## Schroder International Selection Fund US Dollar Liquidity

(This is not a money market fund in Hong Kong)

A Accumulation USD | Data as at 31.08.2020

### Important Information

The fund invests in Money Market Instruments denominated in USD.

- The fund invests in debt securities which may be subject to interest rate, credit and counterparty risks.
- The fund is not a money market fund and is not the same as placing funds on deposit with bank or deposit-taking company. Principal is not guaranteed.
- The fund may invest in emerging markets and concentrated region and subject to ownership and custody risks, political and economic risks, market and settlement risks, etc. .
- The fund may use derivatives to meet its investment objective. Derivatives exposure may involve higher counterparty, liquidity and valuation risks. In adverse situations, the fund may suffer significant losses from their derivative usage for hedging.
- For share classes with a general dividend policy, expenses will be paid out of capital rather than out of gross income. The amount of distributable income therefore increases and the amount so increased may be considered to be dividend paid out of capital. Share classes with a fixed dividend policy may pay out both income and capital in distributions. Where distributions are paid out of capital, this amounts to a return or withdrawal of part of your original investment or capital gains attributable to that and may result in an immediate decrease in the net asset value of shares.

You should not make any investment decision solely based on this document. Please read the relevant offering document carefully for further fund details including risk factors.

### Investment Objectives

The Fund aims to provide income by investing in Money Market Instruments denominated in US Dollar. The Fund is designed to provide liquidity and aims to preserve the value of the investment in falling markets. The preservation of value or provision of liquidity cannot be guaranteed.
