

Templeton Emerging Markets Investment Trust TEMIT

Blend GB00BKPG0S09 Factsheet as of 31 March 2024

Investment Overview

Templeton Emerging Markets Investment Trust (the "Company") seeks long-term capital appreciation through investment in companies in emerging markets or companies which earn a significant amount of their revenues in emerging markets but are domiciled in, or listed on, stock exchanges in developed countries. It is expected that the majority of investments will be in listed equities.

TEMIT may borrow up to 20% of its net assets.

Past performance does not predict future returns.

Charges

Ongoing Charges	0.96%
-----------------	-------

The **Ongoing Charges** represent the annual costs taken from the Company each year for managing your investment, expressed as a percentage of the average net assets over the year. This includes the fee payable to the Manager for management, administration and secretarial services as well as other operating fees and expenses such as costs for custody and depository services. Interest and charges associated with the borrowing facilities are excluded. Further information on the ongoing charges ratio is included within the Company's Annual Report and Audited Accounts and Half-Yearly Reports.

What are the Risks?

The value of shares in the Templeton Emerging Markets Investment Trust PLC (Temit) and any income received from it can go down as well as up and investors may not get back the full amount invested. There is no guarantee that Temit will meet its objective. Temit invests in the equity securities of emerging markets companies. Emerging markets have historically been subject to significant price movements, often to a greater extent than more established equity markets. As a result, the share price and net asset value of Temit can fluctuate significantly over relatively short time periods. Performance may also be affected by currency fluctuations.

Temit can borrow to purchase assets for the company; this will magnify any gains or losses made by the company. Shares of Temit are bought and sold on stock exchanges, typically, at any given time on any given day, the price you pay for a share will be higher than the price at which you could sell it. In addition, investors should be aware that Temit may trade at a discount to its Net Asset Value (NAV) per Share, and such discount may become larger in the future.

Temit may take charges from the Company's capital account. While this might allow a larger dividend to be distributed, it may also have the effect of reducing capital. For more details of all the risks applicable to Temit, please refer to the Key Information Document, Investor Disclosure Document and the risk section in Temit's Annual Report, which can be downloaded from our website - temit.co.uk.

If you are unsure about Temit's suitability for your needs, please contact a professional financial adviser.

Glossary

Gearing: a term used to describe the process of borrowing money for investment purposes in the expectation that the returns on the investments purchased using the borrowings exceeds the costs of those borrowings. For example, a figure of 5% means that the shareholder funds are 5% geared and indicates the extra amount by which the shareholder funds would rise or fall if the total assets were to rise or fall. A figure of 0% means there is no gearing. The Board has agreed that the Company may borrow up to 20% of net assets.

Comparator: Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment.

Price to Book: The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds.

Price to Earnings (12-Month Trailing) is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

Debt to Equity: The debt to assets ratio defines the total amount of debt relative to assets. The ratio is used to determine the financial risk of a business. The higher the ratio, the higher the degree of leverage (assets funded with debt), and consequently, financial risk.

Price to Cash Flow: Supplements price/earnings ratio as a measure of relative value for a stock. For a portfolio, the value represents a weighted average of the stocks it holds.

Dividend Yield is the annual dividend received on an equity security as a percentage of the price. For a portfolio, the value represents a weighted average of the stocks it holds. It should not be used as an indication of the income received from this portfolio.

Important Information

Benchmark - We build Temit's portfolios on a stock-by-stock basis and do not seek to replicate the Index. Temit's holdings can differ significantly from the Index and may include non-benchmark stocks and/or non-benchmark countries. The Index is included only as an indicator of the broader emerging markets' allocation and breakdown.
