Fidelity Funds - Asian High Yield Fund 富達基金-亞洲高收益基金

31 March 2021 年3月31日

- This fund invests primarily in high yielding, sub investment grade securities of issuers, or in high-yielding securities of sub nvestment grade issuer in Asia.
- The fund is subject to risk to capital and income, foreign currency risk, downgrading risk, credit/default risk, credit rating risk, risks of investing in emerging markets, valuation risk, risk associated with urban investment bonds and risk associated with collateralised and/or securitised debt instruments. The value of bonds or other debt instruments will fluctuate depending on e.g. market interest rates, the credit quality of the issuer, the currency of the investment and liquidity considerations. In general, the prices of debt instruments rise when interest rates fall, whilst their prices fall when interest rates rise. The fund may invest in debt securities rated below investment grade or unrated securities which are subject to lower liquidity, higher volatility, heightened risk of default and loss of principal and interest than higher-rated/lower yielding debt securities. Although the fund will generally invest in income-producing securities, it is not guaranteed that all underlying investments will generate income. Higher yields generally mean that there will be increased potential for capital appreciation and / or depreciation for fixed income securities.
- The fund may invest in instruments with loss-absorption features which are subject to greater capital risks, liquidity, valuation and sector concentration risk. The fund may invest in CoCos, which are highly complex and are of high risk CoCos are a form of hybrid debt security with loss-absorption features that are intended to either convert into equity shares of the issuer or have their principal written down upon the occurrence of certain 'triggers'. The fund may also invest in senior non-preferred debts, which may be subject to write-down upon the occurrence of a trigger event and may result in total loss of principal invested.
- The fund's net derivative exposure may be up to 50% of its NAV, the use of derivatives may involve liquidity risk, counterparty credit risk, volatility risk, valuations risks and over-the-counter transaction risk, at times. Exposure to financial derivative instruments and its leverage element may lead to a high risk of significant loss by the fund.

 Dividend of certain share classes, at the Board's discretion, may be paid out of capital and/or effectively out of capital
- amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any such distributions may result in an immediate reduction of the NAV per share/ unit. For the hedged share class, the distribution amount and NAV of such share class may be adversely affected by differences in the interest rates of the reference currency of the hedged share class and the fund's base currency, resulting in more distribution that is paid out of capital and hence a greater erosion of capital than other non-hedged share classes. Investors may suffer substantial loss of their investments in the fund. Investor should not invest in the fund solely based on •
- the information provided in this document and should read the offering documents, including Product Key Facts (including the risk factors) for details.
