	Euro	No	No	1,000,000/ €100	Accumulating
Class J Acc	€10,000	From 07 June 2024 to 07 June 2024	Euro	No	No	1,000,000/ €100	Accumulating

During the initial offer period, Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how fees are accrued and paid, and details of other general management and Fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
Up to 2,25% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 5% of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager

is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000, will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

SMART GLOBAL DEFENCE 2027 FINECO AM FUND III

SUPPLEMENT DATED 20 JUNE 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2027 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 24 September 2025, 23 September 2026 and 22 September 2027 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 21 June 2024 and will close at 5:00 PM (Irish time) on 5 July 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	24 September 2027
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 8 July 2024 to 9 September 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>Funding Investments</u>

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the

Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund’s approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 21 June 2024 to 5 July 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 21 June 2024 to 5 July 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 21 June 2024 to 5 July 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2031 FINECO AM FUND

SUPPLEMENT DATED 28 JUNE 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2031 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	8 October 2025, 7 October 2026, 6 October 2027, 11 October 2028, 10 October 2029, 9 October 2030 and 8 October 2031 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 1 July 2024 and will close at 5:00 PM (Irish time) on 15 July 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	15 October 2031
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 6 August 2024 to 1 October 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denominati on and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 1 July 2024 to 15 July 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 1 July 2024 to 15 July 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 1 July 2024 to 15 July 2024	Euro	No	€5,000 ,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing

Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE PLUS FINECO AM FUND
SUPPLEMENT DATED 28 JUNE 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE PLUS FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	Means 8 October 2025, 7 October 2026, 6 October 2027, 11 October 2028 and 10 October 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 1 July 2024 and will close at 5:00 PM (Irish time) on 15 July 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	15 October 2029
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 6 August 2024 to 1 October 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to and the underlyings of its financial derivative transactions, default by any of which on its contractual and/or any (other) financial obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. <u>*Funding Investments*</u>

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a [medium] investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 1 July 2024 to 15 July 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 1 July 2024 to 15 July 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 1 July 2024 to 15 July 2024	Euro	No	€5,000 ,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with

regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE PROGRESSION 2026 FINECO AM FUND

SUPPLEMENT DATED 22 JULY 2024

This Supplement contains specific information in relation to **SMART DEFENCE PROGRESSION 2026 FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Coupon:	means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum coupon which will be paid by the Fund at the Maturity Date.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 3 July 2024 and will close at 5:00 PM (Irish time) on 3 July 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share (“Initial Offer Price”).
Maturity Date:	19 March 2026.
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 4 July 2024 to 3 September 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with the Coupon at the Maturity Date and (ii) seek to protect the Fund’s Net Asset Value per Share at 100% of the Initial Offer Price

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest up to 100% of its assets in Equity and/or Debt Instruments ("Funding Instruments").

Once the Fund purchases the Funding Instruments it will then enter into a total return swap ("TRS") on the Funding Instruments in which it will swap out the performance and the income of the Funding Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Funding Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Funding Instruments directly. The TRS will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders during the life of the Fund, up to the Maturity Date.

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection
The Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum Volatility**: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable

economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency.

The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may

acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and obtain income at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 3 July 2024 to 3 July 2024	Euro	No	€1,000	N/A	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	All Share Classes
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

DYNAMIC PROFILE FINECO AM FUND

SUPPLEMENT DATED 22 JULY 2024

This Supplement contains specific information in relation to **DYNAMIC PROFILE FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Business Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) on the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for a Share Class will start at 9:00 AM (Irish time) on the first date disclosed in the table under "Offer of Shares" and will close at 5:00 PM (Irish time) on the second date disclosed. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date	Means 23 August 2027
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 24 July 2024 to 02 September 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Point:	Means 3:00pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to seek to (i) achieve capital growth and (ii) protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price, during the life of the Fund up to the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest principally in Equity and/or Debt Instruments ("Funding Instruments").

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection
The Manager will use a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative analysis:

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection
In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into a swap which involves an OTC counterparty paying the Fund a return linked to a standard market interest rate. The swap will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders up the Maturity Date.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or

efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek capital growth. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 23 July 2024 to 23 July 2024	Euro	No	€1,000	N/A	€100	Accumulating
Class L Acc	€100	From 23 July 2024 to 23 July 2024	Euro	No	€1,000	Up to 2%	€100	Accumulating

Class G Acc	€100	From2 3 July 2024 to 23 July 2024	Euro	No	€5,000	N/A	€100	Accumulating
Class H Acc	€100	From 23 July 2024 to 23 July 2024	Euro	No	€10,000	N/A	€100	Accumulating
Class I Acc	€100	From 23 July 2024 to 23 July 2024	Euro	No	€10,000	Up to 2%	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

EUROPEAN LEADERS FINECO AM FUND III

SUPPLEMENT DATED 10 JULY 2024

This Supplement contains specific information in relation to **EUROPEAN LEADERS FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	1 October 2025, 30 September 2026, 29 September 2027, 27 September 2028, 26 September 2029, 25 September 2030 and 1 October 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 11 July 2024 and will close at 5:00 PM (Irish time) on 25 July 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	24 October 2031
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 25 July 2024 to 24 September 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to and the underlyings of its financial derivative transactions, default by any of which on its contractual and/or any (other) financial obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by European governments and/or Investment Grade/non- Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and

also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to seek income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a [medium] investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 11 July 2024 to 25 July 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 11 July 2024 to 25 July 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 11 July 2024 to 25 July 2024	Euro	No	€5,000 ,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY 2031 FINECO AM FUND II

SUPPLEMENT DATED 19 JULY 2024

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2031 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 15 October 2025, 14 October 2026, 13 October 2027, 18 October 2028, 17 October 2029, 16 October 2030 and 15 October 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 22 July 2024 and will close at 5:00 PM (Irish time) on 22 July 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share (“Initial Offer Price”).
Limited Index Return:	means a range of between 20%-30% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 50%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	17 October 2031.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 23 July 2024 to 1 October 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund’s Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*
The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Index (the "Index"). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com/World.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under “Funding Investments” further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund’s approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 6 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a [medium-to-high] investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Dist	€100	From 22 July 2024 to 22 July 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 22 July 2024 to 22 July 2024	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 22 July 2024 to 22 July 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE CALLABLE AFTER 3 YEARS FINECO AM FUND II

SUPPLEMENT DATED 9 AUGUST 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE CALLABLE AFTER 3 YEARS FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	5 November 2025, 4 November 2026, 3 November 2027, 8 November 2028, 7 November 2029, 6 November 2030 and 5 November 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day unless otherwise notified to Shareholders in advance.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, callable bonds, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 12 August 2024 and will close at 5:00 PM (Irish time) on 26 August 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	7 November 2031 or such earlier Business Day as may be determined by the Directors and notified in advance to Shareholders.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 27 August 2024 to 23 October 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Investors should be aware that the Fund's ability to achieve its investment objective is contingent upon the terms and conditions of the contractual arrangements entered into by the Manager with OTC counterparties. In addition to the ability to sell, liquidate or close OTC derivatives by an offsetting transaction at any time at their fair value at the Manager's initiative under the UCITS Regulations, the Manager or the OTC counterparties may at their discretion, under certain predefined market conditions, terminate their contractual arrangements and the Manager may consider that it is in the best interests of the Shareholders to redeem all outstanding Shares of the Fund. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty. The swap transactions will include a specific provision allowing the counterparty, depending on market conditions, to apply for an early termination ("Call Provision") of the swap transactions at the third-year anniversary following close of the Subscription Period and annually thereafter to the Maturity Date by written notice addressed to the Manager and the Fund. Inclusion of such specific provision is expected to enable the Manager to be able to provide a better risk adjusted return. Following the exercise of any Call Provision, the Fund will continue in existence in line with its investment policy to the Maturity Date unless the Manager considers that it in the best interests of the Shareholders to redeem all outstanding Shares of the Fund and notifies Shareholders accordingly.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding

Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base

Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 12 August 2024 to 26 August 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 12 August 2024 to 26 August 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 12 August 2024 to 26 August 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

DYNAMIC PROFILE FINECO AM FUND II

SUPPLEMENT DATED 15 August 2024

This Supplement contains specific information in relation to **DYNAMIC PROFILE FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Business Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) on the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for a Share Class will start at 9:00 AM (Irish time) on the first date disclosed in the table under "Offer of Shares" and will close at 5:00 PM (Irish time) on the second date disclosed. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date	Means 2 October 2028
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 2 September 2024 to 1 November 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Point:	Means 3:00pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to seek to (i) achieve capital growth and (ii) protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price, during the life of the Fund up to the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest principally in Equity and/or Debt Instruments ("Funding Instruments").

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection

The Manager will use a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative analysis:

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into a swap which involves an OTC counterparty paying the Fund a return linked to a standard market interest rate. The swap will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders up the Maturity Date.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps (“TRS”), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions”.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund’s use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund’s use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund’s use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps (“TRS”): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund’s portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund’s assets may be subject to TRS on the financial instruments outlined in the Fund’s investment objective and policy and it is expected that, in general, 0%-100% of the Fund’s assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or

efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek capital growth. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 16 August 2024 to 30 August 2024	Euro	No	€1,000	N/A	€100	Accumulating
Class L Acc	€100	From 16 August 2024 to 30 August 2024	Euro	No	€1,000	Up to 2%	€100	Accumulating

Class G Acc	€100	From 16 August 2024 to 30 August 2024	Euro	No	€5,000	N/A	€100	Accumulating
Class H Acc	€100	From 16 August 2024 to 30 August 2024	Euro	No	€10,000	N/A	€100	Accumulating
Class I Acc	€100	From 16 August 2024 to 30 August 2024	Euro	No	€10,000	Up to 2%	€100	Accumulating
Class A1 Acc	€100	From 16 August 2024 to 30 August 2024	Euro	No	€5,000,000	N/A	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

FINECO AM SHORT TERM FIXED INCOME OPPORTUNITIES FUND

SUPPLEMENT DATED 30 AUGUST 2024

This Supplement contains specific information in relation to **FINECO AM SHORT TERM FIXED INCOME OPPORTUNITIES FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open- ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest substantially in money market investments. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every weekday on which retail banks and securities markets in Luxembourg and France are normally open for business
Dealing Day	means every Business Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight
Dealing Deadline:	means 11.59am (Irish time) on the relevant Dealing Day
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities including corporate debt securities, bonds and notes, zero-coupon and discount bonds, callable bonds, debentures, inflation linked bonds, subordinated debt securities, denominated in any currency and issued, owned or guaranteed by any governments or government agencies located anywhere in the world (excluding emerging markets)and/or global large cap and mid-cap corporate issuers, mainly listed or traded on Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 21 August 2024 and will close at 5:00 PM (Irish time) on 21 August 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other collective investment schemes which provide exposure to the above instruments, excluding money market funds.
Valuation Point:	Means 4:00pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to provide a total return (income and capital growth) in excess of that generated by the Bloomberg Euro Aggregate 0-1 Year Index (the "Index").

The Index comprises investment-grade bonds issued in Euro with a maturity of 0 to 1 year. The Index includes a diverse range of bond types, including government and corporate bonds. All bonds in the index are rated Investment Grade. The weightings of the index are based on market capitalization.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund may, enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing principally in Debt Instruments and/or Money Market/Short Term Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade/non-Investment Grade Debt Instruments issued by governments globally and/or (i) mid-cap and (ii) large-cap global companies (i.e. companies with a market capitalization generally over (i) 1 billion euro and (ii) 10 billion euro or the equivalent in US Dollar or any other relevant currency) that the Manager believes are leaders within the industry in which they operate as evidenced for example by their ability to achieve high relative return on invested capital (ROIC) over time. This commonly may be attributable to, among other things, an enduring competitive position (e.g., issuers with a strong business model geared towards sustaining a solid competitive position) and a strong barrier to entry. The Manager will also seek to identify industry sectors with sound prospects for expansion and select global issuers that have a strong leading role in those sectors.

The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date) and yield curve slopes (i.e. different levels of return for different maturity dates).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 50% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially in government bonds issued by any Member State.

The Manager will select Money Market/Short Term Instruments based on their liquidity, credit quality, and yield potential. The selection criteria will also include an assessment of maturity durations and market conditions. When selecting Money Market/Short Term Instruments, the Manager will give preference to instruments with maturities typically not exceeding one year to maintain flexibility and reduce exposure to interest rate fluctuations.

Money Market/Short Term Instruments encompass a broad spectrum of high-quality, short-term debt securities, including but not limited to cash, treasury bills, commercial paper, certificates of deposit, and short-

Investment Objective

The investment objective of the Fund is to provide a total return (income and capital growth) in excess of that generated by the Bloomberg Euro Aggregate 0-1 Year Index (the "Index").

The Index comprises investment-grade bonds issued in Euro with a maturity of 0 to 1 year. The Index includes a diverse range of bond types, including government and corporate bonds. All bonds in the index are rated Investment Grade. The weightings of the index are based on market capitalization.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund may, enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing principally in Debt Instruments and/or Money Market/Short Term Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade/non-Investment Grade Debt Instruments issued by governments globally and/or (i) mid-cap and (ii) large-cap global companies (i.e. companies with a market capitalization generally over (i) 1 billion euro and (ii) 10 billion euro or the equivalent in US Dollar or any other relevant currency) that the Manager believes are leaders within the industry in which they operate as evidenced for example by their ability to achieve high relative return on invested capital (ROIC) over time. This commonly may be attributable to, among other things, an enduring competitive position (e.g., issuers with a strong business model geared towards sustaining a solid competitive position) and a strong barrier to entry. The Manager will also seek to identify industry sectors with sound prospects for expansion and select global issuers that have a strong leading role in those sectors.

The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date) and yield curve slopes (i.e. different levels of return for different maturity dates).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 50% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially in government bonds issued by any Member State.

The Manager will select Money Market/Short Term Instruments based on their liquidity, credit quality, and yield potential. The selection criteria will also include an assessment of maturity durations and market conditions. When selecting Money Market/Short Term Instruments, the Manager will give preference to instruments with maturities typically not exceeding one year to maintain flexibility and reduce exposure to interest rate fluctuations.

Money Market/Short Term Instruments encompass a broad spectrum of high-quality, short-term debt securities, including but not limited to cash, treasury bills, commercial paper, certificates of deposit, and short-

term fixed or floating rate securities. Issuers may include sovereign entities, government agencies, supranational entities, and corporate issuers. The Fund may also invest in Underlying Funds that provide exposure to diversified Money Market/Short Term Instruments, thereby supporting overall portfolio stability and liquidity.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Benchmark Information

The Fund is actively managed in reference to the Index which will be used as a comparison for investment performance only. The Manager does not intend to replicate the composition of the Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques

The Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, futures and interest rate futures, inflation-linked swaps, cross-currency swaps, total return swaps (“TRS”), CDS, and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transaction”.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. Currency forwards may also be used for taking active currency risk where the Manager takes long or short exposure to currencies that it expects to rise or fall as the case may be as determined based on an assessment of the relevant factors that determine the value of currency markets such as global economic conditions, interest rates, capital flows and credit spreads (i.e. difference in yield between bonds of similar maturities).

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, may use forwards contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Futures and Interest Rate Futures: The Fund may use futures to hedge or gain exposure to fixed income securities. The Fund may also use interest rate futures to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates. As determined by the Manager interest rate futures may be used to manage the Fund's overall sensitivity to interest rate movements (understood as duration positioning) by either increasing or decreasing the portfolio's duration.

Interest Rate Swaps
The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates and/or to hedge against changes in relevant interest rates.

Inflation-linked Swaps
The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Inflation-linked swaps may also be used to express views on the future level of inflation.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%- 70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, guaranteed or owned by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund may be suitable for investors seeking a return over the short-term via exposure to Debt Instruments and Money Market/Short Term Instruments from issuers located worldwide and who are willing to accept a low level of volatility and the risks of the capital markets in pursuit of the short-term investment goals.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 21 August 2024 to 21 August 2024	Euro	No	€100	Up to 2%	€100	Accumulating

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

GLOBAL CREDIT COUPON FINECO AM FUND

SUPPLEMENT DATED 18 SEPTEMBER 2024

This Supplement contains specific information in relation to **GLOBAL CREDIT COUPON FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	12 November 2025, 11 November 2026, 10 November 2027, 15 November 2028, 14 November 2029, 13 November 2030 and 12 November 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 22 August 2024 and will close at 5:00 PM (Irish time) on 3 September 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	14 November 2031
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 4 September 2024 to 5 November 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to and the underlyings of its financial derivative transactions, default by any of which on its contractual and/or any (other) financial obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by European and/or United States governments and/or Investment Grade/non- Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions and/or insurance companies authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and

also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to seek income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Investment Advisor

The Manager has appointed M&G Investment Management Limited with registered office at 10 Fenchurch Avenue, London, EC3M 5AG, United Kingdom to act as its investment advisor (the "Investment Advisor") in respect of the Fund pursuant to a non-discretionary investment advisory agreement, as amended on 18 September 2024. The Investment Advisor will provide strategic asset allocation advice to the Manager in respect of the selection and weighting of assets of the Fund, on a non-discretionary basis. For the avoidance of doubt, the Manager will retain full discretion in respect of the selection and weighting of assets of the Fund.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);

c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 22 August 2024 to 3 September 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 22 August 2024 to 3 September 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 22 August 2024 to 3 September 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Investment Advisor's Fees

The Manager shall pay out of its own fee the fees of the Investment Advisor.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double -charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE PROGRESSION 2026 FINECO AM FUND II

SUPPLEMENT DATED 17 SEPTEMBER 2024

This Supplement contains specific information in relation to **SMART DEFENCE PROGRESSION 2026 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Coupon:	means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum coupon which will be paid by the Fund at the Maturity Date.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 6 September 2024 and will close at 5:00 PM (Irish time) on 6 September 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	6 November 2026.
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 9 September 2024 to 5 November 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with the Coupon at the Maturity Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest up to 100% of its assets in Equity and/or Debt Instruments ("Funding Instruments").

Once the Fund purchases the Funding Instruments it will then enter into a total return swap ("TRS") on the Funding Instruments in which it will swap out the performance and the income of the Funding Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Funding Instruments and will subsequently enter the TRS in order to determine the desired rate of return (whether fixed or floating) the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Funding Instruments directly. The TRS will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders during the life of the Fund, up to the Maturity Date.

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection
The Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum Volatility**: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable

economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g.* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency.

The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and obtain income at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	From 6 September 2024 to 6 September 2024	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A Acc	€100	From 6 September 2024 to 6 September 2024	Euro	No	€1,000	N/A	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are

accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

FINECO AM SHORT TERM FIXED INCOME OPPORTUNITIES FUND II

SUPPLEMENT DATED 17 SEPTEMBER 2024

This Supplement contains specific information in relation to **FINECO AM SHORT TERM FIXED INCOME OPPORTUNITIES FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest substantially in money market investments. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every weekday on which retail banks and securities markets in Luxembourg and France are normally open for business
Dealing Day	means every Business Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight
Dealing Deadline:	means 11.59am (Irish time) on the relevant Dealing Day
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities including corporate debt securities, bonds and notes, zero-coupon and discount bonds, callable bonds, debentures, inflation linked bonds, subordinated debt securities, denominated in any currency and issued, owned or guaranteed by any governments or government agencies located anywhere in the world (excluding emerging markets)and/or global large cap and mid-cap corporate issuers, mainly listed or traded on Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 18 September 2024 and will close at 5:00 PM (Irish time) on 18 September 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other collective investment schemes which provide exposure to the above instruments, excluding money market funds.
Valuation Point:	Means 4:00pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to provide a total return (income and capital growth) in excess of that generated by an index composed of 80% Bloomberg Euro Aggregate 0-1 Year Index and 20% Bloomberg Euro Aggregate 1-3 Year Index (the "Index").

The Index comprises investment-grade bonds issued in Euro with a maturity of 0 to 3 years. The Index includes a diverse range of bond types, including government and corporate bonds. All bonds in the index are rated Investment Grade. The weightings of the index are based on market capitalization.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund may, enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing principally in Debt Instruments and/or Money Market/Short Term Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade/non-Investment Grade Debt Instruments issued by governments globally and/or (i) mid-cap and (ii) large-cap global companies (i.e. companies with a market capitalization generally over (i) 1 billion euro and (ii) 10 billion euro or the equivalent in US Dollar or any other relevant currency) that the Manager believes are leaders within the industry in which they operate as evidenced for example by their ability to achieve high relative return on invested capital (ROIC) over time. This commonly may be attributable to, among other things, an enduring competitive position (e.g., issuers with a strong business model geared towards sustaining a solid competitive position) and a strong barrier to entry. The Manager will also seek to identify industry sectors with sound prospects for expansion and select global issuers that have a strong leading role in those sectors.

The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date) and yield curve slopes (i.e. different levels of return for different maturity dates).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 50% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially in government bonds issued by any Member State.

The Manager will select Money Market/Short Term Instruments based on their liquidity, credit quality, and yield potential. The selection criteria will also include an assessment of maturity durations and market conditions.

Money Market/Short Term Instruments encompass a broad spectrum of high-quality, short-term debt securities, including but not limited to cash, treasury bills, commercial paper, certificates of deposit, and short-

term fixed or floating rate securities. Issuers may include sovereign entities, government agencies, supranational entities, and corporate issuers. The Fund may also invest in Underlying Funds that provide exposure to diversified Money Market/Short Term Instruments, thereby supporting overall portfolio stability and liquidity.

When selecting Money Market/Short Term Instruments and/or Debt Instruments, the Manager will give preference to instruments with maturities typically not exceeding one year to maintain flexibility and reduce exposure to interest rate fluctuations.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Benchmark Information

The Fund is actively managed in reference to the Index which will be used as a comparison for investment performance only. The Manager does not intend to replicate the composition of the Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index or which are present in different proportions.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

The Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, futures and interest rate futures, inflation-linked swaps, cross-currency swaps, CDS, and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. Currency forwards may also be used for taking active currency risk where the Manager takes long or short exposure to currencies that it expects to rise or fall as the case may be as determined based on an assessment of the relevant factors that determine the value of currency markets such as global economic conditions, interest rates, capital flows and credit spreads (i.e. difference in yield between bonds of similar maturities).

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Futures and Interest Rate Futures: The Fund may use futures to hedge or gain exposure to fixed income securities. The Fund may also use interest rate futures to gain exposure to changes in relevant interest rates or to hedge against changes in relevant interest rates. As determined by the Manager interest rate futures may be used to manage the Fund's overall sensitivity to interest rate movements (understood as duration positioning) by either increasing or decreasing the portfolio's duration.

Interest Rate Swaps
The Fund may use interest rate swaps to gain exposure to changes in relevant interest rates and/or to hedge against changes in relevant interest rates.

Inflation-linked Swaps
The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Inflation-linked swaps may also be used to express views on the future level of inflation.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, guaranteed or owned by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund may be suitable for investors seeking a return over the short-term via exposure to Debt Instruments and Money Market/Short Term Instruments from issuers located worldwide and who are willing to accept a low level of volatility and the risks of the capital markets in pursuit of the short-term investment goals.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 18 September 2024 to 18 September 2024	Euro	No	€100	Up to 2%	€100	Accumulating
Class A1 Acc	€100	From 18 September 2024 to 18 September 2024	Euro	No	€100,000	N/A	€100	Accumulating
Class A Acc	€100	From 18 September 2024 to 18 September 2024	Euro	No	€100	N/A	€100	Accumulating
Class I Acc	€100	From 18 September 2024 to 18 September 2024	Euro	No	€100	N/A	€100	Accumulating
Class J Acc	€10,000	From 18 September 2024 to 18 September 2024	Euro	No	€10,000	N/A	€100	Accumulating

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE CALLABLE AFTER 3 YEARS FINECO AM FUND III

SUPPLEMENT DATED 24 SEPTEMBER 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE CALLABLE AFTER 3 YEARS FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	17 December 2025, 16 December 2026, 15 December 2027, 20 December 2028, 19 December 2029, 18 December 2030 and 10 December 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day unless otherwise notified to Shareholders in advance.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, callable bonds, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 25 September 2024 and will close at 5:00 PM (Irish time) on 7 October 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	12 December 2031 or such earlier Business Day as may be determined by the Directors and notified in advance to Shareholders.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 8 October 2024 to 10 December 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Investors should be aware that the Fund's ability to achieve its investment objective is contingent upon the terms and conditions of the contractual arrangements entered into by the Manager with OTC counterparties. In addition to the ability to sell, liquidate or close OTC derivatives by an offsetting transaction at any time at their fair value at the Manager's initiative under the UCITS Regulations, the Manager or the OTC counterparties may at their discretion, under certain predefined market conditions, terminate their contractual arrangements and the Manager may consider that it is in the best interests of the Shareholders to redeem all outstanding Shares of the Fund. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty. The swap transactions will include a specific provision allowing the counterparty, depending on market conditions, to apply for an early termination ("Call Provision") of the swap transactions at the third-year anniversary following close of the Subscription Period and annually thereafter to the Maturity Date by written notice addressed to the Manager and the Fund. Inclusion of such specific provision is expected to enable the Manager to be able to provide a better risk adjusted return. Following the exercise of any Call Provision, the Fund will continue in existence in line with its investment policy to the Maturity Date unless the Manager considers that it in the best interests of the Shareholders to redeem all outstanding Shares of the Fund and notifies Shareholders accordingly.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding

Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base

Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 25 September 2024 to 7 October 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 25 September 2024 to 7 October 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 25 September 2024 to 7 October 2024	Euro	No	€5,000 ,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

GLOBAL CREDIT COUPON FINECO AM FUND II

SUPPLEMENT DATED 3 OCTOBER 2024

This Supplement contains specific information in relation to **GLOBAL CREDIT COUPON FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	17 December2025, 16 December 2026, 15 December 2027, 20 December 2028, 19 December 2029, 18 December 2030 and 10 December 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 4 October 2024 and will close at 5:00 PM (Irish time) on 4 October 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	12 December 2031
Money Market/Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from7 October 2024 to 10 December2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to and the underlyings of its financial derivative transactions, default by any of which on its contractual and/or any (other) financial obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *<u>Funding Investments</u>*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by European and/or United States governments and/or Investment Grade/non- Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions and/or insurance companies authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and

also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to seek income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Investment Advisor

The Manager has appointed M&G Investment Management Limited with registered office at 10 Fenchurch Avenue, London, EC3M 5AG, United Kingdom to act as its investment advisor (the "Investment Advisor") in respect of the Fund pursuant to a non-discretionary investment advisory agreement, as amended on 3 October 2024. The Investment Advisor will provide strategic asset allocation advice to the Manager in respect of the selection and weighting of assets of the Fund, on a non-discretionary basis. For the avoidance of doubt, the Manager will retain full discretion in respect of the selection and weighting of assets of the Fund.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);

b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 4 October 2024 to 4 October 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 4 October 2024 to 4 October 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 4 October 2024 to 4 October 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Investment Advisor's Fees

The Manager shall pay out of its own fee the fees of the Investment Advisor.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double -charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE PROGRESSION 2026 FINECO AM FUND III

SUPPLEMENT DATED 8 October 2024

This Supplement contains specific information in relation to **SMART DEFENCE PROGRESSION 2026 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Coupon:	means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum coupon which will be paid by the Fund at the Maturity Date.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 9 October 2024 and will close at 5:00 PM (Irish time) on 9 October 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	9 January 2026.
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 10 October 2024 to 10 December 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with the Coupon at the Maturity Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest up to 100% of its assets in Equity and/or Debt Instruments (“Funding Instruments”).

Once the Fund purchases the Funding Instruments it will then enter into a total return swap (“TRS”) on the Funding Instruments in which it will swap out the performance and the income of the Funding Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Funding Instruments and will subsequently enter the TRS in order to determine the desired rate of return (whether fixed or floating) the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Funding Instruments directly. The TRS will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders during the life of the Fund, up to the Maturity Date.

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager’s view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection
The Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum Volatility**: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable

economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g.* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency.

The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and obtain income at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 9 October 2024 to 9 October 2024	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A Acc	€100	From 9 October 2024 to 9 October 2024	Euro	No	€1,000	N/A	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus

under the heading “Fees and Expenses”.

Manager’s Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator’s Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary’s Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

NORTH AMERICAN GROWTH FINECO AM FUND

SUPPLEMENT DATED 18 OCTOBER 2024

This Supplement contains specific information in relation to **NORTH AMERICAN GROWTH FINECO AM FUND** (the "Fund"), a sub-fund of the **FAM SERIES UCITS ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in the context of and in conjunction with the prospectus of the ICAV dated 1 December 2022 and the Addendum thereto (together the "Prospectus").

The Fund's Net Asset Value may be subject to increased volatility as a consequence of its investment in equities. Accordingly, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital growth.

The Fund seeks to achieve its investment objective by investing principally in equities, equity related securities including preferred stocks equity-linked instruments such as American depositary receipts and global depositary receipts, participation notes, and rights and warrants of primarily large-cap north American growth companies (companies with a market capitalization typically exceeding $10 billion) conducting the majority of their business activities in North America across any business or market sector.

The equity securities, selected for inclusion in the Fund, are issued by those companies that in the opinion of the Manager are well-managed businesses, as demonstrated by consistent operating histories and financial performance, that have favorable long-term economic prospects as further described below.

The selection of the Fund’s investments is carried out by the Manager on the basis of both bottom-up and top-down analysis. The bottom-up analysis focuses on the detailed examination of individual companies, assessing factors such as returns on capital, balance sheet flexibility, revenue growth, earnings consistency, dividend growth potential, innovation and R&D and market leadership i.e. companies with strong competitive advantages and market share. This approach includes evaluating a company's management team, competitive advantages, market position, and financial health to identify companies with strong potential for sustainable growth. The top-down analysis, on the other hand, involves analyzing macroeconomic trends, industry dynamics, and market conditions to identify sectors and themes that are poised for growth and are likely to outperform.

Over full market cycles (i.e. the time period during which the price of equities, equity- linked instruments and equity related securities rise, then fall, then rise again), the investment style is designed with the objective of capturing part of the up market cycles and may offer protection in down market cycles because the Fund's investments, acquired based on the above factors such as operating histories, financial performance, etc. are expected to retain their value relative to market performance, although there is no guarantee that it will do so.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20%

booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. No more than 10% of the Fund's Net Asset Value may be invested in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations and the purpose of such investment is to gain exposure to the types of investments described herein.

Other than permitted investment in unlisted securities, the Fund's investments will be limited to securities that are traded on the markets listed in Schedule I of the Prospectus.

Benchmark Information

The Fund is actively managed. The Manager has selected the MSCI North American Growth 10/40 Index (the "Index"), which is used for performance comparison purposes only. The Index ticker is NU758397. The Manager does not intend to replicate the composition of such Index and may at all times exercise total freedom by investing in securities which are not included in the referenced Index, or which are present in different proportions.

Use of Financial Derivative instruments (FDI)

The only type of FDIs that the Fund may use are currency forwards. The Fund will use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency or to mitigate the exchange rate risk between the Base Currency of the Fund and the currency designation of particular Share Classes, where relevant. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Long/Short Exposure

The expected maximum level of long derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 100% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. Any long or short derivative positions taken by the Fund will be limited to the use of currency forwards, solely for the purpose of hedging foreign exchange exposure.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value at risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of theIndex, which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the VaR of the Index, as determined daily using a one-tailed confidence interval of 99%, a holding period of one month and a historical observation period of at least 1 year. The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 100% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of securities that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and exposure to securities lending transactions is expected to be 5% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Investor Profile

The Fund is suitable for investors who seek capital appreciation over a long-term horizon but who are prepared to accept a medium to high level of volatility from time to time. The Fund is not designed for investors who need current income.

SFDR Classification: Article 6 Fund

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk**.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have

Sustainable Investment as its investment objective To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: US Dollar.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 22 October 2024 to 21 April 2025	Euro	No	Yes / 3.%	€1,000 / €100	Accumulating
Class A Acc	€100	From 22 October 2024 to 21 April 2025	Euro	No	No	€1,000 / €100	Accumulating
Class A1 Acc	€100	From 22 October 2024 to 21 April 2025	Euro	No	No	€5,000,000 / €100	Accumulating
Class I Acc	€100	From 22 October 2024 to 21 April 2025	Euro	No	No	€1,000,000 / €100	Accumulating
Class J Acc	€10,000	From 22 October 2024 to 21 April 2025	Euro	No	No	€1,000,000 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of applications for Shares of the Fund:

"**Dealing Deadline**" means 11:59am (Irish time) on the relevant Dealing Day; and

"**Valuation Point**" means 11:59pm (Irish time) on the relevant Dealing Day.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 3 % of the value of the gross subscription, except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge fee is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors: The attention of investors is drawn to the section headed "Risk Factors" in the

Prospectus.

SMART DEFENCE MULTI-STRATEGY 2031 FINECO AM FUND III

SUPPLEMENT DATED 10 OCTOBER 2024

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2031 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 17 December 2025, 16 December 2026, 15 December 2027, 13 December 2028, 19 December 2029 and 18 December 2030 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 11 October 2024 and will close at 5:00 PM (Irish time) on 11 October 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Limited Index Return:	means a range of between 20%-30% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 50%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	19 December 2031.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 14 October 2024 to 10 December 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Index (the "Index"). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com/World.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps (“TRS”), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions”.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund’s use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund’s use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund’s use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps (“TRS”): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund’s portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund’s assets may be subject to total return swaps on the financial instruments outlined in the Fund’s investment objective and policy and it is expected that, in general, 0%-100% of the Fund’s assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund’s credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 7 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Dist	€100	From 11 October 2024 to 11 October 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 11 October 2024 to 11 October 2024	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 11 October 2024 to 11 October 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager’s Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator’s Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary’s Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund’s operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE PROGRESSION 2025 FINECO AM FUND IV

SUPPLEMENT DATED 16 OCTOBER 2024

This Supplement contains specific information in relation to **SMART DEFENCE PROGRESSION 2025 FINECO AM FUND IV** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Coupon:	means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum coupon which will be paid by the Fund at the Maturity Date.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 17 October 2024 and will close at 5:00 PM (Irish time) on 30 October 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	12 December 2025.
Money Market/Short Term Instruments:	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 31 October 2024 to 29 November 2024 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with the Coupon at the Maturity Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest up to 100% of its assets in Equity and/or Debt Instruments ("Funding Instruments").

Once the Fund purchases the Funding Instruments it will then enter into a total return swap ("TRS") on the Funding Instruments in which it will swap out the performance and the income of the Funding Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Funding Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Funding Instruments directly. The TRS will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders during the life of the Fund, up to the Maturity Date.

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection

The Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum Volatility**: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable

economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency.

The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may

acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and obtain income at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 17 October 2024 to 30 October 2024	Euro	No	€1,000	N/A	€100	Accumulating
Class L Acc	€100	From 17 October 2024 to 30 October 2024	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A1 Acc	€100	From 17 October 2024 to 30 October 2024	Euro	No	€5,000,000	N/A	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out

in the below table:

Manager's Fee	All Share Classes
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2029 FINECO AM FUND V
SUPPLEMENT DATED 25 OCTOBER 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2029 FINECO AM FUND V** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 12 December 2024, 11 December 2025, 10 December 2026, 8 December 2027, 7 December 2028 and 18 December 2029 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 29 October 2024 and will close at 5:00 PM (Irish time) on 8 November 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	29 December 2029.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 11 November 2024 to 10 January 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 29 October 2024 to 8 November 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 29 October 2024 to 8 November 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 29 October 2024 to 8 November 2024	Euro	No	€5,000 ,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations..

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with

regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY 2030 FINECO AM FUND III

SUPPLEMENT DATED 5 December 2024

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2030 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 18 February 2026, 17 February 2027,16 February 2028 and 14 February 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments: includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period: The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 6 December 2024 and will close at 5:00 PM (Irish time) on 6 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").

Limited Index Return: means a range of between 20%-50% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 50%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.

Maturity Date: 22 February 2030.

Money Market/Short Term Instruments includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Subscription Period: means from 9 December 2024 to 11 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Valuation Day: means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.

Valuation Point: Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for

payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Next Industries Index (the "Index"). The ticker code for the Index is WRLDINDU.

The Index is a broad global equity index that represents large and mid-cap equity performance across developed and emerging markets countries and is skewed towards the Materials and Industrials sectors.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 5 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sales Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Dist	€100	From 6 December 2024 to 6 December 2024	Euro	No	€1,000	Up to 1%	€100	Distributing
Class A Dist	€100	From 6 December 2024 to 6 December 2024	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 6 December 2024 to 6 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 1% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

EUROPEAN LEADERS FINECO AM FUND IV

SUPPLEMENT DATED 25 OCTOBER 2024

This Supplement contains specific information in relation to **EUROPEAN LEADERS FINECO AM FUND IV** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	1 October 2025, 30 September 2026, 29 September 2027, 27 September 2028, 26 September 2029, 25 September 2030 and 1 October 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 29 October 2024 and will close at 5:00 PM (Irish time) on 8 November 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	24 October 2031.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 11 November 2024 to 10 January 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to and the underlyings of its financial derivative transactions, default by any of which on its contractual and/or any (other) financial obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by European governments and/or Investment Grade/non- Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and

also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to seek income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

The Manager acknowledges that the Fund’s exposure to Sustainability Risks is changeable and shall keep the It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. Fund’s exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund’s approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 29 October 2024 to 8 November 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 29 October 2024 to 8 November 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 29 October 2024 to 8 November 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”. Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE CALLABLE AFTER 2 YEARS FINECO AM FUND

SUPPLEMENT DATED 5 December 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE CALLABLE AFTER 2 YEARS FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	11 February 2026,10 February 2027, 9 February 2028, 14 February 2029 and 13 February 2030, or, if one of these dates is not a Business Day, the next day which is a Business Day unless otherwise notified to Shareholders in advance.
Debt Instruments:	includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, callable bonds, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 6 December 2024 and will close at 5:00 PM (Irish time) on 6 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	15 February 2030 or such earlier Business Day as may be determined by the Directors and notified in advance to Shareholders.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 9 December 2024 to 11 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Investors should be aware that the Fund's ability to achieve its investment objective is contingent upon the terms and conditions of the contractual arrangements entered into by the Manager with OTC counterparties. In addition to the ability to sell, liquidate or close OTC derivatives by an offsetting transaction at any time at their fair value at the Manager's initiative under the UCITS Regulations, the Manager or the OTC counterparties may at their discretion, under certain predefined market conditions, terminate their contractual arrangements and the Manager may consider that it is in the best interests of the Shareholders to redeem all outstanding Shares of the Fund. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty. The swap transactions will include a specific provision allowing the counterparty, depending on market conditions, to apply for an early termination ("Call Provision") of the swap transactions at the second-year anniversary following close of the Subscription Period and annually thereafter to the Maturity Date by written notice addressed to the Manager and the Fund. Inclusion of such specific provision is expected to enable the Manager to be able to provide a better risk adjusted return. Following the exercise of any Call Provision, the Fund will continue in existence in line with its investment policy to the Maturity Date unless the Manager considers that it in the best interests of the Shareholders to redeem all outstanding Shares of the Fund and notifies Shareholders accordingly.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding

Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base

Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 6 December 2024 to 6 December 2024	Euro	No	€100	Up to 1%	€100	Distributing
Class A Dist	€100	From 6 December 2024 to 6 December 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 6 December 2024 to 6 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 1% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

GLOBAL CREDIT COUPON FINECO AM FUND III

SUPPLEMENT DATED 1 NOVEMBER 2024

This Supplement contains specific information in relation to **GLOBAL CREDIT COUPON FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates:	28 January 2026, 27 January 2027, 26 January 2028, 31 January 2029, 30 January 2030, 29 January 2031 and 28 January 2032 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 4 November 2024 and will close at 5:00 PM (Irish time) on 11 November 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 January 2032
Money Market/Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 12 November 2024 to 20 January 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to aim to provide Shareholders with a Dividend on each Dividend Payment Date.

There can be no guarantee that the investment objective will actually be attained. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to and the underlyings of its financial derivative transactions, default by any of which on its contractual and/or any (other) financial obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by European and/or United States governments and/or Investment Grade/non- Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions and/or insurance companies authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, some or all of the fixed amount payable to the Fund and which may be used by the Fund to pay Dividends at each Dividend Payment Date may be at risk.

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and

also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to seek income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Investment Advisor

The Manager has appointed M&G Investment Management Limited with registered office at 10 Fenchurch Avenue, London, EC3M 5AG, United Kingdom to act as its investment advisor (the "Investment Advisor") in respect of the Fund pursuant to a non-discretionary investment advisory agreement, as amended on 1 November 2024. The Investment Advisor will provide strategic asset allocation advice to the Manager in respect of the selection and weighting of assets of the Fund, on a non-discretionary basis. For the avoidance of doubt, the Manager will retain full discretion in respect of the selection and weighting of assets of the Fund.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);

b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 4 November 2024 to 11 November 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 4 November 2024 to 11 November 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 4 November 2024 to 11 November 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Investment Advisor's Fees
The Manager shall pay out of its own fee the fees of the Investment Advisor.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double -charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk
As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE CALLABLE AFTER 3 YEARS FINECO AM FUND V

SUPPLEMENT DATED 20 NOVEMBER 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE CALLABLE AFTER 3 YEARS FINECO AM FUND V** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	11 February 2026, 10 February 2027, 9 February 2028, 14 February 2029, 13 February 2030, 12 February 2031 and 11 February 2032 or, if one of these dates is not a Business Day, the next day which is a Business Day unless otherwise notified to Shareholders in advance.
Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, callable bonds, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 21 November 2024 and will close at 5:00 PM (Irish time) on 4 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	13 February 2032 or such earlier Business Day as may be determined by the Directors and notified in advance to Shareholders.
Money Market/Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 5 December 2024 to 4 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Investors should be aware that the Fund's ability to achieve its investment objective is contingent upon the terms and conditions of the contractual arrangements entered into by the Manager with OTC counterparties. In addition to the ability to sell, liquidate or close OTC derivatives by an offsetting transaction at any time at their fair value at the Manager's initiative under the UCITS Regulations, the Manager or the OTC counterparties may at their discretion, under certain predefined market conditions, terminate their contractual arrangements and the Manager may consider that it is in the best interests of the Shareholders to redeem all outstanding Shares of the Fund. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty. The swap transactions will include a specific provision allowing the counterparty, depending on market conditions, to apply for an early termination ("Call Provision") of the swap transactions at the third-year anniversary following close of the Subscription Period and annually thereafter to the Maturity Date by written notice addressed to the Manager and the Fund. Inclusion of such specific provision is expected to enable the Manager to be able to provide a better risk adjusted return. Following the exercise of any Call Provision, the Fund will continue in existence in line with its investment policy to the Maturity Date unless the Manager considers that it in the best interests of the Shareholders to redeem all outstanding Shares of the Fund and notifies Shareholders accordingly.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding

Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base

Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives

used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 21 November 2024 to 4 December 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 21 November 2024 to 4 December 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 21 November 2024 to 4 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE EQUITY 2029 FINECO AM FUND II

SUPPLEMENT DATED 22 NOVEMBER 2024

This Supplement contains specific information in relation to **SMART DEFENCE EQUITY 2029 FINECO AM FUND II** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	A Business Day in the fifth month following close of the Subscription Period, payable annually thereafter and ending by the Maturity Date.

Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 25 November 2024 and will close at 5:00 PM (Irish time) on 6 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	30 June 2029 or such later Business Day in that calendar year notified in advance to Shareholders.
Money Market/Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 9 December 2024 to 7 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide a return linked to the positive performance of the Index (as defined in the section entitled "Investment Policy" below); (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual

obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*
The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*
The Fund will then use the return it receives from the exposure to the Funding Investments described

above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the “Equity Swap”) which involves an OTC counterparty paying the Fund a return linked to the MSCI World Index (the “Index”). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across all 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country.

For additional information on the Index, including its methodology and components, investors can visit the Index provider’s website at the following link: https://www.msci.com/World..

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager’s view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 7) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer’s credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 7) to hedge against downward movements in the value of the Fund’s Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager’s view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use currency forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use cross-currency swaps for hedging purposes. The Fund's use of cross-currency swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of futures and forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued

owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we

draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY 2031 FINECO AM FUND V

SUPPLEMENT DATED 22 NOVEMBER 2024

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2031 FINECO AM FUND V** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 17 December 2025, 16 December 2026, 15 December 2027, 13 December 2028, 19 December 2029, 18 December 2030 and 17 December 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 25 November 2024 and will close at 5:00 PM (Irish time) on 6 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Limited Index Return:	means a range of between 20%-30% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 50%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	19 December 2031.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 9 December 2024 to 7 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*
The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for

payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Index (the "Index"). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com/World.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned

or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 6 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Minimum Initial Subscription**	**Sale Charge**	**Minimum Subsequent Subscription**	**Distribution Type**
Class L Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2031 FINECO AM FUND III

SUPPLEMENT DATED 22 NOVEMBER 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2031 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	8 October 2025, 7 October 2026, 6 October 2027, 11 October 2028, 10 October 2029, 9 October 2030 and 8 October 2031 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 25 November 2024 and will close at 5:00 PM (Irish time) on 6 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	15 October 2031
Money Market/Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 9 December 2024 to 7 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*

Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt
Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the
Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%- 70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager’s exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation’s (“ILO”) broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 25 November 2024 to 6 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE PROGRESSION 2026 FINECO AM FUND IV

SUPPLEMENT DATED 22 NOVEMBER 2024

This Supplement contains specific information in relation to **SMART DEFENCE PROGRESSION 2026 FINECO AM FUND IV** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Coupon:	means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum coupon which will be paid by the Fund at the Maturity Date.
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments: includes but is not limited to Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Equity Instruments: means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.

Initial Offer Period: The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 25 November 2024 and will close at 5:00 PM (Irish time) on 6 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").

Maturity Date: 9 January 2026.

Money Market/Short Term Instruments: includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.

Subscription Period: means from 9 December 2024 to 7 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Valuation Day: means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.

Valuation Point: Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) aim to provide Shareholders with the Coupon at the Maturity Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest up to 100% of its assets in Equity and/or Debt Instruments (“Funding Instruments”).

Once the Fund purchases the Funding Instruments it will then enter into a total return swap (“TRS”) on the Funding Instruments in which it will swap out the performance and the income of the Funding Instruments in return for the payment by a counterparty of a fixed rate or a floating rate on the notional amount of the TRS (i.e. on the face value of the TRS). The TRS will be unfunded.

The Fund will buy the Funding Instruments and will subsequently enter the TRS in order to fix the rate of return the Fund is seeking to achieve throughout its life, subject to the non-default of the OTC counterparty to the TRS, without being exposed to the performance and income volatility of holding the Funding Instruments directly. The TRS will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders during the life of the Fund, up to the Maturity Date.

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager’s view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection
The Manager will use its own proprietary quantitative investment process and a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative and quantitative analysis:

Quantitative analysis

a) **Quality**: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) **Value**: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) **Momentum**: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) **Minimum Volatility**: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable

economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency.

The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may

acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a “look-through” approach which allows the Manager to analyse the Fund’s exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this “look through” analysis, if the Fund’s consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund’s Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund’s investment objective and policy, and it is expected that, in general, 0%-70% of the Fund’s Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and obtain income at the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 25 November 2024 to 6 December2024	Euro	No	€1,000	N/A	€100	Accumulating
Class L Acc	€100	From 25 November 2024 to 6 December 2024	Euro	No	€1,000	Up to 2%	€100	Accumulating
Class A1 Acc	€100	From 25 November 2024 to 6 December 2024	Euro	No	€5,000,000	N/A	€100	Accumulating

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses
The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out

in the below table:

Manager's Fee	All Share Classes
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors
The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

DYNAMIC PROFILE FINECO AM FUND IV

SUPPLEMENT DATED 19 December 2024

This Supplement contains specific information in relation to **DYNAMIC PROFILE FINECO AM FUND IV** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Business Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) on the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Equity Instruments:	means equity and/or equity related securities such as convertible stocks or preferred stock listed (or about to be listed) or traded on any Recognised Markets listed in Schedule I of the Prospectus of (i) issuers listed or traded on developed market stock exchanges or (ii) companies considered by the Manager to be developed market companies and which are listed or traded on other Recognised Exchanges. These instruments will be denominated in any currency.
Initial Offer Period:	The Initial Offer Period for a Share Class will start at 9:00 AM (Irish time) on the first date disclosed in the table under "Offer of Shares" and will close at 5:00 PM (Irish time) on the second date disclosed. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date	Means 1 2 February 2029
Money Market/Short Term Instruments:	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 21 December 2024 to 21 June 2025 or longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Point:	Means 3:00pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to seek to (i) achieve capital growth and (ii) protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price, during the life of the Fund up to the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Instruments and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of Funding Instruments so that if one or more of the issuers of any of those Funding Instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC

counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

Invest principally in Equity and/or Debt Instruments ("Funding Instruments").

The breakdown between Equity Instruments and Debt Instruments which make up the Funding Instruments will depend on the Manager's view of the market at the time of purchase or in respect of their ongoing assessment of the holding of the particular investments. In particular, the Manager will be cognisant of the risk adjusted return of the particular investment prior to deciding the percentage to allocate to either a Debt Instrument or Equity Instrument. Below we have outlined the considerations given to selecting either Debt or Equity Instruments.

Equity Instrument Selection
The Manager will use a qualitative analysis for the purpose of determining which Equity Instruments to acquire or gain exposure to. The Manager will consider the following criteria as part of its qualitative analysis:

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

Debt Instrument Selection
In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds and/or Investment Grade Debt Instruments issued by developed market governments and/or companies. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 20% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. **If there is a default event in respect of the underlying Debt Instrument, the investment objective of the Fund may not be achieved**. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

The Fund will then use the return it receives from the exposure to the Funding Investments described above (plus any cash the Fund may hold that was not used to purchase the Funding Investments) to enter into a swap which involves an OTC counterparty paying the Fund a return linked to a standard market interest rate. The swap will contain a provision which will allow the Manager aim to return the Initial Offer Price per Share (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 60) to Shareholders up the Maturity Date.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments (“FDI”) and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps (“TRS”), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund’s investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund’s investments. For information in relation to the risks associated with the use of FDIs, please refer to the “Risk Factors” section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions”.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund’s Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund’s investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund’s use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund’s use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund’s portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund’s use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps (“TRS”): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund’s portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund’s assets may be subject to TRS on the financial instruments outlined in the Fund’s investment objective and policy and it is expected that, in general, 0%-100% of the Fund’s assets may be subject to TRS. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Long/Short Exposure: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or

efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed “Collateral Policy”. In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to protect the value of their initial investment and seek capital growth. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 20 December 2024 to 20 December 2024	Euro	No	€1,000	N/A	€100	Accumulating
Class L Acc	€100	From 20 December 2024 to 20 December 2024	Euro	No	€1,000	Up to 2%	€100	Accumulating

Class G Acc	€100	From 20 December 2024 to 20 December 2024	Euro	No	€5,000	N/A	€100	Accumulating
Class H Acc	€100	From 20 December 2024 to 20 December 2024	Euro	No	€10,000	N/A	€100	Accumulating
Class I Acc	€100	From 20 December 2024 to 20 December 2024	Euro	No	€10,000	Up to 2%	€100	Accumulating
Class A1 Acc	€100	From 20 December 2024 to20 December 2024	Euro	No	€5,000,000	N/A	€100	Accumulating
Class L Dist	€100	From 20 December 2024 to 20 December 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 20 December 2024 to 20 December 2024	Euro	No	€1,000	N/A	€100	Distributing
Class G Dist	€100	From 20 December 2024 to 20 December 2024	Euro	No	€5,000	N/A	€100	Distributing
Class H Dist	€100	From 20 December 2024 to 20 December 2024	Euro	No	€10,000	N/A	€100	Distributing
Class I Dist	€100	From 20 December 2024 to 20 December 2024	Euro	No	€10,000	Up to 2%	€100	Distributing
Class A1 Dist	€100	From 20 December 2024 to 20 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing

Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription. **If a sales charge is incurred, Shareholders should view their investment as medium to long-term.**

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, "Derivatives Risk" and "Securities Financing Transactions Risk" in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2027 FINECO AM FUND IV

SUPPLEMENT DATED 13 DECEMBER 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2027 FINECO AM FUND IV** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub- funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 24 September 2025, 23 September 2026 and 22 September 2027 or, if one of these dates is not a Business Day, the next day which is Business Day.
Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 16 December 2024 and will close at 5:00 PM (Irish time) on 27 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	24 September 2027
Money Market/Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 30 December 2024 to 28 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

Approaching the Maturity Date, based on market conditions at the time and the view of the Manager, the ICAV may determine that there is an opportunity for Shareholders to benefit from an extended period of investment in the Fund. In such case, it may notify the Shareholders in writing that said Maturity Date shall be extended by a number of years.

A written notification would then be sent to each Shareholder at that time stating that each Shareholder may redeem out of the Fund on specified Dealing Days shortly before the Maturity Date is reached with any payment due to such Shareholders at the Maturity Date being payable to them on or around that date. Such notice would also provide the option for Shareholders to leave their investment in the Fund and remain as a Shareholder, in which case the Fund would continue with a new Maturity Date and the investment objective referring to that new Maturity Date. Should the ICAV wish to extend the Maturity Date, the Supplement would be updated to reflect new proposed Dividend Payment Dates and the new proposed Maturity Date set out in the notice and submitted for Central Bank noting. The key features of the extension would also be set out in the notice to Shareholders to enable them to make an informed decision on whether they wish to remain invested in the Fund.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use

of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager's exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour

Organisation's ("ILO") broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 16 December 2024 to 27 December 2024	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 16 December 2024 to 27 December 2024	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 16 December 2024 to 27 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART GLOBAL DEFENCE 2028 FINECO AM FUND III
SUPPLEMENT DATED 13 DECEMBER 2024

This Supplement contains specific information in relation to **SMART GLOBAL DEFENCE 2028 FINECO AM FUND III** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	25 March 2026, 24 March 2027 and 22 March 2028 or, if one of these dates is not a Business Day, the next day which is a Business Day.
Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 16 December 2024 and will close at 5:00 PM (Irish time) on 14 January 2025. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Maturity Date:	24 March 2028
Money Market/Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 15 January 2025 to 18 March 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point	Means 11:59 pm (Irish time) on the relevant Dealing Day.

Investment Objective
The investment objective of the Fund is to (i) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Investment Policy
The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below.

I. *Funding Investments*
Investing principally in Debt Instruments (the "Funding Investments").

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies authorised to operate in the UK and/or credit institutions and/or insurance companies authorised to operate in the European Union or the European Economic Area and listed on the European Banking Authority's credit institution register and/or listed on the European Insurance and Occupational Pensions Authority's register of insurance undertakings (respectively) and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date, the Fund may:

- engage in Credit Default Swaps ("CDS") (as explained in detail below on page 5) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and

- engage in the use of forward contracts (as explained in detail below on page 5) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of Underlying Funds within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from securities lending and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions.

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the

Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes.

Forwards: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. The Fund has the ability to invest in TRS on Debt Instruments which mature either prior to, or beyond the Maturity Date of the Fund. In the case of such a mismatch between the Maturity Date of the Fund and the Debt Instrument, the Fund may enter into a TRS in respect of that particular Debt Instrument to cover the intervening period between that Debt Instruments maturity date and the Maturity Date of the Fund (or vice versa). This exposure to the Debt Instrument created through the TRS may create some yield enhancement for the Fund while also allowing the Fund to hedge the market risk of having Debt Instruments which have maturity dates which do not perfectly coincide with the Fund Maturity Date. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

Options: The Fund may use options on interest rates and/or bonds in order to gain or hedge exposure to fixed income securities the Fund may acquire in accordance with its investment policy. Options may also be used in order to manage interest rate risk to reflect a view on the future direction of the market, achieve a desired risk/reward position or for yield enhancement and/or modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may acquire in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations.

When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the absolute value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund shall not exceed 20% of the Net Asset Value of the Fund based on a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and a confidence interval using an historical observation period of at least one year (250 Business Days).

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to balance their need to protect the value of their initial investment with their need for income up to the Maturity Date. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled “Definitions” above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium investment risk.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

The exclusions specifically covered by the Manager’s exclusion policy currently include:

a. Issuers that breach the principles of the UN Global Compact (**UNGC**);
b. Issuers involved in the manufacture or product life cycle of controversial weapons (such as but not limited to chemical weapons, cluster munitions and landmines);
c. Issuers deriving a certain percentage of their revenue from the production of tobacco or from other type of involvement in the life cycle of tobacco products such as distribution or licencing activities;
d. Issuers that derive a certain percentage of their revenue from thermal coal extraction and/or arctic drilling;
e. Issuers that contravene the UNGC labour-related principles and International Labour Organisation’s (“ILO”) broader set of labour standards.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 16 December 2024 to 14 January 2025	Euro	No	€100	Up to 2%	€100	Distributing
Class A Dist	€100	From 16 December 2024 to 14 January 2025	Euro	No	€100	N/A	€100	Distributing
Class A1 Dist	€100	From 16 December 2024 to 14 January 2025	Euro	No	€5,000,000	N/A	€100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Application for Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the

Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY FINECO AM FUND

SUPPLEMENT DATED 13 DECEMBER 2024

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 18 February 2026, 17 February 2027, 16 February 202814 February 2029 and or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 16 December 2024 and will close at 5:00 PM (Irish time) on 27 December 2024. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Limited Index Return:	means a range of between 20%-30% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 50%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	22 February 2030.
Money Market/Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 30 December 2024 to 28 February 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment

objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the "Equity Swap") which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Index (the "Index"). The ticker code for the Index is MSERWI.

The Index is a broad global equity index that represents large and mid-cap equity performance across 23 developed markets countries. It covers approximately 85% of the free float-adjusted market capitalization in each country and does not offer exposure to emerging markets.

For additional information on the Index, including its methodology and components, investors can visit the Index provider's website at the following link: https://www.msci.com/World.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager's view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer's credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund's Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments

taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring

credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international

body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 5 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sale Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 16 December 2024 to 27 December 2024	Euro	No	€1,000	Up to 2%	€100	Distributing
Class A Dist	€100	From 16 December 2024 to 27 December 2024	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 16 December 2024 to 27 December 2024	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund:

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.

SMART DEFENCE MULTI-STRATEGY 2030 FINECO AM FUND IV

SUPPLEMENT DATED 16 JANUARY 2025

This Supplement contains specific information in relation to **SMART DEFENCE MULTI-STRATEGY 2030 FINECO AM FUND IV** (the "**Fund**"), a sub-fund of **FAM SERIES UCITS ICAV** (the "**ICAV**"), an open-ended umbrella type Irish collective asset-management vehicle with variable capital with segregated liability between its sub-funds and authorised by the Central Bank on 1 August 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus for the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

The Fund may, at any one time, be principally invested in FDI for investment purposes, risk reduction and/or hedging purposes. The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. As the Fund may be exposed more than 20% to emerging markets, an investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be suitable for all investors.

Shareholders should note that dividends may be paid out of the capital of the Fund. As a result, capital may be eroded and distributions may be achieved by foregoing the potential for future capital growth and this cycle may continue until all capital is depleted. The value of future returns may be diminished due to the fact that dividends are payable out of capital.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day:	means every week day on which retail banks and securities markets in Europe and Luxembourg are normally open for business;
Dealing Day:	means every Valuation Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be a at least one Dealing Day per fortnight.
Dealing Deadline:	means 11.59am (Irish time) one Business Day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates.
Dividend Payment Dates:	means 22 April 2026, 21 April 2027, 19 April 2028 and 25 April 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Debt Instruments:	includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.
Initial Offer Period:	The Initial Offer Period for the Fund will start at 9:00 AM (Irish time) on 17 January 2025 and will close at 5:00 PM (Irish time) on 11 February 2025. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Limited Index Return:	means a range of between 20%-50% exposure of the Fund to the performance of the Index (as defined below) at the Maturity Date with the return of the Index available to the Fund capped at 50%. The actual percentage exposure of the Fund to the performance of the Index within the range above may vary during the life of the Fund based on market opportunities and the view of the Manager.
Maturity Date:	26 April 2030.
Money Market/Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Collective Investment Schemes which provide exposure to the above instruments.
Subscription Period:	means from 12 February 2025 to 15 April 2025 or such longer (up to a maximum period of 6 months from the end of the Initial Offer Period) or shorter period as may be determined by the Directors in accordance with the requirements of the Central Bank. After the close of the Subscription Period, the Fund will not accept any new subscriptions.
Valuation Day:	means every Wednesday or if a particular Wednesday is not a Business Day, the Valuation Day shall be the next following Business Day, or such other day or days as may be determined by the Directors and notified in advance to Shareholders.
Valuation Point:	Means 11:59pm (Irish time) on the relevant Dealing Day.

Investment Objective

The investment objective of the Fund is to (i) seek to provide the Limited Index Return at the Maturity Date; (ii) aim to provide Shareholders with a Dividend on each Dividend Payment Date and (ii) seek to protect the Fund's Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed product. In seeking to achieve its investment objective, the Fund will, as described in greater detail below, invest directly in a diversified portfolio of Funding Investments (as defined below) and enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund will bear credit risk in respect of its portfolio of Funding Investments so that if one or more of the issuers of any of those Funding Investments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved.

Investment Policy

The Fund will aim to achieve its investment objective by investing in line with the investment parameters set out below. The Fund is actively managed.

I. *Funding Investments*

Invest up to 100% of its portfolio either directly or indirectly in Debt Instruments.

In respect of the selection of Debt Instruments, the Manager will give preference to investments in Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies authorised to operate in the UK and/or in a Member States of the European Union or European Economic Area and/or issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. The Manager will select the Debt Instruments based on an analysis which includes assessment of Debt Instruments particular yield levels (i.e. the level of return given by a bond up to its maturity date), yield curve slopes (i.e. different levels of return for different maturity dates) and country spreads (i.e. the difference in yield between certain government bonds having the same maturity date).

The Debt Instruments in which the Fund invests will be either non-Investment Grade or Investment Grade at the time of purchase or, if unrated, which are in the opinion of the Manager, of comparable quality. At the time of purchase of the Debt Instruments, the Fund may only purchase, in aggregate, up to 30% of its Net Asset Value in either non-Investment Grade and/or subordinated debt. Where a Debt Instrument ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security. The Manager may invest substantially or fully in government bonds issued by any Member State.

In order to obtain the desired return that can be achieved by investing directly in the Debt Instruments but at a lower cost than buying the Debt Instruments directly, the Fund may sell credit default swaps ("CDS") on the Debt Instruments through which the Fund will receive from the buyer of the CDS a fixed rate of income throughout the term of the CDS, provided there is no default event in respect of the underlying Debt Instrument. The aim of selling CDS on Debt Instruments is to allow the Fund reduce cost and gain additional income for the Fund, in an economically appropriate manner, with the same level of risk as buying the Debt Instruments directly. Any counterparty risk arising to the Fund as seller of the CDS is managed via a daily exchange of collateral in order to minimise any impact arising to the Fund in the case of a default of the buyer of the CDS. The use of CDS in this manner can be classified as efficient portfolio management. See the section below titled "*Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques"* for information on the use by the Fund of efficient portfolio management techniques.

II. *Entering Coupon Swaps*

The Fund will then enter into a series of inflation linked swaps and/or interest rate swaps in which it will swap out an amount equal to the coupons it receives on the Funding Investments in return for

payments received from an OTC counterparty.

III. *Exposure to the Index*

The Fund will then use the return it receives from the exposure to the Funding Investments described above (and may also use any cash it may hold that was not used to purchase the Funding Investments) to enter into an equity swap (the “Equity Swap”) which involves an OTC counterparty paying the Fund the Limited Index Return on the MSCI World Next Industries Index (the “Index”). The ticker code for the Index is WRLDINDU.

The Index is a broad global equity index that represents large and mid-cap equity performance across developed and emerging markets countries and is skewed towards the Materials and Industrials sectors.

For additional information on the Index, including its methodology and components, investors can visit the Index provider’s website at the following link: https://www.msci.com.

IV. *Seeking to achieve protection*

In seeking to protect the Net Asset Value per Share at 100% of the Initial Offer Price at the Maturity Date the Fund will buy each of the Funding Investments on a buy to hold basis. This means that the Manager intends, from the time of purchase, to hold each Funding Investment up to the Maturity Date on the basis of the Manager’s view on the outlook for the corresponding Funding Investment up to the Maturity Date, and not on the potential for short term price fluctuations in respect of the corresponding Funding Investment. Irrespective of the intention of buying and holding the Funding Investments, constant monitoring will be undertaken by the Manager following the purchase of the Funding Investments in order to ensure that there is a continuing investment rationale for retaining each individual Funding Investment. This constant monitoring will include assessing the credit standing of each individual Funding Investment issuer taking into account the analysis used to select the Funding Investment for purchase described in sub-section I. above.

As described in detail in sub-section I. above, the Debt Instruments which will make up the Funding Investments may be Investment Grade government bonds issued by governments globally and/or Investment Grade/non-Investment Grade Debt Instruments issued by credit/financial institutions and/or insurance companies registered in the European Union, the UK and/or the European Economic Area and/or Debt Instruments issued by credit institutions authorised by the relevant regulatory authority to operate in the United States. Any of the aforementioned government bonds, credit/financial institutions and/or insurance companies selected by the Manager as the issuer of one of the Debt Instruments that make up the Funding Investments will generally be recognised (at the time of purchase by the Fund) as systemically important. For example, financial institutions will be deemed as systemically important if regarded as such by their relevant national and/or supranational regulatory agency. In addition, European Union sovereign debt issued by any Member State is deemed by the Manager to be systemically important.

In further seeking such protection, the Fund may

- engage in CDS (as explained in detail below on page 6) in order to buy protection against the default of either a single reference entity or a basket of reference entities that make up the Funding Investments. CDS used in this manner allow the Fund hedge against a Funding Investment issuer’s credit deterioration, as the Fund would receive compensation from the seller of the CDS due to the decline in credit quality of the underlying reference entity/entities; and/or

- engage in the use of forward contracts (as explained in detail below on page 6) to hedge against downward movements in the value of the Fund’s Funding Investments so as to protect the Fund against a drop in the price of the Funding Investments. The Fund will utilise such forward contracts based on the Manager's view of the elements that may affect the price of the Funding Investments taking into account the analysis used to select the Funding Investment for purchase described under "Funding Investments" further above.

During the Subscription Period, approaching the Maturity Date and after the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

At any time the Fund may invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. The Fund may also invest up to 10% of its Net Asset Value in units or shares of collective investment schemes within the meaning of Regulation 68(1)(e) of the UCITS Regulations.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus)). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider and/or Sustainability Risk metrics based on internal research, in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also applies its basic exclusion policy whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Use of Financial Derivative Instruments ("FDI") and efficient portfolio management techniques

In addition to the use of FDI described in detail in the Investment Policy section above, the Fund may engage in securities lending for efficient portfolio management purposes and in FDI transactions for investment purposes to generate returns, for the purposes of hedging and risk reduction. The types of FDI that the Fund may use are currency forwards, forwards, futures, interest rate swaps, cross-currency swaps, total return swaps ("TRS"), CDS and options. The underlying assets of FDIs will be limited to those investments that the Fund may acquire in accordance with its investment policy and/or with this section. Transactions in FDIs will be used for the purpose of meeting the Fund's investment objective and to hedge against currency risk. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDIs, please refer to the "Risk Factors" section of the Prospectus. In respect of the direct/indirect costs and fees arising from the use of efficient portfolio management techniques *(e.g* securities lending) and the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Currency Forwards: The Fund may use currency forwards for the purpose of hedging currency exchange risk resulting from investments of the Fund being denominated in currencies other than the Fund's Base Currency. The expected effect of the use of currency forwards will be to reduce inherent risks affecting the Fund's investments. For the avoidance of any doubt, the Fund may only use Currency Forwards for hedging purposes. The Fund's use of currency forwards for hedging, may mean it takes short positions.

Cross-Currency Swaps: For hedging purposes, the Fund may use cross-currency swaps in order to exchange fixed or floating cash flow streams calculated on notional amounts in different currencies, at specified dates during the life of the swap. There may be a final, interim or initial exchange of the notional amounts. For example in order to hedge cash flows from a bond which is denominated in, for example, US Dollar and not in the Fund's Base Currency, the Manager may choose to enter into a cross-currency swap, whereby the Fund receives payments in its Base Currency against paying the US Dollar cash flows from the bond. For the avoidance of any doubt, the Fund may only use Cross-Currency Swaps for hedging purposes. The Fund's use of Cross-Currency Swaps for hedging, may mean it takes short positions.

Forwards and Futures: The Fund, in addition to the use of FDI disclosed in the Investment Objectives and policy section above, may use forwards and futures contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards and futures to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets the Fund may hold or the Fund may wish to buy. The Fund's use of Futures and Forwards for hedging, may mean it takes short positions.

Total Return Swaps ("TRS"): The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets may be subject to total return swaps on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps. Counterparties to a TRS will comply with Regulation 8 of the Central Bank UCITS Regulations and will have no discretion over the composition of the underlying of the TRS.

CDS: The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures of certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller a Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset). The Fund's use of CDS for hedging, may mean it takes short positions.

Options: The Fund may buy or sell options on fixed income and/or equity securities and/or basket of equity securities and/or equity indices and/or basket of equity indices. Options may be used in order to manage market risk, to reflect a view on the future direction of the market, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio without incurring large transaction costs.

Exposure to Indices: The Fund may take exposure to one or more indices as described in this section and also as described above in the Investment Policy section, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify all of the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the exposure provided by such indices will be in line with the exposure that the Fund may acquire in accordance with its investment policy and/or as set out in this section. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's consolidated exposure does not meet the risk spreading requirements of the UCITS Regulations, the Fund will have to address this by reducing the said exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Short Positions: The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 150% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements: Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at a pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending by the Fund of investments that it may acquire in accordance with its investment policy and are subject to the conditions and limits set out in the Central Bank UCITS Regulations. Counterparties to any securities lending activity will comply with Regulation 8 of the Central Bank UCITS Regulations. The Fund will only act as a lender under securities lending transactions and up to 100% of the Fund's Net Asset Value may be subject to securities lending on the financial instruments outlined in the Fund's investment objective and policy, and it is expected that, in general, 0%-70% of the Fund's Net Asset Value may be subject to securities lending.

Collateral Management: All assets received by the Fund as collateral in the context of the use of FDI and/or efficient portfolio management will comply with the criteria for the receipt of such collateral set down by the Central Bank as further detailed under the section of the Prospectus headed "Collateral Policy". In addition, the Fund may be fully collateralised in different transferable securities and money market instruments issued, owned or guaranteed by a Member State, one or more of its local authorities, a third country, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the Index, which is considered by the Manager to be a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for all investors who are able to identify a specific target date when they need to withdraw their investment and who wish to obtain income up to the Maturity Date and also those who wish to obtain a return on their investment over a 5 year period. Investment in the Fund is intended to be kept up to the Maturity Date (as defined in section entitled "Definitions" above). The Fund may therefore be suitable for investors who are able to forego their invested capital for the duration of their investment in the Fund and who can accept a medium-to-high investment risk.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Minimum Initial Subscription	Sales Charge	Minimum Subsequent Subscription	Distribution Type
Class L Dist	€100	From 17 January 2025 to 11 February 2025	Euro	No	€1,000	Up to 1%	€100	Distributing
Class A Dist	€100	From 17 January 2025 to 11 February 2025	Euro	No	€1,000	N/A	€100	Distributing
Class A1 Dist	€100	From 17 January 2025 to 11 February 2025	Euro	No	€5,000,000	N/A	€100	Distributing

All of the above Share Classes are offered during the Initial Offer Period. Following the Subscription Period the Fund will be closed for subscriptions.

Application for Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares". Investors should note the definitions of Business Day, Dealing Day, Dealing Deadline and Valuation Point in the Definitions section above that shall apply in respect of applications for Shares of the Fund.

Applications for Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day. After the close of the Subscription Period, the Fund will not accept any new subscriptions.

Fees and Expenses

The following fees and expenses are payable out of the assets of the Fund, and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

A fee based on the Net Asset Value of each Share Class will be payable to the Manager in the manner set out in the below table:

Manager's Fee	**All Share Classes**
During the Subscription Period	up to 1.20% per annum of the Net Asset Value of each class of Shares
After the Subscription Period	up to 2.30% per annum of the Net Asset Value of each class of Shares
After the Maturity Date	up to 2.30% per annum of the Net Asset Value of each class of Shares

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each class of Shares.

Sales Charge

Up to 1% of the value of the gross subscription.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, we draw Shareholders attention to the Risk Factors entitled, “Derivatives Risk” and “Securities Financing Transactions Risk” in respect of the investments the Fund may hold.

Subordinated Debt Risk

As described above the Fund may invest in subordinated Debt Instruments which are often more attractive investments than senior debt securities in respect of the yield these investments may provide. Subordinated Debt Instruments may however involve a greater credit risk as they rank below senior debt securities with regard to the repayment of the principal in the case of issuer default i.e. subordinated debt holders are not repaid until after senior debtholders have been fully paid.
