Objective

The Aberdeen Standard Global Technology Fund ("the Fund") aims to generate capital growth over the medium to long term by investing in global technology equities (company shares).

The Fund aims to outperform the MSCI AC World Information Technology before charges. The benchmark is also used as a reference point for portfolio construction and as a basis for setting risk constraints.

The Fund is actively managed.

The Fund invests in equities and equity related securities of companies or institutions involved in high technology industries anywhere in the world.

The management team use their discretion (active management) to maintain a diverse asset mix at country, sector and stock level. Their primary focus is on stock selection using research techniques to select individual holdings. The research process is focused on finding high quality companies at attractive valuations that can be held for the long term.

In order to achieve its objective, the Fund will take positions whose weightings diverge from the benchmark or invest in securities which are not included in the benchmark. The investments of the Fund may deviate significantly from the components of and their respective weightings in the benchmark. Due to the active nature of the management process, the Fund's performance profile may deviate significantly from that of the benchmark over the longer term.

The Fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "efficient portfolio management").

Derivative usage in the Fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the Fund so that in these instances, cash can be invested while maintaining the Fund's existing allocations to company shares.

Key facts

Fund manager(s)	Andy Brown & Donal Reynolds
