**IMPORTANT NOTE:**

- Threadneedle (Lux) - Emerging Market Debt (the "Fund") principally invests in high yielding sovereign and corporate bonds issued by borrowers from Emerging Market countries.
- In respect of dividend paying share classes, distributions may at the discretion of the Directors be paid out of capital or effectively out of capital (i.e. paying dividends out of gross income while charging all or part of their fees and expenses out of capital) of the share classes. Any such distributions may result in an immediate reduction of the net asset value per share.
- Investors should note that bonds and other debt instruments, in particular those rated below investment grade, are exposed to higher credit risks of the issuer. In the event that any issuer of bonds or other debt instruments experiences financial or economic difficulties, the value of the investment may be adversely affected and may become zero.
- Investors should be aware that, due to political and economic situations in emerging countries, investment in the Fund presents greater risk and is intended only for investors who are able to bear and assume this increased risk.
- The investment decision is yours but you should not invest unless the intermediary which sells you the Fund has advised you that the Fund is suitable for you and has explained why, including how investment in the Fund will be consistent with your investment objectives.
- Investors should not base their investment decision on this document alone and must refer to the Prospectus of each Fund prior to investing.

**Investment Objective & Policy**

The Fund aims to provide income with the potential to grow the amount you invested over the long term. It looks to outperform the J.P. Morgan EMBI Global Index after the deduction of charges.

At least two-thirds of the Fund's assets will be in bonds (which are similar to a loan and pay a fixed or variable interest rate) issued by governments and companies in emerging markets.

The Fund may also invest in asset classes and instruments different from those stated above.

The Fund is actively managed in reference to the J.P. Morgan EMBI Global Index. The index is broadly representative of the securities in which the Fund invests, and provides a suitable target benchmark against which Fund performance will be measured and evaluated over time. The fund manager has discretion to select investments with weightings different to the index, and that are not in the index, and the Fund may display significant divergence from the index.

Deviations from the index, including limits on the level of risk relative to the index, will be considered as part of the fund manager's risk monitoring process, to ensure the overall level of risk is broadly consistent with the index. In line with its active management strategy, there may be significant deviation from the index.

\*Past performance is not a guide to future performance. The performance data does not take account of the commissions and costs incurred on the issue and redemption of units. The value of investments and any income is not guaranteed and can go down as well as up and may be affected by exchange rate fluctuations. This means that an investor may not get back the amount invested. Index returns assume reinvestment of dividends and capital gains and unlike fund returns do not reflect fees or expenses. The index is unmanaged and cannot be invested directly. All returns assume income is reinvested for a local taxpayer, bid to bid performance (which means performance does not include the effect of any initial charges). The Share Class currency, unless indicated as a Hedged Share Class, is a translated price using exchange rates at the official valuation point of the fund. This is intended as a way to access a Share Class in your chosen currency and does not reduce your overall exposure to foreign currency. The fund currency indicates the highest currency exposure of the fund unless the currency breakdown is detailed in the Weightings % table on page 2.
