Please note the risk analytics figures are calculated on gross returns whereas the performance figures are based on net asset value (NAV) returns. In addition, the risk analytics figures lag the performance figures by one month. It should be noted that the figures provided regarding risk would be adjusted if fund fees and expenses were included.

Standard deviation measures historical volatility. Beta is a measure of the volatility of a portfolio in comparison to a benchmark index. Sharpe ratio measures risk-adjusted performance.

Tracking error measures the divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark.
