

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Neuberger Berman Euro Bond Absolute Return Fund (the “Portfolio”)
Legal entity identifier: 549300ZPJNN43P39QR29

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☐ ☐ Yes	☐ ☐ ☒ No
☐ It will make a minimum of sustainable investments with an environmental objective: ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ It will make a minimum of sustainable investments with a social objective: ____%	☐ It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective ☒ It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager will not invest in an issuer with a poor NB ESG Quotient rating unless there is a commitment to engage with the issuer with an expectation that the NB ESG Quotient rating will improve over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“**GHG**”) emissions; opportunities in clean

technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management & water management.

- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Manager deems as weak ESG efforts, are being addressed adequately. The success of the Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not applied across all issuers held by the Portfolio and is instead limited to the corporate issuers for which the Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). Additionally, the Portfolio is prohibited from purchasing the securities of issuers that are involved in tobacco production such as cigars, cigarettes, e-cigarettes, smokeless tobacco, dissolvable and chewing tobacco. This also includes issuers that grow or process raw tobacco leaves. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

N/A – the Portfolio does not commit to holding sustainable investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio does not commit to holding sustainable investments.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

— — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio does not commit to holding Taxonomy aligned investments.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Manager will consider the following principal adverse impacts, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers; and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

The Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

What investment strategy does this financial product follow?

The investment objective of the Portfolio is to seek to generate positive absolute returns over a market cycle (typically 3-5 years), irrespective of market conditions with a moderate level of volatility. It aims to achieve this by implementing an unconstrained strategy combining long and synthetic short positions in a diversified portfolio of predominantly Euro-denominated debt securities.

The Manager aims to achieve the Portfolio's investment objective through a disciplined investment process utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Manager utilises the NB ESG Quotient criteria, as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

II. Engagement:

The Manager engages directly with management teams of corporate issuers through a robust ESG engagement program.

The Manager may also engage with sovereign issuers in developed and Emerging Market Countries. Where the Manager seeks to engage with sovereigns, such engagement efforts may include speaking regularly to government officials, policy makers and international financial organisations, such as the International Monetary Fund, World Bank, and Asian Development Bank with onsite visits whenever possible, and utilise such meetings to engage with sovereign issuers on ESG topics, where the Manager sees scope for improvement for the relevant country.

The sovereign engagement process tends to focus on the various areas relating to SDGs under the UN Global Compact, and the UNGPs. In addition, the Manager will monitor and engages with countries on reducing GHG emissions based on the Climate Watch Net-Zero Tracker managed by World Resources Institute. Sovereign engagement may also be carried out with jurisdictions under increased monitoring, who are actively working with the Financial Action Task Force ("FATF") to address strategic deficiencies in counter money laundering, terrorist financing, and proliferation financing. Progress on sovereign engagement is tracked centrally in the Manager's engagement log.

The Manager views this direct engagement with issuers, as an important part of its investment process (including the investment selection process). Issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of issuers. As part of the direct engagement process, the Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Manager through an internal NB engagement tracker.

In addition, the Manager will seek to prioritise constructive engagement with companies which have high impact controversies, or which have a poor NB ESG Quotient rating or third party rating, in order to assess whether those ESG controversies or what the Manager deems as weak ESG efforts, are being addressed adequately.

The Manager firmly believes this consistent engagement with issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy***

N/A

● ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Manager tracks may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Manager engages directly with management teams of issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of corporate issuers. The Manager views this direct engagement with issuers, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Manager aims to prioritise engagement that is expected, based on the Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at an issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

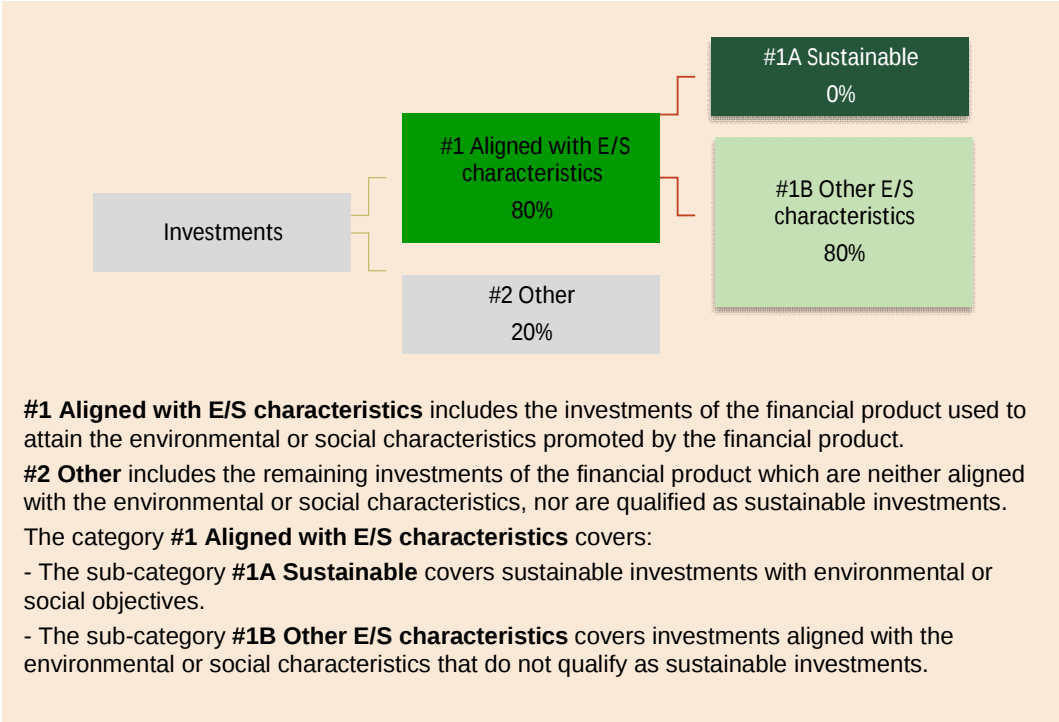

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The “Other” section in the Portfolio is held for a number of reasons that the Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The “Other” section may also include investments or asset classes for which the Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the “Other” section are set out below.

Please note that while the Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio’s mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: (i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or (ii) with whom the Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for hedging, including synthetic short hedging, efficient portfolio management and/or other investment purposes, it will not use derivatives to promote environmental or social characteristics.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Manager amends the minimum Taxonomy alignment of the Portfolio.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What is the minimum share of investments in transitional and enabling activities?

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

What is the minimum share of socially sustainable investments?

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

- ***How does the designated index differ from a relevant broad market index?***

N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

N/A

Where can I find more product specific information online?

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at www.nb.com.

More product-specific information can be found on the website:
