\*The ongoing charges figures are calculated based on the costs incurred by the Sub-Fund over a 12-month period divided by the average net assets over the same period based on the information in the latest audited financial statement for the year ended 30 September 2019. It is provided for each share class available within the Sub-Fund. This figure may vary from year to year. It includes All-in-Fee plus the Luxembourg tax (Taxe d’Abonnement) and excludes transaction cost. Rounding differences may occur.

## What is this product?

The Sub-Fund is a sub-fund of Allianz Global Investors Fund (the “Company”), which is constituted as an open ended investment company in Luxembourg. It is regulated by Commission de Surveillance du Secteur Financier (“CSSF”) in Luxembourg.

## Investment Objective

Long-term capital growth by investing in developed global equity markets, with a focus on acquiring equities that have above-average potential for profit growth and/or attractive valuations.

The Investment Manager may engage in foreign currency overlay and thus assume separate foreign currency risks with regard to currencies of OECD member states, even if the Sub-Fund does not include any assets denominated in these respective currencies.

## Investment Strategy

At least 70% of Sub-Fund assets are invested in equities of companies which are exposed or connected to developed global markets, with a focus on acquiring equities that have above-average potential for profit growth and/or attractive valuations. Less than 30% of Sub-Fund assets may be invested in equities other than the above.

Up to 30% of Sub-Fund assets may be invested in emerging markets.

Up to 10% of Sub-Fund assets may be invested in the China A-Shares market either directly via Shanghai-Hong Kong Stock Connect and Shenzhen-Hong Kong Stock Connect or indirectly through all eligible instruments.

Up to 10% of Sub-Fund assets may be invested in instruments with loss-absorption features (i.e. contingent convertible bonds). These bonds may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger events.

The Sub-Fund is managed in reference to MSCI WORLD TOTAL RETURN (NET) (“**Benchmark Index**”) where the Benchmark Index plays a role (i) as reference for formulating the Sub-Fund’s portfolio composition, and/or (ii) for measurement and comparison of the Sub-Fund’s performance. However, due to the active management approach adopted by the investment manager, the performance of the Sub-Fund and the performance of the Benchmark Index may differ. The extent to which the investment manager may deviate from the Benchmark Index is material.

## Use of derivatives/investment in derivatives

The Sub-Fund’s net derivative exposure may be up to 50% of the Sub-Fund’s net asset value.

## What are the key risks?

**Investment involves risks. The Sub-Fund’s investment portfolio may fall in value due to any of the key risk factors below and therefore your investment in the Sub-Fund may suffer losses. Please refer to the Prospectus for details including the risk factors.**

### 1. Investment Risk/General Market Risk

- The Sub-Fund is an investment fund. There is no guarantee of the repayment of principal. The instruments invested by the Sub-Fund may fall in value.
- The Sub-Fund invests in securities (eg. equities), and is exposed to various general trends and tendencies in the economic and political situations as well as securities markets and investment sentiment, which are partially attributable to irrational factors. Such factors could lead to substantial and longer-lasting drops in prices affecting the entire market. Securities from top-rated issuers are subject to essentially the same general market risk as other securities and assets. All these factors may adversely impact the net asset value of the Sub-Fund.

### 2. Company-specific Risk

- The Sub-Fund may invest in equities which may be affected by company-specific factors, such as the issuer’s business situation. If a company-specific factor deteriorates, the price of the respective asset may drop significantly and for an extended period of time, possibly even without regard to an otherwise generally positive market trend. All these factors may adversely impact the net asset value of the Sub-Fund.

### 3. Emerging Market Risk

- The Sub-Fund invests in emerging markets which involve increased risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, legal, economic, foreign exchange/control, liquidity, regulatory risks, settlement risks, custody risk and the likelihood of a high degree of volatility. The accounting, auditing and financial reporting standards may deviate substantially to the Sub-Fund’s detriment. All these factors may adversely impact the net asset value of the Sub-Fund.

### 4. Currency Risk

- The Sub-Fund may hold assets denominated in foreign currencies other than its base currency. The Sub-Fund may also launch a class of shares that may be designated in a foreign currency other than the base currency of the Sub-Fund. Accordingly, the Sub-Fund and investors of such class of shares are exposed to a currency risk that if these foreign currency positions have not been hedged or if there is any change in the relevant exchange control regulations, the net asset value of the Sub-Fund may be affected unfavorably. Any devaluation of the foreign currency against the base currency of the Sub-Fund would cause the value of the assets denominated in the foreign currency to fall and adversely impact the investor.

### 5. Liquidity Risk

- The Sub-Fund may invest in illiquid securities (securities that cannot be sold readily). Even relatively small orders for purchases or sales of illiquid securities in particular can lead to significant price changes. If an asset is not liquid, there is the risk that the asset cannot be sold or can only be sold at a significant discount to the purchase price. The lack of liquidity of an asset may cause its purchase price to increase significantly. The bid and offer spreads of the price of such securities may be large and the fund may incur significant trading costs.

## 6. Derivatives Risk

- The Sub-Fund may invest in derivatives, which may expose the Sub-Fund to higher leverage, valuation, volatility, counterparty, liquidity, market and over the counter transaction risks, all of which may adversely impact the net asset value of the Sub-Fund. The leverage component of financial derivative instruments ("FDI") can result in a loss significantly greater than the amount invested in the FDI by the Sub-Fund.
- The Sub-Fund's use of FDI in efficient portfolio management (including for hedging) may become ineffective and/or cause the Sub-Fund to suffer significant losses.

## 7. Risk related to Distribution out of Capital and Distribution effectively out of Capital

- The payment of distributions out of capital/distributions effectively out of capital represents a return or withdrawal of part of the amount investors originally invested and/or capital gains attributable to the original investment. Any distributions involving payment of distributions out of the Sub-Fund's capital/distributions effectively out of the Sub-Fund's capital may result in an immediate decrease in the Net Asset Value per Share and may reduce the capital available for the Sub-Fund for future investment and capital growth.
- The distribution amount and NAV of any hedged share classes of the Sub-Fund may be adversely affected by differences in the interests rates of the reference currency of the hedged share classes and the base currency of the Sub-Fund, resulting in an increase in the amount of distribution that is paid out of capital and hence a greater erosion of capital than other non-hedged share classes.
